[23] As revised in Order No. 566, definition 38B of Part 201, Title 18 of the Code of Federal Regulations, defines research, development, and demonstration as follows: Research, Development, and Demonstration (R.D. & D.) means expenditures incurred by natural gas companies either directly or through another person or organization (such as research institute, industry association, foundation, university, engineering company, or similar contractor) in pursuing research, development, and demonstration activities including experiment, design, installation, construction, or operation. This definition includes expenditures for the implementation or development of new and/or existing concepts until technically feasible and commercially feasible operations are verified. Such research, development, and demonstration costs should be reasonably related to the existing or future utility business, broadly defined, of the public utility or licensee or in the environment in which it operates or expects to operate. The term includes, but is not limited to: all such costs incidential to the design, development or implementation of an experimental facility, a plant process, a product, a formula, an invention, a system or similar items, and the improvement of already existing items of a like nature; amounts expended in connection with the proposed development and/or proposed delivery of substitute or synthetic gas supplies (alternate fuel sources, for example, an experimental coal gasification plant or an experimental plant synthetically producing gas from liquid hydro-carbons); and the costs of obtaining its own patent, such as attorney's fees expended in making and perfecting a patent application. The term includes preliminary investigations and detailed planning of specific projects for securing for customers non-conventional pipeline gas supplies that rely on technology that has not been verified previously to be feasible. The term does not include expenditures for efficiency surveys; studies of management, management techniques and organization; consumer surveys, advertising promotions, or items of a like nature.

[24] Order No. 566, *supra*, mimeo ed., p. 4.

Staff recognizes that the GRI program is still in an early stage of development and, accordingly, does not recommend that any individual project be rejected for 1979. Staff does recommend, however, that GRI be directed to set forth clearly the specific R.D. & D. projects that are the objective of the investigations in the Economics and Systems Analysis area. New York, in contrast, urges that funding for the "World-wide" and "Gas Supply Modeling" projects be rejected unless GRI supplies additional information showing that the projects are not general in nature.[25]

The ultimate consideration that must be applied to each project or "work element" in GRI's program is not whether it meets some abstract concept of R.D. & D. but whether the individual project makes a contribution to the overall R.D. & D. program in a manner that reflects sound and comprehensive planning and a meaningful R.D. & D. program. As the Federal Power Commission observed in its Notice of Proposed Rulemaking which led to Order No. 566, there are two methods for testing the reasonableness of R. & D. projects: [26]

> The first method is to examine the technical structure of each project to determine whether it meets a definition of research and development and has a reasonable chance of benefitting ratepayers * * *.
>
> The second method is to establish a set of criteria based on the planning process itself. In this approach, an individual R. & D. expenditure would be reasonable if it supported a comprehensive and integrated energy R. & D. program meeting the needs of the company and/or the industry to serve ratepayers and the general public.

The FPC wisely adopted the second method. In Order No. 566 (at 1) it announced that its rulemaking would "establish sound and comprehensive planning of research *programs* as the preferred test for granting advance approval of R. & D. expenditures * * *."

The studies in the Economics and Systems Analysis area, then, should make a contribution to an R. & D. program and should not be ends in themselves. Studies that serve to develop information that will support and direct the technical program at GRI are, therefore, appropriate for inclusion in GRI's R. & D. program. Studies designed to provide data, analysis and methodology to the public, the research community and industry, apart from any needs of GRI's overall program, are inappropriate.

It is not clear from GRI's submission whether all the studies in the Economics and Systems Analysis area are ends in themselves or are foundations for making sound planning decisions. The "World-wide Gas Resource Assessment" study is one we question. On the other hand, the "Gas Supply Modeling" project, according to GRI, will provide information that it says will be "crucial to the proper planning of gas technology R. & D.". If so, it would seem to bear an appropriate relationship to GRI's planning process.

For this application, we will not pursue this issue further. Rather, we will give GRI the benefit of the doubt and approve funding for these projects. We put GRI on notice, however, that in future applications there should be a better articulation of the connection between such studies and the basic program objectives. Studies in the Economics and Systems Analysis area require a special amount of attention with respect to explaining their roles in GRI's overall program.

REMAINING ISSUES

1. SHAREHOLDER CONTRIBUTIONS.

Staff recommended that the Commission direct GRI to commit itself too getting contributions beyond those recovered from gas consumers. The primary source of these nonrecoverable contributions would be stockholders in the gas industry [27] though staff mentioned the coal industry, the uranium mining industry, the gas appliance industry and manufacturers of insulation materials as examples of other possible sources. Staff suggested, further, that GRI be instructed to develop a target level for such non-recoverable contributions beginning with the 1980 program. The target level, according to staff, could be expressed as a fixed percentage of the amount by which GRI's budget is increased each year above the 1979 budget.

Staff's argument for requiring that stockholders contribute to GRI begins with the premise that the R. & D. activities of GRI will benefit interstate pipelines and distribution company operations by, for example, increasing gas supplies, increasing safety in the transportation of LNG and improving conservation techniques. Staff then reasons that improved pipeline and distribution operations will directly benefit the stockholders of pipeline and distribution companies. Staff concludes that stockholders as well as the consumers of gas should contribute toward the R. & D. costs of GRI.

California and Michigan support Staff's proposal. GRI and Southern strenuously oppose it. GRI justifies passing the cost of the R. & D. on to the consumer by citing *Southwestern Bell Telephone* v. *Public Service Commission of Missouri*,[28] holding that the true test of whether an expenditure should be included in the cost of service of a regulated utility is whether the investment is "prudent". GRI notes that nowhere in the staff report does staff contend any of GRI's projects are imprudent, nor does the staff question that the benefits of the projects are intended for the ultimate customer.

GRI also points to Order No. 566 in which the Commission sanctioned the full flow-through of all prudent costs associated with R. & D. programs. Staff's proposal that the stockholders should contribute would, according to GRI, contravene the spirit of the Commission's advance approval regulation enunciated in Order No. 566. In a regulated business, GRI points out, the rate of return is controlled.

GRI argues that while stockholder contributions might be expected in the case of unregulated manufacturing or retail businesses, it is inappropriate to expect participation by a regulated company with a constrained return on investment. Thus, any benefit realized by the utility as a result of GRI's R. & D. will be flowed through to the consumer in the form of reduced rates. GRI argues that because a utility's rate of return is predicated on the cost of capital, to require the stockholder to pay part of GRI's cost would effectively lower the stockholder's return below the cost of capital. This would put management in the position of either accepting a return below the cost of capital or withdrawing his utility's support of GREI.

In sum, GRI contrasts the situation of regulated GRI contributors to that of an unregulated business. While the former have regulated margins of profit, the latter can hope to better themselves through R. & D. breakthroughs that will lead to larger profits.

Southern joins GRI in arguing that a regulated company is entitled to recover its total cost of service and all

[25] These two projects would account for $350,000 or less than 1 percent of GRI's 1979 program.

[26] *Research, Development and Demonstration; Accounting; Advance Approval of Rate Treatment*, docket No. RM76-17, Notice of Proposed Rulemaking issued June 17, 1976, 3-4 (mimeo ed.).

[27] Staff points to the following statement in Opinion No. 11 as support for its recommendation: We subscribe to GRI's policy of spreading the expenditures for its R.D. & D. program as evenly as possible and over the broadest possible base of jurisdictional and non-jurisdictional natural gas services in this country. Since consumers of natural gas in particular, and Federal taxpayers generally, are expected to benefit from the results of GRI's R.D. & D. proram, it is proper that they should pay for the program. But since producers, pipelines and distributors also have a stake in the results of the program, it is proper that they too should pay for it. Accordingly, we strongly encourage GRI to obtain the broadest possible financial support from all of the expected beneficiaries of its activities, and will follow its efforts and successes in this direction with close attention in future annual reviews. With this assurance, we will refrain from imposing a condition to this effect.

[28] 262 U.S. 276 (1923).

OCT 2 1978

V 4 3 / 1 9 1
0 C 2 7 8

reasonable and prudent expenses incurred in conducting its business. Southern says that staff rationalized its position on the grounds that the natural gas industry, as opposed to the consumer, will benefit from GRI's R. & D. programs. Southern counters with three arguments. First, any R. & D. effort which improves gas sevice directly benefits the gas consumer. Second, in paragraph number 4 of the Stipulation and Agreement in Docket No. RM77-14, GRI agreed to make publicly available the results of its research for the widest possible benefit to the consumer. Third, GRI agreed in the same paragraph to apply all revenues derived from such research as credits against future budgets, thereby directly and exclusively benefiting the gas consumer.

The Commission views this as a major issue. Staff's position may have vital implications for GRI's future. Further, because the arguments applied to GRI's activities would seem to be equally applicable to R.D. & D. expenses in general, our decision here may set a precedent for treatment of all other R.D. & D. projects brought before the Commission. The issue requires careful analysis and deliberation.

On the other hand, the determination of the issue will have no bearing on the 1979 GRI program. The 1980 program would be the first year affected by Staff's proposal. Thus, no delay will be occasioned by allowing opportunity for further briefing and additional discussion by the parties could be of assistance. Accordingly, we will sever this issue from the present proceeding and establish a schedule for further briefing.

Interested parties, including staff, should file comprehensive briefs on this subject covering the basic policy questions as well as other relevant matters. We shall also provide for answering briefs.

II. CO-FUNDING ESTIMATES

In its second year application, as in its first year application, GRI included numerous estimates of the amount of government co-funding that would be forthcoming for various projects. As staff observed, however, it is difficult to determine whether GRI's estimates of government co-funding are based upon specific information or are merely indications of co-funding levels that GRI would like to achieve. Staff recommends that in future applications GRI state the basis for its projections of government co-funding. The Commission shall require GRI to do so in future applications.

III. ACCOUNTING

The staff stated that the limited information included in GRI's filing about its accounting and reporting systems was insufficient for staff to evaluate the overall adequacy of GRI's system of accounting, reporting, and internal control. Accordingly, staff made five accounting recommendations. Michigan and California urged adoption of Staff's recommendations, and GRI did not object to any of them. The recommendations and GRI's responses to each of them are as follows:

A. GRI should obtain the services of independent certified public accountants to perform annual audits of its operation.

GRI states that this recommendation has already been implemented. At its March 29, 1978 meeting, the GRI Board of Directors approved the appointment of Arthur Anderson & Company as GRI's independent Certified Public Accountant for 1978.

B. The FERC staff should have the right to perform a review or audit of GRI's operations.

GRI says it has no objection to FERC staff review of its operations.

C. GRI should adopt costing standards and principles consistent with those found in Part 1-15, CFR 41, Public Contracts and Property, and require contractors to abide by such standards and principles.

GRI says this also has been implemented. GRI attached to its September 1, 1978 comment a copy of GRI's standard contract which GRI says is consistent with 41 CFR, Public Contracts and Property, Part 1-15.

D. GRI should establish an audit function to review and audit contractor activities to determine whether costing standards and principles have been met and whether work is being performed for intended purposes.

GRI says it has hired a contract cost analyst whose role will be to audit both preaward and post-award proposals and contracts. GRI says that, further, its staff plan for 1979 calls for the addition of at least one and possibly two more employees in the auditing area.

E. GRI should file with the Secretary of the Commission quarterly financial statements prepared in accordance with generally accepted accounting principles, including a statement of funds collected and expenditures made during the quarter. GRI should file with the Secretary of the FERC annual financial statements audited by certified public accountants.

GRI agrees to comply with the request that it file quarterly financial statements and annual audited financial statements.

F. GRI should file with the Secretary of the FERC all statements, reports, and statistical computations it has prepared for dissemination to the public, members, or others outside GRI.

GRI does not state any objection to F.

The Commission shall direct that GRI comply with staff's accounting recommendations.

The Commission notes that New York and California express concern about the rise in GRI's administrative costs, and they request that Staff audits of GRI's administrative expense be required. The staff has already indicated in its report that it intends to audit GRI. These audits as well as the review of GRI's annual applications should, of course, encompass GRI's admininstrative costs.

IV. DATA COLLECTION

Staff's discovery of additional volumes which GRI should have included in funding services and GRI's statement that it did not have sufficient data to fully calculate total funding services when preparing its application demonstrate the need for improvement in collection and presentation of data. As Michigan points out, improved collection of information will serve two purposes. First, it will assure a more reliable basis for GRI's calculaion of its funding unit in future applications. Second, it will permit more thorough evaluation by the Commission and others of GRI's compliance with the various requirements of the Stipulation and Agreement approved in Opinion No. 11.

The staff suggests a breakdown of the sales and transportation volumes of interstate pipeline members to identify each customer more precisely. Staff also proposes that pipeline companies with direct sales customers identify the volumes of gas sold for electric generation.

With regard to data on intrastate gas utility sales, Staff recommends GRI revise its questionnaire to provide additional information concerning operations, supplies, actual sales, and the basis of departures from actual experience. Staff notes that every reasonable effort must be made to verify those volumes so as to insure that ultimate consumers are bearing a fair share of the R. & D. program without undue preference or discrimination.

Michigan and California agree with the staff's suggestion and GRI voices no objection. Accordingly, GRI shall be ordered to collect and present data in accordance with staff's suggestions.

V. ELIMINATING CERTAIN AGA COSTS FROM GRI MEMBERS' RATES

Staff notes that certain interstate pipeline members of GRI are currently collecting through their underlying rates amounts associated with the AGA utility research and coal gasification programs. Approximately $18.7 million are attributable to these programs, and during 1979 these AGA programs will be funded by GRI. Since GRI is funded through a surcharge to pipeline company rates, a double recovery of funding for these projects would occur if underlying pipeline rates were not revised.

To eliminate this duplication of funding, staff recommends that those pipeline companies that are currently funding AGA projects which, in 1979, will be funded by GRI, be required to file revised tariff sheets to reflect a reduction in their base tariff rates to reflect the lowered expense of contribution to AGA. California supports staff's recommendation, and we agree. The Commission hereby puts jurisdictional pipeline companies on notice that they will be permitted to collect the 3.5 mills per Mcf GRI funding unit in 1979, only upon the condition that the costs of funding the transferred AGA projects are eliminated from their base tariff rates by the filing of revised tariff sheets.

VI. PROCEDURAL MATTERS

A. Service lists and intervention

California says it is troubled by "the apparent lack of a service list in this proceeding". As we have already mentioned, in Opinion No. 11, the Commission directed that GRI include in its second application, a list of its members and State regulatory commissions. That list was to be the service list for the proceeding on the second application. GRI complied. A service list of all municipal utility members, pipeline company members, distribution company members, and State regulatory commissions was included as exhibit 12 of the GRI's June 30, 1978 application. Thus, California is mistaken in its concern.

The Commission would take this occasion to note that its direction in Opinion No. 11 to GRI to include a service list in its application was "experimental". The Commission believes the exeriment was successful. So, too, has been the procedure of permitting all GRI members and commissions listed by GRI to participate as intervenors without their filing formal petitions and notices for that purpose. Accordingly, the Commission shall direct that, in future applications, GRI shall include a list of its members and State regulatory commissions as of a current specified date. The list shall be the service list for the proceeding on the application in which it is contained, and listed members and commissions will be permitted by the Commission to participate as intervenors in the proceeding without their filing formal petitions and notices for that purpose.

B. Extension of the time allowed for Commission action

California objects to the pace of this proceeding, commenting, "The entire course of this proceeding to date has been marked by extreme haste * * *." California proposes that the Commission amend § 154.38(d)(5)(iv) of its regulations to allow 120 days, rather than the current 90 days, for advance approval of an R.D. & D. program. California observes that this would permit GRI to file next year's application for its 1980 program on June 4, 1979, and obtain a final decision by October 1, 1979, the date by which GRI says it must have Commission action for planning and administration purposes. The Commission shall issue a Notice of Proposed Rulemaking to obtain comments on California's suggestion.

California also objected to several aspects of the procedure adopted in the July 3, 1978 notice in this proceeding. For example, California observes that no date was established for reply to the comments filed on September 1, 1978. The Commission regards the procedure adopted for this second annual application of GRI to have been experimental. We welcome comments on how to improve the procedure in the future. When we issue the Notice of Proposed Rulemaking on the proper length of the review period, we will invite parties to include in their comments, suggestions on the specific procedures to be followed in proceedings on GRI's future applications.

The Commission orders:

(A) The application of GRI for advance approval of its 1979 R. & D. program and related 1979-83 5-year R. & D. plan is hereby granted.

(B) A 1979 funding requirement of $39,700,000 is just and reasonable, and, effective January 1, 1979, without regard to purchase gas adjustment clause effective dates, jurisdictional members of GRI may collect a general R. & D. funding unit of 3.5 mills per Mcf, such funding unit to be applied to program funding services consisting of sales and transportation deliveries to distributors for resale, to pipelines which are not members of GRI, and to ultimate consumers.

(C) A jurisdictional member of GRI may collect the GRI funding unit only if it files, if it has not already done so, an R. & D. cost adjustment provision which complies with § 154.38(d)(5)(v) of the Commission's regulations and which contains a provision clearly indicating that the cost adjustment clause is applicable only to payments to GRI, that collections of the GRI funding unit by means of it shall be remitted to GRI within 30 days of receipt, and that such collections shall be made only from persons receiving program funding services; such an R. & D. cost adjustment provision may be placed into effect upon not less than 30 days notice, and it will be allowed to take effect without suspension, reduction, or refund.

(D) The issue of shareholder contributions shall be severed from this proceeding and docketed as RP78-76 (Phase II). Initial briefs shall be filed on or before January 15, 1979. Answering briefs shall be filed on or before February 15, 1979.

(E) In future applications, GRI shall furnish information on what coordination has been achieved with DOE or other R. & D. organizations on each GRI contract or "work element".

(F) In its next annual application, GRI shall detail how it is responding to the concern that it assign priorities to its planned projects.

(G) In its next annual application, GRI shall submit to the Commission for its consideration, procedures instituted by GRI's Board of Directors to assure the avoidance of the preferential award of contracts to any particular party.

(H) In future applications, GRI shall indicate the information upon which it is relying in arriving at projections of co-funding.

(I) Stipulation 6 of the September 30, 1977 Stipulation and Agreement, approved in Opinion No. 11, shall be amended to read as follows:

Stipulation 6. For its 1979 program, GRI shall keep expenditures within ten percent (10%) of its budgeted limits or $25,000, whichever is greater, at the contract or work element level as set forth in Volume 2 of Exhibit No. 1 to its 1979 program application: *Provided, however,* That GRI shall keep expenditures within the budgeted limits for the five major program areas. This provision shall not apply, however, to project sub-area 1.2.1, "Gasification Processes". Expenditures in this sub-area shall be limited to a total amount of $10,860,000 and shall conform with the preferred gasification program or the alternative program as set forth in Volume 2 of Exhibit No. 1 at pages A-49 to A-65.

(J) Stipulation 16 of the September 30, 1977 Stipulation and Agreement approved in Opinion No. 11, shall be amended to read as follows:

Stipulation 16. It is understood and agreed that amounts collected by GRI's interstate pipeline members and attributable to the inclusion of an approved GRI funding unit in such members' rates shall be paid over to GRI within 30 days of collection. *GRI should report to the Commission if it has reason to believe that collected funds are not forthcoming.*

(K) GRI shall comply with staff's six accounting and reporting recommendations, as discussed in the body of this order.

(L) GRI shall collect and present data on member's sales volumes, transportation volumes, operations, and supplies in accordance with staff's recommendations, as discussed in the body of this order.

(M) In its future applications, GRI shall list its members and State regulatory commissions as of a current specified date, such list to be used as a

V 43/191
OCT 78

service list, and GRI shall specify in a draft notice, which is also to be submitted with the application, that all such members and commissions will be permitted by the Commission to participate as intevenors without their filing formal petitions and notices for that purpose.

(N) All parties listed in the service list submitted as exhibit 12 in GRI's June 30, 1978 application, as well as INGAA, AGD, and PSE&G are permitted to intervene subject to the rules and regulations of the Commission: *Provided, however,* That the participation of the said parties shall be limited to matters affecting asserted rights and interests specifically set forth in their applications for leave to intevene, if such were submitted: *And provided, further,* That the admission of such intervenors shall not be construed as recognition that they might be aggrieved by any order entered in this proceeding.

(O) The Secretary shall cause prompt publication of this Order in the FEDERAL REGISTER.

By the Commission.

KENNETH F. PLUMB,
Secretary.

[6740-02]

[Docket No. E-8121]

GULF STATES UTILITIES CO.

Compliance Filing

SEPTEMBER 22, 1978.

Take notice that Gulf States Utilities Co, on September 11, 1978, tendered for filing a report in compliance with the Commission's letter order of August 7, 1978, indicating Commission approval of the settlement agreement entered into by Gulf States and Mid-South Electric Cooperative. The Commission's order directed Gulf States to refund to Mid-South $505,000 within 30 days of the date of the letter order and to file a compliance report with the Commission within 15 days after the refund was made.

Gulf States indicates that check No. 20822, dated August 24, 1978, in the amount of $505,000, payable to Mid-South was mailed, on August 31, 1978, by certified mail, to Mid-South.

Any person desiring to be heard or to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.10). All such protests should be filed on or before October 10, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-27745 Filed 9-29-78; 8:45 am]

[6740-02]

[Docket No CI78-1134]

HNG FOSSIL FUELS CO.

Application

SEPTEMBER 26, 1978.

Take notice that on August 28, 1978, HNG Fossil Fuels Co. (HNG) P.O. Box 1188 Houston, Tex. 77001, filed in Docket No. CI78-1134 an application pursuant to section 7(c) of the Natural Gas Act, as amended, and § 2.75 of the Commission's General Policy and Interpretations, *Optional Procedure For Certificating New Producer Sales of Natural Gas,* for a certificate of public convenience and necessity authorizing the sale of natural gas from its interest in Block 317 Field, High Island Area, Offshore Texas, to Natural Gas Pipeline Co. of America, all as more fully set forth in the application, which is on file with the Commission and open to public inspection.

The contract is for a base period of 20 years and provides for an initial base rate of $4.53 per Mcf at 14.65 psia, subject to Btu adjustment and new or increased taxes.

Any person desiring to be heard or to make any protest with reference to said application, on or before October 17, 1978, should file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be take, but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding, or to participate as a party in any hearing therein, must file a petition to intervene in accordance with the Commission's rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by sections 7 and 15 of the Natural Gas Act, and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-27732 Filed 9-29-78; 8:45 am]

[6740-02]

[Docket No. ER78-615]

ILLINOIS POWER CO.

Filing

SEPTEMBER 22, 1978.

Take notice that Illinois Power Co. (Illinois Power) on September 18, 1978, tendered for filing Supplement 2 to an Agreement dated August 19, 1974, between Illinois Power and City of Peru, Ill. (Peru).

Illinois Power states that the purpose of the filing is to revise the Agreement to reflect a change in permanent interconnection point from 138/13.8 Kv to 34.5/13.8 Kv.

Illinois Power requests an effective date of August 29, 1978, and therefore requests waiver of the Commission's notice requirements.

According to Illinois Power copies of this filing have been mailed to Peru and the Illinois Commerce Commission.

Any person desiring to be heard or to portest said application should file a petition to intervene or protest with the Federal energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 10, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-27746 Filed 9-29-78; 8:45 am]

[6740-02]

[Docket No. RI78-86]

SMALL PRODUCER CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PETITION FOR SPECIAL RELIEF

Application of Kamlok, Inc.

SEPTEMBER 26, 1978.

Take notice that on August 16, 1978, Kamlok, Inc. (Kamlok), P.O. Box 40262, Houston, Tex. 77040, filed in Docket No. R78-I86, an application for a small producer certificate of public convenience and necessity pursuant to § 157.40 of the Commission's Regulations and petition for special relief pursuant to Section 2.76 of the Commission's General policy and Interpretations.

Kamlok acquired the Adams and Haggarty No. 2 and No. 6 wells located in Big Hill Field, Jefferson County, Tex. from Exxon Corp. Exxon ceases production on these wells in March 1977 when operations proved uneconomical. Kamlok intends to rework both wells and to sell any gas produced to Texas Eastern Transmission Co.

Kamlok seeks to obtain a small producer certificate of public convenience and necessity for the leases named in its application. In order to reestablish production, Kamlok proposes to install compression and saltwater treatment equipment and to perform workovers as needed. Due to the costs involved in this project, Kamlok requests that a rate be established for its gas in excess of the applicable ceiling rate.

Any person desiring to be heard or to make any protest with reference to said application should on or before October 17, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

KENNETH F. PLUMB,
Secretary.

[Docket No. RI78-78]

LIBERTY OIL & GAS CORP.

Petition for Special Relief

SEPTEMBER 26, 1978.

Take notice that on July 11, 1978, Liberty Oil & Gas Corp. (Petitioner), Suite 809, 234 Loyola Building, New Orleans, La. 70112, filed a petition for special relief in Docket No. RI78-78 pursuant to § 2.76 of the Commission's Statements of General Policy and Interpretations.

Petitioner requests permission to charge a total rate of $2.10 per Mcf at 15.025 psia for the sale of gas to United Gas Pipeline Co. from the Simoneaux No. 9 Well, Bayou Des Allemands Field, St. Charles Parish, La. Currently, petitioner charges a total rate of 37.25 cents per Mcf for its gas. Petitioner plans to spend $68,400 reworking the subject well.

Any person desiring to be heard or to make any protest with reference to said petition should on or before October 17, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any party wishing to become a party to a proceeding, or to participate as a party in any hearing therein, must file a petition to intervene in accordance with the Commission's Rules.

KENNETH F. PLUMB,
Secretary.

[6740-02]

[Docket No. RI78-77]

MESSMAN RINEHART CORP.

Petition for Special Relief

SEPTEMBER 21, 1978.

Take notice that on July 7, 1978, Messman Rinehart Corp. (Petitioner), 125 North Market, Suite 1432, Wichita, Kans. 67202, filed a petition for special relief in Docket No. RI78-77 pursuant to § 2.76 of the Commission's Statements of General Policy and Interpretations.

Petitioner requests permission to change 1.03052¢ per Mcf at 14.73 psia for the sale of gas to Panhandle Eastern Pipe Line Co. from the Lerado Mississippi Gas Unit, located in Reno County, Kans. Currently, petitioner charges a total rate of 0.37128746¢ per Mcf for the sale of the subject gas. Petitioner states that at the present rate structure significant gas reserves will not be recovered from the subject gas unit.

Any person desiring to be heard or to make any protest with reference to said petition should on or before October 13, 1978 filed with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any party wishing to become a party to a proceeding, or to participate as a party in any hearing therein, must file a petition to intervene in accordance with the Commission's Rules.

KENNETH F. PLUMB,
Secretary.

[6740-02]

[Project No. 2826]

MONTEREY COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT, CALIF.

Application for Preliminary Permit

SEPTEMBER 21, 1978.

Public notice is given that an application for preliminary permit was filed on November 14, 1977, under the Federal Power Act, 16 U.S.C. §§ 791a-825r, by the Monterey County Flood Control and Water Conservation District, Calif. (Applicant) (Correspondence to: Mr. Loran Bunte, District Engineer, Monterey County Flood Control and Water Conservation District, P.O. Box 930, County Court House, Salinas, Calif. 93901; Mr. William H. Stoffers,

V 43/191

Monterey County Counsel, P.O. Box 930 County Court House, Salinas, Calif. 93901) for the San Antonio and Nacimiento Rivers, tributaries of the Salinas River, in Monterey and San Luis Obispo Counties, Calif. and would affect lands of the United States within the Hunter-Liggett Military Reservation.

The proposed project would have a total installed capacity of 6,000 kW and would consist of: (1) the existing earthfill San Antonio dam, 18 feet high with a crest length of 1430 feet at elevation 798 feet msl; (2) the existing San Antonio Reservoir with gross storage capacity of 350,000 acre-feet and surface area of 5,200 acres at elevation 780 feet; (3) the existing earthfill Nacimiento dam, 25 feet high, with a crest length of 1,630 feet at elevation 825 feet; (4) the existing Lake Nacimiento with gross storage capacity of 5,370 acres at elevation 800 feet; (5) a proposed 10,800-foot-long tunnel connecting the two reservoirs; and (6) a proposed powerhouse adjacent to the existing San Antonio dam containing four turbine-generator units. The project energy would be sold to a wholesale power purchaser.

A preliminary permit does not authorize construction. A permit, if issued, gives the Permittee, during the term of the permit, the right of priority of application for license while the Permittee undertakes the necessary studies and examinations to determine the engineering and economic feasibility of the proposed project, market for the power, and all other necessary information for inclusion in an application for license. The Applicant seeks a 36-month permit.

Anyone desiring to be heard or to make any protest about this application should file a petition to intervene or a protest with the Federal Energy Regulatory Commission, in accordance with the requirements of the Commission's Rules of Practice and Procedure, 18 CFR 1.8 or 1.10 (1977). In determining the appropriate action to take, the Commission will consider all protests filed, but a person who merely files a protest does not become a party to the proceeding. To become a party, or to participate in any hearing, a person must file a petition to intervene in accordance with the Commission's Rules. Any protest or petition to intervene must be filed on or before November 27, 1978. The Commission's address is: 825 North Capitol Street NE., Washington, D.C. 20426.

The application is on file with the Commission and is available for public inspection.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-27755 Filed 9-29-78; 8:45 am]

[6740-02]

[Docket No. CP77-378]

NORTHWEST PIPELINE CORP.

Petition to Amend

SEPTEMBER 21, 1978.

Take notice that on September 1, 1978, Northwest Pipeline Corp. (Petitioner), P.O. Box 1526, Salt Lake City, Utah 84110, filed in Docket No. CP77-378 a petition to amend the order of July 5, 1978, issued by the Commission in the instant docket pursuant to Section 7(c) of the Natural Gas Act so as to provide for the continued sale and delivery of up to 200 billion Btu's equivalent of natural gas per day to Pacific Interstate Transmission Co. (Pac-Interstate) for a term extending through October 31, 1978, or such later date as may coincide with the expiration of Petitioner's Kingsgate import authorization which may be extended but in no event, later than September 30, 1989, all as more fully set forth in the petition to amend on file with the Commission and open to public inspection.

Petitioner states that in its original application filed in the instant docket on May 13, 1977, it requested authorization to sell and deliver natural gas, on a best-efforts basis, to Pac-Interstate through October 31, 1977, pursuant to an agreement dated April 29, 1977. Such temporary authorization was granted on July 1, 1977, it is said. Pursuant to a contract amendment dated October 21, 1977, Petitioner requested that the Commission extend its authorization for the sale and delivery through October 31, 1978, it is stated. It is indicated that the Commission granted such authorization on July 5, 1978. It is further indicated that concurrrently with authorizations of July 1, 1977 and July 5, 1978 granted Petitioner, the Commission authorized El Paso Natural Gas Company, in Docket NO. CP77-407, to transport for the account of Pac-Interstate the quantities of natural gas to be sold to Pac-Interstate by Petitioner and further authorized Pac-Interstate, in Docket No. CP77-381, to sell to Southern California Gas Co. these quantities of natural gas.

Petitioner states that it and Pac-Interstate have, by an agreement dated July 14, 1978, agreed to amend further the April 29, 1977 agreement to extend the term as described above. The other provisions of the April 29, 1977 agreement remain unchanged, it is said, including the three-part rate structure, which is comprised of: (1) a charge for gas equal to the border price paid by Petitioner for gas purchased in Canada, (2) a transportation charge of 16.03¢ per Mcf of gas sold to Pac-Interstate (this rate will increase to 20.69¢ per Mcf on October 1, 1978, subject to refund, as proposed in Petitioner's general rate increase filed March 31, 1978 in Docket No. RP 78-50), and (3) a fuel charge equal to 2 percent of the MM Btu's of gas sold to Pac-Interstate multiplied by Petitioner's then-average cost of purchased gas. The present estimated cost to Pac-Interstate, assuming a cost of $2.16 per million Btu's, would be approximately $2.39 per million Btu's, it is said.

Petitioner states that it has gas available to it at the Sumas import point during off-peak periods, particularly during August through mid-October. Petitioner indicates that it is proposing to sell quantities of gas to Pac-Interstate which Westcoast Transmission Co. has available for export from Canada under existing export licenses which quantities are excess to Petitioner's total requirements.

Any person desiring to be heard or to make any protest with reference to said petition to amend should on or before October 13, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it or its designee in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

KENNETH F. PLUMB,
Secretary.

[6740-02]

[Docket No. CP78-511]

PANHANDLE EASTERN PIPE LINE CO. AND TRUNKLINE GAS CO.

Application

SEPTEMBER 21, 1978.

Take notice that on September 7, 1978, Trunkline Gas Co. and Panhandle Eastern Pipe Line Co. (Applicants), Post Office Box 1642, Houston, Tex. 77001, filed in Docket No. CP78-511 a joint application pursuant to section 7 of the Natural Gas and the regulations thereunder for a certificate of public convenience and necessity authorizing the transportation of natural gas on behalf of Northern Natural Gas Company (Northern). It is indicated that the proposed agreement contains further elements of an agreement approved by the Commission in Docket No. CP77-17. Applicants' proposals are more fully set forth in the application which is on file with the Commission and open to public inspection.

Applicants propose to receive initial quantities of 15,000 Mcf per day for the account of Northern utilizing the existing facilities and capacity of their respective systems. It is stated that pursuant to a June 19, 1978 transportation agreement, Applicants would redeliver those volumes for Northern's account at Trunkline's compressor station at Longville, La., less compressor fuel and certain quantities to be sold to Panhandle. Further, it is stated that such gas would be transported thereafter pursuant to a Transportation Agreement dated September 24, 1976, between Applicants and Northern wherein Trunkline would receive the gas at Longville, La., and redeliver to Panhandle at the interconnection between Applicant's facilities near Tuscola, Ill., for further delivery by Panhandle to Northern in Kiowa County, Kans. It is asserted that the gas would be transported to Longville under a transportation agreement between Applicants and Northern dated June 19, 1978, pursuant to which Northern would make delivery to Trunkline in Acadia, Jefferson Davis or St. Mary Parish, La., through arrangements with Tennessee Gas Pipeline Co., a Division of Tenneco Inc., and Columbia Gulf Transmission Co. For the transportation service between the point of receipt and Trunkline's Longville, La., compressor station, Northern would pay a monthly charge of $19,080, it is indicated.

Applicants state that the initial volumes to be transported to Longville, La., may be reduced after 5 years by up to 50 percent.

Further, it is shown that as partial consideration for this transportation service, Northern has agreed to sell to Panhandle up to 20 percent of the volumes delivered at the points of receipt.

Applicants also seek authorization to effectuate a transportation agreement between Applicants which provides for the transportation by Trunkline of the gas purchased by Panhandle from Northern, and that in consideration for said transportation Panhandle would pay to Trunkline a monthly transportation charge of $20,280.

Protests and petitions to intervene may be filed with the Federal Energy Regulatory Commission, Washington, D.C. 20426, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10), on or before October 13, 1978. All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's rules.

Take further notice that pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission, on its motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for unless otherwise advised, it will be unnecessary for Trunkline or Panhandle to appear or be represented at the hearing.

KENNETH F. PLUMB,
Secretary.

[6740-02]

Docket No. CP78-516]

PANHANDLE EASTERN PIPE LINE CO. AND TRUNKLINE GAS CO.

Application

SEPTEMBER 21, 1978.

Take notice that on September 12, 1978, Panhandle Eastern Pipe Line Co. (Panhandle) and Trunkline Gas Co. (Trunkline) (Applicants), P.O. Box 1642, Houston, Tex. 77001, filed in Docket No. CP78-516 a joint application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation of natural gas for Northern Natural Gas Co. (Northern), all as more fully set forth in the application on file with the Commission and open to public inspection.

Applicants request authorization to transport initially 47,500 Mcf of natural gas for Northern which gas Northern would purchase from West Cameron Block 630, offshore Louisiana, pursuant to a transportation and sales agreement dated July 24, 1978, among Applicants and Northern. Pursuant to the subject agreement Trunkline would receive the gas at a point of delivery in Acadia, Jefferson Davis, and St. Mary Parishes, La., through arrangements made by Northern with Columbia Gulf Transmission Co. (Columbia) and Tennessee Gas Pipeline Co., a Division of Tenneco Inc. (Tennessee), and Trunkline would redeliver said gas for Northern's account at Trunkline's Longville, La., compressor station in Beauregard Parish, La.

The application states that for transportation service between the points of receipt and Trunkline's Longville, La., compressor station, Northern would pay Panhandle a monthly charge of $60,420 subject to adjustment based on firm transportation for Northern of 38,000 Mcf per day at 14.73 psia saturated. An extra 0.62 cent above the aforesaid rate would be charged to Northern for each Mcf of gas taken at the Centerville point of receipt, and an upward or downward adustment of 5.22 cents per Mcf would be applied to any deficiency or excess in quantities taken, it is said. It is indicated that Panhandle would pay Trunkline for its pro rata share of the transportation service from the amounts paid by Northern and that Northern would reimburse Trunkline 1 percent of the volume received for fuel usage and line losses in transportation service between the point of receipt and Longville.

Applicants state that as partial consideration for the proposed transportation of such gas for Northern's account by Applicants as provided in the September 24, 1976, transportation agreement, Northern would sell to Panhandle up to 20 percent of the volumes received by Trunkline at the aforesaid points of delivery (Sales Gas). The purchase price for such gas would be Northern's weighted average purchase price per Mcf plus associated transportation charges paid to others to effectuate delivery to Trunkline plus associated cost of service charges applicable to facilities Northern installs or causes to be installed to provide service to effect deliveries herein it is indicated.

Applicants also seek authorization to effectuate a transportation agreement dated August 4, 1978, between themselves, which agreement provides for the transportation by Trunkline of the gas purchased by Panhandle from Northern. In consideration for said transportation Panhandle would pay Trunkline a monthly charge of $64,220 based on a firm transportation quantity of 9,500 Mcf per day during the period of 5 years from the date of first delivery, it is stated. The application states that Panhandle, however, would have an option to reduce said quantity in the sixth and subsequent years to no less than 50 percent of the initial volume, and an upward or downward adjustment of 22.21 cents per Mcf would be applied to any deviation

OCT 2 1978 UMI

V 43/191

from said 9,500 Mcf per day in quantities taken. An extra 0.62 cent above the aforesaid rate would be charged to Panhandle for each Mcf of gas taken at the Centerville point of reciept, and that Trunkline would retain 5 percent of the volumes received hereunder as reimbursement for fuel and line losses, it is indicated.

Any person desiring to be heard or to make any protest with reference to said application should on or before October 13, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a peition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to jurisdiction conferred upon the Federal Energy Regulation Commission by sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, futher notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicants to appear or be represented at the hearing.

KENNETH F. PLUMB,
Secretary.

[6740-02]

[Docket No. RP78-62]

PANHANDLE EASTERN PIPE LINE CO.

Proposed Changes

SEPTEMBER 25, 1978.

Take notice that Panhandle Eastern Pipe Line Co. (Panhandle) on September 15, 1978, tendered for filing proposed changes in the following revised tariff sheets:

FERC Gas Tariff, Original Volume No. 1

Substitute 24th revised sheet No. 3-A.
Substitute first revised sheet No. 3-B.
Substitute second revised sheet No. 43-1.
Substitute fourth revised sheet No. 43-2.
Substitute fifth revised sheet No. 43-3.
Substitute sixth revised sheet No. 43-4.

An effective date of November 1, 1978 is proposed.

These substitute tariff sheets are tendered to replace revised Volume 1 tariff sheets included in Panhandle's rate filing of May 1, 1978 in Docket No. RP78-62. The proposed rate increase in said docket was accepted for filing and suspended until November 1, 1978, by order of the Commission issued May 31, 1978.

Panhandle states that it seeks (1) to file the rates proposed in the substitute tariff sheets to be effective November 1, 1978, and (2) restate the base cost of gas in accordance with its currently effective PGA procedure, as required by the May 31, 1978 order.

Copies of this filing were served on Panhandle's jurisdictional customers, interested State regulatory agencies and all parties to the proceeding.

Any person desiring to be heard or to make any protest with reference to said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10).

All such petitions or protests should be filed on or before October 20, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-27747 Filed 9-29-78; 8:45 am]

[6740-02]

[Docket No. CP78-510]

PANHANDLE EASTERN PIPE LINE CO. AND TRUNKLINE GAS CO.

Application

SEPTEMBER 26, 1978.

Take notice that on September 6, 1978, Trunkling Gas Co. and Panhandle Eastern Pipe Line Co. (Applicants), P.O. Box 1642, Houston, Tex. 77001, filed in Docket No. CP78-510 a joint application pursuant to section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation of natural gas on behalf of Northern Natural Gas Co. (Northern). It is indicated that the proposed agreement contains further elements of an agreement approved by the Commission in Docket No. CP77-17. Applicants' proposals are more fully set forth in the application which is on file with the Commission and open to public inspection.

Applicants propose to receive initial quantities of gas 30,000 Mcf per day for the account of Northern utilizing the existing facilities and capacity of their respective systems. It is stated that pursuant to a March 1, 1978 transportation agreement, Applicants would redeliver those volumes for Northern's account at Trunkline's compressor station at Longville, La., less compressor fuel and certain quantities to be sold to Panhandle. Further it is stated that such gas would be transported thereafter pursuant to a Transportation Agreement dated September 24, 1976, between Applicants and Northern wherein Trunkline would receive the gas at Longville, La., and redeliver to Panhandle at the interconnection between Applicants' facilities near Tuscola, Ill., for further delivery by Panhandle to Northern in Kiowa County, Kans. It is asserted that the gas would be transported to Longville under a transportation agreement between Applicants and Northern dated March 1, 1978, pursuant to which Northern would make delivery to Trunkline in Acadia, Jefferson Davis, or St. Mary Parish, La., through arrangements with Tennessee Gas Pipeline Co., a Division of Tenneco Inc., and Columbia Gulf Transmission Co. For the transportation service between the point of receipt and Trunkline's Longville, La., compressor station, Northern would pay a monthly charge of $38,160 based on firm transportation for Northern of 24,000 Mcf per day at 14.73 psia saturated, it is indicated.

Applicants state that initial volumes to be transported to Longville, La., may be reduced after 5 years by up to 50 percent.

Further, it is shown that as partial consideration for this transportation service, Northern has agreed to sell to Panhandle up to 20 percent of the volumes delivered at the points of receipt.

Applicants also seek Commission approval of a transportation agreement between them which provides for the transportation by Trunkline of the gas purchased by Panhandle from Northern, and that in consideration for said transportation Panhandle would pay to Trunkline a monthly transportation charge of $40,560, based on a firm transportation quantity of 6,000 Mcf per day during the period of 5 years from the date of first delivery.

Any person desiring to be heard or to make any protest with reference to said application should on or before October 17, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission, on its motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for unless otherwise advised, it will be unnecessary for Trunkline or Panhandle to appear or be represented at the hearing.

KENNETH F. PLUMB,
Secretary.

[Docket No. RP73-48]

PEOPLES NATURAL GAS DIVISION OF NORTHERN NATURAL GAS CO.

Rate Change Pursuant to Purchased Gas Cost Adjustment Provision

SEPTEMBER 25, 1978.

Take notice that Peoples Natural Gas Division of Northern Natural Gas Co. on September 12, 1978, tendered for filing Second Substitute Twenty-first Revised Sheet No. 3a of its FPC Gas Tariff, Original Volume No. 4. The proposed change to become effective October 1, 1978, would increase the rate per Mcf to jurisdictional customers by 27.61 cents per Mcf. This increase reflects the net effect of a decrease in rates to Peoples resulting from a rate change by Colorado Interstate Gas Co. at Docket No. RP78-51 and a semiannual Purchased Gas Adjustment filed by CIG in accordance with the provisions of its FPC Gas Tariff. Colorado Interstate is the pipeline supplier to Peoples for sales made under Volume No. 4.

Copies of the filing were served upon the Gas Utility Customers and interested State Commissions.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's rules of practice and procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 4, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[6740-02]

[Docket No. RP78-85]

VILLAGE OF PAWNEE, ILL., ET AL., COMPLAINANT PETITIONERS v. PANHANDLE EASTERN PIPE LINE CO., RESPONDENT

Complaint and Petition for Relief

SEPTEMBER 21, 1978.

Take notice that on August 30, 1978, the Villages of Pawnee, Divernon, Pleasant Hill, and Riverton, Ill., the Cities of Auburn, Bushnell, Pittsfield, and Montgomery, Ill., and the Town Gas Co., complainant petitioners (petitioners), filed a petition, pursuant to the provisions of the Natural Gas Act, requesting relief from certain restrictions imposed under the FERC Gas Tariff of Panhandle Eastern Pipe Line Co., (Panhandle Eastern).

Petitioners state that they are full requirements customers of Panhandle Eastern with contract demands of less than 6,000 Mcf per day, and assert that the provisions of section 16.5(c)(4) of the General Terms and Conditions of Panhandle Eastern's FERC Gas Tariff preclude them from attaching new customers while other classes of Panhandle Eastern's customers are not subject to such restrictions, resulting in discrimination and financial hardship. Petitioners further assert that because of heavy temperature sensitive loads with little or no system flexibility they cannot add new customers and thus risk not meeting the conditions of section 16.5(c)(4) for exemption from the $10 per Mcf overrun penalty for volumes taken in excess of Panhandle Eastern's curtailment orders. They, claim to have not been attaching any new Priority 1 loads even though they have sufficient peak day gas volume capabilities to serve new residential and small commercial customers. According to petitioners, many large customers of Panhandle Eastern have been connecting new customers with little or no restriction as to the type of load attached.

Petitioners estimate that during the first year they would add 383 new customers with annual requirements of 70,465 McF, respresenting about 0.0117 percent of Panhandle Eastern's annual deliveries.

It is requested that petitioners be allowed to connect new Priority 1 customers within the limits of their applicable daily contract demands and that Panhandle Eastern be directed to amend the latter portion of § 16.5(c)(4) of its tariff to read "and (b) it did not attach or supply any new gas usuage on its system, within Opinion No. 754 for Priorities 2 through 5 after September 1, 1978."

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 18, 1978. Protest will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[Docket No. OR78-6]

POWDER RIVER PIPELINE CORP. AND THE CRUDE CO. v. AMOCO PIPELINE CO.

Order Setting Complaint for Investigation Granting Intervention and Denying Motion To Dismiss

SEPTEMBER 22, 1978.

On January 4, 1978, Powder River Pipeline Corp. (Powder River) and its

OCT 2 1978

V 4 3 / 1 9 1

0 C 2 7 8

affiliate the Crude Co. (TCC) filed a complaint that alleged that Amoco Pipeline Co. (Amoco) unreasonably favored Western Oil Transportation Co., Inc. (Western) in the allocation of Amoco's pipeline capacity at Reno station, Wyo.[1]

Powder River's complaint is predicated on section 3(1) of the Interstate Commerce Act (Act) which prohibits pipeline common carriers from discriminating between shippers by giving any undue preference or advantage to any shipper. (49 U.S.C. 3(1) (1970).)

Powder River requests, among other things, that the Commission order an investigation and hearing and thereafter order Amoco to cease from its discriminatory practices.[2] On April 13, 1978, Amoco filed a motion to dismiss grounded on the assertion that Powder River's complaint is legally insufficient on its face.[3]

Amoco contends that it has always allocated capacity at Reno station on the basis of current tenders; that any disadvantage experienced by Powder River is not the consequence of its conduct and that in allocating capacity at Reno station it was not under an obligation to consider the availability of capacity to Western at its Sussex station. Amoco also argues that the issues raised by the complaint are moot because Amoco presently has space capacity at Reno station.[4]

Amoco has failed to introduce facts or arguments that would support a Commission determination that Powder River's complaint was legally insufficient on its face, as required by 49 CFR 1110.34(a). Accordingly, Amoco's motion to dismiss is denied.

The Commission finds that it is necessary and in the public interest that the Commission enter upon a hearing concerning the complaint filed by Powder River.

The Commission orders:

(A) Petitioners—Western and Permian—shall be permitted to intervene in this proceeding subject to the Commission's rules and regulations: *Provided, however,* That the participation of the intervenors shall be limited to matters affecting asserted rights and interests specifically set forth in the petitions to intervene; *And provided, further,* That the admission of such interveners shall not be construed as recognition that they might be agrieved by any order entered in this proceeding.

(B) Amoco's motion to dismiss Powder River's complaint is denied.

(C) Pursuant to the authority of section 13(1) of the Interstate Commerce Act (49 U.S.C. 13(1)), an investigation at this Commission shall be instituted and a public hearing shall be held concerning the allegations contained in Powder River's complaint.

(D) Powder River shall submit its case-in-chief within 45 days from the issuance of this order. Amoco shall submit its case-in-chief within 45 days after Powder River's filing and the Commission staff and petitioners—Western and Permian—shall file their cases within 30 days after Amoco's filing.

(E) A Presiding Administrative Law Judge, to be designated by the Chief Administrative Law Judge for that purpose shall convene a settlement conference in this proceeding to be held within 30 days after the filing of testimony as provided in paragraph (D) of this order in a hearing room of the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426. The Presiding Administrative Law Judge is authorized to establish such further procedural dates as may be necessary and to rule on all motions as provided for the in the rules of practice and procedure. (49 CFR Part 1100.66.)

(F) The Secretary shall cause prompt publication of this order in the FEDERAL REGISTER.

By the Commission.

KENNETH F. PLUMB,
Secretary.

[6740-02]

[Docket No. E-9454]

PUBLIC SERVICE CO. OF NEW MEXICO

Compliance Filing

SEPTEMBER 22, 1978.

Take notice that Public Service Co. of New Mexico on July 20, 1978, tendered for filing, pursuant to ordering paragraph B of the Commission's July 5, 1978, order affirming initial decision of Administrative Law Judge, its contract with Western Coal Co. relating to the purchase of coal from Western.

Any person desiring to be heard or to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.10). All such protests should be filed on or before October 2, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken. Copies of this filing are on file with the Commission and are available for public inspection.

[6740-02]

[Docket Nos. ER78-337 and ER78-338]

PUBLIC SERVICE CO. OF NEW MEXICO

Order Revising Previous Order in Part

SEPTEMBER 22, 1978.

By motion filed August 24, 1978, Community Public Service Co. (CPSC) requests that the Commission revise its June 30 order [1] to the extent of empowering the Administrative Law Judge to provide for a Phase II procedural schedule that would permit the parties to move forward on Phase II issues without interfering with the expeditious processing of Phase I.

CSPC recites that portion of the June 30 order which provided that "Phase II will commence after a final order on rehearing has been issued in Phase I",[2] and states that the Administrative Law Judge was constrained by this language from providing for any procedural dates for Phase II until determination of Phase I issues. CPSC submits that after the conclusion of the Phase I hearing it is not necessary to defer the Phase II evidence while Phase I issues are pending before the Administrative Law Judge and, ultimately, the Commission.

A response to CPSC's motion was filed by Public Service Co. of New Mexico (PNM) on September 8, 1978. PNM states that to the extent that CPSC's motion seeks to move forward in Phase II without interference with expeditious resolution of Phase I, it does not oppose the relief requested.

We agree with the point raised by CPSC. Accordingly, we shall grant the Administrative Law Judge the discretion to provide for Phase II procedures without having to await final Commission resolution of Phase I. The June 30 order shall be revised to reflect this change.

The Commission orders:

(A) The Administrative Law Judge is hereby granted the discretion to provide for Phase II procedures without having to await final Commission resolution of Phase I issues. The June 30 order is hereby modified to reflect this change.

(B) The Secretary shall cause prompt publication of this order to be made in the FEDERAL REGISTER.

By the Commission.

KENNETH F. PLUMB,
Secretary.

[Docket No. RP73-92 (PGA78-3)]

RATON NATURAL GAS CO.

Amendment to PGA Rate Filing

SEPTEMBER 22, 1978.

Take notice that on September 12, 1978, Raton Natural Gas Co. (Raton) tendered for filing Replacement Alternate Eighteenth Revised Sheet No. 3a amending rate changes proposed by its PGA filing in Docket No. RP73-92.

Raton states that the amendment is necessary to track a new filing by Colorado Interstate Gas Co. (CIG) which will change Raton's gas cost effective October 1, 1978. Tracking of the revised CIG gas cost increase results in increased rate from $1.40 to $1.50 per Mcf demand and from 116.54¢ to 147.32¢ per Mcf commodity.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 6, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[Docket No. RP77-6]

SEA ROBIN PIPELINE CO.

Filing

SEPTEMBER 20, 1978.

Take notice that on September 8, 1978, Sea Robin Pipeline Co. (Sea Robin) filed the following revised tariff sheets with the Federal Energy Regulatory Commission:

Original Volume No. 1

Eighteenth revised sheet No. 4.
Second revised sheet No. 5.
Second revised sheet No. 7.

Original Volume No. 2

Substitute fifth revised sheet No. 39.
First revised sheet No. 39-A.
Sixth revised sheet No. 64.
Eighth revised sheet No. 96.
Sixth revised sheet No. 97.
Fourth revised sheet No. 127-D.
Fourth revised sheet No. 135-C.
Second revised sheet No. 150.
Second revised sheet No. 151.
First revised sheet No. 176.
First revised sheet No. 197.
First revised sheet No. 218.
First revised sheet No. 240.
Second revised sheet No. 264.
Substitute second revised sheet No. 264.
First revised sheet No. 288.
First revised sheet No. 289.
First revised sheet No. 314.
First revised sheet No. 315.
First revised sheet No. 340.
First revised sheet No. 357.
First revised sheet No. 365.
First revised sheet No. 390.
First revised sheet No. 391.
First revised sheet No. 416.
First revised sheet No. 417.
First revised sheet No. 446.
First revised sheet No. 447.

This filing was made in accordance with the terms of the settlement agreement in docket No. RP77-6, as modified by letter order dated May 11, 1978, and order denying rehearing and clarifying order approving settlement agreement subject to conditions issued July 12, 1978. Except for substitute second revised sheet No. 264 with a proposed effective date of August 20, 1978, it is proposed that these tariff sheets become effective on August 1, 1978.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 29, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[6740-02]

[Docket No. RP78-89]

SOUTHERN NATURAL GAS CO.

Proposed Changes in FERC Gas Tariff

SEPTEMBER 22, 1978.

Take notice that Southern Natural Gas Co (Southern), on September 1, 1978, tendered for filing proposed changes in its FERC Gas Tariff, Original Volume No. 3. The proposed changes would increase revenues from a field sale to Sea Robin Pipeline Co. under Southern's Rate Schedule F-9.

Southern states that this filing reflects rate increases in accordance with article 7 of the subject rate schedule up to the level allowed effective July 1, 1978 by § 2.56a(a)(2) of the Commission's Statements of General Policy and Interpretations. The increased rates reflected in the filing will increase annual revenues by $20,230. The proposed effective date is October 1, 1978.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). Any such petitions or protests should be filed on or before September 29, 1978. Protests will be considered by the Commission determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with

[1] Public notice of Powder River's complaint was issued Feb. 13, 1978. On Mar. 17, 1978, Western and the Permian Corp. filed a motion to intervene. Western is a wholly owned subsidiary of Permian. The Commission finds that the petitioners have demonstrated an interest in this proceeding which warrants their participation. The petition shall therefore be granted.

[2] On Aug. 25, 1977, Powder River filed a complaint in the U.S. District Court for the District of Colorado against Western, Permian, and Amoco. Powder River also filed a motion for a temporary restraining order or preliminary injunction which was later withdrawn when Amoco agreed to accept Powder River's full tender for September. On Oct. 14, 1977, the court filed its memorandum Opinion and order in which the court found that the question of whether Amoco had violated the Act was within the primary jurisdiction of the FERC; retained jurisdiction of that case until after the Commission considers the propriety of Amoco's proration policy and retained jurisdiction of Powder River's antitrust claims. Further, the court issued a preliminary injunction against Amoco enjoining it from allocating capacity at Reno station in such a manner as to give an undue preference to Western and Permian.

[3] On Mar. 3, 1978, Amoco filed a motion to extend until Apr. 14, 1978, the time to file its complaint. On Apr. 27, 1978, Powder River requested an extension of time to file a response to Amoco's motion to dismiss. The request was granted and Powder River filed its opposition May 12, 1978.

[4] Powder River contends that: Amoco's initial adoption of an allocation system on historical tenders was improper; Amoco was required to take into account Western's access to Amoco's system at Sussex station; that public policy favors requiring Amoco to take account of available capacity at Sussex in allocating space at Reno Station, and that Powder River's damages are the direct consequence of Amoco's acts.

[1] Public Service Co. of New Mexico, Docket Nos. ER78-337 and ER78-338, order issued June 30, 1978.

[6740-02]

[Docket No. RI78-45]

T.E.L. OIL & GAS CORP.

Amended Petition for Special Relief

SEPTEMBER 20, 1978.

Take notice that on August 14, 1978, T.E.L. Oil & Gas Corp. (Petitioner), 125 North Roosevelt, Box 292, Guymon, Okla. 73942, filed an amended petition for special relief in Docket No. RI78-45 pursuant to 18 CFR 2.76. In its original petition for special relief, petitioner requests permission to sell its gas, produced from the Halsell No. 1 Well, in Texas County, Okla., and sold to Panhandle Eastern Pipe Line, at the reduced rate of 54.1¢ per Mcf. In its original petition which was filed on March 23, 1978, and noticed on July 14, 1978, petitioner requested authorization to sell the above-referenced gas to the above-named purchaser at a rate of 72.06098¢ per Mcf.

It appears reasonable and consistent with the public interest in this case to prescribe a period shorter than 10 days for the filing of protests and petitions to intervene. Therefore, any person desiring to be heard or to make any protest with reference to said application should on or before September 29, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's rules of practice and procedure (18 CFR 1.8 or 1.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's rules.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-27760 Filed 9-29-78; 8:45 am]

[6740-02]

[Docket No. CP76-322]

TENNESSEE GAS PIPELINE CO., A DIVISION OF TENNECO INC., AND EAST TENNESSEE NATURAL GAS CO.

Petition To Amend

SEPTEMBER 21, 1978.

Take notice that on September 12, 1978, Tennessee Gas Pipeline Co., a division of Tenneco Inc. (Tennessee), P.O. Box 2511, Houston, Tex. 77001, and East Tennessee Natural Gas Co. (East Tennessee) (Petitioners), P.O. Box 20245, Knoxville, Tenn., filed a Docket No. CP 76-322 a petition to amend the order of June 30, 1976, issued in the instant docket (57 FPC —)[1] pursuant to section 7(c) of the Natural Gas Act and section 2.79 of the Commission's General Policy and Interpretations (18 CFR 2.79) so as to authorize Petitioners to transport gas for Stauffer Chemical Co. (Stauffer) for an additional 2-year period, all as more fully set forth in the petition to amend on file with the Commission and open to public inspection.

It is indicated that pursuant to the June 30, 1976, order Tennessee was authorized, inter alia, to transport for a 2-year period up to 1,700 Mcf of gas per day for Stauffer and East Tennessee was authorized to transport up to 1,688 Mcf per day for Stauffer, which gas was produced by Texas Pacific Oil Co. (Texas Oil) from the Beckwith Creek Field in Calcasieu Parish, La. It is stated that production from the Beckwith Creek Field declined more rapidly than anticipated and that on June 30, 1976, Petitioners requested permission to transport gas from a source in addition to the Beckwith Creek Field. The new deliveries were to be made by Texas Pacific Oil Co. (UK) Inc. (Texas Pacific) from the Waveland Field in Hancock County, Miss. Pursuant to the Commission order of March 24, 1978, Petitioners were granted temporary certificate authorization to transport up to 650 Mcf of natural gas per day from the Waveland Field with total transported volumes from all sources not to exceed a maximum of 1,700 Mcf per day. Such temporary authorization expired August 15, 1978, it is indicated. Petitioners state that they transported volumes for Stauffer's account for 2 years, and then abandoned same on August 15, 1978.

The petition indicates that Stauffer has a continuing need for gas to meet its high priority requirements, and that Stauffer has arranged to purchase up to 650 Mcf of gas per day from Texas Pacific for 2 additional years, pursuant to a gas purchase agreement between Stauffer and Texas Pacific, dated July 6, 1978, which gas would be produced from the Zengarling No. 1 well in the Waveland Field, Hancock County, Miss. It is stated that Stauffer would pay Texas Pacific $1.80 per million Btu's for the subject gas for the first additional year of the contract, which price would increase to $1.90 effective the first day of the second contract year and continuing thereafter. In addition, Stauffer would pay Texas Pacific $0.10 per million Btu's for the gathering and measuring of the gas, it is said. It is indicated that such gas is not available for resale in the interstate market.

Petitioners request authorization to render, to the extent their operating conditions permit, transportation services for Stauffer for an additional 2-year period, which transported gas would enable Stauffer to continue receiving natural gas for its plant in Mt. Pleasant, Tenn., to mitigate the effects of curtailment being imposed on Stauffer by East Tennessee. Tennessee proposes to receive from Texas Pacific up to 650 Mcf of natural gas per day together with volumes for Tennessee's fuel end use requirements associated with this transportation service, and to transport and deliver to East Tennessee equivalent daily volumes of natural gas, exclusive of fuel and use volumes, up to the said Maximum Daily Quantity (MDQ), to the extent its operating conditions permit through the utilization of its existing facilities and on the terms and conditions and at the rates set forth in the transportation contract among Petitioners and Stauffer.

It is stated that Stauffer would arrange to have the MDQ plus the fuel and use volumes delivered into Tennessee's existing pipeline at the interconnection of the facilities of Tennessee and Texas Pacific at Tennessee's Side Valve 530B-102 in Hancock County, Miss. Tennessee proposes to receive the gas at such point and to transport and deliver the MDQ, or a lesser volume to East Tennessee for the account of Stauffer at Tennessee's existing Lobelville Sales Meter Station delivery point to East Tennessee in Perry County, Tenn., at Tennessee's Main Line Valve No. 79-1 plus 1.85 miles (Lobelville).

East Tennessee proposes to receive from Tennessee at Lobelville daily volumes of natural gas up to the MDQ of 650 Mcf for the account of Stauffer, and to transport and deliver equivalent volumes of natural gas, less a daily volume for East Tennessee's fuel and use requirements associated with this transportation service, to Stauffer at East Tennessee's existing Stauffer Sales Meter Station in Maury County, Tenn.

It is stated that Stauffer would pay Tennessee each month for the transportation service (A) the sum of (i) a demand charge equal to the product of $1.32 multiplied by the MDQ of 650 Mcf, less any demand charge credit provided therein, if applicable; and (ii) a volume charge equal to the product of 16.79 cents per Mcf multiplied by the total of the scheduled daily volumes during such month; or (B) a minimum monthly bill consisting of the demand charge plus a minimum volume charge consisting of the product of 4.34 cents multiplied by (i) the number of days in said month and (ii) 66⅔ percent of the MDQ. However, at the end of each contract year, Stauffer would, under certain specified conditions, receive an annual bill credit, it is said. It is stated that Tennessee proposes to receive each day, in addition to the scheduled daily volume, a volume of natural gas equal to 5.76 percent of such scheduled daily volume for its fuel and use requirements associated with this transportation service. The receipt of such additional gas provides assurance that Tennessee's customers would not suffer a diminution in their supply of gas as a result of the proposed transportation service, it is asserted.

It is indicated that Stauffer would pay East Tennessee each month for the transportation service 29.14 cents per Mcf delivered by East Tennessee to Stauffer, and that East Tennessee proposes to retain each day a volume determined by multiplying the daily volume delivered by Tennessee to East Tennessee for the account of Stauffer by 0.72 percent. It is further indicated that East Tennessee's other customers would not suffer any loss of volumes as a result of this transportation service.

Any person desiring to be heard or to make any protest with reference to said petition to amend should on or before October 13, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's rules of practice and procedure (18 CFR 1.8 or 1.10) and the regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's rules.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-27761 Filed 9-29-78; 8:45 am]

[6740-02]

[Docket No. RP73-114]

TENNESSEE GAS PIPELINE CO., A DIVISION OF TENNECO INC.

Refund Report

SEPTEMBER 25, 1978.

Take notice that on September 11, 1978, Tennessee Gas Pipeline Co., a division of Tenneco Inc. (Tennessee), filed a plan for disposition of refunds which it received from Sea Robin Pipeline Co.

Tennessee states that upon Commission approval of its refund plan it will flow-through to its customers $939,293.14 by means of a credit to its Unrecovered Purchased Gas Cost Account. Tennessee states that it is not refunding the remaining $478,331.82 applicable to periods covered by settlements or Commission orders reflecting test period estimates rather than actual book figures.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with sections 1.8 and 1.10 of the Commission's rules of practice and procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 13, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene, provided, however, that any person who has previously filed a petition to intervene in this proceeding is not required to file a further petition. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-27737 Filed 9-29-78; 8:45 am]

[6740-02]

[Docket Nos. RP 75-13, et al.]

TENNESSEE NATURAL GAS LINES, INC.

Proposed Plans of Refund

SEPTEMBER 25, 1978.

Take notice that Tennessee Natural Gas Lines, Inc. (Tennessee Natural), on September 10, 1978, tendered for filing a Report of Flow Through of Refunds resulting from refunds made by Tennessee Gas Pipeline Co. (Tennessee) to Tennessee Natural in compliance with a Stipulation and Agreement approved by the Commission's letter order of May 1, 1978, in Docket Nos. RP75-13, et al.,

Tennessee Natural states that on July 17, 1978, it received a refund from Tennessee and it completed distribution of a refund to its sole jurisdictional customer, Nashville Gas Co. (Nashville), in accordance with its tariff on August 31, 1978. Tennessee Natural states that the refund to Nashville, including principal and interest, totals $3,316,331.23 and covers the period March 15, 1975, through December 31, 1977.

Tennessee Natural further states that the refund from Tennessee to Tennessee Natural reflects a reduction in the demand rate which results in Tennessee Natural having received more demand charge credit in prior periods than under the rates approved in this docket and therefore, Tennessee reduced the amount of Tennessee Natural's refund accordingly. However, since no demand credits were given Nashville Gas Co., no reduction was made in Nashville's refund. Tennessee Natural states that the issue of demand charge credit will be ultimately resolved when Commission Docket Nos. RP76-71, RP71-11 (PGA-76-1) is concluded and the appropriate adjustments made at that time.

Tennessee Natural states that copies of the filing have been mailed to Tennessee Natural's sole jurisdictional customer and to the Tennessee Public Service Commission.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 16, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-27738 Filed 9-29-78; 8:45 am]

[1] This proceeding was commenced before the FPC. By joint regulation of October 1, 1977 (10 CFR 1000.1), it was transferred to the Commission.

OCT 2 1978

V 43 / 191

[6740-02]

[Docket No. RP75-13, et al.]

TENNESSEE GAS PIPELINE CO., A DIVISION OF TENNECO INC.

Refund Report

SEPTEMBER 25, 1978.

Take notice that on September 12, 1978, Tennessee Gas Pipeline Co., a division of Tenneco Inc. (Tennessee), tendered for filing a report on further refunds made pursuant to the Stipulation and Agreement approved by the Commission's letter order of May 1, 1978 in this proceeding.

Tennessee states that it refunded to its jurisdictional customers in August 1978 $840,338 related to State income tax refunds which it had received.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 10, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene; provided, however, that any person who has previously filed a petition to intervene in this proceeding is not required to file a further petition. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[6740-02]

[Docket No. CP78-509]

TEXAS EASTERN TRANSMISSION CORP.

Application

SEPTEMBER 21, 1978.

Take notice that on September 6, 1978, Texas Eastern Transmission Corp. (Texas Eastern), Post Office Box 2521, Houston, Tex. 77001, filed in Docket No. CP78-509 an application pursuant to section 7 of the Natural Gas Act and section 2.79 of the Commission's General Policy and Regulations (18 CFR 2.79) for a certificate of public convenience and necessity authorizing Texas Eastern to construct interconnection facilities and to transport natural gas for Aluminum Co. of America (Alcoa) for 2 years for use at its Warrick Operations located in Newburgh, Ind., all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Texas Eastern proposes to construct facilities at a point where its 30-inch line and a pipeline of Lavaca Pipeline Co. (Lavaca), a wholly owned subsidiary of Alcoa, intersect in Calhoun County, Tex. It is said that Texas Eastern would receive at this point up to 6,361 dths per day equivalent of natural gas for Alcoa's account. Texas Eastern proposes to then transport the stated quantities, less 3 percent for gas used in providing such a service, to an existing point of interconnection between Texas Eastern and Texas Gas Transmission Corp. (Texas Gas) located in Clairborne Parish, La., for redelivery by Texas Gas to Southern Indiana Gas & Electric Co. (SIGECo.) for ultimate delivery to Alcoa's Warrick Operations facility in Newburgh, Ind. Texas Eastern proposes to charge 14.89 cents per dth for the service. Texas Eastern asserts that construction of the interconnection and metering facilities between Texas Eastern and Lavaca in Calhoun County, Tex. is estimated to cost approximately $76,700.

It is stated that Alcoa has purchased from Weeks Petroleum Corp. (Weeks) gas produced from its Matagorda Bay Field in Calhoun County, Tex. and from Sun Gas Co. (Sun Gas) gas produced from its Swan Lake Field in Jackson County, Tex. It is further stated Alcoa has agreed to pay $1.95 per Mcf for the gas from Sun Gas, and $1.85 per Mcf subject to a 10-cent escalation in price starting on April 1, 1979 for Weeks gas.

It is stated that the subject gas is owned and produced by Weeks and Sun Gas and committed to Alcoa only, and, therefore, not available to Texas Eastern.

It is stated that Alcoa's Warrick, Ind., facility is an aluminum plant currently experiencing curtailments from its supplier, SIGECo. It is further stated that the Warrick plant produces aluminum needed by the food packaging and container industry and that an alleged emergency need exists for the subject gas.

Any person desiring to be heard or to make any protest with reference to said application should on or before October 13, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene, provided, however, that any person who has previously filed a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission, or its designee, on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

KENNETH F. PLUMB,
Secretary.

[6740-02]

[Docket No. RP74-41]

TEXAS EASTERN TRANSMISSION CORP.

Compliance Filing

SEPTEMBER 25, 1978.

Take notice that on September 7, 1978, Texas Eastern Transmission Corp. (Texas Eastern) tendered for filing several revised tariff sheets to Fourth Revised Volume No. 1 and Original Volume No. 2 of its FERC Gas Tariff, which are proposed to be effective August 9, 1978. Texas Eastern states that these sheets are being filed in compliance with the terms of Opinion No. 21, issued August 9, 1978 in this docket.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 10, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene, provided, however, that any person who has previously filed a petition to intervene in this proceeding is not required to file a further petition. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[6740-02]

[Docket No. CP76-403]

TEXAS GAS TRANSMISSION CORP.

Application to Amend Further

SEPTEMBER 26, 1978.

Take notice that on September 12, 1978, Texas Gas Transmission Corp. (Texas Gas), P.O. Box 1160, Owensboro, Ky. 42301, filed in Docket No. CP76-403, an application, pursuant to section 7 of the Natural Gas Act and § 2.79 of the Commission's General Policy and Interpretations (18 CFR 2.79), to amend further the certificate of public convenience and necessity issued in the said docket on August 13, 1976 [1] so as to authorize Texas Gas to extend the transportation service for the account of Owens-Corning Fiberglas Corp. (Owens-Corning) for an additional year from August 27, 1978, all as more fully set forth in the application to amend which is on file with the Commission and open to public inspection.

Texas Gas states that the volumes of natural gas to be transported for the additional year would be purchased by Owens-Corning from Kilroy Properties Inc. and Dawson Exploration, Inc. (Kilroy) from production of wells in Jefferson Davis Parish, La.

It is asserted that the subject natural gas would be delivered to Texas Gas at an existing meter station at or near the site of Woodlawn Junction in section 7, Township 9 South, Range 5 West, Jefferson Davis Parish, La. It is stated that Texas Gas would simultaneously redeliver for Owens-Corning's account (1) up to 300 Mcf per day to Texas Eastern Transmission Corp. (Texas Eastern) at a point of delivery located near Lebanon, Ohio; (2) up to 2,000 Mcf per day to its existing point or points of delivery with Jackson Utility Division, City of Jackson, Tenn. (Jackson) or; (3) divert all or a portion of the volumes up to 2,000 Mcf per day to be transported and delivered to Jackson and deliver such volumes to Transcontinental Gas Pipe Line Corp. (Transco) for ultimate delivery to Owens-Corning's Anderson, S.C., plant.

It is stated that Texas Gas would not retain any volumes of natural gas hereunder for its own system supply but would retain as makeup for compressor fuel and line loss 10.34 percent of those volumes delivered to Texas Eastern, 2.45 percent of those volumes delivered to Jackson and .55 percent of those volumes delivered to Transco. It is asserted Texas Gas would collect an initial charge of 30.36 cents per Mcf for those volumes delivered to Texas Eastern for the account of Owens-Corning, 19.29 cents per Mcf for those volumes delivered to Jackson and 5.77 cents per Mcf for those volumes delivered to Transco.

Owens-Corning has agreed to pay Kilroy $1.82 per one million Btu's for an initial term of 12 months commencing August 24, 1978, $1.97 for the next twelve month period, and a price mutually agreed upon thereafter.

Any person desiring to be heard or to make any protest with reference to said application to amend should on or before October 17, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's rules.

KENNETH F. PLUMB,
Secretary.

[6740-02]

[Docket No. OR78-1]

TRANS-ALASKA PIPELINE SYSTEM

Granting Extension of Time

SEPTEMBER 25, 1978.

On September 18, 1978, Commission Staff Counsel filed a motion for extension of the date within which to reply to the motion to quash subpoenas filed by Arctic Constructors and its joint venture partners (Arctic) in the above captioned proceeding. The motion states that staff has had to review a vast quantity of material in preparing a response and that the other parties in the proceeding do not object to the proposed extension.

Upon consideration, notice is hereby given that an extension of time is granted to and including October 6, 1978, for filing replies to Arctic's motion.

KENNETH F. PLUMB,
Secretary.

[6740-02]

[Docket No. CP72-182]

TRANSCONTINENTAL GAS PIPE LINE CORP. AND TEXAS GAS TRANSMISSION CORP.

Application To Amend Further

SEPTEMBER 26, 1978.

Take notice that on September 12, 1978, Transcontinental Gas Pipe Line Corp. (Transco), P.O. Box 1396, Houston, Tex. 77001, and Texas Gas Transmission Corp., (Texas Gas), P.O. Box 1160, Owensboro, Ky. 42301, filed in Docket No. CP72-182, [1] a joint application to amend further the FPC's order issued June 27, 1972, in said docket pursuant to section 7(c) of the Natural Gas Act so as to add an additional exchange point between Applicants, all as more fully set forth in the application to amend further in this proceeding.

The order of June 27, 1972, authorized an exchange of gas between Transco and Texas and was amended, February 7, 1974, October 16, 1974, and April 12, 1977, to add additional exhange points between the companies.

Under the instant proposal, Transco and Texas Gas seek authorization for an additional delivery point, in accordance with the letter agreement between them, dated August 31, 1978, which further amends the Exchange Agreement between them, dated July 27, 1973, as amended. Such delivery point would be at the existing point of interconnection between the systems of Texas Eastern Transmission Corp. (Texas Eastern) and Transco near Ragley, Beauregard Parish, La., where either Transco or Texas Gas can cause volumes of natural gas to be delivered to the other party, it is said.

The addition of the Ragley delivery point would permit Texas Gas to receive volumes of natural gas into its system which Texas Gas would be purchasing from Block 237, West Cameron Area, offshore Louisiana, it is asserted.

Any person desiring to be heard or to make any protest with reference to said petition to amend further should on or before October 17, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and

[1] This proceeding was commenced before the FPC. By joint regulation of October 1, 1977 (10 CFR 1000.1), it was transferred to the FERC.

[6740-02]

[Docket No. CP78-76]

TRANSCONTINENTAL GAS PIPE LINE CORP.

Petition to Amend

SEPTEMBER 26, 1978.

Take notice that on August 28, 1978,[1] Transcontinental Gas Pipe Line Corp. (Petitioner), P.O. Box 1396, Houston, Tex. 77001, filed in Docket No. CP78-76 a petition pursuant to section 7(c) of the Natural Gas Act to amend the order issued on January 30, 1978 in Docket No. CP78-76 so as to remove the condition imposed upon the rate for the transportation service authorized, all as more fully set forth in the petition which is on file with the Commission and open to public inspection.

It is stated that Petitioner was authorized to provide interruptible transportation service for a period of 2 years for Owens-Corning Fiberglas Corp. (Owens-Corning) under Petitioner's presently effective long-haul interruptible transportation rate. Petitioner was also authorized, it is said, to transport gas for redelivery to both Texas Gas Transmission Corp. and Texas Eastern Transmission Corp. within Petitioner's production and gathering area for ultimate delivery to two other Owens-Corning plant locations. For this latter service Petitioner charges a rate of 3.5 cents per dekatherm (dt) equivalent of gas which represents Petitioner's minimum charge for transportation in its gathering facilities, it is stated.

In the order of January 30, 1978 in the instant docket, Petitioner states that the Commission conditioned its authorized of the transportation service at the rate proposed by Petitioner upon the final determination of the proceedings in Docket Nos. RP76-316, RP77-26 and RP77-108. Petitioner states that on June 27, 1978 the Commission approved a settlement in Docket Nos. RP76-136 and RP77-26 and that Petitioner's Rate Schedule T became effective on August 1, 1978. Additionally, Petitioner states that its rate for transportation service in its gathering area facilities was not involved in the above-mentioned rate proceedings. Consequently, Petitioner requests that the order issued on January 30, 1978 in the instant docket be amended to remove the condition that the authorization is subject to the final determination in the above-mentioned rate proceedings.

Any person desiring to be heard or to make any protest with reference to said petition to amend should on or before October 17, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-27784 Filed 9-29-78; 8:45 am]

[6740-02]

[Docket No. CP77-426]

TRANSCONTINENTAL GAS PIPE LINE CORP.

Application to Amend

SEPTEMBER 21, 1978.

Take notice that on September 8, 1978, Transcontinental Gas Pipe Line Corp. (Applicant), P.O. Box 1396, Houston, Tex. 77001, filed in Docket No. CP77-426 an application to amend the order issued August 29, 1977[1] in said docket pursuant to section 7(c) of the Natural Gas Act and § 2.79 of the Commission's general policy and interpretations (18 CFR 2.79), authorizing the transportation of natural gas for Owens-Corning Fiberglas Corp. (Owens-Corning), Applicant's only direct industrial customer, for use at Owens-Corning's Anderson, S.C. plant, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

By the application to amend, Applicant requests authority to continue transportation service for an additional 2-year term for Owens-Corning, beyond the initial termination date of August 28, 1978.

Applicant proposes to transport up to 2,000 Mcf of natural gas per day for Owens-Corning. It is stated that Owens-Corning has purchased gas from Kilroy Properties Inc. (Kilroy) and Dawson Exploration, Inc. from production of the Racca Well, Woodlawn Field, Jefferson Davis Parish, La. at a price of $1.35 per million Btu's for the first 12 months and $1.40 per million Btu's for the second 12 months.

It is asserted that such gas would be received by Texas Gas Transmission Corp. in the field for delivery to Applicant for ultimate delivery to Owens-Corning.

Applicant proposes to charge Owens-Corning an initial rate of 23.5 cents per dekatherm equivalent of natural gas delivered under the agreement and would retain, initially, 3.8 percent of the quantities received for transportation for compressor fuel and line loss.

It is stated that Owens-Corning's Anderson, S.C. plant, employs 1,650 employees and that a complete shutdown of the plant or a severe cutback in operations resulting from a shortage of natural gas supply would have a direct and immediate adverse impact on the vitality and economic health of the Anderson community as well as upon Owens-Corning. It is further stated that Petitioner's curtailments of gas supply to the Anderson plant has reached 100 percent of its firm demand during each winter period since 1976. It is stated that it is necessary for Owens-Corning, in order to continue normal operations at its Anderson plant, to rely solely on its ability to obtain supplemental natural gas supplies.

Any person desiring to be heard or to make any protest with reference to said application to amend should on or before October 13, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or protest in accordance with the requirements of the Commission's rules of practice and procedure (18 CFR 1.8, 1.10) and the regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's rules.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-27763 Filed 9-29-78; 8:45 am]

[1] The petition was initially tendered for filing on August 28, 1978, however, the fee required by § 159.1 of the Regulations under the Natural Gas Act (18 CFR 159.1) was not paid until September 14, 1978; thus, the filing was not completed until the latter date.

[1] This proceeding was commenced before the FPC. By joint regulation of October 1, 1977 (10 CFR 1000.1), it was transferred to the FERC.

[6740-02]

[Docket No. RP73-3 (PGA78-3)]

TRANSCONTINENTAL GAS PIPE LINE CORP.

Purchased Gas Cost Adjustments to Rates and Charges

SEPTEMBER 25, 1978.

Take notice that Transcontinental Gas Pipe Line Corp. (Transco) on September 15, 1978, tendered for filing certain substitute revised tariff sheets to its FERC Gas Tariff, Second Revised Volume No. 1 to become effective September 1 and September 2, 1978.

Transco states that its revised PGA filing is being made as a result of the Commission's August 31, 1978 "Order Accepting for Filing and Suspending Proposed PGA Rate Increase, Initiating Hearing, and Consolidating Proceedings" issued in Docket Nos. RP73-3 (PGA78-3), et al. Transco's filing contained two sets of revised sheets, one to be made effective September 1, 1978 without suspension, the other to be made effective September 2, 1978 subject to refund.

Transco states that the revised sheets filed to be effective September 1, 1978 without suspension reflect a reduction in rates from the sheets originally filed on August 1, 1978, due to elimination of the so-called "out-of-period" costs in computing such rates, consistent with the provisions of Ordering Paragraphs (A) and (C) of the Commission's Order issued August 31, 1978 in Docket Nos. RP73-3 (PGA78-3) et al. The rates in these tariff sheets reflect the same increase of 13.9 cents per dt in the current gas costs as included in the August 1, 1978 filing but the amount of the Deferred Adjustment has been reduced from 3.3 cents per dt to 2.9 cents per dt.

Transco further states that the tariff sheets proposed to be effective September 2, 1978, subject to refund, provide for recovery of the full balance of $48,877,612 recorded in Transco's Unrecovered Purchased Gas Cost Account as of June 30, 1978. Except for the designation thereof, these tariff sheets are identical to the sheets filed on August 1, 1978 to be effective September 2, 1978. In that connection, Transco states that it is filing concurrently an Application for Rehearing and Request for Stay of the Commission's August 31, 1978 Order, wherein it has requested that the Commission grant rehearing of its order and permit the full balance of the deferred account to be reflected in the rates to be effective September 2, 1978, subject to refund, and to set the propriety of the recovery of the so-called "out-of-period" costs for hearing.

The Company states that copies of the filing have been mailed to each of its jurisdictional customers and interested State Commissions.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 10, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-27752 Filed 9-29-78; 8:45 am]

[6740-02]

[Docket Nos. RP76-136 and RP77-26]

TRANSCONTINENTAL GAS PIPE LINE CORP.

Tariff Filing

SEPTEMBER 25, 1978.

Take notice that Transcontinental Gas Pipe Line Corp. (Transco) on September 19, 1978, tendered for filing certain revised tariff sheets to its FERC Gas Tariff, Original Volume No. 2. The sheets are proposed to become effective on various dates from January 31, 1978 to November 1, 1978.

On June 27, 1978, the Commission approved the settlement agreement in Docket Nos. RP76-136 and RP77-26. Article VII of the agreement provided that Transco would reduce its rates for interruptible transportation service into or within Transco's rate zones to the levels provided in the agreement. Transco filed on August 23, 1978, revised tariff sheets reflecting rate reductions for all such services in effect during the period February 1, 1977 through December 31, 1977, under Docket Nos. RP76-136, RP77-26, and RP77-108. Also, by filing dated August 23, 1978, Transco reduced its rates to such levels effective January 1, 1978 in Docket No. RP77-108.

Transco states that while the aforementioned August 23, 1978 filings provided for basic changes in rate levels for the interruptible transportation services reflected in the two general rate proceedings, there are certain additional revisions which revisions which are necessary to fully effectuate the terms of the approved settlement agreement. The purpose of revised tariff sheets included in this filing is explained below:

(1) To reflect such reduced transportation rate levels for Rate Schedules X-154, X-155, and X-156, which agreements became effective on January 31, 1978;

(2) To provide for a prospective rate increase, effective November 1, 1978, under Rate Schedules X-145 and X-146 to the level approved under the aforementioned settlement agreement;

(3) To revise Rate Schedules X-67, X-71, X-99, X-114, X-118, X-135, X-137, X-139, X-154, X-155, and X-156 to reflect, as of June 1, 1978, the inclusion of the 0.12 cents per dt charge related to Gas Research Institute (GRI), as approved by Commission order dated June 1, 1978 in Docket No. RM77-14; and

(4) To provide changes in fuel and line loss makeup percentages, as follows: (a) as of September 1, 1978, for reductions in such percentages under Rate Schedules X-71, X-99, X-110, X-111, X-130, X-131, X-132, X-133, X-134, X-135; and (b) as of November 1, 1978, for an increase in such percentage under Rate Schedule X-80.

Transco further states that copies of the instant filing have been mailed to each of its jurisdictional customers and interested State Commissions.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 13, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-27753 Filed 9-29-78; 8:45 am]

[6740-02]

[Docket No. CP78-518]

TRUNKLINE GAS CO. AND TRANSCONTINENTAL GAS PIPE LINE CORP.

Pipeline Application

SEPTEMBER 21, 1978.

Take notice that on September 13, 1978, Trunkline Gas Co. (Trunkline),

V 43 / 191

P.O. Box 1642, Houston, Tex. 77001 and Transcontinental Gas Pipe Line Corp. (Transco), P.O. Box 1396, Houston, Tex. 77001, filed in Docket No. CP78-518, a joint application pursuant to section 7(c) of the Natural Gas Act and the regulations thereunder for temporary and permanent certificates of public convenience and necessity authorizing the exchange and transportation of natural gas on behalf of Transco, all as more fully set forth in the application on file with the Commission and open to public inspection.

Trunkline proposes to exchange and/or transport for Transco on a firm basis up to 105,000 Mcf of gas per day which represents Transco's interest in gas to be produced from Vermilion Block 325 and West Cameron Blocks 405 and 576. Trunkline proposes to receive the gas from such Blocks at existing side taps on the Stingray Pipeline Co. system in Vermilion Block 321, West Cameron Block 277 and West Cameron Block 537, respectively, for exchange and/or transportation for the account of Transco at one of five Points of Redelivery: (1) High Island Block A-330; (2) the Mobil Oil Corp. Cow Island Processing Plant in Vermilion Parish, La.; (3) near Ragley, La. at the interconnection between the facilities of Trunkline and Transco; (4) the terminus of the U-T Offshore System in Cameron Parish, La.; and (5) at Katy in Waller County, Tex., at the Interconnection between the facilities of Trunkline and Transco.

Any person desiring to be heard or to make any protest with reference to said application, on or before October 13, 1978, should file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party to a proceeding, or to participate as a party in any hearing therein, must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or to be represented at the hearing.

KENNETH F. PLUMB,
Secretary.

[Docket No. ER78-512]

WISCONSIN ELECTRIC POWER CO.

Granting Extension of Time

SEPTEMBER 25, 1978.

On September 14, 1978, counsel for the cities, villages, and towns of Cedarburg, Clintonville, Deerfield, Elkhorn, Florence, Hartford, Jefferson, Kaukauna, Kiel, Lake Mills, Menasha, New London, Oconomowoc, Oconto Falls, Shawano, Slinger, and Waterloo, Wis., the city of Crystal Falls, Mich., and the Ontonogan County Rural Electrification Association (The Intervenors) filed a motion for extension of time in which to make a price squeeze allegation as provided for in the Commission order of August 31, 1978, in the above captioned proceeding. The motion states tht the Intervenors cannot accurately make a price squeeze allegation until after WEPC files reduced wholesale rates pursuant to the August 31, 1978, Commission order.

Upon consideration, notice is hereby given that the time within which the Intervenors may file price squeeze allegations pursuant to the Commission order of August 31, 1978, is extended to and including October 20, 1978.

KENNETH F. PLUMB,
Secretary.

Hearings and Appeals Office

CASES FILED

Week of September 8 through September 15, 1978

Notice is hereby given that during the week of September 8, 1978 through September 15, 1978, the appeals and applications for exception or other relief listed in the Appendix to this Notice were filed with the Office of Hearings and Appeals of the Department of Energy.

Under the DOE's procedural regulations, 10 CFR, Part 205, any person who will be aggrieved by the DOE action sought in such cases may file with the DOE written comments on the application within 10 days of service of notice, as prescribed in the procedural regulations. For purposes of those regulations, the date of service of notice shall be deemed to be the date of publication of this Notice or the date of receipt by an aggrieved person of actual notice, whichever occurs first. All such comments shall be filed with the Office of Hearings and Appeals, Department of Energy, Washington, D.C. 20461.

MELVIN GOLDSTEIN,
Director,
Office of Hearings and Appeals.

SEPTEMBER 22, 1978.

APPENDIX.—*List of Cases Received by the Office of Hearings and Appeals*

[Week of Sept. 8-15, 1978]

Date	Name and location of applicant	Case No.	Type of submission
Sept. 11, 1978	Cabot Corp., Houston, Tex	DXE-1825, DXE-1826.	Extension of relief granted in *Cabot Corp.*, Case Nos. FXE-4509 and FXE-4510 (decided Nov. 4, 1977) (unreported decision). If granted: The applicant would be permitted to increase its prices to reflect nonproduct cost increases incurred in producing natural gas liquids and natural gas liquid products at its North Terrebone and Prentice plants.
Do	Professor Harold Fruchtbaum, New York, N.Y.	DFA-0211	Appeal of information request denial. If granted: The DOE's June 30, 1978 information request denial would be rescinded and Harold Fruchtbaum of Columbia University would receive access to certain DOE data regarding the nuclear weapons development program.
Do	L & M Oil Co., Indianapolis, Ind	DEE-1827	Price exception (section 212.73). If granted: L & M Oil Co. would be permitted to sell the crude oil produced from the Allen 2A well located in Lewisville, Ark., at market prices.

APPENDIX.—*List of Cases Received by the Office of Hearings and Appeals*—Continued

[Week of Sept. 8-15, 1978]

Date	Name and location of applicant	Case No.	Type of submission
Do	Monsanto Co., Houston, Tex	DEE-1824	Price exception (section 212.73). If granted: Monsanto Co. would be permitted to sell the crude oil produced from the Navajo 138 wells located in Apache County, Ariz., at upper tier ceiling prices.
Do	Powerine Oil Co., Santa Fe Springs, Calif	DEE-1823	Exception to the entitlements program. If granted: Powerine Oil Co. would receive additional entitlements to compensate the firm for the cost of shipping residual fuel oil from its California refinery to the east coast.
Do	State of Illinois, Chicago, Ill	DFA-210	Appeal of information request denial. If granted: The DOE's July 3, 1978 information request denial would be rescinded and the State of Illinois would receive certain DOE data regarding the General Electric nuclear waste facility in Morris, Ill.
Sept. 12, 1978	Burl C. Smith, Portage, Ohio	DEE-1832	Price exception (section 212.93). If granted: Burl C. Smith would be permitted to increase retroactively its maximum permissible ceiling prices for the period Nov. 1, 1973 to June 30, 1975.
Do	....do	DMR-0031	Request for rescission. If granted: The DOE's Dec. 8, 1977 decision and order denying the firm's appeal of a remedial order would be reversed and that remedial order would be rescinded.
Do	Green Pipe & Supply Co., Tulsa, Okla	DEE-1829	Price exception (section 212.73). If granted: Green Pipe & Supply Co. would be permitted to sell crude oil produced from the Nora Brunner lease located in Seminole County, Okla., at upper tier ceiling prices.
Do	Petroleum International Associates, Inc., Washington, D.C.	DRA-0212, DRS-0212.	Appeal of an ancillary order, request for stay. If granted: The ancillary order issued by DOE region II on Aug. 10, 1978 would be rescinded and Petroleum International Associates, Inc. would not be required to pass through certain refunds which it received from Oakey Gasoline & Oil Co. and Stillings Petroleum Corp.
Do	San Joaquin Refining Co., Newport Beach, Calif..	DEE-1828	Exception to the entitlements program. If granted: San Joaquin Refining Co. would receive additional entitlements to compensate it for the cost of shipping residual fuel oil from its California refinery to the east coast.
Do	Sun Co., Inc., Dallas, Tex	DXE-1831	Extension of relief granted in *Sun Co., Inc.*, Case No. DXE-0696 (decided Apr. 28, 1978) (unreported decision). If granted: The applicant would be permitted to increase its prices to reflect nonproduct cost increases incurred in producing natural gas liquids and natural gas liquid products at its Elmwood plant.
Do	Texas Oil & Gas Corp., Corpus Christi, Tex.	DEE-1830	Price exception (section 212.73). If granted: Texas Oil & Gas Corp. would be permitted to sell crude oil produced from the Pete Rydolph "A" lease located in the North McFaddin Field, Victoria County, Tex., at upper tier ceiling prices.
Do	Transcontinental Oil Corp., Shreveport, La	DEE-1835	Price exception (section 212.73). If granted: Transcontinental Oil Corp. would be permitted to sell the crude oil produced from State Lease 4041, Well No. 1 located in St. John the Baptist Parish, La., at upper tier ceiling prices.
Do	Universal Mineral Corp., Dallas, Tex	DEE-1834	Price exception (section 212.73). If granted: Universal Mineral Corp. would be permitted to sell the crude oil produced from the No. 1 Humble-Dowdy Fee well located in Duval County, Tex., at market prices.
Sept. 13, 1978	Charter Oil Co., Washington, D.C.	DES-1398	Stay request. If granted: Charter Oil Co. would be granted a stay of its obligation to purchase entitlements under the provisions of 10 CFR 211.67 for the period September 1978 through February 1979 pending a determination on an application for exception which it has filed.
Do	Fuel Distributors, Inc., Temple, Tex	DFA-0213	Appeal of information request denial. If granted: The DOE's Aug. 15, 1978 information request denial would be rescinded and Fuel Distributors, Inc. would receive access to DOE data relating to a DOE investigation of Foremost Petroleum Corp., Inc.
Do	Northland Oil & Refining Co., Tulsa, Okla.	DES-0102	Stay request. If granted: Northland Oil & Refining Co. would be granted a stay of its obligation to purchase entitlements under the provisions of 10 CFR 211.67 commencing with the month of September 1978 pending a determination on an application for exception which the firm has filed.

Director,
Office of Hearings and Appeals.

SEPTEMBER 22, 1978.

APPENDIX.—*List of Cases Received by the Office of Hearings and Appeals*

[Week of Aug. 25-Sept. 1, 1978]

Date	Name and location of applicant	Case No.	Type of submission
Aug. 25, 1978	Matrix Land Co., Taylor County, Tex	DXE-1782	Extension of relief granted in *Matrix Land* Co., Case No. DEE-0034 (decided Feb. 15, 1978) (unreported decision). If granted: The applicant would be permitted to increase its prices to reflect nonproduct cost increases incurred in producing natural gas liquids and natural gas liquid products at its Box-Elmdale/Tuscola plant.
Aug. 28, 1978	Batzell, Nunn & Bode, Washington, D.C	DRD-0084	Motion for discovery. If granted: Discovery would be granted with respect to objections to a remedial order issued to Ashland Oil Co. by special counsel for compliance on July 7, 1978.
Aug. 29, 1978	Getty Oil Co., Los angeles, Calif	DEE-1801 and DEE-1802.	Price exception (section 212.165). If granted: Getty Oil Co. would be permitted to increase its prices to reflect nonproduct cost increases in excess of $0.005 per gallon for natural gas liquid products produced at the Dollarhide and Stephens plants.
Do	Gibbs Oil Co., Washington, D.C	DRH-0024	Request for evidentiary hearing. If granted: An evidentiary hearing would be convened to permit Gibbs Oil Co. to present certain factual contentions in connection with an appeal of a remedial order filed by Champlin Petroleum Co. (Case No. DRA-0012).
Do	Marathon Oil Co., Findlay, Ohio	DXE-1786 through DXE-1789.	Extension of relief granted in *Marathon Oil* Co. Case Nos. DXE-0551 through DXE-0554 (decided on Apr. 20, 1978) (unreported decision). If granted: The applicant would be permitted to increase its prices to reflect nonproduct cost increases incurred in producing natural gas liquids and natural gas liquid products at its Rock River, West Foulaude, West Sidney, and Welder plants.
Do	Mid-Valley Petroleum Corp., Washington, D.C.	DRH-0025	Request for evidentiary hearing. If granted: An evidentiary hearing would be convened to permit Mid-Valley Petroleum Corp. to present certain factual contentions in connection with an appeal of a remedial order filed by Champlin Petroleum Co. (Case No. DRA-0012).
Do	Reico Exploration Co., Inc., Monroe, La	DEE-1785	Exception to filing requirements of the certification of domestic crude oil sales. If granted: Reico Exploration Co., Inc. would be granted an exception to the provisions of 10 CFR 212.131 with respect to the filing of the certification of domestic crude oil sales.
Do	Standard Oil Co. (Indiana), Chicago, Ill	DEE-1792	Price Exception (section 212,165). If granted: Standard Oil Co. would be permitted to increase its prices to reflect nonproduct cost increases in excess of $0.005 per gallon for natural gas liquid products produced at the Kalkaska plant.
Do	Sun Co., Inc., Dallas, Tex	DXE-1803 through DXE-1809.	Extension of relief granted in *Sun Co., Inc.*, Case Nos. DXE-1850, DXE-0852, DXE-0919, DXE-0920, DXE-0914, DXE-0916, and DXE-0943 (decided Apr. 28, 1978) (unreported decisions). If granted: The applicant would be permitted to increase its prices to reflect nonproduct cost increases incurred in producing natural gas liquids and natural gas liquid products at its Bayou Sale, Tonkawa, Wakita, Belle Isle, Fordache, Mermentau and Victoria plants.
Do	Supreme Petroleum Co. of New Jersey, Inc	DRH-0011	Request for evidentiary hearing. If granted: An evidentiary hearing would be convened to permit Supreme Petroleum Co. of New Jersey, Inc. to present certain factual contentions in connection with an appeal of a remedial order filed by Champlin Petroleum Co. on Sept. 19, 1977 (Case No. DRA-0012).
Do	Union Oil Co. of California, Los Angeles, Calif.	DEE-1800	Price exception (section 212.165). If granted: Union Oil Co. of California would be permitted to increase its prices to reflect nonproduct cost increases in excess of $0.005 per gallon for natural gas liquid products produced at the Mooreland plant.
Aug. 30, 1978	Akin, Gump, Hauer, & Feld, Washington, D.C.	DFA-0205	Appeal of an information request denial. If granted: The DOE's July 28, 1978, information request denial would be rescinded and Akin, Gump, Hauer, & Feld would be granted access to various DOE data regarding the entitlements program and imports of residual fuel oil.
Do	Andrews, Kurth, Campbell, & Jones, Washington, D.C.	DFA-0204	Appeal of an information request denial. If granted: The DOE's July 28, 1978 information request denial would be rescinded and Andrews, Kurth, Campbell, & Jones would be granted access to various DOE data regarding ruling 1977-5.
Do	A. C. Duerr, Tulsa, Okla	DXE-1783	Extension of relief granted in *A. C. Duerr* Case No. FEE-3207 (decided Jan. 1, 1977) (unreported decision). If granted: The applicant would be permitted to increase its prices to reflect nonproduct cost increases incurred in producing natural gas liquids and natural gas liquid products at its R. M. Stephens plant.
Do	F-M Oil Co., Cinnaminson, N.J	DRA-0206	Appeal of remedial order issued Aug. 4, 1977. If granted: The Aug. 4, 1977, remedial order issued by DOE region III would be rescinded.
Do	Ke-La-Da Enterprises, Inc., Archie, Mo	DEE-1790	Price exception (section 212.73). If granted: Ke-La-Da Enterprises, Inc. would be permitted to sell the crude oil produced from Limpus Field located in Cass County, Mo., at upper tier ceiling prices.
Do	Maguire Oil Co., Dallas, Tex	DXE-1791	Extension of relief granted in *Maguire Oil* Co., 1DOE Par. — (Aug. 4, 1978). If granted: Maguire Oil Co. would be permitted to sell the crude oil produced from the Chandler lease located in Howard County, Tex., at upper tier ceiling prices.

APPENDIX.—*List of Cases Received by the Office of Hearings and Appeals*—Continued

[Week of Aug. 25-Sept. 1, 1978]

Date	Name and location of applicant	Case No.	Type of submission
Do	Monsanto Co., St. Louis, Mo	DXE-1793 through DXE-1799.	Application for extension of relief granted in *Monsanto* Co. Case Nos. DXE-0727 through DXE-0733 (decided Mar. 31, 1978) (unreported decision). If granted: The applicant would be permitted to increase its prices to reflect nonproduct cost increases incurred in producing natural gas liquids and natural gas liquid products at its Adena, Como, Diamond K, Dollarhide, Gillette, Pledger, and Spivey plants.
Do	Special Counsel, Washington, D.C	DRD-0004	Motion for discovery. If granted: Discovery would be granted to the Office of Special Counsel for Compliance with respect to objection filed by Chevron, U.S.A. and Time Oil Co. in response to a proposed remedial order issued to Chevron, U.S.A. (Case No. DRO-0083).
Do	Varibus Corp., Beaumont, Tex	DEX-0106	Supplemental order. If Granted: Escrowed funds would be distributed in a manner consistent with the provisions of a remedial order issued by DOE region VI to Varibus Corp. on September 20, 1978.
Aug. 31, 1978	Andrews, Kurth, Campbell & Jones, Washington, D.C.	DFA-0207	Appeal of an information request denial. If granted: The DOE's July 5, 1978 information request denial would be rescinded and Andrews, Kurth, Campbell & Jones would be granted access to documents concerning various aspects of the DOE crude oil price regulations.
Do	O. B. Mobley, Jr., Shreveport, La	DES-0100	Request for stay. If granted: O. B. Mobley, Jr. would be granted a stay pending a judicial review by the U.S. District Court for the Western District of Louisiana.

GULF REFUND PROCEDURES

Extension of Time for Comments

AGENCY: Office of Hearings and Appeals, Department of Energy.

ACTION: Notice of extension of comment period.

SUMMARY: On August 28, 1978, a Notice was published in the FEDERAL REGISTER that pertained to the settlement of claims resulting from a $42,240,000 refund by Gulf Oil Corp. 43 Fed. Reg. 38,548 (1978). Attached to the Notice was a copy of an Interim Decision and Order that established procedures for refund applications. The Notice sought public comments on the procedures by September 18, 1978. On September 15, 1978, the Department of Energy published a second Notice extending the period for filing comments until September 29, 1978. 43 Fed. Reg. 41,266 (1978). Since that time several interested parties have requested a further extension of the comment period in order to complete and fully document their statements. In view of the importance of the refund procedure and the complexity of the issues involved in this proceeding, the comment period will be extended until October 16, 1978.

DATES: Comments by October 16, 1978.

ADDRESS: Office of Public Hearing Management, Box VH, 2000 M Street NW., Room 2313, Washington, D.C. 20461.

Issued in Washington, D.C. on September 26, 1978.

MELVIN GOLDSTEIN,
Director,
Office of Hearings and Appeals.

ENVIRONMENTAL PROTECTION AGENCY

[FRL 980-2; OPP—31021]

PESTICIDE PROGRAMS

Notice of Receipt of Application To Register Pesticide Product Entailing a Changed Use Pattern

E. I. Du Pont De Nemours & Co., Wilmington, Del. 19898, has submitted to the Environmental Protection Agency (EPA) an application to amend the registration of the pesticide product "Velpar" weed killer (EPA registration No. 352-378), which contains 90 percent of the active ingredient 3-cyclohexyl-6-(dimethylamino)-1-methyl-1,3,5-triazine -2,4(1*H*,3*H*)-dione. The application received from E. I. Du Pont De Nemours & Co., proposes that the use pattern of this pesticide product be changed from non-crop use to crop use for the control of weeds in sugarcane. The application also proposes that the product be classified for general use.

Notice of receipt of this application does not indicate a decision by the Agency on the application. Interested persons are invited to submit written comments on this application to the FEDERAL REGISTER Section, Program Support Division (TS-757), Office of Pesticide Programs, EPA, room 401, East Tower, 401 M Street SW., Washington, D.C. 20460. The comments must be received on or before November 1, 1978, and should bear a notation indicating the EPA registration No. "352-378". Comments received within the specified time period will be considered before a final decision is made; comments received after the specified time period will be considered only to the extent possible without delaying processing of the application. Specific questions concerning this application and the data submitted should be directed to Product Manager (PM) 23, Registration Division (TS-767), Office of Pesticide Programs, at the above address or by telephone at 202-755-2196. The label furnished by E. I. Du Pont De Nemours & Co., as well as all written comments filed pursuant to this notice, will be available for public inspection in the office of the FEDERAL REGISTER section from 8:30 a.m. to 4 p.m., Monday through Friday.

Notice of approval or denial of this application to register "Velpar" weed killer will be announced in the FEDERAL REGISTER. Except for such material protected by Section 10 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), the test data and other information submitted in support of registration as well as other scientific information deemed relevant to the registration decision may be made available after approval under the provisions of the Freedom of Information Act. The procedures for requesting such data will be given in the FEDERAL REGISTER if an application is approved.

Dated: September 25, 1978.

DOUGLAS D. CAMPT,
Acting Director,
Registration Division.

FEDERAL COMMUNICATIONS COMMISSION

HUB OIL CO., INC.

Designating Application for Hearing on Stated Issues

MEMORANDUM OPINION AND ORDER

Adopted: September 20, 1978.

Released: September 21, 1978.

By the Chief, Safety and Special Radio Services Bureau:

1. The Chief, Safety and Special Radio Services Bureau (the Bureau) has before him for consideration the above-captioned applications filed August 28, 1978, by Hub Oil Co., Inc. (Hub) for reinstatement of expired authorizations for facilities in the Special Industrial Radio Service at Rochester, N.Y. Also before the Bureau in connection with its consideration of the above-captioned applications is the Investigative Case Report of the Commission's Field Operations Bureau (FOB) concerning unlicensed operation by Hub.

2. The Bureau's license records show that on October 4, 1972, Hub was authorized to operate stations KO8427 and KER642 in the Special Industrial Radio Service. Those licenses expired, as shown on their face, on October 4, 1977. FOB's Investigative Case Report indicates that its Canandigua, N.Y., office discovered through monitoring on December 13, 1977, that Hub was operating on its previously licensed frequencies although its licenses had expired more than 2 months earlier without an application for renewal having been filed. On January 17, 1978, the Canandaigua Office issued a warning letter to Hub concerning its unlicensed operation. That letter, to which no reply was received, also explained the procedures for obtaining a license and special temporary authority. It appears that Hub eventually did file an application for reinstatement of its applications on March 7, 1978. That application was returned by the Bureau as incomplete and was not resubmitted until August 28, 1978.

3. Hub's continued radio transmissions were noted by the Canadaigua office on July 5, 1978, and a second warning letter was issued. Further monitoring on July 13, 1978, revealed that the unlicensed operation was continuing. In a telephone conversation of that date between the Canandaigua office and the Hub employee who signed a response to the second warning letter, the employee disclaimed any involvement with the operation of Hub's radio system. Later that same day the Canandaigua office was called by Hub's president, William F. Huberlie (Huberlie). Huberlie was warned that operation of the radio system must be terminated until a valid license or special temporary authority had been obtained and that there were possible criminal penalties for continued violation. According to FOB, Huberlie stated that Hub had been attempting to become licensed but could not obtain the proper application forms, and that he needed the radio system for his business and would continue to use it whether or not he had a license. In response to the warning in that telephone conversation of possible criminal prosecution Huberlie challenged the Commission to take whatever action it wished, but stated that he nevertheless would continue operation of the radio stations in the face of Commission action and regardless of whether he were issued the special temporary authority which he indicated that he would seek. The Bureau has no record of Hub ever having filed a request for special temporary authority. Monitoring by the Canandaigua office as recently as September 14, 1978, indicates that Hub is still operating without a license.

4. In light of Hub's unlicensed operation, which evidently continues to this day, serious questions exist as to Hub's character qualifications and responsibility to receive the authorizations which it here seeks. Because the Bureau cannot make the requisite finding, pursuant to section 309(a) of the Communications Act of 1934, as amended, that a grant of Hub's applications would serve the public interest, convenience and necessity, the applications must, in accordance with section 309(e) of the Act, be designated for evidentiary hearing.

5. Accordingly, *it is ordered,* That in accordance with the provisions of section 309(e) of the Communications Act of 1934, as amended (47 U.S.C. 309(e)), the above-captioned applications of Hub Oil Co., Inc., file Nos. 20310/11-IS-88, are, pursuant to authority delegated in §§ 0.131(a) and 0.331 of the Commission's rules, "designated for hearing," at a time and place to be specified at a later date, on the following issues.

(a) To determine whether Hub Oil Co., Inc. has willfully violated the Communications Act of 1934, as amended, and the Commission's rules by operating unlicensed radio facilities in the Special Industrial Radio Service.

(b) To determine, in light of the evidence adduced pursuant to issue (a) hereinabove, whether Hub Oil Co., Inc. possesses the requisite character qualifications to receive a grant of the applications which are the subject of this proceeding.

(c) To determine, in light of the evidence adduced pursuant to issue (a) hereinabove, whether Hub Oil Co., Inc., is so inept in the management and conduct of its affairs with respect to operation and licensing of its radio system that it cannot be entrusted with a Commission authorization.

(d) To determine, in light of the evidence adduced pursuant to the foregoing issues, what disposition of the above-captioned applications will best serve the public interest, convenience and necessity.

6. *It is further ordered,* That Hub Oil Co., Inc. and the Chief, Safety and Special Radio Services Bureau "are made parties" in this proceeding.

7. *It is further ordered,* That the burden of proceeding with the introduction of evidence and the burden of proof on the issues specified in paragraph 5 hereinabove are, pursuant to section 309(e) of the Communications Act of 1934, as amended, and §§ 1.254 and 1.973(e) of the Commission's rules, upon Hub Oil Co., Inc.

8. *It is further ordered,* That each of the parties named in paragraph 6 hereinabove, in order to avail itself of the opportunity to be heard, shall within 20 days of the mailing of the notice of designation by the Secretary of the Commission, file with the Commission, in triplicate, a written notice of appearance that it will appear on the date to be fixed for hearing and present evidence on the issues specified in this Order, as prescribed in § 1.221 of the Commission's rules.

9. *It is further ordered,* That the Secretary of the Commission shall serve a copy of this Order, by Certified Mail, Return Receipt Requested, upon Hub Oil Co., Inc. and by first class mail upon Hub's counsel.

FEDERAL COMMUNICATIONS COMMISSION,
CARLOS V. ROBERTS,
Chief, Safety and Special Radio Services Bureau.

MEMORANDUM OPINION AND ORDER

Adopted: September 19, 1978.

Released: September 27, 1978.

In re applications of Tele-Comm, Inc., for renewal of license for Station KON925 operating on 152.12 MHz in the Domestic Public Land Mobile Radio Service at Bremerton, Wash., and Rad Com Electronics, Inc., for a construction permit to establish a new two-way station to operate on 152.12 MHz in the Domestic Public Land Mobile Radio Service near Olympia, Wash. CC Docket No. 78-303, File No. 2618-C2-R-74; and CC Docket No. 78-304, File No. 21023-C2-P-(2)-74.

By the Commission: Commissioner Quello absent.

1. Presently before the Commission is an application filed by Tele-Comm, Inc. (Tele-Comm) for renewal of license for two-way Station KON925 operating on 152.12 MHz at Bremerton, Wash., File No. 2618-C2-R-74. This application was filed on April 3, 1974, 32 days after it should have been filed under § 21.14(f) (now § 21.11(c)) of the rules [1] and 2 days after its license expiration date of April 1, 1974. Tele-Comm's application appeared on Public Notice as having been accepted for filing on April 15, 1974. Also under consideration is the application of Rad Com Electronics, Inc. (Rad Com), File No. 21023-C2-P-(2)-74, filed on June 14, 1974, for a construction permit to establish a new two-way station to operate on 152.12 MHz at Buck Mountain and Rock Candy Mountain near Olympia, Wash. These applications are electrically mutually exclusive. Rad Com has filed an informal objection against the Tele-Comm application and a motion for expedited action with respect to its own application. Various responsive pleadings have been filed.

2. Because Tele-Comm filed its renewal application after the expiration date of its license, Rad Com argues that Tele-Comm has forfeited its license under § 21.34(b) of the rules,[2] that it has lost any *Ashbacker* [3] rights to a comparative hearing, and that its frequency became available to be claimed by other applicants. Rad Com further argues that our consideration of Tele-Comm's application would constitute a de facto grant of a license in excess of the statutory maximum of 5 years as set forth in section 307(d) of the Communications Act of 1934, as amended (the Act).[4] Rad Com requests the Commission to dismiss Tele-Comm's application and grant its own application for the frequency previously held by Tele-Comm.

3. In response to the above arguments Tele-Comm states that its principal thought the renewal application was timely filed if postmarked by the expiration date, that the renewal application was in fact postmarked by the expiration date and that the filing was delayed in any case because the entire staff of Tele-Comm (consisting apparently only of the principal of Tele-Comm and his wife) was busy with the birth of a child at the time the renewal application should have been prepared. On this basis, Tele-Comm requests a waiver of § 21.14(f) of the rules so that its application will be accepted for filing. Tele-Comm argues that because a waiver should be granted, the issue of forfeiture under § 21.34(b) will not be reached. In any case, Tele-Comm states that it is entitled on equitable grounds to have its application considered because, if its application is now dismissed, it will not be able to reapply as a new applicant since the time period has passed for

[1] Section 21.14(f) was amended and redesignated 21.11(c) (47 CFR 21.11(c)(1976)) by First Report and Order in Docket No. 20490, FCC 7501073, released October 6, 1975. Section 21.14(f) provided in part: "Renewal of Station License. Unless otherwise directed or permitted by the Commission, each application for renewal of license other than special temporary authorizations shall be submitted on FCC Form 405 not less than 30 days or more than 60 days prior to the expiration date of the license sought to be renewed."

[2] At the time Tele-Comm filed its application § 21.34(b) provided:

"A license or Special Temporary Authorization shall be automatically forfeited upon the expiration date specified therein unless prior thereto an application for renewal of such license or authorization shall have been filed with the Commission (See Sec. 21.14(f))

"In our 1975 *Notice of Proposed Rulemaking,* 55 FCC 2d 36, we stated that we would amend our rules to provide a 30-day grace period to file renewal applications in order to 'more clearly reflect current policy with respect to expired construction permits and licenses'. 55 FCC 2d at 37. This proposal was adopted in *Report and Order,* 55 FCC 2d 744 (1975). Section 21.34(b) was redesignated 21.44(b) without change by *First Report and Order,* 60 FCC 2d 549 (1976). Section 21.44(b) (47 CFR 21.44(b)) provides:

"A license shall be automatically forfeited upon the expiration date specified therein unless prior thereto an application for renewal of such license has been filed with the Commission. An application for renewal filed after the expiration date of the license will be considered only if:

"(1) It is filed within 30 days of such expiration date;

"(2) It explains the failure to timely file a renewal application; and

"(3) It describes procedures which have been established to insure timely filings in the future."

[3] *Ashbacker Radio Corp. v. FCC,* 326 U.S. 327 (1945).

[4] Section 307(d) of the Communications Act of 1934, as amended, 47 U.S.C. 307(d), provides in part:

"No license granted for the operation of a broadcasting station shall be for a longer term than 3 years and no license so granted for any other class of station shall be for a longer term than 5 years, and any license granted may be revoked as hereinafter provided."

V 4 3 / 1 9 1
0 C 2 7 8
UMI

filing an application mutually exclusive with Rad Com's application.[5]

4. Section 307(d) of the Act limits to 5 years our grant of original licenses and renewals for stations other than broadcast. Section 307(d) also provides that a license will be continued in effect pending final determination of a renewal application.[6] Therefore, while the Act prohibits the Commission from granting a license beyond the maximum statutory period, the Act does not place "inexorable limitations on the duration of the licenses themselves." *Committee for Open Media*, 543 F.2d 861, 866 (D.C. Cir. 1976). In our view, acceptance of a renewal application filed after the expiration date does not violate the Act's proscription against the award of a license beyond the statutory period.

5. Tele-Comm's application appeared on public notice as having been accepted for filing on April 15, 1974. Pursuant to section 307(d) of the Act, its license has been continued in effect pending disposition of its renewal application. The brief period between the expiration date and filing date, as well as the four years that have passed since Tele-Comm's filing persuade us that forfeiture under then § 21.34(b) of the Rules would not be warranted and therefore the rule is waived. At the time of its filing Rad Com recognized that its application would be in frequency conflict with Station KON925. Thus, our resolution of this matter will merely put Rad Com in the circumstances it could normally expect when filing "on top of" an existing carrier, namely, a comparative hearing. In short, we find that acceptance and, consideration of Tele-Comm's renewal application is reasonable, fair, and within our statutory authority. Accordingly, we reject Rad Com's arguments on this issue, subject to our concerns on Tele-Comm's comparative and basic qualifications as stated below.

6. As we have indicated, Tele-Comm failed to file its renewal application for Station KON925 within the time prescribed by our rules. See note 1, *supra* and accompanying text. Tele-Comm also failed to file timely renewals for Stations KOP253 and KOP246 Seattle, Wash.[7] It is our understanding, moreover, that these latter two stations were inoperative since 1968. In addition, an examination of the station file for Station KON925 indicates that Tele-Comm on February 5, 1974, was issued a construction permit to modify the facilities of Station KON925. However, Tele-Comm never filed an application for a radio station license to cover this construction permit, which by its own terms was to expire on October 10, 1974. Finally, a recent field investigation of Tele-Comm's Station KON925 indicates that its control point was inoperative for at least 6 months prior to the time of the field investigation.[8] The record does not reflect an adequate explanation of these matters. For this reason, we find it necessary to explore further these matters in an evidentiary hearing. Our concern is that Tele-Comm may be careless, negligent, or inept to a degree sufficient to warrant a denial of its application.[9] See *Beamon Advertising, Inc.*, 45 FCC 1101 (Rev. Bd. 1963). Accordingly, we will designate appropriate issues to explore these matters.

7. Rad Com has requested a waiver of § 21.505 of the rules to permit operation at a power greater than that authorized by that section.[10] Rad Com states that there is a need for its proposed service in Tacoma and Bellevue, but that because of mountainous terrain it will be unable to serve these areas without the requested excess power. However, based on terrain data submitted by Rad Com, the proposed transmitter sites on Buck Mountain and Rock Candy Mountain appear to afford after a few miles from the transmitter site virtually unobstructed coverage to the lower lying areas it intends to serve. A substantial likelihood exists, therefore, that the reliable service area of Rad Com's proposed facilities will cover Tacoma and Bellevue without the requested waiver. Accordingly, we will designate an issue to determine if Rad Com has adequately demonstrated a need for its requested waiver of § 21.505 of the rules.[11]

8. The above-referenced applications are electrically mutually exclusive. Accordingly, a comparative hearing must be held to determine which applicant would better serve the public interest, convenience and necessity. *Ashbacker Radio Corp.* v. *FCC*, 326 U.S. 327 (1945).

9. Except to the extent indicated below, we find the applicants to be legally, financially, technical and otherwise qualified to construct and operate the proposed facilities.

10. Accordingly, *it is ordered*, Pursuant to sections 309 (d) and (e) of the Communications Act of 1934, as amended (47 U.S.C. Sections 309 (d) and (e)), that the above-captioned applications of Tele-Comm, Inc. and Rad Com Electronics, Inc., are designated for hearing in a consolidated proceeding upon the following issues:

(a) To determine the facts and circumstances surrounding the inoperative status of Tele-Comm's former Stations KOP253 and KOP246, the inoperative status of its control point for Station KON925, Tele-Comm's failure to file a license to cover a construction permit granted to it on February 5, 1974, and its failure to file timely renewals for Stations KON925, KOP246 and KOP253 as required by then § 21.14(f) of the rules;

(b) To determine whether the facts adduced pursuant to the foregoing issue reveal such negligence, carelessness or ineptness to reflect on the licensee's basic and/or comparative qualifications;

(c) To determine whether § 21.505 of the rules should be waived to allow operation of the facilities proposed in the application of Rad Com Electronics, Inc. at a power in excess of that prescribed by that rule section;

(d) To determine on a comparative basis, the nature and extent of service proposed by each applicant, including the rates, charges, maintenance, personnel, practices, classifications, regulations, and facilities pertaining thereto;

(e) To determine on a comparative basis, the areas and populations that each applicant will serve within the prospective 37 dbu contours, based upon the standards set forth in §21.504(a) of the Commission's Rules,[12] and to determine the need for the proposed services in said areas; and

(f) To determine, in light of the evidence adduced pursuant to the foregoing issues, what dispostion of the above-referenced applications would best serve the public interest, convenience and necessity.

11. *It is further ordered*, That, with respect to issues (a) and (b) the burden of proceeding with the introduction of evidence and the burden of proof are placed on Tele-Comm, Inc.

12. *It is further ordered*, That, with respect to issue (c) the burden of proof and the burden of proceeding with the introduction of evidence are placed on Rad Com Electronics, Inc.

13. *It is further ordered*, That, with respect to issues (d) and (e) the burden of proof and the burden of proceeding with the introduction of evidence are placed jointly on the applicants, and, that, with respect to issue (f) the burden of proof is placed jointly on the applicants.

14. *It is further ordered*, That the hearing shall be held at the Commission's offices in Washington, D.C. at a time and place and before an Administrative Law Judge to be specified in a subsequent order.

15. *It is further ordered*, That, the Chief, Common Carrier Bureau, is made a party to the proceeding.

16. *It is further ordered*, That, the applicants may vail themselves of an opportunity to be heard by filing with the Commission pursuant to § 1.221(c) of the rules within 20 days of the release date hereof, a written notice stating an intention to appear on the day of the hearing and present evidence on the issues specified in this memorandum opinion and order.

FEDERAL COMMUNICATIONS COMMISSION,
WILLIAM J. TRICARICO,
Secretary.

RADIO TECHNICAL COMMISSION FOR MARINE SERVICES

Notice of Meetings

In accordance with Pub. L. 92-463, "Federal Advisory Committee Act," the schedule of future Radio Technical Commission for Marine Services (RTCM) meetings is as follows:

SPECIAL COMMITTEE No. 72

"Numerical Identification of Stations in Maritime Telecommunications Systems"

Notice of 10th meeting: Wednesday, October 18, 1978, 9:30 a.m., Conference Room 7327, 2025 M Street NW., Washington, D.C.

AGENDA

1. Call to order; Chairman's report.
2. Administrative matters.
3. Discussion of U.S. position for CCIR special preparatory meeting (SPM).
4. Adoption of U.S. position.

Contact person: Francis K. Williams, Chairman, SC-72, Federal Communications Commission, Washington, D.C. 20554, phone: 202-632-7054.

RTCM EXECUTIVE COMMITTEE

Notice of October meeting: Thursday, October 19, 1978, 9:30 a.m., Conference Room 7200, Nassif Building, 400 Seventh Street SW., Washington, D.C.

AGENDA

1. Call to order.
2. Administrative matters.
3. Approval of amendment to Bylaws, article IV, section 1.
4. Discussion on amendment of Constitution, article VI, section 8.
5. New business.

SPECIAL COMMITTEE No. 73

"Minimum Performance Standards (MPS)—Marine Omega Receiving Equipment"

Notice of 4th meeting: Tuesday, October 24, 1978, 9:30 a.m., Conference Room, Maritime Institute of Technology and Graduate Studies, 5700 Hammonds Ferry Road, Linthicum Heights, Md. 21090.

AGENDA

1. Call to order; Chairman's report.
2. Administrative matters.
3. Reports of working groups.

Contact person: M. H. Carpenter, Co-Chairman, CDR T. P. Nolan, Co-Chairman, Maritime Institute of Technology and Graduate Studies, Linthicum Heights, Md. 21090, phone: 301-636-5700.

RTCM has acted as a coordinator for maritime telecommunications since its establishment in 1947. All RTCM meetings are open to the public. Written statements are preferred, but by previous arrangement, oral presentations will be permitted within time and space limitations.

Those desiring additional information concerning the above meetings may contact either the designated chairman or the RTCM Secretariat, phone: 202-632-6490.

FEDERAL COMMUNICATIONS COMMISSION,
WILLIAM J. TRICARICO,
Secretary.

GENERAL ACCOUNTING OFFICE

REGULATORY REPORTS REVIEW

Receipt of Report Proposal

The following request for clearance of a report intended for use in collecting information from the public was accepted by the Regulatory Reports Review Staff, GAO, on September 26, 1978. See 44 U.S.C. 3512 (c) and (d). The purpose of publishing this notice in the Federal Register is to inform the public of such acceptance.

The notice includes the title of the request received; the name of the agency sponsoring the proposed collection of information; the agency form number, if applicable; and the frequency with which the information is proposed to be collected.

Written comments on the proposed NRC request are invited from all interested persons, organizations, public interest groups, and affected businesses. Because of the limited amount of time GAO has to review the proposed request, comments (in triplicate) must be received on or before October 20, 1978, and should be addressed to Mr. John M. Lovelady, Assistant Director, Regulatory Reports Review, U.S. General Accounting Office, Room 5106, 441 G Street NW., Washington, D.C. 20548.

Further information may be obtained from Patsy J. Stuart of the Regulatory Reports Review Staff, 202-275-3532.

NUCLEAR REGULATORY COMMISSION

The NRC requests clearance of revisions to Form NRC-7, Application for License to Export Nuclear Material and Equipment. Several new items have been added to the form and others revised. The revisions to Form NRC are necessary to implement the Commission's new regulations in 10 CFR Part 110. NRC estimates that respondents will number approximately 200 and burden will average 30 minutes per application.

NORMAN F. HEYL,
Regulatory Reports Review Officer.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Health Care Financing Administration

PHARMACEUTICAL REIMBURSEMENT BOARD

Proposed MAC Limit on Doxepin HCl Capsules

AGENCY: Health Care Financing Administration (HCFA), HEW.

[5] Section 21.31(b) of the rules (47 CFR 21.31(b) (1976)) provides that an application will be entitled to comparative consideration with one or more conflicting applications only if it is received within 60 days after the date of the public notice listing the first of the conflicting applications as accepted for filing or, in other circumstances not relevant here.

[6] Section 307(d) of the Communications Act of 1934, as amended (47 U.S.C. 307(d)) provides in part: "Pending any hearing and final decision on such an application and the disposition of any petition for rehearing pursuant to section 405, the Commission shall continue such license in effect."

Section 9(b) of the Administrative Procedure Act (5 U.S.C. 558(c)) provides a similar extension for licenses generally: "When the licensee has made timely and sufficient application for a renewal or a new license in accordance with agency rules, a license with reference to an activity of a continuing nature does not expire until the application has been finally determined by the agency.

[7] The renewal applications for these stations were received on the same day as the renewal application for KON925. Pursuant to settlement agreements with Ultra Radio Communications, Inc., the renewal applications for Stations KOP253 and KOP246 were dismissed with prejudice on January 25, 1977, and July 14, 1977, respectively.

[8] Tele-Comm admits that its control point was inoperative at the time of the field investigation.

[9] Section 308(b) of the Communications Act of 1934, as amended (47 U.S.C. 308(b)) requires that all prospective licensees show the requisite "character . . . and other qualifications" that the Commission might require.

[10] Section 21.505 of the Commission's rules (47 CFR 21.505) prescribes required reductions in effective radiated power for antenna heights in excess of 500 feet above average terrain.

[11] Rad Com's waiver request may ultimately be denied. In that event, its proposal will be evaluated on the basis of conformance with § 21.505 of the rules.

[12] Section 21.504(a) of the Commission's Rules (47 CFR 21.504(a)) describes a field

Footnotes continued on next page

Footnotes continued from last page

strength contour of 37 decibels above one microvolt per meter as the limits of the reliable service area for stations engaged in two-way communications service in the 152-162 MHz band. Propagation data set forth in § 21.504(b) are the proper bases for establishing the location of service contours for the facilities involved in this proceeding.

V 43 / 191

ACTION: Extension of comment period.

SUMMARY: Because additional information of possible significance to the setting of a MAC level for Doxepin HCl capsules has been received after the close of the comment period, the comment period for that drug is extended.

DATE: End of extended comment period: October 11, 1978.

FOR FURTHER INFORMATION CONTACT:

Peter Rodler, Executive Secretary, Pharmaceutical Reimbursement Board, 3076 Switzer Building, 330 C Street SW., Washington, D.C. 20201.

SUPPLEMENTARY INFORMATION: On August 18, 1978, the Pharmaceutical Reimbursement Board proposed maximum allowable cost (MAC) limits on three forms of Doxepin HCl capsules. (See 43 FR 36698.) At that time, the Board announced that it would consider all comments received within 30 days of the date of the notice. After the close of the comment period, a comment was received stating that Doxepin HCl was not available to pharmacists at the proposed MAC limits. Although we would not ordinarily consider comments received after the close of the comment period, we were concerned that the proposed MAC limit, if adopted, might unfairly burden practicing pharmacists. In order to test the validity of this comment, we contacted one of the major wholesalers which distribute this drug. We were informed that their prices compared to the proposed MAC levels as follows:

Proposed MAC's and Wholesale Price

Doxepin HCl 10 mg. $0.0940—$0.0999.
Doxepin HCl 25 mg. $0.1150—$0.1222.
Doxepin HCl 50 mg. $0.1765—$' 1875.

The Board intends to consider this information in arriving at final MAC levels for Doxepin HCl. In order that the public be given the opportunity to comment on this information, or to bring other relevant information to our attention, the comment period for Doxepin HCl is extended until October 11, 1978.

Dated: September 28, 1978.

PETER RODLER,
Executive Secretary, Pharmaceutical Reimbursement Board.

National Institutes of Health

ANIMAL RESOURCES REVIEW COMMITTEE

Meeting

Pursuant to Pub. L. 92-463, notice is hereby given of the meeting of the Animal Resources Review Committee, Division of Research Resources, October 25, 1978, at the Oregon Primate Research Center, Beaverton, Oreg. 97005.

The meeting will be open to the public on October 25 from 8:30 a.m. to 10:30 a.m., during which time there will be a brief staff presentation on the current status of the primate research centers program. The committee will select future meeting dates. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), title 5, U.S. Code and section 10(d) of Pub. L. 92-463, the meeting will be closed to the public on October 25 from 10:30 a.m. to adjournment for the review, discussion, and evaluation of individual grant applications. These applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material and personal information concerning individuals associated with the applications.

Mr. James Augustine, Information Officer, Division of Research Resources, Room 5B13, Building 31, National Institutes of Health, Bethesda, Md. 20014, 301-496-5545, will provide summaries of the meeting and rosters of the Committee members. Dr. Dennis O. Johnsen, Executive Secretary of the Animal Resources Review Committee, Room 5B55, Building 31, National Institutes of Health, Bethesda, Md. 20014, 301-496-5175, will furnish substantive program information.

(Catalog of Federal Domestic Assistance Programs No. 13.306, National Institutes of Health.)

Dated: September 22, 1978.

SUZANNE L. FREMEAU,
NIH Committee Management Officer.

[FR Doc. 78-27646 Filed 9-29-78; 8:45 am]

CHANGE OF DATE OF THE PRESIDENT'S CANCER PANEL

Amended Notice of Meeting

Notice is hereby given of the change of meeting date for the President's Cancer Panel, National Cancer Institute, October 10, 1978, National Institutes of Health, Bethesda, Md., which was published in the FEDERAL REGISTER on September 5, 1978 (43 FR 39430). The meeting will now be held October 18, 1978, Building 31C, Conference Room 7, National Institutes of Health, Bethesda, Md., and will be entirely open to the public from 9 a.m. to adjournment. Attendance by the public will be limited to space available.

For further information, please contact Dr. Richard A. Tjalma, Executive Secretary, Building 31, Room 11A46, National Institutes of Health, Bethesda, Md. 20014, 301-496-5854.

Dated: September 22, 1978.

SUZANNE L. FREMEAU,
Committee Management Officer, NIH.

NIDR SPECIAL GRANTS REVIEW COMMITTEE

Meeting

Pursuant to Pub. L. 92-463, notice is hereby given of the meeting of the NIDR Special Grants Review Committee, National Institute of Dental Research, on November 28-29, 1978, in building 31-C, Conference Room 9, National Institutes of Health, Bethesda, Md. This meeting will be open to the public from 9 a.m. to 10 a.m. on November 28 to discuss administrative details relating to committee business and general discussion. Attendance by the public will be limited to space available.

In accordance with provisions set forth in sections 552b(c)(4) and 552b(c)(6), title 5, U.S. Code and section 10(d) of Pub. L. 92-463, the meeting will be closed to the public on November 28 from 10 a.m. to adjournment and on November 29 from 9 a.m. to adjournment for the review, discussion, and evaluation of individual grant applications. These applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications.

Dr. Emil L. Rigg, Chief of Scientific Review Branch, National Institute of Dental Research, National Institutes of Health, Westwood Building, Room 504, Bethesda, Md. 20014, phone 301-496-7658, will provide summaries of meetings, rosters of committee members, and substantive program information.

NATIONAL CANCER INSTITUTE COMMITTEES

Renewals

The Director, National Institutes of Health, announces the merger on September 8, 1978, of the Committees on Cancer Immunobiology; Cancer Immunodiagnosis, and Cancer Immunotherapy, and the renewal of these committees as one under the new title of the Tumor Immunology Committee, under the authority of section 410(a)(3) of the Public Health Service Act (42 U.S.C. 286d). Such advisory committees shall be governed by the provisions of the Federal Advisory Committee Act, as amended (Pub. L. 92-463) setting forth standards governing the establishment and use of advisory committees. This Committee provides to the Director, NCI, and the Director, Division of Cancer Research Resources and Centers, NCI, advice on the technical and scientific merit of contract proposals. The Committee will terminate September 8, 1980, unless renewed by appropriate action as authorized by law.

Dated: September 22, 1978.

DONALD S. FREDRICKSON,
Director, National Institutes of Health.

Office of the Assistant Secretary for Health

ADVISORY COMMITTEE

Meetings

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), announcement is made of the following National Advisory bodies scheduled to meet during the month of October 1978:

Name: Health Services Research Study Section.
Date and Time: October 12-13, 1978, 9 a.m.
Place: Room 10-57, Center Building, 3700 East-West Highway, Hyattsville, Md. 20782.
Open October 12, 9 a.m. to 10 a.m.
Closed for remainder of meeting.
Purpose: The Committee is charged with the initial review of grant applications for Federal assistance in the program areas administered by the National Center for Health Services Research.
Agenda: The open session on October 12, 1978, will be devoted to a business meeting covering administrative matters and reports. During the closed session, the study section will be reviewing research grant applications relating to the delivery, organization, and financing of health services. The closing is in accordance with provisions set forth in section 552b(c)(6), Title 5, U.S. Code and the Determination by the Assistant Secretary for Health, pursuant to Public L. 92-463.

Anyone wishing to obtain a roster of members, minutes of meetings, or other relevant information should contact Marco Montoya, Ph. D., National Center for Health Services Research, OASH, Room 7-50A, Center Building, 3700 East-West Highway, Hyattsville, MD 20782, telephone 301-436-6918.

Name: Health Services Developmental Grants Study Section.
Date and Time: October 25-27, 1978, 8 p.m.
Place: Hotel Washington, Capital Room, Pennsylvania at 15th and F Streets NW., Washington, D.C. 20004.
Open October 25, 8 p.m. to 10 p.m. and October 26, 9 a.m. to 10 a.m.
Closed for remainder of meeting.
Purpose: The Committee is charged with the initial review of grant applications for

V 43/191 OCT 2 78 UMI

Federal assistance in the program areas administered by the National Center for Health Services Research.

Agenda: The open sessions of the meeting on October 25 and 26, 1978, will be devoted to a business meeting covering administrative matters and reports. During the closed sessions, the study section will be reviewing research grant applications relating to the delivery, organization and financing of health services. The closing is in accordance with provisions set forth in section 552b(c)(6), Title 5, U.S. Code, and the determination by the Assistant Secretary for Health, pursuant to Pub. L. 92-463.

Anyone wishing to obtain a roster of members, minutes of meetings, or other relevant information should contact Mr. David McFall, National Center for Health Services Research, OASH, Room 7-50A, Center Building, 3700 East-West Highway, Hyattsville, Md. 20782, telephone 301-436-6916.

Agenda items are subject to change as priorities dictate.

Dated: September 26, 1978.

WAYNE RICHEY, Jr.,
Associate Director for Management, Office of Health Policy Research and Statistics.

Bureau of Indian Affairs

NAVAHO LAND SELECTION

Additional Public Hearings

SEPTEMBER 26, 1978.

A previous notice on public hearings concerning the Navaho land selection was published in the FEDERAL REGISTER, Vol. 43, No. 161, dated August 18, 1978.

Additional public hearings on the Navaho land selection environmental impact statement, each to begin at 7:30 p.m., will be held on November 2, 1978, in Flagstaff, Ariz., at the South Campus Student Union, Northern Arizona University, and November 3, 1978, in Kanab, Utah, in the high school auditorium. These hearings are being held to enable members of the public to present comments concerning the Department of the Interior's draft environmental impact statement on the proposal, under which 250,000 acres of public domain land in Arizona or New Mexico will be made available for purchase by the Navaho Indian Tribe.

Previous public hearings on the statement were held in Farmington, N. Mex., on September 11; Oraibi, Ariz., September 12; Page, Ariz., September 13; and Phoenix, Ariz., September 15.

Oral and written comments by interested parties are invited. The number of persons desiring to present oral statement may make it necessary to limit the time allowed for any single statement. Written comments supplementary to, or in lieu of, oral statements will be accepted at the hearings. The deadline for such comments has been extended to November 3. Copies of the draft environmental impact statement may be obtained from the Flagstaff Administrative Office, Bureau of Indian Affairs, P.O. Box 1889, Flagstaff, Ariz. 86002.

Those desiring to make an oral presentation at the hearings should make that fact known by advising the Flagstaff Administrative Office, Bureau of Indian Affairs, 125 East Birch Street, Room 307, Arizona Bank Building, Flagstaff, Ariz. 86001, in advance of the hearing or by registering on the date and at the place of hearing prior to the scheduled hour.

LARRY E. MEIEROTTO,
Deputy Assistant, Secretary of the Interior.

NASA ADVISORY COUNCIL (NAC) SPACE AND TERRESTRIAL APPLICATIONS ADVISORY COMMITTEE (STAAC)

Meeting

The Ad Hoc Informal Advisory Subcommittee on Technology Transfer of the NAC-STAAC will meet on October 26 and 27, 1978, at NASA headquarters, room 226A, Federal Office Building 10B, 600 Independence Avenue SW., Washington, D.C. 20546. Members of the public will be admitted to the meeting at 8:30 a.m. on both days on a first-come-first-served basis and will be required to sign a visitors' register. The seating capacity of the meeting room is for 35 persons.

This Subcommittee, chaired by Dr. Robert P. Morgan, is comprised of seven members of the NAC-STAAC and will review and discuss the 5-year program plan and the role of the private sector in technology transfer.

The approved agenda for the meeting is as follows:

OCTOBER 26, 1978

TIME AND TOPIC

8:30 a.m.—5-year plan.
1:15 p.m.—Discussion.
3 p.m.—Role of the private sector in NASA technology transfer.
4:30 p.m.—Adjourn.

OCTOBER 27, 1978

8:30 a.m.—Role of private sector in NASA technology transfer (continued).
11:30 a.m.—Findings and recommendations.
12:30 p.m.—Adjourn.

For further information regarding the meeting, please contact Louis B. C. Fong, Executive Secretary of the Subcommittee, Washington, D.C., at 202-755-8601.

ARNOLD W. FRUTKIN,
Acting Associate Administrator for External Relations.

SEMIANNUAL AGENDA OF SIGNIFICANT REGULATIONS

AGENCY: National Aeronautics and Space Administration.

ACTION: Advanced public notice of NASA's planned activities.

SUMMARY: In accordance with Executive Order 12044, "Improving Government Regulations," this Semiannual Agenda describes the significant regulations being considered for development or amendment by NASA, and the need and legal basis for the actions being considered.

EFFECTIVE DATE: October 2, 1978.

ADDRESS: Director, Information Systems Division (Code NSM-12), Office of Management Operations, NASA Headquarters, Washington, D.C. 20546.

FOR FURTHER INFORMATION CONTACT:

Joan Cavanaugh, 202-755-3219.

SUPPLEMENTARY INFORMATION: On May 22, 1978, NASA published in the FEDERAL REGISTER (43 FR 21981) its first report implementing Executive Order 12044. It proposed that any regulation that meets one or more of the following criteria will be considered significant.

(1) It is a matter of major concern to the public, especially if substantial public comments are anticipated;

(2) It may impose heavy compliance and reporting burdens on the public, especially on small business;

(3) It may substantially affect the quality of the environment, and the public health and safety; and

(4) It involves important NASA policy which will require substantial resources to develop and enforce.

ROBERT A. FROSCH,
Administrator.

[Docket No. 70-2623]

DUKE POWER CO.

Special Prehearing Conference

SEPTEMBER 22, 1978.

On July 28, 1978, the Nuclear Regulatory Commission published in the FEDERAL REGISTER a notice of opportunity for public participation in the proposed NRC licensing action for amendment to special materials license SNM-1773 (43 FR 32905). The proposed amendment to SNM-1773 would authorize the Applicant, Duke Power Co., to transport spent nuclear fuel from the Oconee nuclear station for storage in the spent fuel pool located at the McGuire nuclear facility in accordance with the Duke's application for amendment dated March 9, 1978. The notice provided that any person whose interest may be affected by the proceeding could file a request for a public hearing in the form of a petition for leave to intervene with respect to whether the proposed amendment to SNM-1773 should be issued.

Pursuant to the Notice,* timely petitions have been filed: (1) by the Safe Energy Alliance (the Alliance); (2) by Carolina Action in Charlotte (Carolina Action); (3) by the Natural Resources Defense Council (the Council); and (4) by the State of South Carolina.

Please take notice that a special prehearing conference pursuant to the provisions of § 2.751a of the Commission's Rules of Practice (10 CFR § 2.751a) will be held at 10:00 a.m., local time, on Tuesday, October 24, 1978, at the Board Room (4th Floor), Charlotte-Mecklenburg Education Center, 701 East Second Street, Charlotte, N.C. 28230. All parties and petitioners for intervention and their counsel are directed to appear at such special prehearing conference to consider the intervention petitions, including the interest or standing of petitioners under either the judicial standing tests for intervention as a matter of right, or intervention as a matter of discretion, as well as the identification of relevant issues in controversy.

Not later than fifteen (15) days prior to the holding of the special prehearing conference each petitioner shall file a supplement to his petition for leave to intervene which must include a list of the contentions which petitioner seeks to have litigated in the matter and the bases for each contention set forth with reasonable specificity. A petitioner who fails to file such a supplement which satisfies the requirements of this paragraph with respect to at least one contention will not be permitted to participate as a party.

The parties and the petitioners or their representatives are directed to conduct such informal conferences as may be practicable prior to the prehearing coference in order to expedite the proceeding and in particular to advance the purposes of the prehearing conference.

It is so ordered.

Dated at Bethesda, Md, this 22d day of September, 1978.

For the Atomic Safety and Licensing Board.

ROBERT M. LAZO,
Chairman.

[7590-01]

[Docket Nos. 50-259, 50-260 and 50-296]

TENNESSEE VALLEY AUTHORITY

Issuance of Amendments to Facility Operating License and Negative Declaration

The U.S. Nuclear Regulatory Commission (the Commission) has issued Amendment No. 42 to Facility Operating License No. DPR-33, Amendment No. 39 to Facility Operating License No. DPR-52 and Amendment No. 16 to Facility Operating License No. DPR-68, issued to Tennessee Valley Authority (the licensee), which revised Technical Specifications for operation of the Browns Ferry Nuclear Plant, Units Nos. 1, 2 and 3, located in Limestone County, Ala. The amendments are effective as of date of issuance.

The amendments change the Technical Specifications and authorize the licensee to increase the storage capacity of each of the three on-site spent fuel pools to 3471 fuel assemblies.

The application for the amendments complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment. Notice of Proposed Issuance of Amendment to Facility Operating License in connection with this action was published in the FEDERAL REGISTER on January 9, 1978 (43 FR 1412). No request for a hearing or petition for leave to intervene was filed following notice of the proposed action.

The Commission has prepared an environmental impact appraisal for the amendment and has concluded that an environmental impact statement for this particular action is not warranted because there will be no environmental impact attributable to the action other than that which has already been predicted and described in the Final Environmental Statement for the Facility dated September 1, 1972.

For further details with respect to this action, see (1) the application for amendments dated December 2, 1977, as supplemented by letters dated December 20, 1977, May 24, May 26, June 30, August 2, August 10, and September 1, 1978, (2) Amendment No. 42 to License No. DPR-33, Amendment No. 39 to License No. DPR-52, and Amendment No. 16 to License No. DPR—68, (3) the Commission's related Environmental Impact Appraisal and (4) the Commission's related Safety Evaluation. All of these items are available for public inspection at the Commission's Public Document Room, 1717 H Street NW., Washington, D.C. and at the Athens Public Library, South and Forrest, Athens, Ala. 35611. A copy of items (2), (3) and (4) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, attention: Director, Division of Operating Reactors.

Dated at Bethesda, Md., this 21st day of September, 1978.

For the Nuclear Regulatory Commission.

THOMAS A. IPPOLITO,
Chief, Operating Reactors Branch No. 3, Division of Operating Reactors.

MIDWEST STOCK EXCHANGE, INC.

Self-Regulatory Organizations; Proposed Rule Change

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), as amended by Pub. L. 94-29, 16 (June 4, 1975), notice is hereby given that on September 6, 1978, the above-mentioned self-regulatory organization filed with the Securities and Exchange Commission a proposed rule change as follows:

EXCHANGE'S STATEMENT OF THE TERMS OF SUBSTANCE OF THE PROPOSED RULE CHANGE

Rule 7 of Article XL is hereby amended as follows (Additions italicized—[Deletions Bracketed]):

ARTICLE XL

Restriction of Out-of-the-Money Options. Rule 7(a) No change in text.

(b) The prohibition of paragraph (a) shall not apply to:

1. The entry of an order for any opening writing transaction intended to create a covered short position or, in the case of a call option contract, a short position that is covered in the account on a share-for-share basis by a long position in a security immediately exchangeable or convertible without restriction, other than the payment of money, into the underlying stock;

(2) The entry of a spread order for the purchase and sale of the same number of option contracts of the same class; [or]

(3) The entry of an order for any opening transaction which would, upon execution, create a spread position for the same number of option contracts of the same class;

(4) The entry of an order for the purchase of a put against a long position in either the underlying stock or a security immediately exchangeable or convertible without restriction, other than the payment of money, into the underlying stock; or

[(3)] (5) Any transaction of a Market Maker pursuant to the provisions of Rule 8 of Article XLVII.

(c) No change in text.

EXCHANGE'S STATEMENT OF BASIS AND PURPOSE

The basis and purpose of the foregoing proposed rule change is as follows:

The purpose of proposed Rule 7(b)(3) is to permit investors to enter an order in a restricted option, the execution of which would result in a spread position. Under present Rule 7(b)(2), the entry of a spread order is exempt from the prohibition of the restricted options rule provided both sides of the order are executed simultaneously. That is, a spread order, by definition, requires the simultaneous purchase and sale of the same number of option contracts of the same class.

Under the proposed rule change, investors would be permitted to execute each side of a spread at different times, which might be advisable depending on market conditions. For example, an account which already has a long position in a particular option class would be able to sell (opening) a restricted option provided each such option sold is offset by a long option which results in a spread position. Similarly, if an account has an existing short position in a particular option class, it would be permitted to purchase (opening) a restricted option to offset the short position provided the transaction results in a spread position.

The proposed rule change would not permit, however, a spread position to be established by initiating an opening purchase or sale in a restricted option and subsequently executing the other side of the spread.

With respect to proposed Rule 7(b)(4), the amendment would permit investors to purchase (opening) restricted puts provided they are offset in the account by long stock or convertible security positions.

The basis of this rule change is section 6(b)(5) of the act, where the rules of the Exchange are designed to promote just and equitable principles of trade.

The Midwest Stock Exchange, Inc., has neither solicited nor received any comments.

The Midwest Stock Exchange, Inc., believes that no burdens have been placed on competition.

Within 35 days of the date of publication of this notice in the FEDERAL REGISTER (November 6, 1978), or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the above-mentioned self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons desiring to make written submissions should file 6 copies thereof with the Secretary of the Commission, Securities and Exchange Commission, Washington, D.C. 20549. Copies of the filing with respect to the foregoing and of all written submissions will be available for inspection and copying in the Public Reference Room, 1100 L Street NW., Washington, D.C. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number referenced in the caption above and should be submitted on or before October 23, 1978.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.

SHIRLEY E. HOLLIS,
Assistant Secretary.

SEPTEMBER 25, 1978.

DEPARTMENT OF STATE

[Public Notice CM-8/110]

ADVISORY COMMITTEE ON TRANSNATIONAL ENTERPRISES

Meeting

The Department of State will hold a meeting on October 12 of the Working Group on U.N./OECD investment undertaking of the Advisory Committee on Transnational Enterprises. The Working Group will meet from 2:30 p.m. until 5:30 p.m. The meeting will be held in room 6320 of the State Department, 2201 C Street NW., Washington, D.C. The meeting will be open to the public.

The subject of the meeting will be the ongoing negotiations in international bodies aimed at codes of conduct related to international investment. In particular, the Working Group will review the results of the September 18-29 meeting of the U.N. Intergovernmental Working Group on a Code of Conduct. In addition, the Working Group will discuss the forthcoming meeting of the OECD subgroups concerned with national treatment, and the guidelines on multinational enterprises. The Working Group will also review the preparations for the October 30-31 meeting of the full OECD Committee on International Investment and Multinational Enterprises (CIME). We will also consider in further detail issues relating to the formal review of the OECD investment package.

Requests for further information on the meeting should be directed to Richard Kauzlarich, Department of State, Office of Investment Affairs, Bureau of Economic and Business Affairs, Washington, D.C. 20520. He may be reached by telephone on 202-632-2728.

Members of the public wishing to attend the meeting must contact Mr. Kauzlarich's office in order to arrange entrance to the State Department building.

The Chairman of each Working Group will, as time permits, entertain

oral comments from members of the public attending the meeting.

Dated: October 21, 1978.

RICHARD D. KAUZLARICH,
Executive Secretary.

[Public Notice CM-8/111]

SHIPPING COORDINATING COMMITTEE; SUBCOMMITTEE ON SAFETY OF LIFE AT SEA

Meeting

The working group on ship design and equipment of the Subcommittee on Safety of Life at Sea, a subcommittee of the Shipping Coordinating Committee, will hold an open meeting at 9:30 a.m. on Wednesday, October 18, 1978 in rooms 8236 and 8238 of the Department of Transportation Building, 400 Seventh Street SW., Washington, D.C. 20590.

The purpose of this meeting is to finalize preparations for the XIX Session of the Subcommittee on Ship Design and Equipment of the Intergovernmental Maritime Consultative Organization (IMCO) which is scheduled to meet November 27 to December 1, 1978 in London. The agenda for this meeting includes, inter alia, noise levels onboard ships, draught requirements for Segregated Ballast Tankers less than 150 meters in length, steering gear standards, special purpose ships (research vessels and offshore supply vessels) and diving systems.

Requests for further information on the meeting should be directed to Captain R. L. Brown, United States Coast Guard. He may be reached by telephone at 202-426-2167.

The Chairman will entertain comments from the public as time permits.

JOHN LLOYD III,
Acting Director,
Office of the Maritime Affairs.

SEPTEMBER 20, 1978.

SHIPPING COORDINATING COMMITTEE; SUBCOMMITTEE ON SAFETY OF LIFE AT SEA

Meeting

The working group on fire protection of the Subcommittee on Safety of Life at Sea, a subcommittee of the Shipping Coordinating Committee, will hold an open meeting at 9 a.m. on Thursday, October 19, 1978 in rooms 8236 and 8238 of the Department of Transportation Building, 400 Seventh Street SW., Washington, D.C. 20590.

The purpose of this meeting is to finalize preparations for the XXII Session of the Subcommittee on Fire Protection of the Intergovernmental Maritime consultative Organization (IMCO) which is scheduled to meet November 6-10, 1978 in London. The agenda for the meeting includes, inter alia, the discussion of reservations on the proposed Code for Mobile Offshore Drilling Units (MODU's) and the discussion of special purpose ships other than MODU's.

Requests for further information on the meeting should be directed to Mr. Daniel F. Sheehan, U.S. Coast Guard, Washington, D.C. 20590. He may be reached by telephone at 202-426-2197.

The Chairman will entertain comments from the public as time permits.

JOHN LLOYD, III,
Acting Director,
Office of Maritime Affairs.

Coast Guard

[CGD 78-133]

COAST GUARD ACADEMY ADVISORY COMMITTEE

Open Meeting

Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463; 5 U.S.C. App. I) notice is hereby given of a meeting of the Coast Guard Academy Advisory committee to be held at the U.S. Coast Guard Academy, New London, CT, on Tuesday and Wednesday, October 17-18, 1978. The session on Tuesday will begin at 1 p.m. and end at 4 p.m. On Wednesday the session will begin at 8:45 a.m., and adjourn at 3:45 p.m.

The agenda for this meeting is as follows: (a) Impact of corps size reduction, (b) accreditation, (c) McAllister Hall (Engineering), (d) educational media center, (e) Academy non-cadet programs, (f) Cadet Administration Division, (g) admissions.

The Coast Guard Academy Advisory Committee was established in 1937 by Pub. L. 75-38 to advise on the status of the curriculum and faculty of the Academy, and to make recommendations as necessary.

Attendance is open to the interested public. With the approval of the Chairman, members of the public may present oral statements at the hearing. Persons wishing to attend and persons wishing to present oral statements should not later than the day before the meeting notify: Capt. Roderick M. White, USCG, Dean of Academics/Executive Secretary of Academy Advisory Committee, U.S. Coast Guard Academy, New London, Conn. 06320, phone 203-443-8463.

Any member of the public may present a written statement to the Committee at any time.

W. H. STEWART,
Rear Admiral, U.S. Coast Guard,
Chief, Office of Personnel.

[CGD 78-135]

WAIVERS OF NAVIGATION AND VESSEL INSPECTION LAWS AND REGULATIONS

Suspension of Requirements for Survey, Inspection, and Measurement

AGENCY: Coast Guard, DOT.

ACTION: Notice of proposed order.

SUMMARY: The Coast Guard proposes to suspend the provisions of law requiring survey, inspection, and measurement of the foreign built vessel, M/V *Lionheart,* in order to admit the vessel to American registry. This action is considered necessary, due to restraints on the shipping trade between the United States and Ecuador recently imposed by the Ecuadorian government. Suspending the provisions of law requireing survey, inspection, and measurement will allow the vessel to be registered under United States laws following its sale to a United States corporation.

DATES: Comments must be received on or before October 13, 1978.

ADDRESSES: Comments should be submitted to Commandant (G-CMC/81), (CGD 78-135), U.S. Coast Guard, Washington, D.C. 20590. Comments will be available for examination at the Marine Safety Council (G-CMC/81), Room 8117, Department of Transportation, Nassif Building, 400 Seventh Street, SW., Washington, D.C. 20590.

FOR FURTHER INFORMATION CONTACT:

Captain J. E. DeCarteret, Chief, Merchant Vessel Inspection Division, U.S. Coast Guard, Room 8302, 400 7th Street, SW., Washington, D.C. 20590, 202-426-2178.

SUPPLEMENTARY INFORMATION: Interested persons are invited to participate in this proposed action by submitting written views, data, or arguments. Persons submitting comments should include their names and addresses, identify this notice (CGD 78-135) and give reasons for the comments. All comments received before the expiration of the comment period

V 43/191
OCT 2 1978

will be considered before final action is taken on this proposal.

DRAFTING INFORMATION

The principal persons involved in drafting this proposal are: Captain J. E. DeCarteret, Project Manager, Office of Merchant Vessel Inspection, and A.F. Bridgman, Jr., Project Attorney, Office of the Chief Counsel.

DISCUSSION

In the interest of preserving the needs for foreign commerce between the United States of America and Ecuador the Coast Guard is considering suspending the provisions of law requiring survey, inspection, and measurement by officers of the United States of foreign built vessels admitted to American registry under 46 U.S.C. 11 for the M/V *Lionheart*, for a period of approximately 9 months. The *Lionheart* is of Norwegian registry, currently under charter to Coordinated Carribean Transport, Inc. an American owned corporation. The vessel has been engaged in roll-on-roll-off shipping between the United States and Ecuador. Recently the Ecuadorian government refused to issue the manifest stamps which are necessary to permit the shipment of goods on the M/V *Lionheart* from Miami, Fla. to Ecuador.

The action has apparently been taken under the provisions of Ecuadorian law reserving the general cargo trade between Ecuador and the United States to U.S. flag vessels and Ecuadorian flag vessels.

Coordinated Carribean Transport, Inc. currently has under construction two U.S. flag vessels scheduled to engage in trade on this route. The completion of the construction of these vessels has been delayed and delivery is not anticipated until March 1979. The applicant has stated that no United States flag vessels of a type and size suitable for roll-on-roll-off operation in the U.S.-Ecuador trade are available for charter or purchase. This waiver is proposed to permit the M/V *Lionheart* to be registered for the foreign trade, as a U.S. flag vessel.

The *Lionheart* is the only vessel currently providing direct roll-on-roll-off service between the United States and Ecuador. The suspension of the service occurred suddenly and left substantial amounts of cargo stranded at the Coordinated Carribean Transport, Inc. Terminal in Miami. The unavailability of other vessels to move this cargo, and other shipments scheduled, has resulted in hardship to numerous U.S. shippers. Delay in acting on this suspension will have adverse affects on the shipping trade that has come to rely on the service provided by the M/V *Lionheart*.

Since this proposed Order could have an effect on other persons, the Coast Guard is providing an opportunity for comment, however, due to the circumstances giving rise to the proposed Order, it has been found necessary to limit the comment period to 10 days. The Coast Guard has determined that this proposed Order is exempt from the requirements of Executive Order 12044 and the DOT Policies and Procedures for Improving Government Regulations (46 FR 9582).

In consideration of the foregoing, the Coast Guard proposes to issue the following Order:

The Commandant, U.S. Coast Guard has found it necessary in the interest of the foreign commerce of the United States, to suspend the provisions of law requiring survey, inspection, and measurement, by officers of the United States, of foreign built vessels prior to their being registered as vessels of the United States under 46 U.S.C. 11. The provisions of 46 U.S.C. 71, 46 U.S.C. 361, 46 U.S.C. 362, 46 U.S.C. 367, and 46 U.S.C. 404 requiring surveys, inspections, and measurement are suspended, until July 1, 1979, and, if otherwise eligible, the M/V *Lionheart*, of 5940 gross tons and 3201 net tons, built in Oslo, Norway in 1960, may be admitted to registry under 46 U.S.C. 11, provided the vessel is engaged solely in the United States-Ecuador trade.

(46 U.S.C. 82; 49 U.S.C. 1655(b)(1); E.O. 10289; and 49 CFR 1.45(a).)

Dated: September 28, 1978.

J. B. HAYES,
Admiral, U.S. Coast Guard
Commandant.

Federal Aviation Administration

RADIO TECHNICAL COMMISSION FOR AERONAUTICS (RTCA), SPECIAL COMMITTEE 134—GENERAL PURPOSE ELECTRONIC TEST EQUIPMENT

Meeting

Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463; 5 U.S.C. App. I) notice is hereby given of a meeting of the RTCA Special Committee 134 on General Purpose Electronic Test Equipment to be held October 19 and 20, 1978, conference room 9W67, National Center No. 1, Naval Electronics Systems Command, 2511 Jefferson Davis Highway, Arlington, Va., commencing at 9 a.m.

The agenda for this meeting is as follows: (1) Chairman's introductory remarks; (2) approval of minutes of fourth meeting held August 24 and 25, 1978; (3) report and discussion on warranty shortfalls issue; (4) briefing on cost and utilization of test equipment in an airline environment; (5) working groups meet in separate sessions; (6) report and discussion on specification confusion issue; (7) report and discussion on wasteful cost of obsolescence issue; and (8) other business.

Attendance is open to the interested public but limited to space available. With the approval of the Chairman, members of the public may present oral statements at the meeting. Persons wishing to present oral statements or obtain information should contact the RTCA Secretariat, 1717 H Street NW., Washington, D.C. 20006, 202-296-0484. Any member of the public may present a written statement to the committee at any time.

Issued in Washington, D.C., on September 15, 1978.

KARL F. BIERACH,
Designated Officer.

Federal Highway Administration
National Highway Traffic Safety Administration

HIGHWAY FATALITY COUNTING RULE

Fatalities Within 30 Days of Causative Accidents

AGENCIES: Federal Highway Administration (FHWA); National Highway Traffic Safety Administration (NHTSA).

ACTION. Notice.

SUMMARY: The Department of Transportation is adopting for its statistical purposes a rule that counts as traffic fatalities only those deaths occurring within 30 days of the causative accidents. The rule has been adopted in the interest of promoting uniformity in the reporting of highway fatalities.

EFFECTIVE DATE: January 1, 1979.

ADDRESS: Administrator, NHTSA, 400 Seventh Street SW., Washington, D.C. 20590.

FOR FURTHER INFORMATION CONTACT:

William E. Scott, National Center for Statistics and Analysis, NHTSA, Washington, D.C. 20590, 202-426-1470.

SUPPLEMENTARY INFORMATION: Motor vehicle traffic fatality statistics are the most widely used indicators of highway safety trends and of the relative magnitude of highway safety problems. National traffic fatality figures are currently being issued by such organizations as the National Center for Health Statistics (U.S. Department of Health, Education, and Welfare), the FHWA, the NHTSA and the National Safety Council (NSC).

While all of the basic data for these national statistics are provided by the States, the organizations which compile the national figures use different rules for determining whether a fatality is to be counted as a traffic fatality. As a result national fatality figures vary greatly. In 1976, for example, fatality figures ranged from about 44,800 (NHTSA) to 47,100 (NSC).

Until now, the FHWA and the NHTSA have been using different fatality counting rules. Under the FHWA rule, a death which occurred within 12 months of a traffic accident would be counted as a traffic fatality, but under the NHTSA rule a death would not be counted as a traffic fatality unless it occurred within 30 days of the accident.

In December 1977, the Department advised the States by letter that it was considering a 30-day fatality rule for both the FHWA and the NHTSA and requested the comments of the States on the 30-day fatality rule. Over 40 States responded to the Department's request for comments. A review of the responses shows that all of the States agree that national uniformity is desirable. Although several States preferred a different counting rule, there were no indications that reporting to the Department on the basis of the 30-day rule would cause unreasonable difficulties.

A small percentage of fatalities occur beyond the 30-day period. If persons using the data need an estimate of these additional fatalities, statistical methods exist to derive such an estimate.

Consequently, in the interest of promoting uniformity in the reporting of highway fatalities, the Department has decided to adopt the 30-day fatality counting rule beginning January 1, 1979. No changes will be required for data submitted by the States to NHTSA; however, data submitted to FHWA should be based on the 30-day counting rule rather than the 12-month rule previously used.

The 30-day fatality rule will apply to the Department's data systems and will affect the data submitted by the States to these systems. It does not apply to the States methods of counting traffic fatalities for their own use.

Issued on September 21, 1978.

JOAN CLAYBROOK,
Administrator, National Highway Traffic Safety Administration.

KARL S. BOWERS,
Administrator,
Federal Highway Administration.

DEPARTMENT OF THE TREASURY

Bureau of Alcohol, Tobacco and Firearms

[Notice No. 78-16; Reference: ATF O 1100.97]

DELEGATION TO THE ASSISTANT DIRECTOR (REGULATORY ENFORCEMENT) OF AUTHORITIES OF THE DIRECTOR IN 27 CFR PART 231, TAXPAID WINE BOTTLING HOUSES

Delegation Order

1. *Purpose.* This order delegates certain authorities, now vested in the Director by regulations in 27 CFR Part 231, to the Assistant Director (Regulatory Enforcement), and permits redelegation to Regulatory Enforcement personnel, headquarters and field.

2. *Background.* Under current regulations, the Director has authority to take final action on matters relating to approval of the bottling and packaging of taxpaid United States and foreign wines at premises other than the bottling premises of a distilled spirits plant operated under 27 CFR Part 201. It has been administratively determined that certain authorities now vested in the Director by regulations in 27 CFR Part 231, Taxpaid Wine Bottling Houses, belong at and should be delegated to a lower organizational level.

3. *Delegations.* Under the authority vested in the Director, Bureau of Alcohol, Tobacco and Firearms, by Treasury Department order No. 221, dated June 6, 1972, and by 26 CFR 301.7701-9, there is hereby delegated to the Assitant Director (Regulatory Enforcement) the authority to take final action on the following matters relating to 27 CFR Part 231, Taxpaid Wine Bottling Houses:

a. To prescribe all forms required by regulations including applications, notices, reports, returns, and records, under 27 CFR 231.2.

b. To prescribe the format of ATF F 2060(5140.1), Record of Wine Cases Filled, which is provided by proprietors at their own expense, under 27 CFR 231.111.

c. To approve applications for:

(1) Alternate methods or procedures including alternate construction or equipment in lieu of a method or procedure specifically prescribed in regulations, under 27 CFR 231.120(a).

(2) Emergency variations from requirements for construction, equipment, and methods of operations, under 27 CFR 231.120(b).

d. To withdraw authorization of any alternate method or procedure or of any variation whenever the revenue is jeopardized or the effective administration of the regulations is hindered by the continuation of such authorization or variation, under 27 CFR 231.120.

4. *Redelegation.* a. The authorities in paragraphs 3a, 3b, and 3d above may be redelegated to Regulatory Enforcement personnel in Bureau Headquarters not lower than the position of branch chief.

b. The authority in paragraph 3c above may be redelegated to Regulatory Enforcement personnel in Bureau Headquarters not lower than the position of ATF specialist.

c. The authority in paragraph 3c(2) above to approve emergency variations may be redelegated to regional regulatory administrators, who may redelegate this authority to regional Regulatory Enforcement personnel not lower than the position of chief, technical services, or area supervisor.

d. The authority in paragraph 3c(1) above may be redelegated to regional regulatory administrators to approve, without submission to headquarters, subsequent applications for alternate methods or procedures which are identical to those previously approved by Bureau headquarters. The authority in paragraph 3d above may be redelegated to regional regulatory administrators and, where an alternate method or procedure is withdrawn, the regional regulatory administrator will notify the Assistant Director (Regulatory Enforcement) of such withdrawal. Regional regulatory administrators may redelegate this authority to regional Regulatory Enforcement personnel not lower than the position of chief, technical services, or area supervisor.

Effective date: This order becomes effective on September 21, 1978.

JOHN G. KROGMAN,
Acting Director.

[FR Doc. 78-27642 Filed 9-29-78; 8:45 am]

Internal Revenue Service

[Delegation Order No. 8 (Rev. 6)]

REGIONAL DIRECTORS OF APPEAL

Delegation of Authority

AGENCY: Internal Revenue Service, Treasury.

ACTION: Delegation of authority.

SUMMARY: Appellate Division job titles are changed, an obsolete job title is deleted, and delegation of authority to one official is terminated. Redelegation of authority is amended to reflect a single level of administrative appeal.

V 43/191
OCT 2 1978

The text of the delegation order appears below.

EFFECTIVE DATE: October 1, 1978.

FOR FURTHER INFORMATION CONTACT:

Thomas H. Hall, CP:AP:PP, 1111 Constitution Avenue NW., Room 2324, Washington, D.C. 20224, telephone 202-566-6131 (not a toll free telephone number).

This document does not meet the criteria for significant regulations set forth in paragraph 8 of the proposed Treasury Directive appearing in the FEDERAL REGISTER for Wednesday, May 24, 1978.

THOMAS H. HALL,
Chief, Programs and Procedures Branch, National Office Appeals Division.

DELEGATION ORDER

Subject: Authority to sign agreements as to liability for personal holding company tax.

Issued: October 1, 1978.

1. The authority granted to the Commissioner of Internal Revenue and District Directors by 26 CFR 301.7701-9 and 26 CFR 1.547-2 to enter into agreements relating to liability for personal holding company tax, is hereby delegated to the following officials:

a. Regional Directors of Appeals;
b. Chiefs, Appeals Offices;
c. Associate Chiefs, Appeals Offices;
d. Director of International Operations;
e. Assistant District Directors; and
f. Chiefs of District Examination Divisions.

2. This authority may be redelegated only by District Directors and the Director of International Operations, who may redelegate to the Chief of Review Staff; and to Revenue Agents (Reviewers) not lower than GS-11.

3. This order supersedes Delegation Order No. 8 (Rev. 5), issued July 2, 1978.

WILLIAM E. WILLIAMS,
Acting Commissioner.

ASSISTANT REGIONAL COMMISSIONER (APPELLATE) AND EXECUTIVE ASSISTANT TO THE ASSISTANT REGIONAL COMMISSIONER (APPELLATE)

Delegation of Authority

AGENCY: Internal Revenue Service, Treasury.

ACTION: Delegation of authority.

SUMMARY: The Assistant Regional Commissioner (Appellate) and the Executive Assistant to the Assistant Regional Commissioner (Appellate) job titles are changed. The text of the delegation order appears below.

EFFECTIVE DATE: October 1, 1978.

FOR FURTHER INFORMATION CONTACT:

Thomas H. Hall, CP:AP:PP, 1111 Constitution Avenue NW., Room 2324, Washington, D.C. 20224, telephone 202-566-6131 (not a toll free telephone number).

This document does not meet the criteria for significant regulations set forth in paragraph 8 of the proposed Treasury Directive appearing in the FEDERAL REGISTER for Wednesday, May 24, 1978.

THOMAS H. HALL,
Chief, Programs and Procedures Branch, National Office Appeals Division.

DELEGATION ORDER

Subject: Designation of acting supervisory officials.

Issued: October 1, 1978.

Pursuant to authority vested in the Commissioner of Internal Revenue by Treasury Department Order No. 177-19, Revision No. 1; Administrative Circular No. 46 and Supplement 1 thereto; and Chapter 250, Treasury Personnel Manual there is hereby delegated the authority to designate acting supervisory officials in the Internal Revenue Service, *unless or until the official making the designation, or a line superior of the official making the designation, designates another employee to serve as acting* as follows.

1. All Internal Revenue Service employees in supervisory positions other than positions specifically provided for in sections 2 through 12 of this Order are authorized to designate an employee to serve as acting during their absence and, in case a supervisory position under their supervision and control becomes vacant, to designate an employee to serve as acting.

2. The Commissioner shall designate an Acting Deputy Commissioner when necessary.

3. In an Office of Assistant Commissioner having a Deputy Assistant Commissioner, such Deputy Assistant Commissioner shall automatically become Acting Assistant Commissioner in case of the absence of the Assistant Commissioner or a vacancy in the office. The Assistant Commissioner shall designate an employee who shall serve as Acting Assistant Commissioner in the absence of both the Assistant Commissioner and Deputy Assistant Commissioner. If the position of Deputy Assistant Commissioner becomes vacant, the Assistant Commissioner shall designate an employee who shall serve as Acting Deputy Assistant Commissioner. In an Office of Assistant Commissioner where there is no Deputy Assistant Commissioner, the Assistant Commissioner shall designate an employee who shall serve as Acting Assistant Commissioner in the absence of the Assistant Commissioner and the Commissioner shall designate an employee who shall serve as Acting Assistant Commissioner in case the position of Assistant Commissioner becomes vacant.

4. In the Office of the Assistant to the Commissioner (Public Affairs), the Assistant Director shall serve as Acting Assistant to the Commissioner (Public Affairs) in the absence of the Assistant to the Commissioner (Public Affairs) or during a vacancy in the office. The Assistant to the Commissioner (Public Affairs) shall designate an employee to serve as Acting Assistant to the Commissioner (Public Affairs) when both the Assistant to the Commissioner (Public Affairs) and the Assistant Director are absent.

5. Each Regional Commissioner shall designate an Assistant Regional Commissioner, Regional Director of Appeals, District Director or Service Center Director who shall serve as Acting Regional Commissioner in the absence of the Regional Commissioner. If the position of Regional Commissioner becomes vacant, the Commissioner shall designate an employee to serve as Acting Regional Commissioner.

6. In an Office of Regional Director of Appeals, the Assistant Regional Director of Appeals shall automatically become Acting Regional Director of Appeals in case of the absence of the Regional Director of Appeals or a vacancy in the office. The Regional Director of Appeals shall designate an employee who shall serve as Acting Regional Director of Appeals in the absence of both the Regional Director of Appeals and the Assistant Regional Director of Appeals. If the position of Assistant Regional Director of Appeals becomes vacant, the Regional Director of Appeals shall designate an employee who shall serve as Acting Assistant Regional Director of Appeals.

7. In an Office of Assistant Regional Commissioner (other than the Assistant Regional Commissioner (Compliance), Midwest Region, and the Assistant Regional Commissioner (Examination)) having an Executive Assistant to the Assistant Regional Commissioner, such Executive Assistant shall automatically become Acting Assistant Regional Commissioner in case of the absence of the Assistant Regional Commissioner or a vacancy in the office. The Assistant Regional Commissioner shall designate an employee who shall serve as Acting Assistant Regional Commissioner in the absence of both the Assistant Regional Commissioner and the Executive Assistant. If the position of Executive Assistant becomes vacant, the Assistant Regional Commissioner shall designate an employee who shall serve as Acting Executive Assistant. If the position of Assistant Regional Commissioner becomes vacant in an office where there is no Executive Assistant, the Regional Commissioner shall designate an employee to serve as Acting Assistant Regional Commissioner.

8. In offices of Assistant Regional Commissioners (Examination), the Executive Assistant shall automatically become Acting Assistant Regional Commissioner in case of the absence of the Assistant Regional Commissioner except to the extent provided for specific periods of time by written Assistant Regional Commissioner designation orders. In offices of the Assistant Regional Commissioners (Examination), the Executive Assistant shall automatically become Acting Assistant Regional Commissioner in case of the vacancy in the office of the Assistant Regional Commissioner, except to the extent provided for specific periods of time by written Regional Commissioner designation orders. If positions of Executive Assistants become vacant, the Assistant Regional Commissioner shall designate employees who shall serve as Acting Executive Assistants.

9. In the Office of the Assistant Regional Commissioner (Compliance), Midwest Region, the Executive Assistant (Examination) shall automatically become Acting Assistant Regional Commissioner in case of the absence of the Assistant Regional Commissioner, except to the extent otherwise provided for specific periods of time by written Assistant Regional Commissioner designation orders. In the vacancy of the position of Assistant Regional Commissioner, the Executive Assistant (Examination) shall automatically become Acting Assistant Regional Commissioner, except to the extent otherwise provided for specific periods of time by written Regional Commissioner designation orders. If the positions of Executive Assistants become vacant, the Assistant Regional Commissioner shall designate employees who shall serve as Acting Executive Assistants.

10. In a District Office having an Assistant District Director of Internal Revenue, such Assistant shall automatically become Acting District Director in case of the absence of the District Director or a vacancy in the office. The District Director shall designate an employee who shall serve as Acting District Director in the absence of both the District Director and the Assistant District Director. If the position of Assistant District Director becomes vacant, the District Director shall designate an employee who shall serve as Acting Assistant District Director. In a District Office where there is no Assistant District Director, the District Director shall designate an employee who shall serve as Acting District Director in the absence of the District Director and the Regional Commissioner shall designate an employee who shall serve as Acting District Director in case the position of District Director becomes vacant.

11. In case of the absence of a Director, Internal Revenue Service Center, or a vacancy in the office, the Assistant Director of the Service Center shall automatically become Acting Director. The Service Center Director shall designate an employee who shall serve as Acting Service Center Director in the absence of both the Service Center Director and the Assistant Service Center Director. If the position of Assistant Service Center Director becomes vacant, the Service Center Director shall designated an employee who shall serve as Acting Assistant Service Center Director.

12. In case of the absence of the Director, Data Center, or the Director, National Computer Center, or a vacancy in the office, the Assistant Director of the Center shall automatically become Acting Director. The Data Center Director and the National Computer Center Director shall designate an employee who shall serve as Acting Director in the absence of both the Director and the Assistant Director. If the position of Assistant Director becomes vacant, the Director shall designate an employee who shall serve as Acting Assistant Director.

13. All designations as acting shall be made in writing and retained as a record, and a record shall be maintained of the periods during which an official automatically became acting under the provisions of this delegation order or by automatic designations issued under authority of this delegation order. The loss of such records, or the failure to maintain such records, will not invalidate the authority of the individual acting pursuant to this delegation order.

14. The authority delegated herein may not be redelegated.

15. This Order supersedes Delegation Order No. 12 (Rev. 6), issued May 28, 1976.

WILLIAM E. WILLIAMS,
Acting Commissioner.

ASSISTANT TO THE COMMISSIONER

Delegation of Authority

AGENCY: Internal Revenue Service, Treasury.

ACTION: Delegation of authority.

SUMMARY: Delegation of authority is extended to Regional Directors of Appeals. The text of the delegation order appears below.

EFFECTIVE DATE: October 1, 1978.

FOR FURTHER INFORMATION CONTACT:

Thomas H. Hall, CP:AP:PP, 1111 Constitution Avenue NW., Room 2334, Washington, D.C. 20224, telephone 202-566-6131 (not a toll-free telephone number).

This document does not meet the criteria for significant regulations set forth in paragraph 8 of the proposed Treasury Directive appearing in the FEDERAL REGISTER for Wednesday, May 24, 1978.

THOMAS H. HALL,
Chief, Programs and Procedures Branch, National Office Appeals Division.

DELEGATION ORDER

Subject: Reimbursement for actual subsistence expenses or per diem allowance to high/rate geographical areas for official travel.

Issued: October 1, 1978.

1. Pursuant to authority delegated to the Commissioner of Internal Revenue by the Department of the Treasury Directives Manual, Chapter 70, the officials named below are authorized, when the unusual circumstances of the travel assignment justify,

a. To authorize or approve reimbursement for subsistence expenses on an actual expense basis, or

b. To authorize in advance of performance of travel appropriate per diem allowances in lieu of actual subsistence reimbursement for travel to high-rate geographical areas, except when written IRS/Union agreements provide otherwise.

2. This authority applies to employees traveling on official business in accordance with the General Travel Order or individual travel orders subject to the limitations prescribed by the Federal Travel Regulations.

3. List of delegated officials: Assistant to the Commissioner (Public Affairs); Assistant Commissioners; Deputy Assistant Commissioners; Director of International Operations; Director, Data Center; Director, National Computer Center; Chief Counsel; Regional Commissioners; Regional Directors of Appeals; Assistant Regional Commissioners; Regional Inspectors; Regional Counsel; District Directors; and Service Center Directors.

4. This authority may only be redelegated to National Office Division Directors.

5. This Order supersedes Delegation Order No. 25 (Rev. 8) issued November 2, 1977.

WILLIAM E. WILLIAMS,
Acting Commissioner.

THOMAS H. HALL,
Chief, Programs and Procedures Branch, National Office Appeals Division.

DELEGATION ORDER

Subject: Authority to administer oaths required by law in connection with employment in the Federal Service.

Issued: October 1, 1978.

A. Pursuant to the authority granted to me in Treasury Department order No. 125, dated September 18, 1950, the incumbents of, and persons acting in, the positions listed below are hereby authorized to administer, without charge or fee, the oath of office required by section 1757 of the Revised Statutes, as amended (5 U.S.C. 16) of any other oath required by law in connection with employment in the Federal service:

1. *National office.* Assistant Commissioner (Resources Management); Director and Assistant Director, Personnel Division; Chief and Assistant Chief, National Office Personnel Branch; Chief, Team Leaders, Personnel Management Specialists, and Personnel Staffing Specialists, Employment Section, National Office Personnel Branch; Chief and Appointment Clerks of the Services Section, National Office Personnel Branch; and Director and Assistant Director of International Operations.

2. *Regional offices.* Regional Commissioner; Assistant Regional Commissioner (Resources Management); Chief, Personnel Branch; Chiefs, Personnel Management Specialists and Appointment Clerks of the Employment and Regional Office Personnel Sections, Personnel Branch; and Chiefs, and Associate Chiefs, Appeals Offices.

3. *District offices.* District Director: Assistant District Directors; Chiefs, Resources Management Division; Chief, Personnel Branch; Chief, Employment Section, Personnel Management Specialists, Personnel Assistants and Appointment Clerks, Personnel Branch; and the Administrative Officer or Representative of the District Director at an area, zone, or local office.

4. *Service centers.* Director; Assistant Director; Chief, Resources Management Division Chief, Personnel Branch; Chief, Employment Section, Personnel Management Specialists, Personnel Assistants and Appointment Clerks, Personnel Branch.

5. *Data center.* Director; Assistant Director; Chief, Resources Management Division; Chief, Personnel Branch; Personnel Management Specialists, Personnel Assistants, Personnel Clerks, and Appointment Clerks, Personnel Branch.

6. *National computer center.* Director; Chief, Resources Management Division; Chief, Personnel Branch; Personnel Management Specialists and Appointment Clerks, Personnel Branch.

7. *Puerto Rico collection branch.* Director's representative, Office of International Operations.

B. All supervisors authorized by section A of this order to administer oaths are also authorized to designate in writing employees under their supervision and control who may administer such oaths.

C. Pursuant to the above authority vested in me as Commissioner of Internal Revenue, employees designated to serve as grievance examiners and executive secretaries in agency grievances are herey authorized to administer oaths to witnesses testifying in hearings, being conducted under the agency grievance process contained in IRM 0771.1. This authority may not be redelegated.

D. This order supersedes delegation order No. 27 (Rev. 6), issued July 2, 1978.

WILLIAM E. WILLIAMS,
Acting Commissioner.

DELEGATION ORDER

Subject: Agreements as determinations under section 1313(a)(4) of the Internal Revenue Code of 1954.

Issued: October 1, 1978.

1. Pursuant to the authority granted to the Commissioner of Internal Revenue and District Directors by 26 CFR 301.7701-9 and 26 CFR 1.1313(a)-4, the authority to enter into agreements pursuant to section 1313(a)(4), Internal Revenue Code of 1954, relating to agreements treated as determinations, is hereby delegated to the following officials:

a. Regional Directors of Appeals;

b. Chiefs and Associate Chiefs of Appeals Offices;

c. Director of International Operations;

d. Assistant District Directors;

e. Chiefs of Examination Divisions; and

f. Chiefs of Employee Plans and Exempt Organizations Divisions.

2. This authority may be redelegated only by District Directors and the Director of International Operations, who may redelegate to the Chief of Review Staff; to revenue agents and tax law specialists (reviewers) not lower than GS-11 for field examination cases; and to revenue agents and tax technicians (reviewers) not lower than GS-9 for office examination cases.

3. This order supersedes delegation order No. 35 (Rev. 8), issued July 2, 1978.

FEDERAL REGISTER for Wednesday, May 24, 1978.

THOMAS H. HALL,
Chief, Programs and Procedures Branch, National Office Appeals Division.

DELEGATION ORDER

Subject: Tours of duty and overtime.

Issued: October 1, 1978.

1. Pursuant to authority vested in the Commissioner of Internal Revenue by chapter 610 of the Treasury Personnel Manual, the following officials are hereby authorized to prescribe, for personnel listed below, the official hours of duty and, when necessitated by operating requirements, to establish an administrative workweek of five 8-hour days other than Monday through Friday for individual employees or groups of employees whose services are required on Saturday or Sunday, or both, and flexible tours of duty for criminal investigators consisting of five 8-hour days, Monday through Friday.

Official and Personnel

Assistant Commissioner (Resources Management), national office (except Data Center and National Computer Center).

Assistant Commissioner (Data Services), Data Center and National Computer Center.

Assistant Commissioner (Inspection), regional inspectors.

Director of International Operations, employees of Office of International Operations stationed outside the Washington metropolitan area.

Regional Commissioners, District Directors, and Service Center Directors, personnel under their supervision and control.

2. The above-named officials are required, in accordance with 5 U.S.C. 6101, to establish tours of duty for individual employees or groups of employees in accord with the following criteria:

(1) Assignments to tours of duty shall be scheduled in advance over periods of not less than 1 week;

(2) The basic 40-hour workweek shall be scheduled in 5 days, which shall be Monday through Friday wherever possible, and the 2 days outside the basic workweek shall be consecutive;

(3) The working hours in each day in the basic workweek shall be the same;

(4) The basic nonovertime workday shall not exceed 8 hours;

(5) The occurrence of holidays shall not affect the designation of the basic workweek; and

(6) Breaks in working hours of more than 1 hour shall not be scheduled in any basic workday.

3. In accordance with 5 U.S.C. 6101, an exception to the criteria in section 2 may be made in those instances where the authorizing official determines that application of one or more of the above enumerated criteria would result in a serious handicap in carrying out the organization's functions, or that costs would be substantially increased. Such exceptions and the reasons therefor shall be made a matter of record.

4. The authority delegated in section 1 may be redelegated as follows:

(1) By the Assistant Commissioner (Data Services) to the Directors, Data Center and the National Computer Center; and

(2) By Regional Commissioners, District Directors, and Service Center Directors, but not lower than to: Branch Chiefs in the regional headquarters office; Associate Chiefs, Appeals Offices; and Division Chiefs in Districts and Service Centers.

5. Assistant Commissioners, Regional Commissioners, Regional Directors of Appeals, Assistant Regional Commissioners, District Directors, and Service Center Directors, are hereby authorized:

(1) To order or approve the performance of paid overtime duty by employees under their supervision and control, provided funds are available for such duty;

(2) To order or approve the performance of overtime duty for personnel under their supervision and control for which compensatory time off will be granted in lieu of overtime pay;

(3) To order or approve the performance of work on holidays, provided funds are available for such duty; and

(4) To establish tours of duty for educational purposes under the provisions of 5 U.S.C. 6101(a)(4).

6. The authority delegated in section 5 may be redelegated to supervisors for employees under their supervision and control.

7. This order supersedes delegation order No. 39 (Rev. 7), issued July 2, 1978.

WILLIAM E. WILLIAMS,
Acting Commissioner.

DELEGATION ORDER

Subject: Authority to execute consents fixing the period of limitations on assessment or collection under provisions of the 1939 and 1954 Internal Revenue Codes.

Issued: October 1, 1978.

1. Pursuant to authority vested in the Commissioner of Internal Revenue by Treasury Department order No. 120, dated July 31, 1950; order No. 150-2, dated May 15, 1952; 26 CFR 301.6501(c)-1; 26 CFR 301.6502-1; 26 CFR 301.6901-1(d); and 26 CFR 301.7701-9; the authority to sign all consents fixing the period of limitations on assessment or collection is delegated to the following officials:

a. Regional Directors of Appeals;

b. Service Center Directors;

c. District Directors;

d. Director of International Operations.

2. This authority may be redelegated but not below the following levels for each activity:

a. Service Centers—Chief, Accounting Branch; Chief, Correspondence Examination Branch; and Revenue Officers;

b. Collection—Chiefs, Office Branch and Office Groups; and Revenue Officers;

c. Examination—Reviewers, Grade GS-11; Group Managers; Case Managers: and Returns Program Managers;

d. Criminal Investigation—Chief, Criminal Investigation Division;

e. Appeals—Appeals Officers;

f. Office of International Operations—Representatives at foreign posts; Revenue Agents, Tax Auditors, and Special Agents on foreign assignments; and levels b, c, and d, above; and

g. District Employee Plans and Exempt Organizations—Reviewers, Grade GS-11; Group Managers.

3. This order supersedes delegation order No. 42 (Rev. 9), issued July 2, 1978.

V 43/191 OCT 2 1978 UMI

FEDERAL REGISTER for Wednesday, May 24, 1978

THOMAS H. HALL,
Chief, Programs and Procedures Branch, National Office Appeals Division.

DELEGATION ORDER

Subject: Authority to authorize or approve attendance at meetings at Government expense.

Issued: October 1, 1978.

1. There is hereby delegated to the following officials the authority to authorize or approve attendance of employees performing functions under their general supervision, at Government expense, within the geographic limits authorized by the general travel order, at meetings of scientific or professional societies, municipal, State, Federal, or international organizations, congresses, and law enforcement or other groups for the purpose of transmitting or receiving information or knowledge relating to the substantive or administrative activities of the Internal Revenue Service:

Assistant Commissioners
Chief Counsel
Assistant to the Commissioner (Public Affairs)
Regional Commissioners
Regional Counsel
Regional Inspectors

2. The authority delegated herein to Regional Commissioners, Regional Counsel, and Regional Inspectors does not include attendance at meetings which are national in scope. The authorization or approval of the Assistant Commissioner (Resources Management), Assistant Commissioner (Compliance), Assistant Commissioner (Taxpayer Service and Returns Processing), Assistant Commissioner (Employee Plans and Exempt Organizations), Assistant Commissioner (Inspection), Assistant to the Commissioner (Public Affairs) or the Chief Counsel, in their respective areas of operation, must be obtained for employees under the general supervision of Regional Commissioners, Regional Counsel, or Regional Inspectors to attend meetings which are national in scope.

3. The authority herein delegated may not be redelegated except by Regional Commissioners to: (1) Assistant Regional Commissioners, Regional Directors of Appeals, and District Directors to authorize or approve attendance of employees under their supervision at meetings not national in scope held within their respective regions; and (2) Service Center Directors to authorize or approve attendance of service center employees at meetings not national in scope held within the geographical area serviced.

4. The authorization or approval of the Regional Commissioner must be obtained for attendance of employees under the general supervision of Assistant Regional Commissioners, Regional Directors of Appeals and District Directors at meetings held outside their respective regions. Attendance of district or service center employees at meetings national in scope requires approval of the Assistant Commissioner (Resources Management), Assistant Commissiner (Compliance), Assistant to the Commissioner (Public Affairs), Assistant Commissioner (Employee Plans and Exempt Organizations), or Assistant Commissioner (Taxpayer Service and Returns Processing) in their respective areas of operation.

5. The restrictions (other than on redelegation) set forth in sections 2, 3, and 4, above, do not apply to meetings or conventions held by recognized employee groups, organizations, or associations. Assistant Commissioners, the Assistant to the Commissioner (Public Affairs), the Chief Counsel, and Regional Commissioners are authorized to approve attendance of employees under their general supervision at meetings held by such employee groups, organizations, or associations when attendance is for the purpose of transmitting or receiving information or knowledge relating to the substantive or administrative activities of the Internal Revenue Service.

6. This order supersedes delegation order No. 47 (Rev. 10), issued July 2, 1978.

WILLIAM E. WILLIAMS,
Acting Commissioner.

THOMAS H. HALL,
Chief, Programs and Procedures Branch, National Office Appeals Division.

DELEGATION ORDER

Subject: Authority of Regional Director of Appeals in offers in Compromise.

Issued: October 1, 1978.

Pursuant to the authority vested in the Commissioner of Internal Revenue by Treasury Department order No. 150-25, dated June 1, 1953, as amended by order No. 180, dated November 17, 1953 and order No. 150-36, dated August 17, 1954, 26 CFR 301.7122-1 and 26 CFR 301.7701-9 it is hereby ordered:

1. Each Regional Director of Appeals and each Chief and Associate Chief, Appeals Office, is authorized to determine the disposition to be made of any offer in compromise submitted under the provisions of section 7122 of the Internal Revenue Code of 1954, in which: (a) The proponent does not agree with the rejection or proposed rejection of the offer in the district office, the Office of International Operations, or a Service Center and requests Regional Director of Appeals consideration; or (b) the liability was previously determined by Appeals officials and the offer is based on doubt as to liability or doubt as to both liability and collectibility.

2. A determination by Appeals officials to accept an offer (other than one involving specific penalties only) based solely on doubt as to liability will be subject to approval by the Regional Commissioner if the unpaid amount of tax (including any interest, penalty, additional amount, or addition to the tax) is $100,000 or more.

3. A determination by Appeals officials to accept an offer (other than one involving specific penalties only) based solely on doubt as to collectibility or on doubt as to collectibility and liability will be subject to approval by the Regional Commissioner or the Director, Collection Division, if the unpaid amount of tax (including any interest, penalty, additional amount, or addition to the tax) is $100,000 or more.

4. The authorities delegated herein may not be redelegated and are not applicable to offers in compromise coming within the jurisdiction of the Chief Counsel under existing procedures, rules, or delegations. These authorities include any Federal excise or employment tax under the Internal Revenue Code of 1954, except any tax imposed by the following provisions or corresponding provisions of the Internal Revenue Code of 1939:

(a) Subtitle E; or

(b) Subchapter D, chapter 78 of subtitle F, insofar as it relates to taxes imposed under subtitle E.

5. This order supersedes delegation order No. 75 (Rev. 7) issued January 25, 1978.

DELEGATION ORDER

Subject: Administrative classification of documents and material.

Issued: October 1, 1978.

The authority vested in the Commissioner of Internal Revenue by Treasury Department order No. 222 of August 3, 1972, for the administrative classification of information necessarily restricted for official purposes is hereby delegated as follows:

(1) The Deputy Commissioner is authorized to classify for LIMITED OFFICIAL USE documents or materials dealing with important, delicate or sensitive matters which must be so restricted as to be available only for the information of officials who have a need to know such information. This authority may not be redelegated.

(2) The Deputy Commissioner, Assistant Commissioners, Assistant to the Commissioner (Public Affairs); Director, Tax Administration Advisory Services Division; Director of International Operations; National Office Division Directors; National Office Assistant Division Directors; Chief, Disclosure Operations Division; Regional Commissioners; Regional Inspectors; Regional Directors of Appeals; Assistant Regional Commissioners; District Directors; Service Center Directors; Director, Data Center; and Director, National Computer Center are authorized to classify for OFFICIAL USE ONLY documents or materials which require restriction to a lesser degree than those marked LIMITED OFFICIAL USE, but which may be made available only to authorized officials. This authority may not be redelegated.

(3) The authority to declassify documents or material classified under this delegation order may be exercised only by the official authorizing the original classification, a successor in that capacity, or a line supervisory official of either and may not be redelegated.

This order supersedes delegation order No. 89 (Rev. 3) issued February 21, 1974.

WILLIAM E. WILLIAMS,

Subject: Authority to Consent to a Redetermination of Aggregations by a Taxpayer in the Case of Invalid Basic Aggregations or Invalid Additions.

Issued: October 1, 1978.

1. The authority vested in the Commissioner of Internal Revenue as prescribed in 26 CFR 1.614-2(d)(5) and 26 CFR 1.614-3(f)(8) is hereby delegated to Regional Directors of Appeals; Chiefs, and Associate Chiefs, Appeals Offices; District Directors; and Chiefs, District Examination Divisions to:

Consent to the reforming of aggregations by a taxpayer where the taxpayer has formed invalid basic aggregations or made invalid additions to valid or invalid basic aggregations, and

Consent, in the case of oil and gas wells where an invalid aggregation has been formed under section 614(b), to the treatment by a taxpayer of all the properties included in the aggregation, which fall within a single operating unit, under the provisions of section 614(d) rather than section 614(b) of the 1954 Code is so requested by the taxpayer.

2. In the case of oil and gas wells this delegation order shall apply only to taxable years subject to the 1954 Code beginning before January 1, 1964.

3. The authority delegated herein may not be redelegated.

4. This Order supersedes Delegation Order No. 93 (Rev. 4), issued July 2, 1978.

WILLIAM E. WILLIAMS,
Acting Commissioner.

DELEGATION ORDER

Subject: Authorization for Use of First-Class Air Accommodations, Superior Rail and Ship Accommodations, and to Approve Travel Vouchers.

Issued: October 1, 1978.

1. The authority vested in the Commissioner of Internal Revenue by Treasury Department Order No. 72, Revised, is hereby delegated to the officials designated below, to direct official travel and administratively approve vouchers claiming reimbursement therefor when performed under the General Travel Order by (a) themselves (except Fiscal Management Officer), and (b) personnel under their supervision and control.

Assistant to the Commissioner (Public Affairs)
Assistant Commissioners
Division Directors
Fiscal Management Officer
Director of International Operations
Director, National Computer Center
Director, Data Center
Chief Counsel
Deputy Chief Counsel
Regional Commissioners
Regional Directors of Appeals
Assistant Regional Commissioners
Regional Inspectors
Assistant Regional Inspectors
Regional Counsels
Deputy Regional Counsels
Assistant Regional Counsels
District Counsels
District Directors
Service Center Directors

a. The authority to direct official travel and administratively approve travel vouchers may be only redelegated by the officials specified in this order.

b. The authority to direct one's own official travel or administratively approve one's own travel voucher may not be redelegated.

2. The officers named in item 1 above may authorize or approve the use of first-class air accommodations by themselves (except Fiscal Management Officer), employees and, where applicable, their immediate families only when all regularly scheduled flights between the authorized origin and destination points (including connection points) provide only first class accommodations.

a. This authority may not be redelegated.

3. The officers named in item 1 above may authorize or approve the use of accommodations superior to the lowest first-class rate for transportation by rail or ship by themselves (except Fiscal Management Officer), employees and, where applicable, their immediate families, for reasons defined in Chapter 1 of the Federal Travel Regulations.

a. This authority may not be redelegated.

4. This Order supersedes delegation order No. 95 (Rev. 4) issued May 25, 1978.

WILLIAM E. WILLIAMS,
Acting Commissioner.

DELEGATION ORDER

Subject: Closing Agreements concerning Internal Revenue Tax Liability.

Issued: October 1, 1978.

Pursuant to authority granted to the Commissioner of Internal Revenue by 26 CFR 301.7121-1(a); Treasury Department Order No. 150-32, Dated November 18, 1953; Treasury Department Order No. 150-36, dated August 17, 1954 (C.B. 1954-2, 733); and Treasury Department Order No. 150-83, dated August 21, 1973, subject to the transfer of authority covered in Treasury Department Order No. 221, dated June 6, 1972, as modified by Treasury Department Order No. 221-3 (Rev. 2), dated January 14, 1977, this authority is hereinafter delegated.

1. The Assistant Commissioner (Technical) is hereby authorized in cases under his/her jurisdiction to enter into and approve a written agreement with any person relating to the Internal Revenue tax liability of such person (or of the person or estate for whom he/she acts) in respect to any prospective transactions or completed transactions affecting returns to be filed.

2. The Assistant Commissioner (Compliance) is hereby authorized to enter into and approve a written agreement with any person relating to the Internal Revenue tax liability of such person (or of the person or estate for whom he/she acts) for a taxable period or periods ended prior to the date of agreement and related specific items affecting other taxable periods. The Assistant Commissioner (Compliance) is also authorized to enter into and approve a written agreement with any person relating to the Internal Revenue tax liability of such person (or of the person or estate for whom he/she acts) with respect to the performance of his/her functions as the competent authority in the administration of the operating provisions of the tax conventions of the United States..

3. The assistant Commissioner (Employee Plans and Exempt Organizations) is hereby authorized to enter into and approve a written agreement with any person relating to the Internal Revenue tax liability of such person (or of the person or estate for whom he/she acts) in cases under his/her jurisdiction, that is, in respect of any transaction concerning employee plans or exempt organizations.

4. Regional Commissioners; Regional Directors of Appeals; Assistant Regional Commissioners (Examination); District Directors; Director of International Operations; Chiefs and Associate Chiefs of Appeals Offices, are hereby authorized in cases under their jurisdiction (but excluding cases docketed before the United States Tax Court) to enter into and approve a written agreement with any person relating to the Internal Revenue tax liability of such person (or of the person or estate for whom he/she acts) for a taxable period or periods ended prior to the date of agreement and related specific items affecting other taxable periods.

5. Regional Commissioners; Regional Directors of Appeals; Chiefs and Associate Chiefs of Appeals Offices are hereby authorized in cases under their jurisdiction docketed in the United States Tax Court and in other Tax Court cases upon the request of Chief Counsel or his/her delegate to enter into and approve a written agreement with any person relating to the Internal Revenue tax liability of such person (or of the person or estate for whom he/she acts) but only in respect to related specific items affecting other taxable periods.

6. The Director of International Operations is hereby authorized to enter into and approve a written agreement with any person relating to the Internal Revenue tax liability of such person (or of the person or estate for whom he/she acts) to provide for the mitigation of economic double taxation under section 3 of Revenue Procedure 64-54, C.B. 1964-2, 1008, under Revenue Procedure 72-22, C.B. 1972-1, 747 and under Revenue Procedure 69-13, C.B. 1969-1, 402, and to enter into and approve a written agreement providing the treatment available under Revenue Procedure 65-17, C.B. 1965-1, 833.

7. The authority delegated herein does not include the authority to set aside any closing agreement.

8. Authority delegated in this Order may not be redelegated, except that the Assistant Commissioner (Technical) may redelegate the authority contained in paragraph 1 to the Deputy Assistant Commissioner (Technical) and to the Technical Advisors on the staff of the Assistant Commissioner (Technical) for cases that do not involve precedent issues, the Assistant Commissioner (Compliance) may redelegate the authority contained in paragraph 2 of this Order to the Deputy Assistant Commissioner (Compliance), and the Assistant Commissioner (Employee Plans and Exempt Organizations) may redelegate the authority contained in paragraph 3 of this Order to the Deputy Assistant Commissioner (Employee Plans and Exempt Organizations) and to the Technical Advisors on the Staff of the Assistant Commissioner (Employee Plans and Exempt Organizations) for cases that do not involve precedent issues.

9. Delegation Order No. 97 (Rev. 15), issued July 2, 1978, is hereby superseded.

WILLIAM E. WILLIAMS,
Acting Commissioner.

DELEGATION ORDER

Subject: Authority to Determine that Certain "Savings Institutions" do not intend to Avoid Taxes by Paying Dividends or Interest for Periods Representing More than 12 Months.

Issued: October 1, 1978.

1. The authority granted to the Commissioner of Internal Revenue under 26 CFR 1.461-1(e)(3)(ii) to determine that an organization referred to therein does not intend to avoid taxes (and therefore be permitted to deduct one-tenth of the amount of dividends or interest not allowed as a deduction for a taxable year under 26 CFR 1.461-1(e)(1) in each of 10 succeeding taxable years) is hereby delegated to the following officials:

(a) Regional Directors of Appeals,
(b) District Directors,
(c) Director of International Operations,
(d) Chiefs, Appeals Offices,
(e) Associate Chiefs, Appeals Offices,
(f) Assistant District Directors, and
(g) Chiefs of District Examination Divisions.

2. This authority may be redelegated only by District Directors and the Director of International Operations, who may redelegate to the Chief of Review Staff.

3. This Order supersedes delegation Order No. 107 (Rev. 3), issued July 2, 1978.

WILLIAM E. WILLIAMS,
Acting Commissioner.

LEON MOURTON,
Director, Program Staff, Office of Assistant Commissioner (Employeee Plans and Exempt Organizations).

DELEGATION ORDER

Subject: Authority to Issue Determination Letters Relating to Employee Plans Matters.

Issued: October 1, 1978.

V 43 / 191
OCT 2 1978

Pursuant to authority vested in the Commissioner of Internal Revenue by Treasury Department Order No. 150-37, dated March 17, 1955, authority with respect to issuance of determination letters pertaining to employee plans and related matters is delegated as follows:

1. The District Director of each Employee Plans and Exempt Organizations key district subject to paragraph 3, is authorized to:

(a) Issue determination letters involving the provisions of sections 401, 403(a), 405, and 501(a) of the Internal Revenue Code of 1954 with respect to:

(1) Initial qualification of stock bonus, pension, profit-sharing, annuity, and bond purchase plans;

(2) Initial exemption from Federal income tax under section 501(a) of trusts forming a part of such plans, provided that the determination does not involve application of section 502 (feeder organizations) or section 511 (unrelated business income), or the question of whether a proposed transaction will be a prohibited transaction under section 503;

(3) Compliance with the applicable requirements of foreign situs trusts as to taxability of beneficiaries (section 402(c)) and deductions for employer contributions (section 404(a)(4)); and

(4) Amendments, curtailments, or terminations of such plans and trusts.

(b) Issue determination letters with respect to whether a plan constitutes an employee stock ownership plan as contemplated in section 46(a)(2)(B) or section 4975(e)(7) of the Internal Revenue Code of 1954.

(c) Issue modifications or revocations of determination letters described above in accordance with currently applicable appeal procedures.

(d) Issue revocations of union negotiated plans maintained by more than one employer only after concurrence by the Assistant Commissioner (E).

(e) Redelegate this authority as follows:

(1) With respect to issuance and modification of determination letters, not below Internal Revenue Agent and Tax Law Specialist, GS-12, provided such individual is a person other than the initiator;

(2) With respect to issuance of proposed and final adverse determination letters or proposed revocation letters not below Chief, EP/EO Division; and

(3) The authority to issue final revocation letters may not be redelegated.

2. In each region, the Regional Director of Appeals, Chiefs and Associate Chiefs, Appeals Office, are authorized to:

(a) Issue final determination letters on appeals from proposed adverse determinations and proposed revocations issued by key district offices under this delegation.

(b) This authority may not be redelegated.

3. The Assistant Commissioner (Employee Plans and Exempt Organizations) is authorized to issue instructions requiring preissuance review of final adverse determinations. These instructions must be approved by Chief Counsel to be issued.

4. The District Director of each Employee Plans and Exempt Organizations key district is authorized with regard to single employer plans to:

(a) Extend the remedial amendment period described IRC 401(b) in accordance with currently applicable 401(b) procedures but not in excess of 8 months after the later of:

(1) The due date of the employer's income tax return with extensions for the year in which the remedial amendment periods begin, or

(2) The end of the plan year within which the remedial amendment period begins.

(b) The authority referred to in paragraph 4(a) may be redelegated, but not below Chief, EP/EO Division.

Delegation Order No. 112 (Rev. 4) issued January 14, 1977, is hereby superseded.

WILLIAM E. WILLIAMS,
Acting Commissioner.

Mr. Leon Mourton, E, 1111 Constitution Avenue NW., Washington, D.C. 20224, 202-566-4546 (not toll free).

This document does not meet the criteria for signficant regulations set forth in paragraph 8 of the proposed Treasury Directive appearing in the FEDERAL REGISTER for Wednesday, May 24, 1978.

LEON MOURTON,
Director, Program Staff, Office of Assistant Commissioner (Employee Plans and Exempt Organizations).

DELEGATION ORDER

Subject: Authority to Issue Exempt Organization Determination Letters.

Issued: October 1, 1978.

Pursuant to authority vested in the Commissioner of Internal Revenue by Treasury Department Order No. 150-37, authority with respect to issuance of determination letters pertaining to the exempt status of organizations under section 501(a) and related matters is delegated as follows:

1. The District Director of each Employee Plans and Exempt Organizations key district is authorized to:

(a) Issue determination letters, except as noted in section 2, below, with respect to exemption from Federal income tax under sections 501 and 521; status under IRC 120, 170(c)(2), 507, 508, 509, 4942(j)(3), 4947, 4948, and 6033; imposition of tax under IRC 11, 511 through 514, 527(f), 641, 1381, and chapters 41 and 42; provided the requests present questions the answers to which are clear from an application of the provisions of the statute, Treasury decisions or regulations, or by a ruling, opinion, or court decision published in the Internal Revenue Bulletin, and

(b) Issue modifications or revocations of rulings or determination letters described above in accordance with currently applicable appeal procedures, and

(c) Redelegate this authority but not below Exempt Organizations Specialist, Grade GS-12 (other than the originator) and not below Chief, Employee Plans and Exempt Organizations Division with respect to adverse modifications or revocations of such letters.

2. In each region, the Regional Director of Appeals, Chief and Associate Chief, Appeals Office are authorized to issue final determination letters on appeals from proposed adverse determinations and proposed revocations issued by key district offices under this delegation. This authority may not be redelegated.

3. The Assistant Commissioner (Employee Plans and Exempt Organizations), with the concurrence of the Chief Counsel, is authorized to require preissuance review of specific types of final adverse determinations of issues described in IRC 7428(a)(1).

WILLIAM E. WILLIAMS,
Acting Commissioner.

[4810-25]

Office of the Secretary

DEBT MANAGEMENT ADVISORY COMMITTEES

Meetings

Notice is hereby given, pursuant to section 10 of Pub. L. 92-463, that meetings will be held in Washington on October 24 and 25, 1978, of the following debt management advisory committees:

American Bankers Association, Government Borrowing Committee
Public Securities Association, U.S. Government and Federal Agencies Securities Committee

The agenda for the American Bankers Association Government Borrowing Committee meetings provides for working sessions on October 24 and a report to the Secrtetary of the Treasury and Treasury staff on October 24.

The agenda for the Public Securities Association U.S. Government and Federal Agencies Securities Committee meetings provides for working sessions October 24 and a report to the Secretary of the Treasury and the Treasury staff on October 25.

Pursuant to the authority placed in heads of departments by section 10(d) of Pub. L. 92-463, and vested in me by Treasury Department order 190, revised, I hereby determine that these meetings are concerned with information exempt from disclosure under section 552b(c) (4) and (9)(A) of title 5 of the United States Code, and that the public interest requires that such meetings be closed to the public.

My reasons for this determination are as follows. The Treasury Department requires frank and full advice from representatives of the financial community prior to making its final decision on major financing operations. Historically, this advice has been offered by debt management advisory committees established by the several major segments of the financial community, which committees are utilized by this Department at meetings called by representatives of the Office of the Secretary. When so utilized they are recognized to be advisory committees under Pub. L. 92-463. The advice provided consists of commercial and financial information given and received in confidence. As such these debt management advisory committee activities concern matters which fall within the exemption covered by section 552b(c)(4) of title 5 of the United States Code for matters which are "trade secrets and commercial or financial information obtained from a person and privileged or confidential."

Although the Treasury's final announcement of financing plans may or may not reflect the advice provided in reports of these committees, premature disclosure of these reports would lead to significant financial speculation in the securities market. Thus, these meetings also fall within the exemption covered by 552b(c)(9)(A) of title 5 of the United States Code.

The Assistant Secretary (Domestic Finance) shall be responsible for maintaining records of the meetings of these committees and for providing annual reports setting forth a summary of their activities and such other matters as may be informative to the public consistent with the policy of 5 U.S.C. 552b.

Dated: September 18, 1978.

ANTHONY M. SOLOMON,
Under Secretary for Monetary Affairs.

[4810-22]

PORTLAND GRAY CEMENT FROM PORTUGAL, ETC.

Tentative Determination To Modify or Revoke Dumping Findings

AGENCY: U.S. Treasury Department.

ACTION: Tentative revocation of dumping findings.

SUMMARY: This notice is to inform the public that portland gray cement from Portugal; pig iron from the U.S.S.R., Czechoslovakia, East Germany, Romania, and West Germany; aminoacetic acid (glycine) from France; whole dried eggs from Holland; clear sheet glass weighing over 28 ounces per square foot from France; asbestos cement pipe from Japan; and canned Bartlett pears from Australia are no longer being sold at less than fair value under the Antidumping Act, 1921. Notice is hereby given that the Department of the Treasury intends to revoke these findings of dumping.

EFFECTIVE DATE: October 2, 1978.

FOR FURTHER INFORMATION CONTACT:

John R. Kugelman, Operations Officer, U.S. Customs Service, Office of Operations, Duty Assessment Division, Technical Branch, 1301 Constitution Avenue NW., Washington, D.C. 20229, telephone 202-566-5492.

SUPPLEMENTARY INFORMATION: The 11 findings of dumping listed below were published in the FEDERAL REGISTER on the dates indicated.

V 43/191
OCT 2 78

A review of § 153.46, Customs Regulations (19 CFR 153.46) and import statistics has resulted in the conclusion that these findings of dumping can be revoked in accordance with § 153.44(b), Customs Regulations (19 CFR 153.44(b)).

STATEMENT OF REASONS OF WHICH THIS TENTATIVE DETERMINATION IS BASED

The findings listed below have been in effect for at least 4 years and there appears to be no likelihood of resumption of sales at less than fair value. There is no record in the last 4 years of imports of the merchandise covered by these findings, with the single exception of one shipment of pig iron from West Germany. That importation was determined to be at fair value. In this factual situation, and in the absence of any special circumstances, a tentative revocation is deemed appropriate.

The findings of dumping referred to above relate to:

Commodity and country	T.D.	FR Date
Portland gray cement, Portugal.	55501	Nov. 7, 1961.
Pig iron, U.S.S.R.	68-261	Oct. 29, 1968.
Pig iron, Czechoslovakia	68-262	Do.
Pig iron, East Germany	68-263	Do.
Pig iron, Romania	68-264	Do.
Pig iron, West Germany	71-192	July 24, 1971.
Aminoacetic acid (glycine), France.	70-71	Mar. 24, 1970.
Whole dried eggs, Holland	70-196	Sept. 18, 1970.

Accordingly, notice is hereby given that the Department of the Treasury intends to revoke the findings of dumping with respect to the products from the countries in the above listing.

In accordance with section 153.40, Customs Regulations (19 CFR 153.40), interested persons may present written views or arguments, or request in writing that the Secretary of the Treasury afford and opportunity to present oral views.

Any requests that the Secretary of the Treasury afford an opportunity to present oral views should be addressed to the Commissioner of Customs, 1301 Constitution Avenue NW., Washington, D.C. 20229, in time to be received by his office not later than October 11, 1978. Requests must be accompanied by a statement outlining the issues wished to be discussed, which issues may be discussed in greater detail in a written brief.

Any written views or arguments should likewise be addressed to the Commissioner of Customs in 10 copies in time to be received by his office not later than November 1, 1978. All persons submitting views or arguments should avoid repetitious and merely cumulative material, and they are reminded of the requirement to include nonconfidential summaries or approximated presentations of all confidential material.

This notice is published pursuant to § 153.44(c) of the Customs Regulations (19 CFR 153.44(c)).

ROBERT H. MUNDHEIN,
General Counsel of the Treasury.

PRIVACY ACT OF 1974

Proposed Revision to System of Records, Correction

In FR Doc 78-22354 appearing on page 35572 in the issue for Thursday, August 10, 1978, the following title was inadvertently omitted:

In the second column under System managers and address, the title, Head, Production Scheduling Staff, should be added following "Chief, Office of Research and Technical Services."

This correction was filed with the President of the Senate, the Speaker of the House of Representatives, and the Director of the Office of Management and Budget on September 27, 1978.

Dated: September 29, 1978.

WILLIAM J. BECKHAM, Jr.,
Assistant Secretary for Administration.

VETERANS ADMINISTRATION

PRIVACY ACT OF 1974

Revised System Notice

The Privacy Act of 1974 (5 U.S.C. 552a(e)(4)) requires that all agencies publish in the FEDERAL REGISTER, at least annually, a notice of the existence and character of their systems of records. Accordingly, the Veterans Administration published and adopted a notice of its inventory of personal records on September 27, 1977 (42 FR 49726).

Notice is hereby given that the Veterans Administration is changing the system of records entitled "Patient Fee Basis Medical and Pharmacy Records-VA" (23VA136). It is the policy of the Veterans Administration to provide medical care on a fee-for-service basis when such care is determined by the Administrator to be necessary or appropriate for the effective and economical treatment of disabilities of veterans who meet eligibility criteria. The size of this program has increased significantly over recent years as new laws expanded these medical benefits to greater categories of veterans. There are approximately 300,000 veterans actively receiving fee-basis care and approximately 100,000 health care providers who could participate in this program. To reduce overall processing time and thereby expedite payment to health care providers for services rendered to eligible veterans on a fee basis, the automated fee basis functions are being centralized from all the Veterans Administration data processing centers to the data processing center at Austin, Tex. In addition, the exchange of system data between the Austin Data Processing Center and VA health care facilities will be via ARS (Automated Record System) telecommunications network. These changes have been designed to increase security for the system, simplify functional requirements, and, most importantly enable the Veterans Administration to expedite payment to health care providers for services they are rendering to eligible veterans at Veterans Administration expense.

The changes to the system in no way alter the purposes for which the information is used; therefore, the requirement to give 30 days prior notice of such change does not apply.

A "Report on New System" and an advance copy of the revised system notice were sent on August 30, 1978, to the Speaker of the House, the President of the Senate, and the Office of Management and Budget, as required by the provisions of 5 U.S.C. 552a(o) of the Privacy Act and guidelines issued by the Office of Management and Budget (40 FR 45877), October 3, 1975.

Notice is hereby given that this description is effective the date of final approval, September 25, 1978.

Approved: September 25, 1978.

By direction of the Administrator.

RUFUS H. WILSON,
Deputy Administrator.

23VA136

System name:

Patient Fee Basis Medical and Pharmacy Records-VA.

System location:

Records are maintained at the VA Data Processing Center at Austin, Tex. and VA health care facilities. Address locations are listed in VA Appendix 1: Addresses of Veterans Administration Facilities.

Categories of individuals covered by the system:

Individuals furnished medical and pharmacy services authorized by the Veterans Administration on a fee-for-service basis.

Categories of records in the system:

Personal identification information on veteran and physician; date of visit; type of service; charge for service; pharmacy dispensing; and travel pay.

Authority for maintenance of the system:

Title 38, United States Code, Chapter 17, Subchapter I, Section 601; Chapter 3, Subchapter II, Section 213.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

1. To provide statistical and other information in response to other legitimate and reasonable requests as approved by appropriate VA authorities, such as the release of information under the Freedom of Information Act.

2. In the event that a system of records maintained by this agency to carry out its functions indicates a violation or potential violation of law, whether civil, criminal, or regulatory in nature, and whether arising by general statute or particular program statute, or by regulation, rule, or order issued pursuant thereto, the relevant records in the system of records may be referred, as a routine use, to the appropriate agency, whether Federal, State, local, or foreign, charged with the responsibility of investigating or prosecuting such violation or charged with enforcing or implementing the statute, or rule, regulation, or order issued pursuant thereto.

3. A record from this system of records may be disclosed as a routine use to a Federal, State, or local agency maintaining civil, criminal, or other relevant information, such as current licenses, if necessary to obtain information relevant to an agency decision concerning the hiring or retention of an employee, the issuance of a security clearance, the letting of a contract, or the issuance of a license, grant, or other health, educational, or welfare benefits.

4. A record from this system of records may be disclosed to a Federal agency, in response to its request, in connection with the hiring or retention of an employee, the issuance of a security clearance, the reporting of an investigation of an employee, the letting of a contract, or the issuance of a license, grant, or other benefit by the requesting agency, to the extent that the information is relevant and necessaary to the requesting agency's decision on the matter

5. To the Treasury Department to facilitate payments to physicians, clinics, and pharmacies for reimbursement for services rendered.

6. To the Treasury Department to facilitate payments to veterans for reimbursements of travel expenses.

7. Disclosure may be made to a congressional office from the record of an individual in response to an inquiry from the congressional office made at the request of that individual.

8. Disclosure may be made to NARS (National Archives and Records Service), GSA (General Services administration) in records management inspections conducted under authority of 44 U.S.C. 2904 and 2906.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

(a) Paper documents at VA Health Care Facilities. (b) Magnetic tape and disk at the data processing center.

Retrievability:

Indexed by veteran's social security number and physician's, or other health care provider's social security number or, if social security number is unavailable, taxpayer's identification number or DUNS (Dun and Bradstreet Uniform Numbering System) number.

Safeguards:

Access to the authorized VA data Processing Center is restricted to authorized VA employees and authorized representatives of vendors. Access to the computer rooms within the data processing center is further restricted to especially authorized VA personnel and vendor personnel. Protection is provided by alarm systems as well as guard service.

Exchange of data from the system between the data processing center and the VA health care facilities is by use of the ARS telecommunications network. Access to the ARS network equipment is restricted since it is in the communications center of each facility. Strict control measures are enforced to insure that disclosure is limited to a "need to know" basis.

At VA health care facilities access to working and storage areas is restricted to VA employees on a "need to know" basis. Generally, VA file areas are locked after normal duty hours and are protected from outside access by the Federal Protective Service. Strict control measures are enforced to insure that disclosure is limited to a "need to know" basis.

Retention and disposal:

Paper documents at the VA health care facility authorizing the fee basis care are maintained in the Patient Consolidated Medical Record portion of the VA Medical Records system. These consolidated medical records, in turn, are retained at the VA health care facility for a minimum of three (3) years after the last episode of care. After the third year of inactivity the paper record is screened, and vital documents are removed and retained at the facility indefinitely; the remaining portion of the record is transferred to the nearest Federal Record Center for twelve (12) more years of storage.

Working magnetic tapes and disks at the data processing center are disposed of as soon as the purpose for which these were established has been served. Magnetic tapes and disks containing historical and statistical data are retained at the data processing center and are disposed of after a five (5) year retention period.

System manager(s) and address:

Director, Medical Administration Service (136), VA Central Office, Washington, DC 20420.

Notification procedure:

An individual seeking information concerning the existence and contents of a record pertaining to himself or herself should submit a written request or apply in person to the nearest VA health care facility (136). All inquiries must reasonably identify the system of records involved. Inquiries should include the individual's full name, social security number, and approximate date(s) of services rendered or received.

Record access procedures:

Veterans, beneficiaries, service personnel or duly authorized representatives seeking information regarding access to and contesting of Patient Fee Basis Medical and Pharmacy System-VA records may contact the Medical Administration Officer at the nearest VA health care facility.

Contesting record procedures:

(See Record Access Procedures above.)

Record source categories:

Patient Consolidated Medical Record portion of the VA Medical Records System.

PROCEDURES FOR IMPLEMENTING EXECUTIVE ORDER 12044, "IMPROVING GOVERNMENT REGULATIONS"

Schedule of Semiannual Agenda of Regulations

AGENCY: Veterans Administration.

V 43/191
OCT 2 78

ACTION: Notice of Schedule for Publication of VA's Semiannual Agenda of Regulations.

SUMMARY: The Executive Order of March 23, 1978, "Improving Government Regulations" directed that all agencies publish a notice in the FEDERAL REGISTER on the first Monday in October indicating when the agency's semiannual agenda of signficant regulations under development or review will be published during the coming fiscal year.

FOR FURTHER INFORMATION:

Mr. William E. Stewart, Management Services (61), 810 Vermont Avenue NW., Washington, D.C. 20420, 202-389-3770.

SUPPLEMENTAL INFORMATION: To give the public adequate notice for comment on proposed significant regulations under development or those proposed for review, the VA will publish a semiannual agenda of regulations in the FEDERAL REGISTER in December and June of each year. In addition, non-significant regulations may be included in the agenda if the responsible Department or staff office head feels that it would be beneficial and of great interest to the veteran population. Supplements to this agenda may be published at other times during the year if it is determined that circumstances warrant such a supplement.

The semiannual agenda of regulations will have the concurrence of the General Counsel and will be signed by the Administrator or the Deputy Administrator.

The agenda will include:

(1) The regulations or significant regulations under development or being considered;
(2) Those regulations under review;
(3) Existing regulations scheduled to be reviewed;
(4) The need for and legal basis for such action;
(5) The status of regulations previously listed in other agendas;
(6) The name, title, address, and telephone number of a knowledgeable agency official who may be contacted for additonal information; and
(7) If possible, whether or not a regulatory analysis will be required.

The Director, Management Services will forward advance copies of the agenda to the Senate and House Committees on Veterans' Affairs as well as other interested, service-oriented individuals and organizations (presently 39). The Assistant Administrator for Information Service will also send notices of the agendas to publications likely to be read by those affected.

Approved: September 27, 1978.

MAX CLELAND,
Administrator of Veterans' Affairs.

INTERSTATE COMMERCE COMMISSION

[Corrected Service Order No. 1304, Revised Exception No. 10]

CHICAGO, ROCK ISLAND & PACIFIC RAILROAD CO.

Car Service

Decided: September 15, 1978.

The Chicago, Rock Island & Pacific Railroad Co. (RI) owns 5,702 jumbo hopper cars subject to Corrected Service Order No. 1304. On August 1, 1978, 564, or 9.9 percent of these cars were being used in unit-grain-train services, 4,069 for general grain traffic and 1,068 for transportating commodities other than grain.

Several shippers have financed repairs of RI jumbo covered hopper cars, and many of the cars are still in a payback status. These cars have been placed in assigned service to the shipper who financed repairs. Some shippers need to use a number of these cars in unit-grain-train service. Use by RI of these shipper-financed jumbo hopper cars in unit-grain-train service will not impair its ability to furnish jumbo covered hopper cars to general grain shippers at the present level of orders for these cars.

It is ordered, Pursuant to the authority vested in the Railroad Service Board by section (a)(6) of Corrected Service Order No. 1304, Chicago, Rock Island & Pacific Railroad Co., is authorized to use shipper-financed repaired Rock Island jumbo covered hopper cars in unit-grain-train service of the specific shippers who financed the rehabilitation of the cars regardless of the provisions of section (a)(1), (2) and (a)(5) of this order.

By the Railroad Service Board, members Joel E. Burns, Robert S. Turkington, and John R. Michael.

Effective September 15, 1978.
Expires December 15, 1978.

JOEL E. BURNS,
Chairman,
Railroad Service Board.

[1505-01]

[Decision—Volume No. 14]

DECISION—NOTICE

Correction

On page 41332 in the issue for September 15, 1978, in the third column, there appeared a correction to FR Doc. 78-21577 which had been published in the issue of Tuesday, August 8, 1978. The correction stated that "MN" should have read "NM" in the sixteenth line of MC 115816 (Sub-320F); however the MC number cited in the correction should have been "MC 115826 (Sub-320F)".

[7035-01]

[Exception No. 4]

MISSOURI PACIFIC RAILROAD CO.

Car Service

Decided September 20, 1978.
By the Board.

The Missouri Pacific Railroad Co. (MP) has been given permission to use National Railways of Mexico (NdeM) 50-foot plain boxcars account there is an available supply of these cars on the NdeM. ICC Revised Exemption No. 133 authorizes MP to use certain NdeM boxcars without regard to the requirements of Car Service Rules 1 and 2. The MP is holding some of these cars beyond the 60-hours permitted in section (a)(2)(ii) of this order prior to placing of cars for loading, and in Section (a)(4)(i) prior to forwarding of cars.

Order. Pursuant to the authority vested in the Railroad Service Board by section (a)(1)(v) of Revised Service Order No. 1332, Missouri Pacific Railroad Co. is authorized to hold empty National Railways of Mexico 50-foot boxcars listed in ICC Revised Exemption No. 133 for loading, or prior to forwarding empty, regardless of the provisions of section (a)(2)(ii), and of section (a)(4)(i) of this order.

These cars shall become fully subject to all provisions of Revised Service Order No. 1332 when loading is completed and instructions for forwarding are received from the shipper.

Effective September 20, 1978.
Expires October 31, 1978.

JOEL E. BURNS,
Chairman,
Railroad Service Board.

[Notice No. 176]

MOTOR CARRIER TEMPORARY AUTHORITY APPLICATIONS

OCTOBER 3, 1978.

The following are notices of filing of applications for temporary authority under section 210a(a) of the Interstate Commerce Act provided for under the provisions of 49 CFR 1131.3. These rules provide that an original and six (6) copies of protests to an application may be filed with the field official named in the FEDERAL REGISTER publication no later than the 15th calendar day after the date the notice of the filing of the application is published in the FEDERAL REGISTER. One copy of the protest must be served on the applicant, or its authorized representative, if any, and the protestant must certify that such service has been made. The protest must identify the operating authority upon which it is predicated, specifying the "MC" docket and "Sub" number and quoting the particular portion of authority upon which it relies. Also, the protestant shall specify the service it can and will provide and the amount and type of equipment it will make available for use in connection with the service contemplated by the TA application. The weight accorded a protest shall be governed by the completeness and pertinence of the protestant's information.

Except as otherwise specifically noted, each applicant states that there will be no significant effect on the quality of the human environment resulting from approval of its application.

A copy of the application is on file, and can be examined at the office of the Secretary, Interstate Commerce Commission, Washington, D.C., and also in the ICC Field Office to which protests are to be transmitted.

MOTOR CARRIERS OF PROPERTY

No. MC 2202 (Sub-No. 565TA), filed July 24, 1978. Applicant: ROADWAY EXPRESS, INC. (a Delaware corporation), P.O. Box 471, 1077 Gorge Blvd., Akron, OH 44309. Representative: William O. Turney, Suite 1010, 7101 Wisconsin Ave., Washington, DC 20014. Authority sought to operate as a *common carrier,* by motor vehicle, over regular routes, transporting: *General commodities,* except those of unusual value, class A and B explosives, household goods as defined by the Commission, commodities in bulk, and those requiring special equipment, (1) serving Longview, TX, and Marshall, TX, as intermediate points on applicant's regular route between Birmingham, AL, and Dallas, TX; (2) serving Jacksonville, TX, as an intermediate point on applicant's regular route between Denison, TX, and Houston, TX; and, (3) serving Cleburne, TX, as an off-route point to applicant's regular route between Denton, TX, and Hillsboro, TX, for 180 days. Supporting shippers: There are approximately (26) statements of support attached to tne application which may be examined at the Interstate Commerce Commission in Washington, DC, or copies thereof which may be examined at the field office named below. Send protests to: District Supervisor, Interstate Commerce Commission, 731 Federal Building, 1240 East Ninth Street, Cleveland, OH 44199.

No. MC 63417 (Sub-No. 157TA), filed July 24, 1978. Applicant: BLUE RIDGE TRANSFER COMPANY, INC., P.O. Box 13447, Roanoke, VA 24034. Representative: William E. Bain (same as above). Authority sought to operate as a *common carrier,* by motor vehicle, over irregular routes, transporting: *Molded wood pulp, peat or expanded or foam products,* from Florin, CA, to Kansas City, MO, and its commercial zone, and Salina, KS, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Keyes Fibre Co., Waterville, ME. Send protests to: Interstate Commerce Commission, Bureau of Operations, P.O. Box 210, Roanoke, VA 24011.

MC 63417 (Sub-158TA), filed July 24, 1978. Applicant: BLUE RIDGE TRANSFER COMPANY, INC., P.O. Box 13447, Roanoke, VA 24034. Representative: William E. Bain, P.O. Box 13447, Roanoke, VA 24034. Authority sought to operate as a *common carrier,* by motor vehicle, over irregular routes, transporting: *Microfoam and microfoam* articles, from Wurtland, KY, to points in GA, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: E. I. DuPont de Nemours and Co., Inc., Wilmington, DE 19898. Send protests to: Interstate Commerce Commission, Bureau of Operations, P.O. Box 210, Roanoke, VA 24011.

MC 93235 (Sub-11TA), filed July 24, 1978. Applicant: INDIANA TRUCKING, INC., (an Indiana corporation), 6500 Industrial Highway, Gary, IN 46408. Representative: Eugene L. Cohn, One North LaSalle Street, Chicago, IL 60602. Authority sought to operate as a *contract carrier,* by motor vehicle, over irregular routes, transporting: *Iron and steel articles, aluminum and plastic articles, in sheets plates, bars, tubes, and structurals,* from the warehouse and facilities of Joseph T. Ryerson, Inc., at Chicago and Elk Grove Village, IL, to Angola, South Bend, Elkhart, Indianapolis, Peru, Bluffton, Kendallville, Warsaw, Carmel, Bristonl, Rochester, Wabash, Terre Haute, Logansport, Huntington, Columbia City, Ft. Wayne, LaGrange, Garrett, Berne and Anderson, IN, under a continuing contract or contractss with Joseph T. Ryerson & Son, Inc., for 180 days. Supporting shipper: Joseph T. Ryerson & Son, Inc., 2621 W. 15th Place, Chicago, IL 60608. Send protests to: Lois M. Stahl, Transportation Assistant, Interstate Commerce Commission, Bureau of Operations, 219 South Dearborn Street, Room 1386, Chicago, IL 60604.

MC 95084 (Sub-123TA), filed August 1, 1978. Applicant: HOVE TRUCK LINE, Stanhope, IA 50246. Representative: Kenneth F. Dudley, P.O. Box 279, Ottumwa, IA 52501. Authority sought to operate as a *common carrier,* by motor vehicle, over irregular routes, transporting: *Building Components and agricultural building accessories* (1) from points in Dallas County, IA and Ankeny, IA to points in IL, IN, MI, MO, OH, and WI; (2) from Norton, KS and Raymond, SD to points in Dallas County, IA and Ankeny, IA. For 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Ploytek Manufacturing, Inc., P.O. Box 178, Granger, IA 50109, Swine-Cycle, Inc., 613 E. Magazine Road, Ankeny, IA 50021. Send protests to: Herbert W. Allen, District Supervisor, Bureau of Operations, Interstate Commerce Commission, 518 Federal Building, Des Moines, IA 50309.

MC 96992 (Sub-11TA), filed August 1, 1978. Applicant: HIGHWAY PIPELINE TRUCKING CO., P.O. Box 1517, Edinburg, TX 78539. Representative: Clayton Farr, P.O. Box 1517, Edinburg, TX 78539. Authority sought to operate as a *common carrier,* by motor vehicle, over irregular routes, transporting: *Frozen vegetables,* from Brownsville, TX, to Memphis, Bels, Rosselle, and Humbolt, TN, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Wintergarden, Inc. P.O. Box 1752, Brownsville, TX 78520. Send protest to: Richard H. Dawkins, District Supervisor, Interstate Commerce Commission, Room B-400, Federal Building, 727 E. Durango, San Antonio, TX 78206.

MC 103051 (Sub-124TA), filed August 1, 1978. Applicant: FLEET TRANSPORT COMPANY, INC., (an Iowa corporation), 934 44th Avenue, North, Nashville, TN 37209. Representative Russell E. Stone, P.O. Box 90408, Nashville, TN 37209. Authority sought to operate as a *common carrier,* by motor vehicle, over irregular routes, transporting: *Yeast Slurry,* in bulk, in tank vehicles, from the facilities of Pabst Brewing Co. at or near

V 43/191
OCT 2 78
UMI

Perry, GA to Jacksonville, FL. For 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Anheuser-Busch, Inc., 721 Pestalozzi St., St. Louis, MO 63118. Send protests to: Joe J. Tate, District Supervisor, Bureau of Operations, ICC, Suite A-422 U.S. Court House, 801 Broadway, Nashville, TN 37203.

MC 107403 (Sub-1104TA), filed July 24, 1978. Applicant: MATLACK, INC. 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (Same as above). Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Plastic granules*, in bulk, in tank vehicles, from Baltic, OH to Chatham, VA, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: The Pantasote Co., of NY., Inc., 26 Jefferson Street, Passaic, NJ 07055. Send Protests to: T. M. Esposito, Transportation Assistant, 600 Arch Street, Room 3238, Philadelphia, PA 19106.

MC 112963 (Sub-78TA), filed July 24, 1978. Applicant: ROY BROS., INC., (a Massachusetts corporation), 764 Boston Road, Pinehurst, MA 01866. Representative: Leonard E. Murphy, 764 Boston Road, Pinehurst, MA 01866. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Poly vinyl chloride*, in bulk, in tank vehicles from New Bedford, Mass., to points in Rhode Island, Connecticut, New York, and New Jersey, for 180 days. Supporting shipper: International Materials, 54 Middlesex Turnpike, Bedford, MA 01730. Send protests to: Paul A. Roberts, District Supervisor, Interstate Commerce Commission, 150 Causeway Street, Boston, MA 01760.

MC 113908 (Sub-445TA), filed August 1, 1978. Applicant: ERICKSON TRANSPORT CORP., P.O. Box 3180 G. S. S., 2105 E. Wale St., Springfield, MO 65804. Representative: B. B. Whitehead, Traffic Manager, P.O. Box 3180 G. S. S., 2105 E. Wale St., Springfield, MO 65804. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Rum, in bulk*, from points in CA, to Harford, CT, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Heublein, Inc. Hartford, CT. Send protest to: DS John V. Barry, room 600, 911 Walnut, Kansas City, MO 64106.

MC 119798 (Sub-7TA), filed July 24, 1978. Applicant: SOUTHWEST SUPPLY, INC., (a West Virginia corporation), 350 Roanoke Street, P.O. Box 1404, Bluefield, WV 24701. Representative: John M. Friedman, 2930 Putnam Avenue, Hurricane, WV 25526. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Foodstuffs and articles* distributed by meat packing plants (except hides and commodities in bulk) between the facilities of Southwest Supply, Inc., Bluefield, WV, on the one hand, and, on the other, points in TN on and east of Interstate Hwy 75, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Mr. Larry L. Brown, Manager Transportation & Purchasing, Geo. A. Hormel & Co., So. Iowa Avenue, Ottumwa, IA 52501. Send protests to: Miss Frances A. Ciccarello, Secretary, Interstate Commerce Commission, 3108 Federal Office Building, 500 Quarrier Street, Charleston, WV 25301.

MC 123885 (Sub 27TA), filed July 24, 1978. Applicant: C & R TRANSFER CO., P.O. Box 1010, Rapid City, SD 57701. Representative: James W. Olson, P.O. Box 1552, Rapid City, SD 57701. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: (1) *Truss rafters for mobile homes and modular units* from Sioux Falls, SD to Greeley, CO; Minden, NE; and Newton, KS; and (2) *Pre-cut wood flooring materials* from Sioux Falls, SD to Hutchinson and Newton, KS; Blue Earth, MN; Minden and Tekamah, NE, for 180 days. Supporting shipper: Component Manufacturing, Inc., 1105 North Cliff, Sioux Falls, SD 57101. Send protests to: J. L. Hammond, District Supervisor, Interstate Commerce Commission, Bureau of Operations, Room 455, Federal Building, Pierre, SD 57501.

MC 124328 (Sub-121TA), filed July 24, 1978. Applicant: BRINK'S INCORPORATED, Thorndal Circle, Darien, CT 06820. Representative: Richard H. Street, Wheeler & Wheeler, 1729 H Street, NW., Washington, DC 20006. Authority sought to operate as a *contract carrier*, by motor vehicle, over irregular routes, transporting: *Coin*, from denver, CO; to Lake Tahoe, NV; Reno, NV; Las Vegas, NV; and Phoenix, AZ, for 180 days. MOTOR CARRIER TEMPORARY AUTHORITY APPLICATIONS

[Notice No. 177]

OCTOBER 4, 1978.

The following are notices of filing of applications for temporary authority under section 210a(a) of the Interstate Commerce Act provided for under the provisions of 49 CFR 1131.3. These rules provide that an original and six (6) copies of protests to an application may be filed with the field official named in the FEDERAL REGISTER publication no later than the 15th calendar day after the date the notice of the filing of the application is published in the FEDERAL REGISTER. One copy of the protest must be served on the applicant, or its authorized representative, if any, and the protestant must certify that such service has been made. The protest must identify the operating authority upon which it is predicated, specifying the "MC" docket and "Sub" number and quoting the particular portion of authority upon which it relies. Also, the protestant shall specify the service it can and will provide and the amount and type of equipment it will make available for use in connection with the service contemplated by the TA application. The weight accorded a protest shall be governed by the completeness and pertinence of the protestant's information.

Except as otherwise specifically noted, each applicant states that there will be no significant effect on the quality of the human environment resulting from approval of its application.

A copy of the application is on file, and can be examined at the Office of the Secretary, Interstate Commerce Commission, Washington, D.C., and also in the ICC Field Office to which protests are to be transmitted.

MOTOR CARRIERS OF PROPERTY

MC 8973 (Sub-53TA), filed July 26, 1978. Applicant: METROPOLITAN TRUCKING, INC., P.O. Box 93, 2424 95th Avenue, North Bergen, NJ 07047. Representative: E. [Finance Docket No. 28842]

WISCONSIN BARGE LINE, INC.

Purchase of Midwest Towing Co., Inc.

Wisconsin Barge Line, Inc., Cassville, Wis. 53806, represented by Leonard R. Kofkin, 39 South LaSalle Street, Chicago, Ill. 60606, hereby gives notice that on the 28th day of August 1978, it filed with the Interstate Commerce Commission at Washington, D.C., an application under section 5 of the Interstate Commerce Act for a decision approving and authorizing Wisconsin Barge Line, Inc., to purchase the operating authority of Midwest Towing Co., Inc., pursuant to authority granted in Docket No. W-764, a common carrier by towing vessels in the performance of general towage, and by self-propelled vessels and non-self-propelled vessels with the use of separate towing vessels in the transportation of commodities generally, between points on the St. Cairo River and the Mississippi River from Minneapolis, Minn. to Cairo, Ill. both inclusive.

No application for temporary authority has been filed under section 311(b).

In the opinion of the applicant, the granting of the authority sought will not constitute a major Federal action significantly affecting the quality of the human environment within the meaning of the National Environmental Policy Act of 1969. In accordance with the Commission's regulations (49 CFR 1108.8) in Ex Parte 55 (Sub-No. 4), *Implementation—National Environmental Policy Act, 1969*, 352 ICC 451 (1976), any protests may include a statement indicating the presence or absence of any effect of the requested Commission action on the quality of the human environment. If any such effect is alleged to be present, the statement shall indicate with specific data, the exact nature and degree of the anticipated impact. See *Implementation—National Environmental Policy Act, 1969*, supra, at p. 487.

Interested persons may participate formally in a proceeding by submitting written comments regarding the application. Such submissions shall indicate the proceeding designation Finance Docket No. 28842 and the original and two copies thereof shall be filed with the Secretary, Interstate Commerce Commission, Washington, D.C. 20423, not later than November 16, 1978. Such written comments shall include the following: The person's position, e.g., party protestant or party in support, regarding the proposed transaction; specific reasons why approval would or would not be in the public interest; and a request for oral hearing if one is desired. Additionally, interested persons who do not intend to formally participate in a proceeding but who desire to comment thereon, may file such statements and information as they may desire, subject to the filing and service requirements specified herein. Persons submitting written comments to the Commission shall, at the same time, serve copies of such written comments upon the applicant, the Secretary of Transportation, and the Attorney General.

H. G. HOMME, Jr.,
Acting Secretary.

2

[M-167, Amdt. 1; Sept. 26, 1978]

CIVIL AERONAUTICS BOARD.

Notice of addition and deletion of items to the September 29, 1978, agenda.

TIME AND DATE: 1 p.m., September 29, 1978.

PLACE: Room 1027, 1825 Connecticut Avenue NW., Washington, D.C. 20428.

SUBJECT:

Addition: 8a. Docket 32752, Application of Pan American for temporary suspension authority at Fairbanks, Alaska, on Route 150 (Memo 8204, BPDA, OGC).

Addition: 8b. Dockets 30170, 32749, 32799, 32787, 32878, 32897, and 33114, Motion of Northwest to establish expedited procedures for deciding the Seattle-Fairbanks issues in the *West Coast-Alaska Investigation* applications of Alaska, Wien, Western, Northwest, Pacific Alaska, and Aeroamerica for Seattle-Fairbanks nonstop authority granted by show cause, temporary certificate, and/or exemption procedures (Memo 8203, OGC).

Deletion: 2. Docket 29044, Part 252 of the Board's Economic Regulations—(1) Final rule on seating segregation; (2) proposed rules on further amendments (Memo 7323-E, OGC, BCP).

Deletion: 5. Dockets 31129 and 32910, Commuter Airlines' exemptions to operate large aircraft (BPDA, OGC, BCP).

STATUS: Open.

PERSON TO CONTACT:

Phyllis T. Kaylor, the Secretary, 202-673-5068.

SUPPLEMENTARY INFORMATION: The staff has asked that items 8a and 8b be added to the September 29 agenda. Pan American has asked to suspend its Fairbanks-Seattle/Portland service over Route 150 effective September 30, 1978. Six carriers have filed exemption applications to institute replacement service on October 1. Due to other pressing items the staff was not able to get the separate memoranda to the Board in time to meet the regular notice requirements. Member Bailey has requested that items 2 and 5 be deleted from the September 29 agenda. She will not be present at the meeting and requests that the items be rescheduled for the October 2 Board meeting in order that she may be present when the items are discussed. Accordingly, the following Members have voted that agency business requires the addition of items 8a and 8b and the deletion of items 2 and 5 from the September 29, 1978 agenda and that no ealier announcement of these changes was possible:

Chairman, Alfred E. Kahn
Member, Richard J. O'Melia
Member, Elizabeth E. Bailey
Member, Gloria Schaffer (did not vote)

All amendments to previously announced agendas are publicly posted at the Board's offices, sent to the FEDERAL REGISTER for publication, and mailed to parties to docketed cases affected by the change. We regret any inconvenience that may be caused by these changes or the delayed receipt of our notices.

3

[M-167, Amdt. 2; Sept. 27, 1978]

CIVIL AERONAUTICS BOARD.

Notice of deletion of item from the September 29, 1978, agenda.

TIME AND DATE: 1 p.m., September 29, 1978.

PLACE: Room 1027, 1825 Connecticut Avenue NW., Washington, D.C. 20428.

SUBJECT: 21. Revision of record retention requirements (Memo 8197, BAS).

STATUS: Open.

PERSON TO CONTACT:

Phyllis T. Kaylor, the Secretary, 202-673-5068.

SUPPLEMENTARY INFORMATION: On September 26, 1978, the staff received late comments from the Director-Designate of the Bureau of Consumer Protection concerning the draft proposed amendment of part 249, item 21 on the September 29 agenda. Since the comments are substantive, they must be evaluated. Accordingly, the following Members have voted that agency business requires the deletion of item 21 and that no earlier announcement of this deletion was possible:

Chairman, Alfred E. Kahn
Member, Richard J. O'Melia
Member, Elizabeth E. Bailey
Member, Gloria Schaffer

All amendments to previously announced agendas are publicly posted at the Board's offices, sent to the Federal Register for publication, and mailed to parties to docketed cases affected by the change. We regret any inconvenience that may be caused by

SECURITIES AND EXCHANGE COMMISSION.

"FEDERAL REGISTER" CITATION OF PREVIOUS ANNOUCEMENT: 43 FR 42853, September 18, 1978.

STATUS: Closed meeting.

PLACE: Room 825, 500 North Capitol Street, Washington, D.C.

DATE PREVIOUSLY ANNOUNCED: Thursday, September 28, 1978.

CHANGES IN THE MEETING: The following item will not be considered at the closed meeting, immediately following the 10 a.m. open meeting, on Thursday, September 28, 1978, but has been rescheduled for Thursday, October 4, 1978, at the closed meeting, immediately following the 10 a.m. open meeting:

Injunctive action.

The following additional items will be considered at the closed meeting, immediately following the 10 a.m. open meeting, on Thursday, September 28, 1978:

Investigatory matter bearing enforcement implications.
Regulatory matter bearing enforcement implications.
Regulatory matter regarding financial institutions.
Other litigation matter.

Chairman Williams and Commissioners Loomis, Evans, Pollack, and Karmel determined that Commission business required consideration of these matters and that no earlier notice thereof was possible.

SEPTEMBER 27, 1978.

ENDANGERED AND THREATENED WILDLIFE AND PLANTS

Review of the Status of the American Alligator in Louisiana

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Review of the status of the American alligator in Louisiana.

SUMMARY: The Service will review the status of the American alligator, *Alligator mississippiensis*, in Louisiana, to determine if it should be reclassified to endangered, threatened, or threatened (similarity of appearance) within the State.

DATE: Information regarding the status of this species should be submitted on or before December 26, 1978.

ADDRESS: Comments on this notice of review should be submitted to the Director (OES), U.S. Fish and Wildlife Service, Department of the Interior, Washington, D.C. 20240.

FOR FURTHER INFORMATION CONTACT:

Mr. Keith M. Schreiner, Associate Director—Federal Assistance, Fish and Wildlife Service, Washington, D.C. 20240, phone 202-343-4646.

SUPPLEMENTARY INFORMATION:

BACKGROUND

The American alligator is a large conspicuous member of its environment and consequently is very important to the ecosystem that it inhabits. However, it has an extremely valuable skin which can be fashioned into luxury items. Because of large demands for products made from alligators, the species experienced severe population declines in the late 1950's and 1960's. As a result, the species was listed as endangered under provisions of the Endangered Species Conservation Act of 1966.

The alligator is a somewhat remarkable species in that, as a result of strict Federal and State conservation measures, protection from trade in its products, a long lifespan, numerous eggs per clutch, and parental care, the species has been able to make a dramatic recovery in many areas of the Southeast. Consequently, the alligator has been reclassified as threatened or threatened (similarity of appearance) throughout much of its range (see the FEDERAL REGISTER of September 26, 1975 (40 FR 44412-44429) and January 10, 1977 (42 FR 2071-2077) for complete details of past reclassifications).

The State of Louisiana has developed through the years a rather comprehensive management and research program for the alligator. Limited hunting is already allowed in Cameron, Calcasieu, and Vermilion Parishes where alligator populations are quite high (over 91 alligators/square mile of habitat). In spite of hunting, alligators increased in these parishes from 99,551 to 168,265 between 1973 and 1976, according to State figures. Throughout many parishes, the general picture of dramatic increases in numbers is much the same.

On July 30, 1976, Gov. Edwin Edwards of Louisiana petitioned the Service to delist the alligator in southern parishes within the State. Supporting information was later supplied by the Louisiana Wildlife and Fisheries Commission, and consists of the following:

(1) A letter (dated April 12, 1977) from J. Burton Angelle requesting delisting of alligators in the following parishes: Cameron, Calcasieu, Vermilion, Acadia, Allen, Beauregard, Jeff Davis, Iberville, Lafayette, Point Coupee, St. Landry, St. Martin, West Baton Rouge, East Baton Rouge, Ascension, St. John, St. James, Assumption, Lafourche, Terrebonne, St. Mary, Iberia, Livingston, St. Tammany, Tangipahoa, St. Bernard, Orleans, Jefferson, Plaquemines, and St. Charles. A total of 4.5 million acres of potential alligator habitat is included and a total of 308,000 alligators (1976 figures) would be involved. This estimate is based on a combination of expansion of the nesting density index and comments from field personnel. A parish by parish estimate was not included although estimates were provided on the basis of habitat type.

(2) A letter (dated December 7, 1977) and supporting documents received from J. Burton Angelle as follows:

(a) Letter—282,000 alligators were estimated from 3.4 million acres of coastal marshlands censused by individuals. A 2- or 1-percent sample (depending on area) was taken and expanded for the nesting density index. Twenty-eight percent of the area was surveyed by estimates from field personnel.

(b) News releases on the 1972, 1973, 1976, and 1977 alligator harvests.

(c) A parish-by-parish breakdown of population estimates in 1973 and 1976.

(d) A table showing nesting effort in comparison to precipitation levels, 1970-76.

(e) A table showing results of the 3-year experimental harvest program in southwestern Louisiana, 1972, 1973, 1975.

(f) "Population Distribution of Alligators With Special Reference to the Louisiana Coastal Marsh Zone" by T. Joanen and L. McNease. 1972.

(g) "Louisiana's Experimental Alligator Harvest Program" by T. Joanen and L. McNease. 1976.

(h) "An Analysis of Louisiana's 1972 Experimental Alligator Harvest Program" by A. W. Palmisano, T. Joanen, and L. McNease. 1973.

(i) "Simulation of a Commercially Harvested Alligator Population in Louisiana" by J. D. Nichols, L. Viehman, R. H. Chabreck, and B. Fenderson. 1976.

(3) A letter (dated June 14, 1978) by T. Joanen with another group of documents:

(a) Letter—Provided an updated parish-by-parish estimate of the alligator population and a more precise picture of how the alligator is censused within the State.

(b) "Artificial Incubation of Alligator Eggs and Post Hatching Culture in Controlled Environmental Chambers" by T. Joanen, L. McNease. 1977.

(c) "Effects of Simulated Flooding on Alligator Eggs" by T. Joanen, L. McNease, and G. Perry. 1977.

(d) "A Comparison of Native and Introduced Immature Alligators in Northeast Louisiana" by D. Taylor, T. Joanen, and L. McNease. 1976.

(e) "Culture of the American Alligator" by T. Joanen and L. McNease.

(f) "Time of Nesting for the American Alligator" by T. Joanen and L. McNease. 1978.

(g) "Status of Louisiana Alligator Farm Program" by T. Joanen and L. McNease. 1978.

(h) "Preliminary Results of Louisiana's Alligator Harvest Program, 1977" by T. Joanen, L. McNease, and G. Linscomb. 1977.

(i) "Alligator Diets in Relation to Marsh Salinity" by L. McNease and T. Joanen. 1977.

The Director of the Service has assessed these data, as well as the recommendations of a review panel appointed by him to review the data, and has directed that a proposal be prepared to change the status of the alligator in Louisiana to threatened (similarity of appearance) in nine parishes primarily along the coast. Accordingly, a proposal to that effect was prepared and is published in the same issue of the FEDERAL REGISTER as this notice. At the same time, the Service believes that a comprehensive review of the status of this species should be undertaken to determine if additional changes in the classification of the alligator in Louisiana is warranted.

The Service is seeking the views of the Governor of Louisiana, and soliciting from him information on the status of this species within Louisiana. Other interested parties are invited to submit any factual information, especially publications and written reports, which is germane to this status review.

This notice of review was prepared by Dr. C. Kenneth Dodd, Jr., Office of Endangered Species, 202-343-7814.

NOTE.—The Service has determined that this document does not contain a major action requiring preparation of an economic impact statement under Executive Order 11949 and OMB Circular A-107.

Dated: September 21, 1978.

LYNN G. GREENWALT,
Director, Fish and Wildlife Service.

[50 CFR Part 17]

ENDANGERED AND THREATENED WILDLIFE AND PLANTS

Proposed Reclassification of the American Alligator in Louisiana, and proposed Changes to Special Rules Concerning the Alligator

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule.

SUMMARY: It is proposed to change the legal status of the American alligator, *alligator mississippiensis*, in nine parishes of southern Louisiana from their present threatened status to threatened under the similarity of appearance clause of the Endangered Species Act of 1973. This proposal is being made because in recent years the alligator has increased its numbers significantly in nine parishes. These nine parishes are located primarily within the coastal zone of Louisiana and include the following: Iberia, St. Mary, Terrebonne, Lafourche, St. Charles, Jefferson, Plaquemines, St. Bernard, and St. Tammany. As such, the special rules which presently apply to alligators in Cameron, Calcasieu, and Vermilion Parishes in southwestern Louisiana, would apply to these parishes as well. In addition, the service proposes to amend the special rules which apply to American alligators in order to simplify application procedures for those seeking buyer's, tanner's, and fabricator's licenses. This amendment would also authorize the sale of meat from lawfully taken alligators in States where such activity is permitted. Also included in this proposal is a limitation upon the applicability to American alligators of general permits pertaining to threatened wildlife issued under 50 CFR 17.32.

DATES: Comments from the public and the Governor of Louisiana must be received by December 26, 1978.

Public hearings will be held on this proposal. The dates and places for the hearings will be published in the FEDERAL REGISTER at a later date.

ADDRESSES: Submit comments to Director (FWS/LE), U.S. Fish and Wildlife Service, P.O. Box 19183, Washington, D.C. 20036. All material received will be available for inspection during normal business hours at the Service's office in Suite 600, 1612 K Street NW., Washington, D.C. 20240.

FOR FURTHER INFORMATION CONTACT:

Marshall L. Stinnett, Special Agent in Charge, Office of Regulations and Penalties, Division of Law Enforcement, Fish and Wildlife Service, P.O. Box 19183, Washington, D.C. 20036, 202-343-9237, or Mr. Keith M. Schreiner, Associate Director—Federal Assistance, Fish and Wildlife Service, U.S. Department of the Interior, Washington, D.C. 20240, 202-343-7814.

SUPPLEMENTARY INFORMATION

BACKGROUND

Introduction.—The alligator is a large conspicuous member of its environment and has been feared, praised, and exploited probably since man first came to southeastern North America. Early naturalists and explorers presented startling and unbelievable stories concerning the species and its behavioral patterns. However, in spite of its major role in the ecosystems of the South, surprisingly little scientific work was conducted on it and then often with conflicting observations. Today, the importance of the alligator as a top predator, modifier of its environment, and behaviorally sophisticated species is universally recognized by the scientific and wildlife management communities.

One of the main commercial values of the alligator is for its hide, which can be fashinoned into leather articles. Hunting and poaching at one time seriously reduced the number of alligators and led to its inclusion as endangered throughout its range under provisions of the Endangered Species Conservation Act of 1966. Strict Federal protection coupled with strong State laws, enabled the alligator populations to recover dramatically in many parts of its former range. Because of this, the alligator has been reclassified twice to reflect its improved status (September 26, 1975 (40 FR 44412-44429), and January 10, 1977 (42 FR 2071-2077). The Endangered Species Act authorizes the protection of species, subspecies, or any other groups of fish or wildlife of the same species or smaller taxa in common spatial arrangement that interbreed when mature. The Service has designated four different groups or populations of the American alligator, and has classified these groups as endangered, threatened, or threatened (similarity of appearance) depending on the locality involved.

At present, the alligator is classified in Louisiana under the Act as threatened (similarity of appearance) in Cameron, Calcasieu, and Vermilion Parishes, threatened in other coastal parishes, and endangered in inland parishes.

On July 30, 1976, Gov. Edwin Edwards of Louisiana petitioned the Fish and Wildlife Service to delist the American alligator in all southern parishes in Louisiana. On February 7, 1977, Curtis Bohlen, then Acting Assistant Secretary of the Department of the Interior, advised the State that supporting data were required before the Service could act on the State's petition. Accordingly, the State supplied supporting documentation on April 12, 1977, December 7, 1977, and June 14, 1978, which they believe supports the reclassification as requested. This information is as follows:

(1) A letter (dated April 12, 1977) from J. Burton Angelle requesting delisting of alligators in the following parishes: Cameron, Calcasieu, Vermilion, Acadia, Allen, Beauregard, Jefferson Davis, Iberville, Lafayette, Point Coupee, St. Landry, St. Martin, West Baton Rouge, East Baton Rouge, Ascension, St. John, St. James, Assumption, Lafourche, Terrebonne, St. Mary, Iberia, Livingston, St. Tammany, Tangipahoa, St. Bernard, Orleans, Jefferson, Plaquemine, and St. Charles. A total of 4.5 million acres of potential alligator habitat is included and a total of 308,000 alligators (1976 figures) would be involved. This estimate is based on a combination of expansion of the nesting density index and comments from field personnel.

A parish-by-parish estimate was not included although estimates were provided on the basis of habitat type.

(2) A letter (dated December 7, 1977) and supporting documents received from J. Burton Angelle as follows:

(a) Letter—282,000 alligators were estimated from 3.4 million acres of coastal marshlands censused by individuals. A 2- or 1-percent sample (depending on area) was taken and expanded for the nesting density index. Twenty-eight percent of the area was surveyed by estimates from field personnel.

(b) News releases on the 1972, 1973, 1976, and 1977 alligator harvests.

(c) A parish-by-parish breakdown of population estimates in 1973 and 1976.

(d) A table showing nesting effort in comparison to precipitation levels, 1970-76.

(e) A table showing results of the 3-year experimental harvest program in southwestern Louisiana, 1972, 1973, and 1975.

(f) "Population Distribution of Alligators With Special Reference to the Louisiana Coastal Marsh Zone" by T. Joanen and L. McNease. 1972.

V 43/191 OCT 2 78

(g) "Louisiana's Experimental Alligator Harvest Program" by T. Joanen and L. McNease. 1976.

(h) "An Analysis of Louisiana's 1972 Experimental Alligator Harvest Program" by A. W. Palmisano, T. Joanen, and L McNease. 1973.

(i) "Simulation of a Commercially Harvested Alligator Population in Louisiana" by J. D. Nichols, L. Viehman, R. H. Chabreck, and B. Fenderson. 1976.

(3) A letter (dated June 14, 1978) by T. Joanen with another group of documents:

(a) Letter—Provided an updated parish by parish estimate of the alligator population and a more precise picture of how the alligator is censused within the State.

(b) "Artificial Incubation of Alligator Eggs and Post Hatching Culture in Controlled Environmental Chambers" by T. Joanen and L. McNease. 1977.

(c) "Effects of Simulated Flooding on Alligator Eggs" by T. Joanen, L. McNease, and G. Perry. 1977.

(d) "A Comparison of Native and Introduced Immature Alligators in Northeast Louisiana" by D. Taylor, T. Joanen and L. McNease.

(e) "Culture of American Alligator" by T. Joanen and L. McNease.

(f) "Time of Nesting for the American Alligator" by T. Joanen and L. McNease. 1978.

(g) "Status of Louisiana Alligator Farm Program by T. Joanen and L. McNease. 1978.

(h)"Preliminary Results of Louisiana's Alligator Harvest Program, 1977" by T. Joanen, L. McNease, and G. Linscomb. 1977.

(i) "Alligator Diets in Relation to Marsh Salinity" by L. McNease and T. Joanen. 1977.

The Service has reviewed all available data and the Director has determined that because of large population sizes and increasing numbers, the American alligator is no longer likely to become endangered in the foreseeable futhre so as to be threatened in the following parishes in southern Louisiana: Iberia, St. Mary, Terrebonne, Lafourche, St. Charles, Jefferson, Plaquemines, St. Bernard, and St. Tammany. The Service believes that the alligator can be managed within these areas and that no harm will be done to the species by controlled harvest. However, because of similarity of appearance, it is still necessary to impose some restrictions on commercial activities involving specimens taken in these nine parishes to insure the conservation of other alligator populations that are threatened or endangered.

Section 4(e) of the Act authorizes the treatment of a species (or sub-species or group of wildlife in common spatial arrangement) as an endangered or threatened species even though it is not otherwise listed as endangered or threatened, if it is found: (a) That the species so closely resembles in appearance an endangered or threatened species that enforcement personnel would have substantial difficulty in differentiating between listed and unlisted species; (b) that the effect of this substantial difficulty is an additional threat to the endangered or threatened species; and (c) that such treatment of an unlisted species will substantially facilitate the enforcement and further the policy of the Act. The Service currently treats the group of American alligators found in Cameron, Vermilion, and Calcaseau Parishes in Louisiana as threatened because of their similarity in appearance to other groups of American alligators that are listed as threatened or endangered. Certain restrictions are imposed on commercial activities involving specimens taken from these three parishes, as is discussed below, to insure the conservation of those groups of American alligators that are listed as threatened or endangered. The Service now proposes to treat the group of American alligators found in Iberia, St. Mary, Terrebonne, Lafourche, St. Charles, Jefferson, Plaquemines, St. Bernard, and St. Tammany Parishes in Louisiana as threatened because of similarity in appearance, and to impose similar restrictions on commercial activities involving specimens taken from those parishes.

American alligators found in Iberia, St. Mary, Terrebonne, Lafourche, St. Charles, Jefferson, Plaquemines, St. Bernard, and St. Tammany Parishes in Louisiana are indistinguishable from American alligators existing elsewhere which are treated by the Service as endangered or threatened under relevant provisions of the Act. Hides from American alligators have proved to have a great commercial value owing to the substantial demand which exists for them in the international leather trade. In addition, representatives of the food industry in Louisiana and Florida have recently expressed an interest in test marketing alligator meat as a novelty item. Historically, it has been shown that the taking of American alligators for commercial purposes was a substantial factor contributing to the decline of the species. This resulted in the previous listing of the American alligator as endangered or threatened over the major portion of its range. Restrictions on taking and commercial activities that stem from such listing would remain for those segments of the American alligator population which continue to be classified as endangered or threatened. In order to insure maximum protection for these endangered and threatened alligators, some restrictions on commercial activities have been found necessary for the physically similar group which exists in the nine parishes affected by this proposal.

Although the State requested that additional parishes be delisted, these parishes either have small population sizes or the populations are stable, based on the State's population status information 1973-76. Therefore, the Service does not believe that a reclassification is warranted for these areas at this time. The Service will continue to monitor the alligator's status, however, and should reclassification be warranted in the future, the Service will act accordingly.

The Fish and Wildlife Service also proposes to amend 50 CFR Part 17 through the revision of certain paragraphs, and revocation of others, found in § 17.42. This section allows for the taking of American alligators under certain specified circumstances, including the taking by Federal or State conservation officers in the performance of their duties, and the taking by any persons in three parishes of Louisiana in accordance with the laws of that State. Also included in this section are provisions for the issuance of licenses authorizing the commercial buying, tanning, and fabrication of lawfully taken alligator hides. The Service has undertaken a review of its enforcement program relating to this provision and has concluded that the permit application process can be substantially simplified without impairing its objectives. As a result, it proposes that present regulatory provisions requiring the submission of detailed information regarding the permit applicant's business organization, methods of operation, previous experience, and accounting systems be eliminated. In addition, owing to the fact that the Service is capable of ascertaining previous wildlife law violations through the record system of its Enforcement Division, the proposed regulations eliminate the necessity for permit applicants to furnish such information on themselves. The burden placed upon those seeking tanner's licenses would be slightly increased under the proposed regulations through the addition of a requirement that all hides to be processed bear a series of markings on their underside applied by the tanner. This is intended to facilitate the Service's enforcement efforts by allowing lawfully taken hides to be identified as such throughout the tanning fabrication process. The Service's interest in this regard is protected prior to the tanning stage through the tagging requirement placed upon those responsible for harvesting and shipping the alligator hides. The burden placed upon fabricators of alligator hide articles has been decreased under the proposed regulations through the elimination of certain recordkeeping requirements which the Service has found to be unnecessary and the further elimination of marking requirements which are rendered superflous by the proposed regulations.

Under § 17.42 as presently constituted, the sale of meat from lawfully taken alligators is strictly prohibited. This position was adopted owing to the fact that control factors were lacking on the level for the regulation of such sale through licensing and recordkeeping requirements. The State of Louisiana has since imposed such controls. In recognition of this circumstance, and in further consideration of the fact that the present regulations mandate the wastage of an economically valuable source of protein, the proposed regulations would allow the sale of alligator meat in the State where the taking occurs, and where this activity is permitted and regulated through the imposition of licensing and recordkeeping requirements on selling parties. Section 17.42 presently applies to all American alligator permits issued under section 17.32, authorizing the performance of activities otherwise prohibited with regard to threatened wildlife. Importation and exportation are two such prohibited activities. Despite the fact that its regulations would thereby allow permits to be issued for the importation and exportation of American alligators, the Service has few such permits to date, owing to its concern that legally exported alligator hides would be commingled with illegally taken hides that are known to exist outside the United States and because the alligator is listed on appendix I to the Convention on International Trade in Endangered Species of Wild Fauna and Flora which restricts international trade in species for primarily commercial purposes. However, the United States is presently considering a proposal to change the alligator's status under the Convention from appendix I to appendix II. This would remove the convention's absolute restriction on international trade. In other words, alligators from the 12 Louisiana parishes would be able to be exported and imported as far as the convention is concerned, subject to review and approval (for exports) of the U.S. Management Authority and Scientific Authority. The Service desires consistency between the convention and these rules, and favors a position which recognizes the greatly improved biological status of the alligator while retaining reasonable and necessary enforcement controls. Therefore, the rule would allow export consistent with the convention. Whether reimport of alligator hides or products could also be allowed, because of the lack of control over possible smuggled skins, is a question on which the Service desires recommendations from the public. The Service's present position is not to allow such reimport.

The above changes in the special rules pertaining to alligators would apply to the three parishes (Cameron, Calcasieu, Vermilion) where the alligator is classified as threatened (similarity of appearance), to the nine parishes proposed for reclassification to such status, and to any other American alligators which are so classified by the Service in the future. It should be recognized that by the express terms of this special rule, the "similarity of appearance" permits provided for in § 17.52 are not available for these alligators. They are only available for captive alligators.

Pursuant to section 4(b) of the Act, the Director will notify the Governor of Louisiana with respect to this proposal and request his comments and recommendations before making final determinations.

PUBLIC COMMENTS SOLICITED

The Director intends that the rules finally adopted will be as accurate and effective as possible in the conservation of any endangered or threatened species. Therefore, any comments or suggestions from the public, other concerned governmental agencies, the scientific community, industry, private interests, or any other interested party concerning any aspect of these proposed rules are hereby solicited.

Final promulgation of the regulations on the American alligator in Louisiana will take into consideration the comments and any additional information received by the Director, and such communications may lead him to adopt final regulations that differ from these proposals.

An environmental assessment has been prepared in conjunction with this proposal. It is on file in the Service's Office of Endangered Species, 1612 K Street NW., Washington, D.C., and may be examined during regular business hours. A determination will be made at the time of final rulemaking as to whether this is a major Federal action which would significantly affect the quality of the human environment within the meaning of section 102(2)(C) of the National Environmental Policy Act of 1969.

The primary authors of these proposed rules are Mr. Coleman Sachs, Legal Specialist, Division of Law Enforcement, 202-343-9347, and Dr. C. Kenneth Dodd, Jr. Office of Endangered Species, 202-343-7814.

REGULATIONS PROMULGATION

Accordingly, it is hereby proposed to amend part 17, subchapter B of Chapter I, Title 50 of the Code of Federal Regulations, as set forth below:

1. Amend § 17.11(i) by changing the status of the American alligator in Louisiana under "Reptiles" on the list of animals to read as follows:

§ 17.11 Endangered and threatened wildlife.

* * * * * * *

V 43/191

Species		Range			Status	When listed	Special rules
Common name	Scientific name	Population	Known distribution	Portion endangered			
Reptile:							
Alligator, Am.	*Alligator mississippiensis*	NA	U.S.A. (Southeast).	Wherever found in the wild, except in those areas where it is listed as Threatened as set forth below.	E	11	NA
Do	do	NA	do	In the wild in Florida and in certain areas in GA, LA (except in those 12 parishes described below), SC and TX, as set forth in Sec. 17.42 (a)(2)(iv).	T	20	17.42(a)
Do	do	NA	do	In the wild in Cameron, Calcasieu, Vermilion, Iberia, St. Mary, St. Charles, Terrebonne, Lafourche, St. Bernard, Jefferson, St. Tammany, Plaquemines parishes in LA.	T(S/A)	11	17.42(a)
Do	do	NA	Worldwide	In captivity wherever found.	T(S/A)	11	

(2) Also, part 17, subpart D, title 50 of the Code of Federal Regulations is proposed to be amended as set forth below.

§ 17.42 [Amended]

1. Paragraph (a)(1) of § 17.42 is revised to read as follows:

(a) • • •

(1) *Prohibitions.* Except as provided by permits issued under paragraph (a)(3) of this section, the following prohibitions apply to the American alligator.

• • • • • •

2. Paragraph (a)(1)(i)(E) of § 17.42 is revised to read as follows:

(a) • • •

(1) • • •

(i) • • •

(E) Any person may take American alligators in Cameron, Vermillion, Calcasieu, Iberia, St. Mary, Terrebonne, St. Bernard, St. Tammany, Lafourche, St. Charles, Plaquemines, and Jefferson Parishes in accordance with the laws and regulations of the State of Louisiana provided the following requirements are met:

(*1*) The hides of such alligators are only sold or offered for sale to persons holding a valid Federal license to buy hides, issued under this subsection;

(*2*) The meat and other parts are sold only in the State of Louisiana, and only in accordance with the laws and regulations of that State.

• • • • •

3. Paragraph (a)(1)(i)(F) of § 17.42 is revised to read as follows:

(a) • • •

(1) • • •

(i) • • •

(F) When American alligators are taken by Service or State officials in accordance with pargraph (a)(1)(i)(D) of this section, the hides may be sold by their respective agencies to any person holding a valid Federal license to buy hides, issued under this subsection, provided the following requirements are met:

(*1*) The hides have been tagged by the State of origin with a noncorrodible numbered tag inserted no more than 6 inches from the tip of the tail;

(*2*) The tag number, length of belly skin, and date and place of the specimen's taking are recorded;

(*3*) A tag label is affixed to the outside of any package used to ship the hides, identifying its contents as alligator hides, indicating their quantity and tag numbers, and providing the name and address of the consignor and consignee;

(*4*) The meat and other parts are only sold in the State where the taking occurs, and only in accordance with the laws and regulations of that State.

• • • • •

4. Paragraph (a)(1)(iv) of § 17.42 is revised to read as follows:

(a) • • •

(1) • • •

(iv) *Commercial transactions.* No person may deliver, receive, carry, transport, ship, sell, or offer to sell in interstate or foreign commerce, by any means whatsoever, and in the course of a commercial activity, any American alligator: *Provided,* That the hides of American alligators lawfully obtained from the State of Louisiana prior to December 28, 1973, may be sold or offered for sale in interstate (not foreign) commerce if the director of the State wildlife conservation agency certifies to the Director that all such hides were lawfully obtained and can be identified; and such hides are sold, offered for sale, delivered, carried, transported, or shipped only to a person holding a valid Federal license to buy hides, issued under this subsection.

• • • • •

5. Paragraph (a)(2)(i) of § 17.42 is revised to read as follows:

(a) • • •

(2) • • •

(i) "Buyer" shall mean a person engaged in the business of buying hides of American alligators for the purpose of resale. A buyer may also be a tanner or fabricator.

• • • • •

6. Paragraph (a)(2)(iv) is amended by adding the following words after the words "occurring in the wild in • • •":

(a) • • •

(2) • • •

(iv) • • • Iberia, St. Mary, St. Charles, Terrebonne, Lafourche, St. Bernard, Jefferson, St. Tammany, Plaquemines • • •

7. Paragraph (a)(3)(i) of § 17.42 is revised to read as follows:

(a) • • •

(3) • • •

(i) Permits are available under § 17.32 (General permits—threatened wildlife) for all the prohibited activities referred to in paragraph (a)(1) of this section, except that import and export shall be allowed only as consistent with the Convention on International Trade in Endangered Species of Wild Fauna and Flora (see 50 CFR, Part 23 for rules implementing this convention). All the terms and provisions of § 17.32 shall apply to all such permits issued under the authority of this paragraph and in addition, any permit which authorizes the sale, delivery, care, carriage, transportation, or shipment of American alligators will be subject to the special conditions set forth below in paragraph (a)(3)(iii) of this section.

• • • • •

8. Paragraph (a)(3)(iii)(A)(*2*) of § 17.42 is revised to read as follows:

(a) • • •

(3) • • •

(iii) • • •

(A) • • •

(*2*) The name and address of the applicant's business organization, the address of any other facilities from which it is operated, and the names and addresses of its principal officers.

• • • • •

9. Paragraph (a)(3)(iii)(A)(*3*) of § 17.42 is revoked.

10. Paragraph (a)(3)(iii)(A)(*4*) of § 17.42 is revoked.

(a) • • •

(3) • • •

(iii) • • •

(A) • • •

(*3*) and

(*4*) [Revoked]

11. Paragraph (a)(3)(iii)(B) of § 17.42 is revised to read as follows:

(a) • • •

(3) • • •

(iii) • • •

(B) *Issuance criteria.* Upon receiving an application completed in accordance with paragraph (a)(3)(iii)(A) of this section, the Director will decide whether or not a permit for the requested activity should be issued.

• • • • •

12 Paragraph (a)(3)(iii)(C)(*4*) of § 17.42 is revised to read as follows:

(a) • • •

(3) • • •

(iii) • • •

(C) • • •

(*4*) A tanner must leave all tags on the hides, but must collect, record, and return to the issuer all shipping tags; in addition there must be applied in indelible ink to the underside of each hide a mark of the tanner's choosing that has been approved by the Service, placed at least every one-half inch throughout its surface area

• • • • •

13. Paragraph (a)(3)(iii)(C)(*7*) of § 17.42 is revoked.

14. Paragraph (a)(3)(iii)(C)(*8*) of § 17.42 is revoked.

(a) • • •

(3) • • •

(iii) • • •

(C) • • •

(*7*) and (*8*) [Revoked]

15. Paragraph (a)(3)(iii)(C)(*6*) of § 17.42 is revised to read as follows:

(a) • • •

(3) • • •

(iii) • • •

(C) • • •

(6) Every licensee must maintain complete and accurate records of all American alligator hides, including all State tags.

• • • • •

16. Paragraph (a)(4) of § 17.42 is revised to read as follows:

(a) • • •

(4) Products of American alligator which have been manufactured by licensed fabricators and marked in accordance with paragraph (a)(3)(iii)(C)(*4*) of this section may be transported, shipped delivered, carried, or received in interstate commerce in the course of a commerical activity, and may be sold or offered for sale in interstate commerce.

• • • • •

17. Paragraph (a)(5) of § 17.42 is revoked.

(a) • • •

(5) [Revoked]

NOTE.—The Service has determined that this document does not contain a major proposal requiring preparation of an economic impact statement under Executive Order 11949 and OMB Circular A-107.

[Docket No. AO-14-A57]

MILK IN THE NEW ENGLAND MARKETING AREA

Decision on Proposed Amendments To Marketing Agreement and to Order

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule.

SUMMARY: This final decision provides for changes in the present order provisions based on industry proposals considered at a public hearing held February 14-16, 1978. The major changes would adjust milk prices throughout the production area to more closely relate the location value of milk to the costs incurred in transporting milk from farms and country plants to bottling plants in the major consuming centers of the market. The changes are necessary to reflect current marketing conditions and to insure orderly marketing in the area.

FOR FURTHER INFORMATION CONTACT:

Clayton H. Plumb, Marketing Specialist, Dairy Division, Agricultural Marketing Service, U.S. Department of Agriculture, Washington, D.C. 20250, 202-447-6273.

SUPPLEMENTARY INFORMATION: Prior documents in this proceeding: Notice of Hearing, issued January 18, 1978, published January 23, 1978 (43 FR 3127).

Recommended decision, issued July 14, 1978, published July 20, 1978 (43 FR 31146).

Notice of extension of time for filing exceptions to the recommended decision, issued August 4, 1978, published August 10, 1978 (43 FR 35490).

Preliminary Statement

A public hearing was held upon proposed amendments to the marketing agreement and the order regulating the handling of milk in the New England marketing area. The hearing was held, pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice (7 CFR Part 900), at Boxborough, Mass., on February 14-16, 1978, pursuant to notice thereof issued on January 18, 1978 (43 FR 3127).

Upon the basis of the evidence introduced at the hearing and the record thereof, the Acting Administrator, on July 14, 1978, filed with the Hearing Clerk, United States Department of Agriculture, his recommended decision containing notice of the opportunity to file written exceptions thereto.

The material issues, findings, and conclusions, rulings, and general findings of the recommended decision are hereby approved and adopted and are set forth in full herein, subject to the following modifications:

Index of Changes

1. Issue No. 1—*"Location adjustments to handlers and producers".*
   a. Paragraphs 24 and 25 are revised and combined.
   b. Two new paragraphs are added after the 27th paragraph.
2. Issue No. 2—*"Establishing several price zones within the 'nearby plant' zone".*
   a. Two paragraphs are added after paragraph 28.
   b. The 32d paragraph is revised.
   c. Two paragraphs are added after paragraph 33.
   d. Two paragraphs are added after paragraph 36.
3. Issue No. 3—*"Class I price differential".*
   a. Five paragraphs are added after paragraph 23.
   b. Paragraph 24 is revised.
   c. Three paragraphs are added after paragraph 24.
   d. Paragraph 27 is revised.
   e. Four paragraphs are added after paragraph 27.

The material issues on the record of the hearing relate to:

1. Location adjustments to handlers and producers.
2. Establishing several price zones within the "nearby plant" zone.
3. Class I price differential.
4. Conforming changes.

Findings and Conclusions

The following findings and conclusions on the material issues are based on evidence presented at the hearing and the record thereof:

1. *Location of adjustments to handlers and producers.* The current plant location adjustment rate of 1 cent for each 10-mile pricing zone more distant than the 201-210 mile zone should be increased to 1.5 cents per hundredweight. The 1.2-cent location adjustment presently applicable to each of the first 20 price zones (starting at Boston) should be increased to 1.8 cents per zone. The additional 16 cents per hundredweight that is added in adjusting prices at the 14th zone should be changed to 14 cents. These modifications would result in a class I and blended price adjustment at Boston of 50 cents per hundredweight compared to the present 40 cents. Under the order, prices are announced for the 21st zone.

A producer association proposed changing the location adjustment rates to 1.8 cents per zone for the first 20 zones and 1.5 cents per zone beyond zone 21. The association proposed leaving the fixed price adjustment of 16 cents at the 14th zone unchanged. This proposal would establish a class I and blended price adjustment at Boston of 52 cents. In addition to the proponent cooperative, this proposal was supported by a proprietary handler and two New York-based cooperatives with members shipping to New England handlers.

The proponent cooperative association indicated that these order modifications are necessary to reflect the current cost of hauling bulk milk from distant plants to the Boston or Providence areas. The cooperative's witness claimed that since the adoption of the present rate structure in 1967, transportation costs have increased significantly. Because of this, the witness contended, the order pricing does not now properly reflect transportation costs incurred in hauling milk from distant plants to distributing plants.

The witness also contended that if location adjustments reflect less than the entire hauling cost from the farm to the city, equity problems develop. He pointed out that a substantial portion of the city-priced milk is assembled at nonpricing point reload stations that compete with country manufacturing plants for supplies. The witness claimed that producers shipping to the city through a reload station have a lower pay price, after deductions for hauling, than their neighbors supplying a local pool plant. Under these circumstances, he noted, producers are reluctant to deliver milk to city distributing plants. It was claimed that when milk is obtained from distant producers for city bottling needs, one of two inequities occur. If the buying handler subsidizes the hauling, he is disadvantaged costwise relative to his competitors receiving direct-delivered milk FOB their plant. If the cooperative subsidizes the hauling, its members are disadvantaged on their returns relative to producers whose milk is priced at country manufacturing plants. To remove these marketing inequities, proponent contended, location adjustments must adequately reflect hauling costs.

The cooperative's witness presented data regarding 48 long-distance hauling rates that were applicable to movements of milk between reload stations or supply plants and city plants. The hauling rates were those being charged by six haulers for transporting milk from 5 reload stations and 2 supply plants to several different dealers throughout the entire marketing area. The rates were applicable to hauls varying in distance from 61 to 278 miles. The cooperative performed a regression analysis on 48 different hauls. The result indicated a variable

hauling cost of .199 cent per mile and a fixed cost of 9.38 cents per hundredweight. Although the proponent concluded that the regression analysis justified a location adjustment rate of 2.0 cents per 10-mile zone, he advocated the 1.8-cent per zone location adjustment to provide alignment with the rate used in the neighboring New York-New Jersey order. The cooperative's witness justified using a rate of 1.5 cents per 10-mile zone beyond zone 21 on the basis that marketing efficiency increases when the outlying parts of the milkshed supply the fluid market only in times of need. He endorsed the 1.5-cent per zone adjustment as a means of encouraging reserve milk supplies to stay in the country for manufacturing.

The witness also stated that his cooperative's cost of operating facilities to reload milk range from 6.5 to 14 cents per hundredweight, averaging approximately 8 cents per one hundred pounds.

A proprietary handler indicated that its hauling and reloading costs were generally of the same magnitude as those reported by this cooperative.

Four producer associations jointly proposed changing the location adjustment rates to those advocated by the other cooperative just mentioned, except that they proposed that the 16 cents per hundredweight now added at the 14th zone be decreased to 8 cents. By changing Order 1 in this manner, a plus location adjustment of 44 cents would be established for Boston.

A spokesman for these cooperative associations stated that the current transportation allowance under the order is insufficient to cover the cost of hauling milk 200 miles. However, they are opposed to a large increase in the transportation allowance because they believe this would result in a corresponding increase in trucking rates. The witness hypothesized that if the location adjustment for Boston were increased to 52 cents per hundredweight, numerous haulers, as well as handlers who haul their own milk supply, would receive undue windfall gains.

The witness contended that a degree of subsidization of hauling costs provides an incentive to market milk in an efficient manner. He believes that if the full hauling cost is reflected under the order there is less incentive for traffic managers to develop efficient marketing patterns.

Another proponent witness testified that it costs his cooperative association 44 cents per hundredweight to move milk from zone 21 to the Providence, R.I., area. This charge covers the fixed and variable hauling costs. The cooperative's cost of operating a reload station is an additional 5 cents per hundredweight.

One producer association proposed changing the location adjustment rates to 1.5 cents per 10-mile zone for the first 20 zones and 1.2 cents per 10-mile zone beyond zone 21. The cooperative was in favor of leaving the present additional 16-cent price adjustment at the 14th zone unchanged. This location adjustment rate schedule would establish a class I and blended price adjustment at Boston of plus 46 cents.

The proponent cooperative presented data regarding its major hauler's rate schedule for 1978. This independent hauler is transporting milk to plants in the marketing area for 55 cents per round trip mile, figured on loads of 50,000 pounds. At this rate a haul from zone 21 to Boston (round trip of 400 miles) would cost 44 cents per hundredweight. This cooperative also submitted data regarding the cost of getting milk hauled to the Boston and Providence areas from zones 17 and 20. Its hauling rates for shipments to Boston from zones 17 and 20 are 38 cents and 42 cents per hundredweight, respectively. The hauling costs per hundredweight from these same zones to Providence are 44 cents and 47 cents, respectively. These charges cover only the fixed and variable hauling costs. There is an additional expense of 5.5 cents per hundredweight for operating the reload stations through which these supplies are moved.

The witness noted that the aforementioned proposal by four cooperatives, which included reducing the 16 cents added to the location adjustment at zone 14 to 8 cents, increases only slightly the location adjustments for zones 16 through 21. Thus, he contended, such a proposal would not provide enough transportation allowance for shipping milk from plants in zones 16 through 21. He also contended that the other cooperative proposal, which would establish a 52-cent location adjustment at Boston, would provide transportation allowances in excess of the actual hauling rates he is charged to ship milk to the market.

The cooperative's witness supported a decrease in the location adjustment rate beyond zone 21 for two reasons. First, he pointed out that historically the location adjustment rate for the more distant zones has differed from the rate applicable in the first 20 zones. The witness also contended that within 210 miles of Boston there is adequate milk produced to normally satisfy the marketing area's class I needs. This being the case, he felt that the order should not provide for a location adjustment rate schedule that makes it attractive to move milk into the metropolitan centers from the most distant parts of the milkshed.

Under the existing New England order, the class I price and blended price difference between the 21st "and "nearby plant" zones is 40 cents. Plants located outside the "nearby plant" zone but within 31 to 40 miles (4th zone) of Boston have a location adjustment of plus 36.4 cents. For each successive 10-mile zone through the 14th zone the adjustment decreases 1.2 cents. At the 15th zone the country plant and fixed transportation costs of 6 cents and 10 cents, respectively, are subtracted, making the total adjustment between the 14th and 15th zones 17.2 cents. The zone increments beyond the 15th zone are 1.2 cents through the 21st zone and 1 cent beyond.

It is clear that the present location adjustment provisions of the New England order are not compatible with current marketing conditions. Major increases in the cost of transporting milk during the last few years have occurred without corresponding changes in the transportation allowances under the order. Consequently, the present Order 1 location adjustments are significantly less than the actual transportaion costs.

This is having a disruptive effect on the procurement of milk by distributors and the marketing of milk by cooperatives and producers. A substantial portion of the Order 1 city-priced milk is assembled at non-pricing point reload stations. When milk is procured from farmers located in an area void of a local plant outlet, the handler is able to pay the dairy farmers his city plant price and deduct the entire hauling and reloading costs of moving these supplies to his facility. Thus, in such cases, the handler is able to procure the milk at the order minimum class prices applicable to his city plant location.

However, there are a number of country pool plants located throughout most of the New England milkshed. Milk received from producers at a country plant is priced at that plant in accordance with the plant location adjustment schedule in the order. When the location adjustment schedule does not reflect the full cost of moving milk through country plants to the city, as is presently the case, the class I and blended prices at country plants are too high relative to the location value of milk delivered to city plants.

This circumstance has resulted in hauling subsidies in supplying city distributing plants. A city plant operator procuring direct-shipped milk produced near a country pool plant has an order blended price at his plant, after deductions for hauling, less than the blended price for such milk delivered to the country plant, less the farm-to-plant hauling costs. Since the

V 43 / 191

producers involved prefer to deliver their milk to the country plant to obtain the higher pay price after deductions for hauling, it forces the city plant operator to subsidize part of the hauling cost to be competitive in procurement with country plants.

A similar hauling subsidy situation exists in the case of procuring milk shipped through country pool plants. Such milk is priced at the country plant location and the cost of hauling the milk from the country plant exceeds the difference between the order class I price at the country plant and the order class I price at the city plant. If the city handler operates his own country supply plant, he is faced with a hauling subsidy. In the case of a supply plant operator who sells milk to other handlers operating city plants, either the supply plant operator or the city plant operator must subsidize the hauling cost, or share the costs in some way.

Several problems have resulted from not reflecting enough transportation cost in the class I and blended price plant location adjustment. Producers shipping to the city through a nonpricing point reload station would have a lower pay price, after deductions for hauling, than their neighbors supplying a local pool plant, if the producer pays the entire hauling cost. Under these circumstances, producers in these areas are reluctant to supply the city distributing plants. If a city handler subsidizes hauling costs, then his supplies cost more than those of his nonsubsidizing competitor. If the producer or his cooperative association pays the entire hauling costs, then there are inequities between him and his neighbors supplying a local pool plant. Moreover, cooperatives that subsidize the cost of hauling milk to city plants must pass such cost back to member producers. This in turn encourages member producers to leave the cooperatives and market their milk directly to proprietary handlers who are required to pay the full amount of the blended price. Corrective action is essential if the order is to fulfill its purpose of providing stable and orderly marketing conditions for producers and for the handlers through whom they market their milk.

The class I and blended price location adjustments under the New England order should be revised to reflect the decreased value of milk delivered to plants in the production area relative to its value when delivered to city bottling plants as a result of increased transportation costs. Specifically, location adjustments for each zone more distant than the 201/210 mile zone should be increased from 1 cent per 10 miles to 1.5 cents per 10 miles; the 1.2-cent rate presently applicable to the first 20 zones should be increased to 1.8 cents per 10-mile zone; and the 16 cents per hundredweight added at the 14th zone should be decreased to 14 cents. These revisions would result in a class I and blended price adjustment at zone 1 of plus 50 cents.

Data presented at the hearing indicate that hauling costs have increased significantly since the Order 1 location adjustment schedule was adopted in 1967. Presently, a proprietary handler and an independent New England hauler used by several Vermont cooperatives are moving bulk milk 200 miles for 44 cents per hundredweight. The data indicate that the variable costs associated with efficient long-distance shipments are 1.8 cents per hundredweight per 10 miles, or 36 cents for 200 miles. Thus, the rates reflect fixed costs of 8 cents per hundredweight (44 cents minus 36 cents). Some of the other hauling data, particularly data presented for 7 of the 37 supply plants and bulk reload stations in the milkshed, suggest slightly higher fixed and variable costs. In exceptions filed a cooperative and a proprietary handler argued that such higher costs should be made the basis for establishing location adjustments. However, when the location adjustments reflect fixed hauling costs and reloading costs, as well as variable hauling costs, as the Order 1 location adjustment schedule is designed to do, it is preferable to remain on the conservative side of the cost range in order to discourage unneeded hauling of milk to city plants. Since some cooperatives and proprietary handlers are moving milk to market at a trucking cost of 44 cents per hundredweight for a distance of 200 miles, any higher location adjustment rate under the order for such distance could encourage moving country plant milk unnecessarily to city plants at the expense of the pool rather than having city plant operators rely on milk moved directly from farms and through the more efficient assembly operations.

Proprietary handler and producer association representatives submitted a wide range of data on the costs of receiving milk through country plants. Two spokesmen for cooperatives that operate a number of country plants testified that their costs were about 5 cents per hundredweight. Another cooperative's witness stated that his association's records indicate that country plant operating costs are ranging from 6.5 to 14 cents per hundredweight. One handler witness said that his costs averaged about 8 cents per one hundred pounds of milk. After considering all the data presented at the hearing, it is concluded that the 6 cents now specified under the Order 1 location adjustment schedule for operating country plants should not be changed. Thus, the present price adjustment of 16 cents at the 14th zone should be decreased to 14 cents (8 cents fixed hauling cost plus 6 cents reload cost).

Changing the present 16-cent price adjustment at the 14th zone to 14 cents would bring the location adjustments for distant zones generally in line with the actual hauling cost some handlers are incurring in moving milk to the primary market. If the price adjustment at the 14th zone were reduced 8 cents, as one proposal would do, the location adjustments would not sufficiently cover the cost of moving milk from the production area to the primary consumption centers.

Several cooperative associations and proprietary handlers excepted to the recommended location adjustment rate of 50 cents per hundredweight for zone 1. They contended that the rate proposed by one cooperative, 52 cents per hundredweight, more nearly covers the cost of moving milk through country plants into the city. Some of the exceptors stated that their actual reloading costs are above 6 cents per one hundred pounds of milk. They also contend that hauling costs have increased since the time of the hearing.

The record does indicate that it costs more than 6 cents per hundredweight to reload milk at small-volume operations. However, it also demonstrates that a substantial amount of milk is being reloaded at a cost of 6 cents or less per hundredweight. Although various handlers contended in their exceptions that hauling costs have increased since the hearing, the decision must be based on evidence contained in the hearing record. In its exceptions, one producer association suggested that lowering the location adjustment between the 14th and 15th zones to 14 cents per hundredweight was not enough and asked that the adjustment be lowered to 8 cents per hundredweight. However, the association did not present any new arguments in support of this request. No departure from the 50-cent location adjustment for zone 1 should be made on the basis of the information provided in these exceptions.

At the hearing and in their briefs, numerous proprietary handlers and cooperative associations supported a lower location adjustment rate beyond the 21st zone. In fact, there was no testimony opposing this type of location adjustment schedule.

Analysis of production and class I sales statistics in the New England milkshed support one witness' contention that within 210 miles of Boston there is adequate milk produced to satisfy the market's normal class I demand. The industry wants to maintain as high a degree of marketing efficiency as possible. This is achieved when the fluid milk requirements are obtained from the closest available sources and reserve supplies are processed into the more concentrated manufactured dairy products in the outlying areas of the milkshed, thus minimizing total transportation costs. Therefore, an economic incentive for handlers to keep reserve milk supplies in the country for manufacturing should be incorporated into the location adjustment schedule. By decreasing the location adjustment rate of 1.8 cents applicable in the inner zones to 1.5 cents for each 10-mile zone beyond zone 21, the desired procurement patterns would be promoted.

2. *Establishing several price zones within the "nearby plant" zone.* In conjunction with the changes in class I and blended price location adjustments to reflect increased hauling costs, the current "nearby plant" zone should be divided into several pricing zones to encourage efficient milk movements and to promote more orderly marketing. Generally, the zone structure should provide for decreasing class I and blended prices in an east to west as well as a south to north direction in recognition of a westward shift of the New England procurement area into New York State.

Class I prices [1] currently are not adjusted for location within the "nearby plant" zone, which encompasses a substantial proportion of the New England marketing area. All plants located in the States of Connecticut, Massachusetts (except Berkshire County), or Rhode Island are included in this zone and thus are subject to identical minimum order prices. The vast majority of pool distributing plants operated by handlers who are regulated under the order are located in the "nearby plant" zone, which accounts for over 90 percent of the marketing area population.

The current "nearby plant" zone should be divided into three geographically-defined pricing zones plus a fourth area in which the zone location of any plant would be determined on the basis of highway mileage from the nearer of Boston, Mass. or Providence, R.I. The order minimum class I prices that should apply in these areas are described under issue 3 that deals with the level of class I price under the order.

All plants located in the State of Rhode Island, the Massachusetts counties of Barnstable, Bristol, Dukes, Norfolk, Plymouth, or Suffolk, or the area between Boston and Massachusetts highway number 128 should be in zone 1. This zone includes the major cities of Boston and Providence and is generally described as southeastern New England. The class I price at plants in this zone would be 50 cents per hundredweight above the class I price at the 21st (base) zone.

Plants located in the Connecticut counties of Fairfield, Hartford, Litchfield, Middlesex (only the townships of Cromwell, Durham, Haddam, Middlefield, or Portland), New Haven, or Tolland (only the townships of Ellington or Somers) should be in zone 7. This western area of Connecticut, which includes the cities of Danbury, Hartford, and New Haven, is adjacent to the eastern boundary of the New York-New Jersey marketing area. The class I price in this zone would be 10.8 cents less than that for zone 1 (6 zones at 1.8 cents per zone) and 39.2 cents more than the zone 21 class I price.

All plants located in the Massachusetts counties of Hampden (except the townships of Brimfield, Holland, Monson, Palmer and Wales) or Hampshire (except the township of Ware) should be in zone 8. At plants located in this area, which includes the city of Springfield, the class I price would be 12.6 cents less than the zone 1 price and 37.4 cents more than the zone 21 class I price.

The zone location of each plant located in the States of Connecticut or Massachusetts (except Berkshire County) that is also located outside the specific zones previously listed should be determined on the basis of highway mileage from the nearer of Boston or Providence. In general, this area encompasses the territory between zone 1 (southeastern New England) and zones 7 and 8 (western Connecticut and Massachusetts) and areas north of zones 1 and 8.

Cooperative associations that represent producers supplying the New England market proposed a restructuring of the "nearby plant" zone in a manner similar to that which is provided herein. Two hearing notice proposals submitted by cooperative associations were identical with respect to the areas to be included in each zone as well as the differences in prices among areas curently within the "nearby plant" zone. At the hearing, the proposals were modified slightly in identical fashion.

The zoning structures provided herein differs from the cooperatives' revised proposals in two respects. First, the adopted zone 1 is smaller in area than the proposed "Eastern City Plant Location Zone." The cooperatives' proposed eastern zone would encompass the area in the adopted zone 1 as well as additional territory in Massachusetts, namely, all of Essex County, Middlesex County (except the Townships of Ashby, Groton, Pepperell, Shirely and townsend) and an eastern tier of 12 townships in Worcester county. Second, the areas included in the adopted zones 7 and 8 were proposed by cooperatives to be included in one "Western City Plant Location Zone," which would not have provided for a price decrease from south to north in the western portion of the current "nearby plant" zone.

The cooperatives' specific zoning proposal, or the concept of zoning, for the present "nearby plant" zone was supported at the hearing or in briefs by several cooperative associations that represent producers supplying the New England and New York-New Jersey marketing areas and a proprietary handler regulated under the New England order. A trade association of 21 handlers regulated under the order also supported the proposed zoning approach provided the issue of intermarket price alignment (discussed under the following issue) was adequately resolved.

Some of the reasons advanced by proponents for zoning were interrelated with their desire to realign class I prices between the New England (Order 1) and New York-New Jersey (Order 2) Federal order markets. They testified that pricing changes effective November 1, 1977, in the Order 2 market necessitated a price reduction in New England, particularly in the areas of the New England market adjacent to New York. Some witnesses stated that a price reduction of a magnitude necessary to align prices in the western portion of the New England market was not necessary in eastern segments of the market (Boston/Providence) that are well protected from the Order 2 market by distance. Also, some testified that by establishing different pricing zones in the "nearby plant" zone the blend price to New England order producers would decline by a lesser amount than if the same price reduction were applied throughout the area.

Proponents also testified that the action is necessary to encourage marketing efficiency by establishing the incentive to move milk from west to east to the major consuming centers of the market (Boston/Providence). They stated that as the market shifts to greater dependence on supplies of milk from New York, it will become increasingly important to maintain a high enough price in the eastern consumption areas to attract this milk from beyond the consumption centers in the western portions of Connecticut and Massachusetts. Consequently, they claimed, an eastern zone price above the western zone price by the

[1] Class I and blended price location adjustments are identical under the order. For purposes of this discussion, location adjusments will be discussed only in the context of the class I price. However, the location adjustments applied to the class I price must be applied similarly to the blended price. This is necessary to provide the proper incentive for producer milk to move to the major consumption centers for fluid use.

OCT 2 1978

V 43/191
OCT 2 78

cost of transportation between the two zones is necessary to place a producer in New York in a position of indifference as to which zone he ships milk.

Proponents testified that the boundaries of their proposed eastern and western zones were determined on the basis of the location of existing distributing plants and the areas of substantial overlapping route disposition. They indicated that the proposed price difference between the two zones was based on the variable hauling cost of 1.8 cents per hundredweight per 10 miles. Since Hartford, Conn. and Springfield, Mass. are about 70 miles from Providence, R.I., prices in the western zone were proposed to be 12.6 cents less than those for the eastern zone (7 zones times 1.8 cents). It was noted that the area between the eastern and western zones would serve as a "buffer" zone in which the zone location of any plant should be determined on the basis of distance from the nearer of Boston or Providence. Proponents indicated that such a "buffer" zone would eliminate any sharp difference in class I prices to handlers that could result if only two zones were established. Proponents stated that although handlers probably could not transport packaged milk for 1.8 cents per 10 miles, the overall zoning approach comes closer than the current structure in achieving competitive price alignment for handlers in procuring milk supplies.

At the hearing, a proprietary handler regulated under the order suggested that the proposed eastern zone be extended westward to include the area of Worcester, Mass. The handler, who operates a fluid milk plant in the eastern zone, stated that Worcester area handlers with whom he competes for class I sales in both the Worcester and Boston areas should have the same class I price as handlers in the eastern zone.

In their briefs, the proprietary handler and a trade association of 49 New England milk dealers opposed any rezoning of the current "nearby plant" zone. Handlers stated that rezoning the "nearby plant" zone must be rejected on statutory grounds since nonuniform prices to handlers would result. They further indicated that the record of the proceeding did not support any price differentiation among handlers in the "nearby plant" zone in that there is no indication of a benefit to be derived by handlers. Rather, the benefit of rezoning would accrue to dairy farmers in the form of a lesser blended price reduction than if prices in the "nearby plant" zone were reduced the same amount throughout the zone in sufficient magnitude to align prices with Order 2.

The issue of determining whether the pricing structure within the "nearby plant" zone should be revised is not dependent upon the possible resulting impact on the overall level of returns to producers. Such consideration, as well as the issue of intermarket alignment of prices, is appropriately considered under the following issue that deals with the level of the class I price that is necessary to assist in assuring an adequate supply of milk for the New England market.

There is substantial evidence in the record of the proceeding to firmly establish a need to revise the pricing structure within the "nearby plant" zone. The "nearby plant" zone contains almost 93 percent of the marketing area population [2] and at the time of the hearing all but 8 of 89 pool distributing plants were located in this three-State area. On the other hand, production within this area, which accounted for less than 24 percent of the approximately 414 million pounds of milk pooled under the order in December 1977, is far short of that needed to meet the fluid milk needs of handlers. Consequently, distributing plants must depend on sources of milk in other areas to obtain milk for bottling needs. New York and Vermont represent by far the largest sources of supply for the marketing area and in December 1977 accounted for 27.9 and 37.8 percent, respectively, of the milk pooled under the order. Maine and New Hampshire, the remaining States that comprise the order 1 milkshed, accounted for 4.7 and 6.1 percent, respectively, of the market supply during the same period.

Adjustment of milk prices for plant location facilitates the orderly and efficient movement of milk supplies from the major production areas to the consuming centers of the market and, conversely, it discourages uneconomic movements away from consumption centers toward supply areas. Since the New England market must depend on substantial supplies of milk located to the west and north of the principal and secondary consumption centers in the "nearby plant" zone, it is logical that location adjustments should increase milk prices from west to east as well as from north to south.

The "nearby plant" zone, in which prices are currently not adjusted for plant location, does not promote orderly marketing conditions. It is simply too large an area in which to maintain a "flat" pricing system. There is no price incentive to move milk either eastward or southward from the current western and northern boundaries of the zone. Furthermore, there is no price incentive to discourage backward movements of milk toward northern and western production areas within the "nearby plant" zone. For example, milk in the relatively heavier production areas of the "nearby plant" zone (New London, Tolland, and Windham Counties, Conn., and Worcester County, Mass.) may move north or west to distributing plants. Should this occur, it would require additional shipments of milk from distant areas to meet the fluid milk needs of the major consumption areas in southeastern New England. Such occurrences, which would increase transportation and energy costs to the detriment of the total interests of the market, are not representative of an orderly and efficient marketing system.

The Boston/Providence area is the largest consumption center in the "nearby plant" zone. The population of the area included in the cooperatives' proposed eastern plant zone represents over 50 percent of the total marketing area population. Milk production in this area is minimal and consequently it is the principal deficit area in the "nearby plant" zone. Therefore, prices in this area must be higher relative to consumption centers located to the north and west that are nearer to the primary production areas.

The need to decrease prices in a westward direction across the "nearby plant" zone is based on the importance of east central New York as a major source of supply for the New England market, as well as the fact that secondary but significant consumption centers in the western parts of Connecticut and Massachusetts are nearer to this supply source than the Boston/Providence area. New York has been a source of supply for New England for a substantial period of time, with the volume of New York milk pooled in the New England markets continually increasing. The volume of New York milk pooled on the New England markets increased from about 100 million pounds in December 1969 to 115 million pounds in December 1977, a 15-percent increase.[3] A further comparison on a county basis between December 1969 and December 1976 reveals that the volume of New England pooled milk originating in the four eastern New York counties of Columbia, Dutchess, Rensselaer, and Washington declined by about 1 percent, from 67 to 66 million pounds. However, milk originating in the more western counties of New York (Orange, Ulster, Greene, Albany, Saratoga, Delaware, Schoharie, Montgomery, Fulton, and Otsego) doubled in volume, from about 14 to 28 million pounds. These data clearly indicate that there has been an increasing reliance on New York milk and that the New England milkshed has expanded westward into east central New York in recent years.

[3] Official notice is taken of Sources of Milk for Federal Order Markets by State and County, U.S. Department of Agriculture, Consumer and Marketing Service, Dairy Division, issued Feb. 1971.

If handlers in western Connecticut and western Massachusetts did not rely on nearby New York milk, it normally would not be necessary to apply location adjustments from east to west. Alternative supply sources in Vermont are relatively equidistant from Boston and Hartford and would provide a basis to continue a flat price structure across southern New England. However, Hartford and other areas in the western portions of the marketing area, such as Springfield, Mass., are located much closer to supply sources in New York than to the heavy production areas in northern Vermont. Therefore, prices in the Hartford/Springfield area need not be as high as those in the Boston/Providence area to attract milk supplies from New York.

A lower price in Hartford/Springfield than Boston/Providence will also establish the incentive to move milk from west to east across the current "nearby plant" zone. This is desirable in that a substantial part of the New York production area, which in addition to being nearer to the western portions of Connecticut and Massachusetts, is also essentially equidistant from Boston and Providence. For example, Oneonta, N.Y. (Otsego County), which generally represents the western edge of the current New England milkshed in New York, is 242 and 236 miles, respectively, from Boston and Providence.[4] In addition, a lower price in Hartford/Springfield would discourage westward movements of milk from relatively heavy production areas in Connecticut and Massachusetts toward the New York supply area.

Cooperative associations proposed a lower class I price for the western portions of Connecticut and Massachusetts than for the major consumption area of Boston/Providence. The concept of the cooperatives' proposal is valid, for reasons previously stated, and should be adopted, but in a somewhat modified form.

The Connecticut portion of the cooperatives' proposed western zone should be in zone 7 since the city of Hartford is approximately 70 miles nearer to major production areas in New York than the major consumption center of Providence. Consequently, the class I price in the Hartford area should be 10.8 cents lower than in the Providence area, which for reasons hereinafter stated should be in zone 1.

The city of Hartford is used to determine the price level in zone 7, relative to Providence, since it and the surrounding areas represent the largest consumption center in western Connecticut. All plants in this zone will have identical minimum order prices, as is currently the case. Any finer delineation of location adjustments within this zone, on either an east to west or south to north basis, is not supported on the basis of this record.

The Massachusetts portion of the cooperatives' proposed western zone should be included in a lower priced zone than western Connecticut. Springfield, which is the major consumption center in western Massachusetts, is a junction for the east-west and north-south Interstate Highway System. Springfield is also 25 miles north of Hartford and as such is nearer to production areas in Vermont and most of the heavy production areas in east central New York. Thus, a substantial proportion of the milk originating in either New York or Vermont can be expected to pass through Springfield en route to Hartford and other areas in zone 7. It is essential, therefore, to establish a lower price level in Springfield than Hartford to recognize its proximity to production areas as well as to provide an additional incentive for milk to move beyond Springfield to plants in western Connecticut.

The difference in prices at Springfield and Hartford should be based on the extent to which Springfield is nearer to the major production areas than Hartford, as measured from the nearest major consumption area of Providence. Since Springfield is approximately one zone (8 miles) more distant from Providence than Hartford, prices at Springfield area plants should be 1.8 cents less than at Hartford. Consequently, the Massachusetts portion of the cooperatives' proposed western zone should be in zone 8.

A proprietary handler that operates a plant in the zone 7 area excepted to placing the Springfield and Hartford areas in different price zones on the grounds that such zoning was neither proposed nor supported by record evidence.

Contrary to this handler's views, the record evidence does establish the need to divide the proposed western zone into two different price zones. The fact that Hartford area handlers are located further from the major procurement areas than Springfield area handlers, as well as the structure of the Interstate Highway System, justifies a difference in prices between the two areas. Although this specific zone differentiation was not specified in the hearing notice, two witnesses at the hearing specifically stated that there might well be a need to establish higher prices in the southern portions of the proposed western zone to either improve the intermarket price alinement or to insure that plants in such areas would be able to obtain adequate supplies of milk. Another witness also expressed concern over the ability of Connecticut handlers to obtain milk supplies at certain price levels that were proposed for the western zone. These concerns highlighted the need to fully explore record evidence concerning the geography of the milkshed and the routes by which milk would move from the production area to the secondary markets in the proposed western zone. As previously stated, these factors provide the basis for a finer delineation of pricing within the western zone area than was originally proposed by cooperatives.

The cooperatives' proposed eastern zone should be reduced in size for several reasons. First, any zone within which prices are not adjusted for location should be as small in area as possible to eliminate the likelihood of relatively large price differences between plants that are close to each other at the edge of two bordering price zones. The larger the zone the greater the price difference there will be between a plant that is located just inside the zone and a plant located just outside the zone. Such a situation exists under the current pricing structure and would be intensified by adopting the cooperatives' proposed eastern zone that would include territory north of Boston extending to the Massachusetts border, including all of Essex County and most of Middlesex County. Currently, order prices at pool plants located in zone 4 in southeastern New Hampshire are 3.6 cents per hundredweight lower than prices at pool plants located a few miles south of the Massachusetts border that are included in the "nearby plant" zone. The adopted location adjustment rate of 1.8 cents would result in a 5.4-cent difference in price between these plants that are within a few miles of each other. This price disparity problem can be rectified by excluding a portion of northeastern Massachusetts from the eastern (zone 1) zone.

Another reason for excluding areas north and northwest of Boston from zone 1 is the obvious fact that plants in such areas are located closer to production areas in Maine, New Hampshire, and Vermont than plants in the

[4] Mileages are obtained from Mileage Guide No. 11, Supplement No. 1, issued by Household Goods Carriers' Bureau, Agent, Arlington, Va., on Feb. 21, 1978, effective May 15, 1978, of which official notice is taken.

V 43 / 191
OCT 2 78

Boston area. Several cooperative association witnesses presented testimony with respect to hauling costs incurred in moving milk southward from these northern areas. They indicated that it costs less to move milk to northeastern Massachusetts than to Boston. Consequently, it would not be appropriate to extend a zone 1 price, which reflects total hauling costs to Boston, to plants located some 40 miles north of Boston.

The border of zone 1 in northeastern Massachusetts should be Massachusetts Highway No. 128. It represents a clearly recognizable and distinguishable zone boundary around Boston at a distance of approximately 10 miles from the city. Plants located to the north and the northwest of such highway will be in either zones 2, 3, or 4 depending on their distance from Boston. Consequently, price differences among plants that are located within a few miles of each other would not be expected to exceed 1.8 cents per hundredweight. Plants located in these zones would have location adjustments that relate to the cost of transporting bulk milk from production areas to the north and west.

An eastern tier of 12 townships in Worcester County that was proposed to be included in the eastern zone should not be included in zone 1. There are no pool plants located in this area and no testimony was presented to indicate a special need for its inclusion.

Testimony by cooperative witnesses concerning the cost of moving milk from north to south might indicate the need for a relatively higher price in Providence than Boston. Providence is 46 miles southwest of Boston and as such is more distant from the northern production areas. However, Providence is relatively closer to production areas in New York than heavy production areas in northern Vermont. Also, most of the heavy production areas in east central New York are either nearer to Providence of are virtually equidistant to Providence and Boston. Therefore, a higher price in Providence relative to Boston in view of north to south movements is not necessary in view of west to east movements of milk that can be made to satisfy the fluid milk requirements to Providence area handlers.

Two cooperative associations, a U.S. Congressman, and two proprietary handlers filed exceptions to the zone 1 definition. One of the cooperative associations and one handler requested that additional territory north of Boston be included in zone 1 as was proposed at the hearing, while the other exceptors requested that certain territory in Norfolk County be excluded from zone 1.

The exceptions requesting the addition of territory north of Boston were filed by a cooperative association that operates a pool manufacturing plant in zone 3 and a proprietary handler that operates a distributing plant in zone 1. They indicated that the exclusion of such area from zone 1 would create competitive problems for dealers since there is a substantial overlap of sales between dealers in such area with Boston area dealers. The cooperative association further stated that the reduction in transportation allowance at its manufacturing plant that results from its being in a lower priced zone would increase the cost of using the plant to balance the fluid milk requirements of Boston and Providence area handlers. The cooperative also stated that hauling costs are greater to this plant due to the intermittent nature of shipments to the plant and that south-to-north zoning would be contrary to pricing needs if the New England market were extended to include additional territory in Maine.

The reasons advanced by exceptors do not provide a basis to extend the zone 1 boundary to include areas north of Boston. The record clearly establishes that it costs less to haul milk from northern supply areas to plants located north of Boston than to plants located in Boston. To extend zone 1 to include territory up to 40 miles north of Boston would overprice milk at plants in such territory. In addition, no valid reasons were presented to indicate a unique situation with respect to areas north of Boston that would require consideration of the alternative zoning procedures suggested.

A proprietary handler who operates a distributing plant in Franklin Township in Norfolk County excepted to being included in zone 1. The handler stated that he would be competitively disadvantaged on a large proportion of his fluid milk sales in the lower priced areas of western Connecticut and western Massachusetts. The handler stated that nearly 40 percent of his fluid milk sales are in the proposed zones 7 and 8 and that, consequently, zone 8 should be extended eastward to include his plant location.

A U.S. Congressman and a cooperative association also filed exceptions relative to this handler's situation. These views basically reiterated those expressed by the handler, i.e., he would be at a competitive disadvantage in a large proportion of his sales area because dealers with whom he competes would have lower prices applicable at their plants under the new zoning structure. The cooperative association stated that the handler's situation is unique in that he is the only handler in zone 1 that has substantial route disposition in zone 7. The association suggested, therefore, that the handler's location be removed from zone 1 to allow him to be competitive with respect to his sales in zone 7.

The record does not contain evidence regarding the sales pattern of the handler as described in the various exceptions. Nevertheless, a situation of this nature would not provide a basis for changing the zone designation of the handler's plant. The pricing structure adopted herein is intended to reflect the relative difference in costs of moving raw milk supplies from procurement areas to various plant locations rather than to accommodate the disposition of fluid milk products from processing plants to secondary consumption areas. The area in which a plant distributes fluid milk products has no relationship to prices that are necessary to assure the delivery of raw milk supplies to a specific location. Consequently, an attempt to establish prices at various plants on the basis of different sales areas would neither insure the delivery of adequate supplies of milk nor result in uniform prices to handlers similarly located. In addition, there is no evidence in the record of this proceeding to indicate that the location of exceptor's plant requires the application of prices different than those of other handlers in zone 1 to secure an adequate supply of milk.

Plants located in areas that are currently within the "nearby plant" zone that are not located in the geographically defined pricing zones provided herein should be zoned on the basis of mileage from the nearer of Providence or Boston, as proposed. In addition to establishing a "buffer" zone between eastern and western consumption centers, it is consistent with the overall objective of encouraging eastward and southward movements of milk toward the major consumption centers of Boston and Providence. Class I prices at any plants so zoned will thus be based on the fact that the plant is located nearer to the major sources of supply relative to the nearest primary market center of Boston or Providence.

The arguments of proprietary handlers who are opposed to restructuring the pricing system in the "nearby plant" zone are not convincing. They indicated that it would be more difficult for Boston area handlers to compete for sales in areas west of Boston, such as Worcester, with handlers located in lower priced zones. Consequently, they contend that prices at Worcester area plants, as well as prices at plants throughout the "nearby plant" zone, should be the same as those at Boston and Providence.

Such argument does not recognize the failure of the current pricing structure to reflect the lower value of milk delivered to plants located closer to the primary production areas for

the market. The application of prices at Worcester area plants at the same level as Boston area plants results in overvaluing milk in the former area by at least the additional cost of transporting bulk milk from Worcester to Boston. Worcester is located 40 miles west of Boston and is nearer to production areas in New York. Consequently, milk delivered to Worcester is not worth as much at that location as milk delivered to Boston.

Two proprietary handlers that operate distributing plants in zone 1 filed exceptions requesting that zone 1 be extended westward to include areas around the city of Worcester because both Boston area and Worcester area handlers have almost the same sales areas. In addition, one of the exceptors, while opposing any change in the pricing structure of the "nearby plant" zone for reasons indicated in his post-hearing brief, specifically excepted to the conclusion that milk delivered to Worcester-area plants has a lower value than milk delivered to Boston. The handler stated that such conclusion is erroneous since there is no evidence in the record to show that such handlers have ever relied on supplies of milk from New York sources. Instead, he contends that Worcester area handlers secure milk supplies from either local or northern New England sources.

As previously stated elsewhere in this decision, the extent to which handlers may compete with each other for fluid milk sales does not provide a proper basis to establish pricing zones under the order. Such zone prices must be based on plant location, rather than sales area, relative to the location of the principal supply areas for the market. In this regard, it is anticipated that there will be an incentive for milk supplies located north of Worcester and Boston to move to Boston. This is in keeping with the goal of encouraging the nearest available milk supplies to move toward the nearest major consuming centers of the market, in this instance, Boston. To the extent that this should result in the need for Worcester area handlers to seek alternative milk supplies, they may be obtained in New York. There has been an increasing reliance on New York supplies to fulfill the fluid milk requirements of New England handlers in the past and it is expected that this trend will continue. Since New York and other western areas represent the alternative sources of supply for Worcester area handlers, and since such handlers are closer to these supplies than Boston area handlers, prices at such plants must reflect a lower value than milk delivered to Boston.

The pricing structure provided herein is intended also to provide greater assurance that adequate supplies of milk will be made available to distributing plants in the Boston/Providence segment of the market. This can best be effected by providing plant location adjustments to the class I and blended prices in the present "nearby plant" zone that reflect the cost of moving milk across such zone from country supply plants. If the present "nearby plant" zone were retained, it would be necessary to limit the amount of the location adjustments under the order to cover transportation costs in moving milk from country supply plants to the northern and western edge of the zone and thereby rely on either producers or handlers to subsidize the additional cost of transporting milk across such zone.

As indicated, New York and Vermont represent the largest sources of supply for the New England market. Also, the Boston/Providence area is the principal consumption center of the market. Any pricing structure that is intended to encourage orderly marketing conditions must recognize the above factors and provide the incentive for milk to move from the production areas to the major consumption center. The pricing structure provided herein recognizes these relevant factors and should be more effective in promoting orderly marketing conditions to the benefit of the entire market than the maintenance of a "flat" price throughout the current "nearby plant" zone.

3. *Class I price differential.* The present class I differential of $2.58 that is applicable at the 21st zone should be reduced to $2.42. With the adopted location adjustment schedule, this would result in a class I differential at zone 1 of $2.92, compared with $2.98 presently.

A basic purpose of the hearing was to consider proposals that were designed to improve class I price alinement between the New England market and the New York-New Jersey market. Cooperative associations and proprietary handlers offered a number of proposals which they believed would improve intermarket price alignment.

Proponent witnesses contended that the amendments to the New York-New Jersey Federal order that became effective on November 1, 1977, changed the class I milk cost alinement between distributing plants in the Order 1 and Order 2 markets. Various witnesses pointed out that these amendments changed the cost of Order 2 class I milk in a variety of ways. The class I differential was lowered 15 cents per hundredweight and the handlers now receive a pool transportation credit of 15 cents per hundredweight on all farm bulk tank milk received at their plant. Also, the transportation differentials were increased from 1.2 cents per 10-mile zone to 1.8 cents per 10-mile zone for the first 20 zones and to 1.5 cents per 10-mile zone beyond the 201-210 mile zone. In addition, the negotiable hauling deduction was increased from 10 cents per hundredweight to 15 cents per hundredweight. It was noted that another amendment affecting the cost of class I milk under Order 2 is the increased direct delivery differential. The direct delivery differential for bulk tank milk received from producers within the 1-70 mile zone or from producers who deliver their milk in cans to plants within such zones was increased from 5 cents per hundredweight to 15 cents per hundredweight. It was argued that these changes could result in various reductions in the cost of class I milk to an Order 2 plant depending upon the freight zone from which the milk was received. For example, a witness testified that the class I cost for milk received from the 71-80, 141-150, and 201-210 mile zones in the Order 2 market was reduced by 27.2 cents, 31.4 cents, and 35 cents per hundredweights, respectively.

Proponent witnesses contended that before Order 2 was amended, southeastern New York handlers already had a significant advantage over southern New England handlers on their cost of class I milk. They claimed that for milk obtained from the 71-80, 141-150, and 201-210 mile zones by New York handlers the Order 2 class I milk cost advantage over the "nearby plant" zone class I milk cost to southern New England handlers was 22 cents, 29 cents, and 38 cents, respectively. It was claimed that since November 1, 1977, these differences have increased to 49 cents, 60 cents, and 73 cents per hundredweight, respectively. A proponent witness contended that the increased cost differences have created competitive pressures over the short run and if not minimized will have damaging long-run effects on the New England dairy industry.

A Connecticut handler organization representative expressed particular concern over the alinement of class I milk costs between Order 2 distributing plants in Albany, N.Y., and Order 1 distributing plants in southwestern New England. The witness stated that Albany is 83 miles from Springfield, 135 miles from Bridgeport, Conn., 164 miles from Providence, and 171 miles from Boston. Using a transportation differential rate of 1.5 cents per 10 miles, he calculated that the proper alinement between Albany and the Order 1 "nearby plant" zone would require reducing the Order 1 price from 13.5 to 27 cents per hundredweight of milk. He contended that the disparity between his calculated alinement and

V 43/191 OCT 2 78 UMI

the present alinement of class I costs makes it very apparent that eventually Order 2 handlers will increase their route distribution in the New England market.

A spokesman for several producer associations was in full agreement with this contention. He further contended that the present alinement of class I prices between Order 1 and Order 2 would cause a substantial loss of class I sales by Order 1 handlers and create disorderly marketing. The witness stated that although it is never an easy decision to lower milk prices, it is the belief of the cooperatives he represents that there must be a decrease in the Order 1 class I price to correct the price disparity between the two orders.

Witnesses opposing any price reduction presented data that demonstrated that there had not been a substantial increase in class I sales by Order 2 bottlers in the New England marketing area since the New York-New Jersey order was amended. On the other hand, a proponent witness noted that there is not complete reciprocity of health inspections between New York, Massachusetts, and Connecticut. He contended that this lack of reciprocity is one of the main reasons that the lower class I costs experienced by New York handlers has not resulted in the immediate influx of Order 2 packaged milk into the Order 1 market. He pointed out, however, that a number of bills that might abolish this lack of reciprocity had been introduced in the Massachusetts House of Representatives. He contended that if the health inspection laws are changed, Order 2 handlers would acquire a lot of fluid milk accounts in the New England marketing area, thereby forcing several New England plants to close because of a loss of sales.

Presently, there is an Order 1 handler in Danbury, Conn., that has 40 percent of his route disposition in the Order 2 marketing area. At the hearing, this handler contended that the recent changes in Order 2 gave his New York competitors a cost advantage of up to 35 cents per 100 pounds of class I milk. He contended that the interstate highway system makes it economically feasible for numerous New York handlers to penetrate the western Massachusetts and western Connecticut class I markets. Consequently, he argued, the alinement problem not only threatens his New York sales but it could eventually undermine the entire southwestern New England class I market. He stated that unless the New England class I differential is reduced he will be forced to adjust his route disposition to become regulated by Order 2.

Opponent witnesses also presented data demonstrating that the route disposition of New England bottlers in the Order 2 market had not decreased since the recent Order 2 amendments. However, a Connecticut Order 1 bottler attributed this to the long-term nature of some fluid milk supply contracts. He contended that since school and institutional bid contracts are binding for an entire season, the misalinement of class I costs between the two orders would not immediately decrease the class I sales of Order 1 handlers into the Order 2 marketing area.

Proponent witnesses were also concerned about the potential movement of bulk milk from Order 2 plants to Order 1 plants. The proponents contended that the current price difference between Order 1 and Order 2 exceeds the cost of transporting bulk milk from an Order 2 plant to a New England plant. Under these circumstances, they claimed, milk might be transshipped from an Order 2 plant to a high class I use plant in New England at less than the Order 1 class I price. Proponents argued that these shipments would disrupt the competitive relationship of handlers in Order 1 as well as result in the loss of class I sales to producers on the New England market.

A cooperative association witness introduced into the record numerous statistics portraying the recent history of milk prices and production in the Northeast markets. During August, September, and October of 1977, the Order 1 blended price at the 21st zone was 31, 33, and 35 cents higher, respectively, than the Order 2 uniform price at the 201-210 mile zone. The first 2 months that the amendments to Order 2 were in effect, November and December of 1977, the differences increased to 53 and 55 cents per hundredweight, respectively. Milk produced in New York and New England during the last quarter of 1977 exceeded production in the same quarter of 1976 by 4 and 5 percent, respectively. The witness believed that a small drop in the Order 1 class I differential would not, at this time, jeopardize the ability of dairymen to adequately supply the class I needs of the New England market. He contended, however, that it is critical that the proper price alinement be achieved to prevent a disorderly flow of milk.

Another cooperative association witness contended that if the class I price under Order 1 is not reduced there will be significant shifts in route dispositions that will cause drastic reductions in the New England blended price. He noted that a 1-percent drop in the Order 1 class I utilization would result in a blended price decrease of approximately 2.5 cents. He further stated that his producer association is willing to sustain a small reduction in blended prices, due to a decreased class I price, to prevent the loss of class I sales which would translate into a much larger reduction later.

Although several proprietary handlers and numerous cooperative associations agreed that it was imperative that the New England class I price be reduced, they did not concur on the magnitude of this reduction. One witness testifying for the Connecticut trade association supported the alinement of class I prices which existed between Order 1 and Order 2 distributing plants prior to November 1, 1977. To reinstate that alinement, the association proposed that the Order 1 zone 21 fluid differential be lowered 30 cents, to $2.28. Numerous cooperative associations contended instead, that a reduction of this magnitude was not necessary and advocated reductions ranging from 12 to 20 cents per hundredweight. Various witnesses supported a class I differential ranging for the proposed western zone from $2.68 to $2.854 and for the proposed eastern zone from $2.68 to $2.98.

Twenty-two individual dairy farm operators testified during the course of the hearing. The dairymen indicated strong opposition to any proposal that would result in a decrease in the class I differential. They claimed that dairy farmers cannot afford a reduction in their returns for milk.

Two cooperative associations also testified in opposition to a decrease in the class I differential. The witnesses claimed that production costs in the Order 1 milkshed have been increasing and returns to producers have not been keeping up. The cooperatives contended that a decrease in the New England class I differential would be contradictory to the higher production costs.

Two New York-based cooperatives with members shipping to New England handlers opposed a decrease in the Boston class I differential. One cooperative association witness stated that the weighted average cost of class I milk to an Order 2 New York City handler is $2.88 over the basic formula price. The distance from Washington, D.C., to New York is 235 miles and from New York to Boston is 208 miles. The witness contended that since the price spread is 10 cents between Washington and New York ($2.78 at Washington versus $2.88 at New York) and 10 cents between New York and Boston ($2.88 at New York versus $2.98 at Boston), it would be logical and consistent to continue the Boston price at $2.98. However, because of the close proximity of the proposed western zone to New York City, he supported a 12-cent decrease in the western zone's class I differential.

The record of this proceeding does not indicate any significant changes in

handlers' sales patterns or changes in the volume of either bulk or packaged milk movements between the Order 1 and Order 2 markets since the amendment of Order 2 on November 1, 1977. However, it may well be that an insufficient period of time had elapsed between the date of the hearing and the Order 2 amendments for any such changes to occur. Also, it may well be that the absence of health reciprocity among the various States has tended to restrict interorder milk movements or sales pattern changes that are anticipated by those supporting a decrease in the class I price differential at this time. Except for the competitive situation faced by the Danbury, Conn., handler who has route disposition in the Order 2 market, the record does not demonstrate the existance of current disorderly marketing conditions resulting from the current relationship of class I costs between the two Federal orders, as contended by opponents of any class I price reduction in New England.

Although there was no showing on the record of any major intermarket disorderly marketing conditions attributable to class I pricing, the potential for such conditions clearly exists. It would not be unreasonable to expect some eventual change in the reciprocity arrangements among States in the Northeast regarding milk. Should milk begin moving freely into New England, there could be some difficult competitive problems facing both Order 1 fluid milk distributors and producers. Order 1 handlers would be threatened with a loss of their business due to an inability to compete in price with Order 2 distributors. At the same time, the established outlets of New England order producers would be jeopardized. Consequently, it is reasonable at this time to establish a pricing structure for New England that ties in properly with the Order 2 market. This will provide both Order 1 and Order 2 handlers with the opportunity to plan their future operations within the pricing framework that presumably would have to be established at some later time in response to changed distribution patterns.

It must be noted at this point that the revised location adjustments and rezoning of the "nearby plant" zone, which are necessary to reflect increased hauling costs and current procurement patterns, would aid materially in alining prices in western New England with the Order 2 market. However, in increasing the location adjustment rate, it is necessary to determine whether the present class I price differential at the 21st zone should be continued, which would necessitate a higher price at zone 1, or whether the Boston price should be continued, which would require a lower price at the 21st zone, or whether some combination of adjustments is necessary. In deciding this issue, recognition should be given to intermarket price alinement problems.

Two basic price alignment concerns were presented by Order 1 handlers. One is the disparity in fluid milk costs between Order 2 handlers in the Albany, N.Y., area and Order 1 handlers supplying the New England market. The other concern is the disparity in class I milk costs between handlers under Order 2 who are in the New York City metropolitan area and Order 1 handlers in the southwestern part of the New England area.

The record demonstrates that the Order 1 class I differential is not in harmony wih the current market situation. The value that the order attaches to milk affects the degree to which Order 1 handlers are able to compete effectively with handlers regulated under other orders. Thus, revision of the Order 1 class I differential is essential if orderly and stable marketing conditions for handlers and producers in the New England market are to be assured.

The record shows that there is a significant amount of intermarket class I milk sales competition between an Order 1 handler whose plant is in Danbury, Conn., and Order 2 handlers located in the New York City metropolitan area. The area of overlapping sales competition is in the Order 2 marketing area. However, if the Order 1 handler at Danbury were to adjust his sales volume in the respective markets to become pooled in the Order 2 market, he undoubtedly would continue to maintain a significant amount of his class I milk sales in the Order 1 market in competition with Order 1 handlers. In these circumstances orderly marketing would be enhanced if the class I price level established for a plant in Danbury, Conn., was the same under both orders. Thus, if this handler shifts regulation between orders it would have no impact on the class I price relationship faced by such a handler and his competitors in either market.

The record indicates that on the basis of the costs of procuring milk from supply plants and directly from farms and the relative proportions from each source, the weighted average cost of class I milk to an Order 2 New York City handler is $2.88 over the basic formula price. The Order 1 distributing plant at Danbury, Conn., is located in the Order 2 41-50 mile zone. Plants in the Order 2 41-50 mile zone have a class I location differential that is 7.2 cents lower than the differential applicable at New York City plants. Under the Order 1 zoning adopted herein, Danbury and the rest of western Connecticut would be in zone 7 and Boston would be in zone 1. Also, the adopted class I location adjustment for zone 1 would be 10.8 cents higher than that adopted for zone 7. Therefore, for the two markets to be properly alined under these circumstances, Boston must have a class I differential of $2.92 ($2.88−7.2 cents+10.8 cents=$2.92). Since the adopted zone 1 location adjustment under Order 1 class I would be plus 50 cents, the Order 1 differential at zone 21 should be $2.42 over the basic formula price for the second preceding month.

In responding to the recommended decision, two New York based cooperatives excepted to the 6-cent per hundredweight decrease in the zone 1 class I differential. They contended that it is not proper to reduce the class I differential for zone 1 by tieing the Order 1 class I differential at an isolated point in the marketing area (Danbury, Conn.) to the Order 2 class I differential at that location and then adjusting prices by 1.8 cents per 10 miles from that plant zone to Boston. They hypothesized that if a handler at Danbury, Conn., were to become an Order 2 distributing plant it would have to procure milk in a northwesterly direction to obtain an adequate supply of milk. They claimed that handlers would be involved in obtaining milk from similar production areas and with similar hauling distances as his Order 2 competition. It was also their contention that the fact that this plant is located in the Order 2 41-50 mile zone is insignificant because it is no closer to the milk supply than Order 2 plants situated at Yonkers, N.Y., or Wallington and Union, N.J., and would therefore have the same raw milk costs as its Order 2 competition located in these areas.

The proposed Order 1 intramarket price structure was set out in the first two issues of this decision. Once the appropriate intramarket alinement was determined, the class I price for the entire New England market could be established by finding the proper class I price level at any location within the market. To determine the proper class I price level for the market, it is necessary to consider intermarket alinement. Intermarket alinement is most crucial to the maintenance of orderly marketing in the areas of greatest intermarket competition. The areas of greatest intermarket competition between the New England and New York-New Jersey markets are western Connecticut and southeastern New York.

If a handler at Danbury, Conn., became regulated under Order 2 and procured supplies from northwest of his plant, he would not have to haul these supplies as far as New York City plants procuring from the same areas.

V 43 / 191

New York City is 189 miles from Oneonta, N.Y., and 229 miles from Utica N.Y. Danbury is only 151 miles and 191 miles from these locations, respectively. A large proportion of the Order 2 milk supply is produced in the vicinity of Oneonta and Utica, which is in central New York State. Since a Danbury plant would be 35 to 40 miles closer to these supplies than a New York City plant, hauling costs to Danbury would be 6.3 to 7.2 cents less than hauling costs to New York City (35 miles×0.18 cent per mile=6.3 cents; 40 miles×0.18 cent per mile=7.2 cents). It is therefore proper intermarket alinement for the raw milk class I cost at Danbury to be 6.8 cents per hundredweight less than at New York City. It is true that plants near Yonkers, N.Y., and Wallington, N.J., are not as far from the supply areas as plants in New York City. However, for the same reason, their cost of class I milk would be something less than the $2.88 per hundredweight over the basic formula price that New York City handlers pay. Therefore, a class I differential of $2.812 ($2.88−6.8 cents=$2.812) for western Connecticut will effectuate intermarket alinement between Order 1 plants in this area and Order 2 plants in southeastern New York.

Moreover, a class I differential of $2.92 at Boston and Providence is in alinement with a New York City differential of $2.88 in the procurement of milk from the heavy production areas of central New York State. For example, the highway mileages from Utica, N.Y., to Boston, Providence, and New York City are 251, 248, and 229, respectively. Thus, the central New York production area is only some 20 miles farther from Order 1 zone 1 plants than New York City plants. The 4-cent higher price at Order 1 zone 1 plants should closely reflect the amount of the additional cost in hauling milk from central New York to such plants compared to plants in New York City.

In their exceptions, several proprietary handlers and a cooperative association favored a 20-cent reduction in the Order 1 zone 21 class I differential, contending that this figure, rather than the proposed 16-cent decrease, would bring about better alinement with Order 2 class I prices. On the other hand, in another exception certain Vermont dairy farmers reiterated their opposition to any decrease in the Order 1 class I differential. These exceptions, however, did not raise any points that had not already been considered in determining the appropriate class I differential. Based on these exceptions, no departure from the recommended decision should be made with respect to the class I differential to be included in the revised order.

Numerous witnesses were concerned about the class I cost alinement between the Albany, N.Y., area and southwestern New England. The average differential cost to any Order 2 Albany handler in the 131-140 mile zone for class I bulk tank milk obtained directly from farms in that zone is $2.376 per hundredweight. This consists of the class I differential of $2.376 that is applicable at the township pricing points in that zone, a 30-cent farm-to-plant hauling cost, a pool transportation credit to the handler of 15 cents, and the maximum hauling deduction negotiated with the producer of 15 cents. By comparison, the differential cost for class I milk obtained directly from farms by an Order 1 plant in Springfield or Hartford would be $2.794 and $2.812, respectively, under the order changes adopted herein. To compete in either of these cities, an Albany handler would incur the additional costs of moving packaged milk from Albany to the respective areas. Albany is 82 miles from Springfield and 102 miles from Hartford. A Purdue University study of 1976 packaged milk transportation costs that was placed in the record indicates that the average fixed hauling cost was 10.03 cents per hundredweight and the average variable cost was 0.319 cent per mile. The application of this formula to the distances between Albany and Springfield and Albany and Hartford yields a transportation cost of 36.2 cents (0.319 cent×82+10.03 cents) and 42.6 cents (0.319 cent×102+10.03 cents), respectively. When added to the average differential cost at Albany of $2.376, these transportation rates yield a class I cost at Springfield of $2.738 and at Hartford of $2.802.

One handler stated in his exceptions that the 10.03-cents fixed transportation cost for moving packaged milk should not be used in the above computation. He contended that any movements of packaged milk from Albany to the Springfield/Hartford area would most likely be directly to retail outlets, as opposed to being moved to a plant or distribution depot from where the cost of serving customers would be the same as for an Order 1 plant. Accordingly, the handler contends that the Order 1 class I differential should be reduced an additional 10 cents.

The above transportation rate is based on plant-to-plant and plant-to-distribution depot hauling costs with an average volume per shipment of 30,074 pounds and an average utilization of truck capacity of 88 percent. It is questionable whether such high average volume per shipment and such high utilization of truck capacity could be sustained on a direct-delivery basis to retail customers. If not, it is likely that costs per hundredweight could be higher than in the Purdue study.

It should be pointed out that the above cost comparison is based on a farm-to-plant hauling cost of 30 cents per hundredweight for the Albany based handler. Should such farm-to-plant hauling exceed 30 cents, the Order 2 effective cost of milk should be increased accordingly. This could well be the case since in their post-hearing briefs, to arrive at an effective cost of class I milk to an Albany based handler, two New York based cooperatives estimated farm-to-plant hauling costs of 40 cents. Moreover, competition from the Order 1 blended price to producers could force bottlers in the Albany area to pay New York producers more than the Order 2 uniform price. As previously stated, the Order 1 blended price exceeds the Order 2 uniform price by some 50 cents per hundredweight.

One witness claimed that Order 2 Albany area handlers were not paying over-order prices for milk. However, it is noted that their supplies were not approved for class I use in Massachusetts or Connecticut. Springfield and Hartford handlers cannot bottle milk that has not been approved by their respective State's health authority. Consequently, they have not been competing with Albany handlers for this production. Also, Albany handlers cannot supply the fluid milk markets in Massachusetts or Connecticut unless all their milk supply is approved by the respective health authority. However, if the New York producers gain this health approval, they will have a substantial price incentive to obtain a pooling outlet under Order 1. Consequently, it can be expected in this case that Order 2 handlers located in the Order 1 supply area would have to pay significantly more than the Order 2 minimum uniform price to these producers or incur additional transportation costs in procuring an alternative supply from beyond the normal Order 1 supply area in New York State.

The resolution of the complex pricing issues involved in this proceeding cannot be contingent upon the maintenance of the current level of returns to Order 1 producers. Any action to make Order 1 milk more competitive with Order 2 milk necessarily requires some reduction in returns. The proponent cooperatives fully realize that their proposals would have this effect. Although some producers testified at the hearing that the maintenance of the present level of returns should be an overriding consideration, such testimony was presented on behalf of a relatively small segment of the market's producers.

OCT 2 1978

An additional point that an opponent raised at the hearing was that the class I price should not be reduced at a time when the cost of hauling alternative milk supplies from the Minnesota-Wisconsin area is increasing. This position was supported by two New York based cooperatives and a group of Vermont dairy farmers in their exceptions to the recommended decision. They also contended that since Danbury, Conn., is farther than New York City from Eau Claire, Wis., milk supplies should not cost less in Danbury than in New York City. The producer groups did not demonstrate, however, that the class I price under the proposed order changes would not be reasonably coordinated with prices in the Midwest. Their concern in this regard is not persuasive, since there are fully adequate supplies of milk produced in the Order 1 and Order 2 milksheds for these markets.

In its exception, one cooperative association claimed that the recommended decision was based on speculation about what would occur if the health regulations imposed on out-of-area supplies by New England State authorities were relaxed. They also contended that order amendments should not be based on speculative potential for disorderly marketing conditions.

The Department agrees with the exceptor that order amendements should not be based on speculation. However, the herein proposed amendments to Order 1 are based on existing economic factors rather than speculation.

At the hearing and in their exception to the recommended decision, an Order 2 cooperative federation contended that the Order 1 and Order 2 marketing areas and their overlapping milk supply areas have become so closely entwined that no change in the Order 1 class I price level should be made on the basis of a hearing where only the Order 1 class I price can be considered. They also contended that adequate consideration of possible needed changes in the Order 1 class I price can only be made by reviewing the intermarket relationship between Order 1 and Order 2 in the same hearing.

The adoption of changes for Order 1 need not be contingent upon the holding of a joint hearing for Order 2 as well. In any amendment proceeding for a market, the effect of proposed order changes on neighboring markets must be taken into consideration by the Secretary to minimize any disruptive impact on such markets. However, this does not require that there be joint hearings, nor can it be concluded from the hearing record or exceptions that a joint Order 1-Order 2 hearing should be held before amending Order 1.

The amendments provided herein would result in an average decrease of about 7 cents per hundredweight in returns to Order 1 producers. This is significantly less than 1 percent of the prevailing pay price to producers. The slightly lower returns should not jeopardize the maintenance of adequate supplies of pure and wholesome milk for the New England market.

4. *Conforming changes.* In the assignment provisions of the order, the terms "zone nearest to Boston" and "most distant zone from Boston" are used to specify that certain skim milk and butterfat assignments to classes should be made in sequence according to the location of the plants from which the milk was received. Since the amendments adopted herein provide for the use of Boston and Providence as basing points, the above-cited terms are changed to "lowest numbered zone" and "highest numbered zone" to conform with the intent of the present provisions of the order.

The assignment provisions of the order provide that at pool distributing plants that have received bulk fluid milk from pool plants located outside the nearby plant zone, prior assignment of a certain amount of receipts from producers and cooperative association bulk tank handlers be made to class II. Such assignment, commonly referred to as the "set-aside", reflects the fact that there is a certain amount of unavoidable class II use at pool distributing plants. This "set-aside" is for the purpose of assigning milk receipts from other pool plants to class I so that a transportation allowance would be effected on transfers of milk from pool plants to pool distributing plans located in higher priced zones. (Such assignment is to be made in sequence beginning with the lowest numbered zone.)

There are three pool manufacturing plants located in the present nearby plant zone. Skim milk is frequently transferred from these plants to pool distributing plants for use in fluid milk product disposition. To carry out the intent of the multiple zone price structure adopted herein in place of the nearby plant zone, transfers of bulk fluid milk products for class I use should be encouraged between plants in the territory that has been in the nearby plant zone. Otherwise, milk from more distant sources would need to be moved for class I use at pool distributing plants. To aid in encouraging class I use of any available reserve milk at plants in the present nearby plant zone, the present term "pool plants located outside the nearby plant zone" as contained in the assignment provisions should be changed to "other pool plants".

The "Plant location adjustments" section of the order now provides for the use of "Mileage Guide No. 10, and supplements to and revisions thereof, issued by Household Goods Carriers' Bureau, Agent, Arlington, Virginia". Mileage Guide No. 11 has been issued, and a proposal was made that the new Mileage Guide No. 11 be used in place of Mileage Guide No. 10. The adopted order language so provides, since the new Mileage Guide represents a revision of Mileage Guide No. 10.

A proprietary handler proposed that a conforming change be made in the "Payments to producers" section of the order. This section states that a handler may elect to pay producers at the price applicable at the zone location of the plant from which his milk is diverted if it is diverted to a plant in a lower-priced zone. Under this option the handler can quote his producers a single pay price that is at least the minimum order price. Proponent handler would like to be able to quote his producers a single price when he diverts their milk to plants in either lower or higher price zones. Such handler operates two distributing plants under the order that have been in the same pricing zone but which would be placed in separate price zones under the provisions adopted herein. This handler diverts his producer milk supplies between his plants but prefers to be able to quote such producers a single plant price and a single hauling rate so that all his producers in a given procurement area receive the same net price irrespective of the plant to which the milk was actually delivered. Moreover, the handler states that such payrolling practice facilitates more simplified computer payrolling operations in his accounting department.

Under the proposals to provide several zones within the present "nearby plant" zone, this handler would desire to pay producers on the basis of one price and one hauling rate when their milk is diverted to either a higher or lower price zone. This practice can be accommodated under the order as long as the resulting net payment to each producer is not less than that otherwise required on the basis of the milk being priced at the location of the plant where physically received. For example, a handler may procure milk from a producer on the basis of the blended price and hauling rate to his plant in zone 7 but divert milk to a plant in a higher-priced zone and pay the additional hauling cost on the milk diverted to the higher-priced zone. Such producer would receive the same net price as if he were to incur a higher hauling charge on the milk diverted (in the amount of the difference in the plant location adjustments for the two plants) and be paid the blended price at the plant to which the milk was diverted.

V 43/191
OCT 2 78
UMI

It is concluded that a handler should be accommodated in procuring milk from a producer on the basis of a single pay price and a single hauling rate deduction, as long as the net payment to the producer is not less than that otherwise required on the basis of pricing at the plant where the milk is physically received.

Ruling on Proposed Findings and Conclusions

Briefs and proposed findings and conclusions were filed on behalf of certain interested parties. These briefs, proposed findings and conclusions and the evidence in the record were considered in making the findings and conclusions set forth above. To the extent that the suggested findings and conclusions filed by interested parties are inconsistent with the findings and conclusions set forth herein, the requests to make such findings or reach such conclusions are denied for the reasons previously stated in this decision.

General Findings

The findings and determinations hereinafter set forth are supplementary and in addition to the findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendments thereto; and all of said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein:

(a) The tentative marketing agreement and the order, as hereby proposed to be amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the Act;

(b) The parity prices of milk as determined pursuant to section 2 of the Act are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the marketing area, and the minimum prices specified in the tentative marketing agreement and the order, as hereby proposed to be amended, are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest; and

(c) The tentative marketing agreement and the order, as hereby proposed to be amended, will regulate the handling of milk in the same manner as, and will be applicable only to persons in the respective classes of industrial and commercial activity specified in, a marketing agreement upon which a hearing has been held.

Rulings on Exceptions

In arriving at the findings and conclusions, and the regulatory provisions of this decision, each of the exceptions received was carefully and fully considered in conjunction with the record evidence. To the extent that the findings and conclusions, and the regulatory provisions of this decision are at variance with any of the exceptions, such exceptions are hereby overruled for the reasons previously stated in this decision.

Marketing Agreement and Order

Annexed hereto and made a part hereof are two documents, a Marketing Agreement regulating the handling of milk, and an order amending the order regulating the handling of milk in the New England marketing are which have been decided upon as the detailed and appropriate means of effectuating the foregoing conclusions.

It is hereby ordered, That this entire decision, except the attached marketing agreement, be published in the Federal Register. The regulatory provisions of the marketing agreement are identical with those contained in the order as hereby proposed to be amended by the attached order which is published with this decision.

Determination of Producer Approval and Representative Period

June 1978 is hereby determined to be the representative period for the purpose of ascertaining whether the issuance of the order, as amended and as hereby proposed to be amended, regulating the handling of milk in the New England marketing area is approved or favored by producers, as defined under the terms of the order (as amended and as hereby proposed to be amended, who during such representative period were engaged in the production of milk for sale within the aforesaid marketing area. (An approved final impact analysis is available from the Agricultural Marketing Service.

Signed at Washington, D.C., on September 27, 1978.

Jerry C. Hill,
Deputy Assistant Secretary.

Order[1] Amending the Order, Regulating the Handling of Milk in the New England Marketing Area

Findings and Determinations

The findings and determinations hereinafter set forth are supplementary and in addition to the findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendmens thereto; and all of said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

(a) *Findings.* A public hearing was held upon certain proposed amendments to the tentative marketing agreement and to the order regulating the handling of milk in the New England marketing area.

The hearing was held prusuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure (7 CFR Part 900).

Upon the basis of the evidence introduced at such hearing and the record thereof, it is found that:

(1) The said order as hereby amended, and all of terms and conditions thereof, will tend to effectuate the declared policy of the Act;

(2) The parity prices of milk, as determined pursuant to section 2 of the Act, are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the said marketing area, and the minimum prices specified in the order as hereby amended, are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest; and

(3) The said order as hereby amended regulates the handling of milk in the same manner as, and is applicable only to persons in the respective classes of industrial or commercial activity specified in, a marketing agreement upon which a hearing has been held.

Order relative to handling. It is therefore ordered that on and after the effective date hereof the handling of milk in the New England marketing area shall be in conformity to and in compliance with the terms and conditions of the order, as amended, and as hereby amended, as follows:

The provisions of the proposed marketing agreement and order amending the order contained in the recommended decision issued by the Acting Administrator, on July 14, 1978 and published in the Federal Register on July 20, 1978 (43 FR 31146), shall be and are the terms and provisions of this order, amending the order, and are set forth in full herein:

1. Section 1001.43(c) is revised to read as follows:

[1] This order shall not become effective unless and until the requirements of § 900.14 of the rules of practice and procedure governing proceedings to formulate marketing agreements and marketing orders have been met.

§ 1001.43 Assignment of receipts to classes in general.

* * * * *

(c) If receipts from more than one plant are to be assigned under a paragraph in § 100.45 or § 100.47, the receipts shall be assigned in sequence according to the zone locations of the plants, beginning with the plant in the lowest numbered zone for assignments to class I milk and beginning with the plant in the highest numbered zone for assignments to class II milk.

§ 1001.46 [Amended]

2. In § 1001.46(c), the words "zone nearest to Boston" are changed to read "lowest numbered zone".

§ 1001.47 [Amended]

3. In § 100.47(a), the words "pool plants located outside the nearby plant zone" are changed to read "other pool plants".

§ 1001.50 [Amended]

4. In § 100.50(a), the number "$2.56" is changed to "$2.42".

5. Section 100.52 is revised to read as follows:

§ 1001.52 Plant location adjustments.

The class I and blended prices computed under §§ 100.50 and 100.61 shall be subject to plant location adjustments based upon the zone locations of plants. The zone location of any plant and the location adjustments applicable to each zone location shall be determined as specified in this section.

(a) Each plant that is located in the State of Rhode Island, the Massachusetts counties of Barnstable, Bristol, Dukes, Norfolk, Plymouth or Suffolk, or between Boston and Massachusetts highway route number 128 shall be in zone 1.

(b) Each plant that is located in the Connecticut counties of Fairfield, Hartford, Litchfield, Middlesex (only the townships of Cromwell, Durham, Haddam, Middlefield, Middletown, or Portland), New Haven, or Tolland (only the townships of Ellington or Somers) shall be in zone 7.

(c) Each plant that is located in the Massachusetts counties of Hampden (except the townships of Brimfield, Holland, Monson, Palmer, or Wales) or Hampshire (except the township of Ware) shall be in zone 8.

(d) The zone location of each plant in the States of Connecticut or Massachusetts (except Berkshire County) that is outside the areas specified in paragraphs (a), (b), or (c) of this section shall be based upon its highway mileage distance to the nearer of Boston, Mass., or Providence, R. I. The distance for each plant shall be the mileage between the applicable basing point and the named point nearest to the plant, measured to the greatest extent possible over roads designated as principal roads, on the road maps specified in paragraph (e) of this section.

(e) The zone location of each plant that is outside the areas specified in paragraphs (a) through (d) of this section shall be based upon its highway mileage distance to Boston, Mass., as determined by use of Mileage Guide No. 11, and supplements to and revisions thereof, issued by Household Goods Carriers' Bureau, Agent, Arlington, Va. The mileages used shall be those shown between designated key points in the mileage charts, and between named points on the appropriate State road maps, as published in the mileage guide. In any instance in which the map does not clearly show the mileage between points on a road, the mileage used shall be the mileage as determined by the highway authority for the State in which the road is located. The distance for each plant shall be the mileage between Boston and the named point nearest to the plant, as shown in the mileage charts. If that named point is not listed in the mileage charts, the distance for the plant shall be the lowest mileage distance between Boston and that named point, computed as follows:

(1) Determine from the charts the mileage between Boston and each of the three key points nearest to the named point which are nearer to Boston than the named point; and

(2) For each of these key points, add to the result in paragraph (e)(1) of this section the mileage between the key point and the named point, measured to the greatest extent possible over roads designated as principal roads.

(f) Notwithstanding the provisions of paragraph (e) of this section, for any named point located in Maine, New Hampshire, Vermont, New York, or Berkshire County, Mass., determine the highway mileage distance between Boston and the named point by use of the appropriate State maps contained in Mileage Guide No. 7, issued by Household Goods Carriers' Bureau, Agent, Arlington, Va. Such distance shall be the lowest highway mileage between Boston and the named point on the map, over roads designated thereon as paved, all-weather roads. In the event that the named point is not located on a through, paved, all-weather road, such other roads shall be used to reach a through, paved, all-weather road as will result in the lowest highway mileage to Boston, except that such other roads shall not be used for a distance of more than 15 miles if it is otherwise possible to connect with a through, paved, all-weather road. In any instance in which the map does not clearly show the mileage between points on a road, the mileage used shall be the mileage as determined by the highway authority for the state in which the road is located. The mileage so determined, or the mileage determined under paragraph (e) of this section, whichever is less, shall be considered to be the lowest highway mileage distance between Boston and the named point.

(g) The location adjustments for each plant shall be the amounts shown in the following table for the zone in which the plant is located:

Location Adjustments for Determination of Zone Price

Distance to basing point (miles)	Plant location zone	Price adjustments[1]
1 to 10	1	+50.0
11 to 20	2	+48.2
21 to 30	3	+46.4
31 to 40	4	+44.6
41 to 50	5	+42.8
51 to 60	6	+41.0
61 to 70	7	+39.2
71 to 80	8	+37.4
81 to 90	9	+35.6
91 to 100	10	+33.8
101 to 110	11	+32.0
111 to 120	12	+30.2
121 to 130	13	+28.4
131 to 140	14	+26.6
141 to 150	15	+10.8
151 to 160	18	+9.0
161 to 170	17	+7.2
171 to 180	18	+5.4
181 to 190	19	+3.6

Title 10—Energy

CHAPTER II—DEPARTMENT OF ENERGY

PART 465—ENERGY EXTENSION SERVICE

Establishment of the Comprehensive Energy Extension Service Program

AGENCY: Department of Energy.

ACTION: Final rule.

SUMMARY: With this notice of final rulemaking, the Department of Energy establishes the comprehensive Energy Extension Service program. A major part of this program includes providing financial assistance for Energy Extension Service programs to all States, including the District of Columbia and six United States Territories. The regulation contains requirements for the preparation, submission and review of State plans and annual applications. If a State plan and annual application meet the requirements of this part, the State will receive available grant funds allocated on a formula basis. This notice of final rulemaking adds a new part 465 to title 10, chapter II, Code of Federal Regulations.

DATES: Effective Date: This regulation shall go into effect November 1, 1978.

FOR FURTHER INFORMATION CONTACT:

Kathleen Reavis, Energy Extension Service, Department of Energy, Mail Stop 8G-031, 1000 Independence Avenue SW., Washington, D.C. 20585, 202-252-6242.

4. § 465.1—Purpose and scope.
5. § 465.2—Definitions.
6. § 465.3—Comprehensive EES program.
7. § 465.5—National advisory board.
8. § 465.6—Financial assistance.
9. § 465.7—Annual State applications.
10. § 465.8—Submission and contents of State plans.
11. § 465.9—Approval of annual State applications and State plans.
12. § 465.10—Development and implementation of a State plan by the director.
13. § 465.11—Administrative review.
14. § 465.12—Prohibited expenditures.
15. § 465.13—Recordkeeping.
16. § 465.14—Reports.
17. § 465.15—Administration of financial assistance.
18. Final regulation.

1. Introduction

With the issuance of this final rule, the Department of Energy (DOE) amends subchapter D, chapter II of title 10, Code of Federal Regulations, to establish part 465. This final rule establishes procedures for the implementation of the comprehensive Energy Extension Service ("EES") program, as required by the National Energy Extension Service Act of 1977 ("Act") title V of Pub. L. 95-39, 91 Stat. 191 et seq., 42 U.S.C. 7001 et seq.

The notice of proposed rulemaking was published on June 5, 1978 (43 FR 108, June 5, 1978). Comments on the proposed regulation were invited from interested persons by August 4, 1978, and a national public hearing was held on July 19, 1978. In response to the notice, 8 persons presented testimony at the public hearing, and 44 written comments were received by DOE. This final regulation contains revisions to the proposed regulation which reflect DOE's consideration of the comments as well as other information available to DOE.

Most comments addressed specific sections of the proposed rulemaking, and are discussed below. However, a number of comments were nonspecific. Thirteen comments indicated general approval of the proposed regulation, while two suggested that the comprehensive EES program should not be implemented at this time. The Act requires DOE to conduct this program at this time.

Some comments raised general issues not related to specific sections of this rulemaking and are discussed below. Several comments were outside the scope of this regulation, and are not considered in today's rulemaking.

2. Role of the Regional Representatives

As DOE indicated in the preamble to the proposed regulation, this final rulemaking delegates substantial functions to the ten DOE Regional Representatives. To summarize, the Regional Representatives will have primary responsibility for administering the comprehensive EES program as it affects the States. Annual State applications for financial assistance will be submitted to the appropriate Regional Representative, who will have review and approval authority. The States will submit their quarterly reports to the Regional Representatives, who shall be responsible for tracking the progress of the State programs and providing the DOE contact point for State technical assistance requests. The Regional Representative will also conduct the administrative review procedures which are provided.

The EES Director at the DOE headquarters office has overall responsibility for the development and implementation of the comprehensive EES program. For the special circumstances indicated in § 465.10, the Director will be responsible for preparing a State plan.

DOE received five comments which supported a decentralization of DOE functions, and two comments which opposed it. One comment pointed out the importance of clearly defining the responsibilities of the Regional Representative, with the Regional Representative having full authority to make necessary decisions. DOE agrees with this comment, and has amended the proposed regulation to achieve this goal.

3. Evaluation of the Comprehensive EES Program

DOE received nine comments regarding the evaluation it will undertake of the impact of EES on its target audiences. Four comments urged DOE not to emphasize evaluation activities at the expense of limiting the programmatic achievements of EES. On the contrary, one comment urged DOE to reduce program funds if necessary to permit more thorough evaluation. DOE intends to conduct a systematic yet not overly time-consuming or expensive evaluation activity. DOE intends to keep the States informed of its evaluation activities, including informing the States in advance of target audience surveys and fully agrees with the comment made to this effect.

DOE agrees with one comment, which was made at the public hearing, that the evaluation results should be used to make mid-course corrections in the comprehensive EES program.

In section III of the preamble to the proposed regulation, DOE explained that a State would select two State programs in the State plan for the national evaluation to be conducted by DOE. Two comments advocated that when the State plan provides for an energy audit program, such program should be required to be selected for DOE evaluation. Although systematic evaluation could contribute substantially toward increasing the state-of-the-art of this type of service, DOE will accord the States broader latitude to select other State programs for evaluation. This latitude is appropriate since (1) it is expected tht a substantial number of States will of their own volition select energy audit programs to be evaluated, and (2) there is a need for systematic evaluation results of a number of different service types, including energy hotlines and workshops.

One comment urged DOE to leave the primary responsibility for the national evaluation to the States, with DOE providing procedural guidelines. DOE considered this option seriously

in planning for the nationwide program evaluation, but decided not to adopt it for reasons of cost-effectiveness and the need to insure uniform procedures and analysis methods. As provided in § 465.8(c)(6), States may at their discretion undertake independent evaluation activities to supplement those of DOE's national evaluation. In response to a comment's query on this point, the States may use EES grant funds to pay for an independent evaluation. DOE requires, however, that any funds used to support an independent State evaluation not exceed 10 percent of the State's allocation of EES financial assistance. A new § 465.12(c) has been added to require this 10 percent limitation.

4. § 465.1 Purpose and Scope

DOE received two comments on proposed § 465.1. One was concerned with duplication of EES activities with other energy outreach activities of the States. DOE has included a number of provisions throughout the regulation directed to encouraging supplementary rather than duplicative EES services, and believes that this intent was adequately described in proposed § 465.1(b), which is retained. The second comment requested that the term "small energy users" be included specifically in § 465.1(a). DOE has concluded that the proposed language is sufficient to make clear that the comprehensive EES program is directed primarily toward small energy users.

5. § 465.2 Definitions

Nine comments were received concerning the proposed definition of small business. Eight of the comments stated that the definition provided in the proposed regulation was too broad, and not consistent with the comprehensive EES program's emphasis on small energy users. DOE has consulted with the National EES Advisory Board on this point at a public meeting held on September 7-8, 1978, for which notice was given in the Federal Register. After discussion, the Advisory Board pointed out that reducing the proposed ceiling on gross annual receipts of a small business could rule out small businesses that sell expensive products, such as automobile dealerships. The Advisory Board also indicated that significantly lowering the proposed limitation on the number of employees would exclude independently owned small businesses that are personnel-intensive, such as a hotel. The consensus of the Advisory Board was that the number of employees should be reduced to 400, and the gross annual receipts maintained at the proposed level. DOE agrees and has made this change to the definition.

DOE also agrees with the Advisory Board's counsel that, while the definition should provide maximum State flexibility, the States should concentrate on providing services to those small businesses who are not able to provide these services for themselves.

The ninth comment questioned whether food processing industries and forestry businesses could be included in the definition of small business, although not specifically referenced. In order to provide maximum flexibility to meet local needs, the definition places no restriction on the types of small businesses that can be included as EES target audiences, as long as the size of the business does not exceed the limitations of the definition.

Two comments questioned the definition of small energy users, maintaining that State and local governments, and educational and health facilities should be dropped. The definition is a term of art and has been revised to include only those entities specifically identified by the Act. For this reason, educational and health organizations are no longer included. This definition, however, does not restrict the States' broad discretion to identify appropriate target audiences, including schools and hospitals.

Two comments suggested revisions to the proposed definition of energy conservation. DOE has retained the definition, which is provided in the Act.

DOE has modified the proposed definition of energy audit to simplify the definition and to indicate that the purpose of an energy audit is to identify conservation techniques and technologies.

One comment recommended substitution of the proposed definition of energy audit by the definition provided in the "Energy Audit Procedures" regulation (10 CFR 450.3, which was developed to carry out section 432(d), 42 U.S.C. 6325(e)(2), of the Energy Conservation and Production Act, Pub. L. 94-385, 90 Stat. 1125 et seq.). The comment further recommended requiring the use of class A, B, and C information audits, as provided in subpart B of these procedures. For the purposes of EES, DOE has concluded that the States, if they provide energy audits, should have the flexibility to select the audit procedures that best suit the particular needs of the target audience addressed. States may use the Class A, B, and C audit procedures if they choose. In the implementation of the comprehensive EES program, DOE intends to monitor closely the State's experiences with audits to small energy users, and may adjust the requirements of the comprehensive EES program in this area to reflect the experience gained by DOE.

DOE received three comments related to the proposed definition of grantee. In one case, the comment suggested that DOE provide financial assistance directly to the State-designated program manager, rather than maintaining the requirement that the grantee be the State or a State entity. Two other comments advocated direct, or a passthrough of, grant funds to the State's Cooperative Extension Service.

DOE has revised the proposed definition of grantee to clarify the requirement of the Act that the grant of financial assistance be made to the State. No grant will be made to any entity not part of the State. However, the States are free to arrange with other organizations to implement a State plan, as long as the grantee remains responsible and accountable to DOE.

What constitutes a "barrier to energy conservation" was a concern expressed by one comment regarding the proposed definition. The comment indicated that barriers should not include low fuel prices. DOE has retained the proposed definition because DOE concluded that the definition should include those factors that target audiences identify as standing in the way of their adoption of conservation techniques and technologies. DOE does not intend to limit what target audiences can identify as a barrier. Items so identified in the EES pilot program have included lending practices, regulator restrictions, and a variety of financial and cost considerations.

Since the DOE Regional Representatives will play a major role in the implementation of the comprehensive EES program, DOE has added a definition of Regional Representative. For clarity, technical corrections were made in the proposed definitions of Act, community action agency, conservation techniques and technologies, EES office, Governor, SECP, special State project, State, State program and technical support.

6. § 465.3 Comprehensive EES Program

DOE received five comments regarding the technical assistance to be provided to the States by DOE. One comment suggested that the EES technical assistance staff in DOE be increased as the nationwide program gets underway. Another comment stressed the need for quick response to specific technical questions asked by the States, and suggested that DOE perform an indepth study of the technical assistance needs of the States. A suggestion was made regarding the creation of regional energy institutes to respond to State needs. One comment stressed the need for DOE tech-

V 43 / 191 OCT 2 1978 UMI

nical assistance during the State program startup phase. Another comment queried the exact type of technical assistance to be provided by DOE, in order that State plans will not duplicate it. One comment raised the issue of insuring that personnel used by the States are properly trained. No comment recommended revision of the proposed § 465.3(c)(5), so it has been retained. However, DOE would like to respond at this time to the comments received, although DOE expects that the State Program Planning Manual to be provided to the States will describe how DOE will make technical assistance available.

DOE's technical assistance under the comprehensive EES program has two primary objectives. First, DOE will help the States build their capacity to use available technical resources. DOE intends to carry out activities for the exchange of information among the States participating in the comprehensive EES program. A new § 465.3(c)(3) has been added to indicate this DOE responsibility. DOE also expects to provide the States with a compendium of available Federal and State technical resources, including persons who may be contacted and the materials or services available.

Second, DOE will endeavor to provide technical assistance which States cannot provide or obtain for themselves in a cost-effective fashion. Because DOE expects the demand for technical assistance to exceed the resources available, DOE will give priority to technical assistance most necessary for the cost-effective accomplishment of the objectives stated in § 465.1. DOE will try to accommodate these priorities to those which the States perceive as most necessary for the development and implementation of State plans.

DOE agrees with the comment regarding the need for an indepth analysis of State technical assistance needs. Accordingly, a study of these needs has been initiated, jointly sponsored by the EES and State Energy Conservation Plan (SECP) offices. Until the study is completed, it is premature to comment on the need for regional technical assistance organization.

One comment suggested that the regulations should contain a better description of the role of the comprehensive EES program. Accordingly, the second sentence of proposed § 465.3(b) has been revised to reflect the emphasis of the comprehensive EES program on increasing the capability of small energy users to make informed energy decisions.

DOE received one comment which would have the comprehensive EES program deal only with opportunities for "cost-effective" energy conservation. Although DOE agrees in principle with the comment, no change has been made to the regulation since cost-effectiveness must remain a decision of the individual small energy user. It is not possible to identify for all target audiences what could constitute a cost-effective energy conservation opportunity and what would not be cost-effective. DOE expects the States to design State programs that are sensitive to the needs of their target audiences and which present, for the individual's decision, the likely costs and benefits of the conservation techniques and technologies addressed.

Another comment maintained that it is a mistake to characterize the need for increased energy conservation only in terms of small energy users. DOE agrees completely. However, the comprehensive EES program is intended to implement a program directed at a particular segment of the energy consuming public, namely small energy users.

A technical correction is made to proposed § 465.3(d)(2). DOE received five comments which underscored the need to minimize potential EES conflict with related activities in the private sector. Through the process described in § 465.3(d), the EES Director will seek to avoid the provision of services by the States which duplicate existing services available from the private sector.

DOE has made a technical change for purposes of clarity in proposed § 465.3(c)(1). Appropriate reference to the role of the Regional Representative has been made in § 465.3(c)(4).

7. § 465.5 National Advisory Board

DOE received five comments suggesting changes to the composition of membership of the Advisory Board. No change has been made to proposed § 465.5(a), since the membership categories are specified by the Act. DOE does believe, however, that several of the comments are helpful, and will be guided by them in implementation of the regulation. DOE has selected one member representative of the interests of utility companies, and has sought geographic balance by assuring that at least one member resides in each of the 10 Federal regions.

DOE has made a change in proposed § 465.5(c) to reflect the role of the Regional Representative in implementing the comprehensive EES program, and has made technical changes in subparagraphs (d) and (e) of proposed § 465.5.

8. § 465.6 Financial Assistance

DOE received four comments suggesting changes to the proposed formula for calculating State allocations of financial assistance provided under the comprehensive EES program. Since the formula is prescribed by the Act, no change has been made.

Three comments addressed the financial assistance that the Director may reserve for special State projects. One comment suggested that the limitation of 10 percent of appropriated funds is too low, and will have the effect of pushing States toward "safe" projects that will have little relevance in the decade to come. Another comment urged DOE to fund special State projects only if the annual appropriation for the comprehensive EES program exceeds $25 million. A final comment appeared to disagree with DOE's decision not to fund special State projects in the first year of the Comprehensive EES program.

DOE presently is testing the usefulness of special State projects in the pilot program, and will not fund these projects in the first year of the nationwide program since the results will not be available in this time period. For the present, DOE will retain the proposed 10-percent limitation, since it appears reasonable in light of balancing the State's need for continuity in the regular annual formula grant funding with that allocated to the pursuit of innovation.

DOE received three requests for clarification of the annual funding cycle to be used in providing financial assistance to the States. As indicated in the preamble to the proposed regulation, DOE will provide financial assistance to the States on a calendar year rather than a Federal fiscal year basis, and proposed § 465.6(a) has been revised to clarify this point. One comment questioned the relationship between this funding cycle and that of SECP. The comprehensive EES program's funding cycle is intended to approximate the SECP funding cycles. The State Program Planning Manual is expected to contain an explanation of the EES annual funding cycle.

DOE has made changes in proposed § 465.6(a) and proposed § 465.6(c) to delegate the responsibility to the Regional Representative for providing financial assistance to the States.

9. § 465.7 Annual State Applications

DOE received six comments regarding proposed § 465.7(c)(5), which requires States to include in the annual State application for financial assistance a written summary and chronology of the procedures used to provide opportunity to comment on the State plan prior to or during its development. One comment suggested that any written comments be appended to the annual application, while another advocated that the regulation require the Governor to appoint an advisory group to prepare the State plan. This advisory group would include a minimum of 33 percent elected officials of

general purpose government. Another comment urged that land-grant universities be required to take part in the development of the State plan. Another comment suggested that States be required to provide professional engineers and contractors with opportunity to comment.

DOE has reviewed these comments carefully and is satisfied that the language of the proposed regulation is adequately broad to insure opportunity for public comment on the State plan. In order to accord a State optimal flexibility to develop and implement a State plan responsive to local needs, DOE will not require States to follow a prescribed procedure for developing the State plan nor will it specify who must prepare the State plan. However, DOE will hold the States responsible for demonstrating that the State plan was developed in an open manner, that interested parties including the private sector are provided with opportunity for comment, and that these comments were considered fully in the development of the State plan.

Two comments questioned the desirability of proposed § 465.7(c)(4). One of these, expressed at the public hearing, held that the requirement that EES financial assistance not supplant State or local funds unduly penalizes States who responded early to energy problems by developing their own programs. DOE will retain proposed § 465.7(c)(4), as it is required by the Act.

DOE received one query concerning the 180-day period for submitting the first annual State application. Specifically, does the 180 days include the time necessary for DOE review and approval of the annual State application? Although DOE encourages States to submit the first annual State application early to facilitate prompt funding, the Act provides the first annual State application is not required to be submitted before the end of the 180-day period.

Proposed § 465.7(a) has been revised to provide that the Regional Representative shall invite the Governor to submit the first annual State application.

DOE has amended proposed § 465.7(b) to require submission of an original and 2 copies rather than 10 copies of the annual State application. In addition, proposed § 465.7(d) has been revised so that the Governor need only request an extension of time for submitting an application 15 days before the expiration date, instead of 30. Changes have been made in proposed § 465.7(b) and proposed § 465.7(d) to indicate that annual State applications and State requests for extensions, respectively, should be submitted to the Regional Representative.

10. § 465.8 Submission and Contents of State Plans

DOE received two comments related to the level of detail required in the State plans. One comment supported the level of detail required, suggesting that it is a positive way of controlling potential EES duplication with other related efforts. The other comment stated that the proposed State plan requirements are overly detailed, in light of the EES principle of State flexibility, the expected funding level, and the fact that energy outreach programs are well along in some States. DOE has maintained the level of detail that was contained in the proposed regulation. This level of detail is not intended to limit the programmatic flexibility of the States, but rather to insure that State plans are carefully and logically thought out and include all the elements necessary for implementation. Through their State plans, the States should demonstrate that their planned EES activities are relevant to the State's particular circumstances and the needs of small energy users.

Two comments questioned the usefulness of preparing a 3-year State plan as required in proposed § 465.8(c), believing this period is too long. DOE has decided to retain the 3-year period since it represents a reasonable planning period and reduces a State's administrative burden. This is particularly appropriate because, as provided in § 465.8(b), a State may modify or update its State plan for the intervening 2 years.

DOE received five comments concerning the EES objectives to be identified in response to proposed § 465.8(c)(1). One comment stressed that DOE should require a balancing of short- and long-term objectives, while another asked if the increased use of coal by small energy users could be considered as an EES objective. Three comments addressed the terms in which objectives should be expressed.

The balancing of short- and long-term objectives will be at the discretion of the State, with the State responsible for indicating the rationale for its selection of objectives. The increased use of coal by small energy users may be an acceptable EES objective if the State can demonstrate to DOE that such an objective meets the definition of energy conservation in the regulation. DOE cannot answer this question definitively out of the context of a specific State plan, except to say that a State program emphasizing the use of coal by small energy users is not prohibited by the regulation. DOE will permit the State to choose whether or not to express EES objectives in terms of expected Btu energy savings.

DOE received five comments regarding proposed § 465.8(c)(1)(iv), which requires optimum use of existing organizations to assist in the implementation of the State plan. One comment urged DOE to be more forceful in calling for linkages with existing programs, while another asked for guidelines for establishing these linkages. A third comment asked that community colleges be referenced explicitly. Another comment urged that DOE not require the States to use colleges and universities as service delivery mechanisms.

DOE believes that the criterion of "optimum use" of existing organizations adequately covers the concern of the first comment. DOE is fully aware that community colleges, as well as other organizations, can be useful delivery mechanisms for EES services, and appropriate references to these will be made in the State Program Planning Manual. It also will contain suggestions for implementing linkages with existing organizations.

DOE will not require the use of any particular type of organization to deliver EES services. This choice is left to the State. DOE also agrees with a comment made by the National EES Advisory Board at the public meeting held on September 7-8, 1978, that a State is not required to select the organizations specified in its 1977 proposal for the EES pilot program.

One comment, in reference to proposed § 465.8(c)(1) (v) and (iv), asked whether States must include provision for energy audits and information dissemination to small business if these services already are provided through other sources. EES may not provide duplicative services. However, these two services are required by the Act. If a State does not choose to provide these services as part of a State program, the State plan should provide an explanation concerning how these services will continue to be provided in the State.

One comment queried whether a State could contract for energy audit services to implement its State plan. The regulation does not restrict a State's ability to contract for the delivery of services to be provided under State programs, as long as the State plan identifies the organization providing the services, as required by § 465.8(c)(2)(iv).

Three comments emphasized the need for face-to-face delivery of services for encouraging increased use of conservation techniques and technologies. State programs should emphasize the use of services which provide personalized information and technical assistance, tailored to the needs of

V 4 3 / 1 9 1
0 C 2 7 8

the particular target audience addressed.

With regard to proposed § 465.8(c)(4)(ii), one comment urged DOE to delete the phrase "within the State," to indicate that some barriers to energy conservation may not be able to be resolved by organizations within that jurisdiction. DOE regarded this comment as very well taken but is retaining the phrase, not as a limitation, but to indicate the State's primary area of responsibility. As in the EES pilot program, DOE intends to work with the States to communicate barriers to energy conservation that need to be considered at the regional or national levels. By so doing, DOE can draw together information on interstate barriers to energy conservation.

DOE also agrees with another comment, which pointed out the relatively long time periods necessary to resolve many barriers to energy conservation. Experience to date in the EES pilot program confirms this conclusion. As part of DOE's management system for the comprehensive EES program, DOE expects to establish a monitoring system regarding the barriers to energy conservation that have been identified.

DOE received three comments concerning the establishment of technical support institutes (TSI), allowed in proposed § 465.8(c)(7). One comment claimed that the establishment of a TSI would be wasteful, and that States should use existing organizations to provide technical support. Another comment argued the reverse, and requested the substitution of less restrictive language since in some cases new organizations can function more effectively. A third comment believed that a TSI should be allowed to be established as part of an unit of general purpose government.

Establishment of a TSI is authorized by the Act, which indicates that, if established, a TSI shall be located at one or more colleges or universities designated by the Governor. DOE will retain the requirement in proposed § 465.8(c)(7) for a detailed justification for the establishment of a TSI, since one of the fundamental principles of the comprehensive EES program is to make optimum use of existing organizations and to avoid duplication.

DOE has deleted proposed § 465.8(c)(2)(iv), which called for the estimated impact of each service to be provided under a State program on its target audience, and has renumbered subsequent subsections accordingly.

DOE has concluded that the EES objectives set according to § 465.8(c)(1) are sufficient indicators of what a State expects to accomplish in its State plan.

DOE also has added a new § 465.8(c)(8)(i), renumbering the proposed § 465.8(c)(8) as § 465.8(c)(8)(ii), and making some technical changes therein. In § 465.8(c)(8)(i), DOE requires the State plan to describe the procedures the grantee will use to achieve timely implementation of the State plan.

DOE has rearranged the subsections under proposed § 465.8(c)(1) in order to achieve a more logical order for preparation of the State plan. Proposed § 465.8(c)(2)(iii) has been renumbered as § 465.8(c)(2)(ii)(D). Proposed § 465.8(c)(6) has been renumbered as § 465.8(c)(3), with proposed § 465.8 (c)(3), (c)(4), and (c)(5) renumbered accordingly. Technical corrections for clarity have been made to proposed § 465.8(c)(1), proposed § 465.8(c)(2)(i), proposed § 465.8(c)(2)(ii) (B) and (C), proposed § 465.8(c)(2)(vi), and proposed § 465.8(c)(7).

11. § 465.9 Approval of Annual State Applications and State Plans

One comment requested that DOE include its criteria for reviewing State plans in the regulation. State plans will be reviewed in accordance with the requirements of § 465.8.

Three comments urged DOE to identify the time period it will use to review an annual State application. Because the problems which can arise in the review of an annual State application may be unique and are in part unforseeable, a mandated review period cannot be identified. However, DOE will provide a timely review of the annual State application and make every effort to be sensitive to time constraints affecting a State plan. In response to a query on this point, DOE does not anticipate prorating the financial assistance available to a State in cases where DOE requests the State to make revisions in the annual State application which are necessary to meet the requirements of the regulation.

One comment urged DOE to permit funding of any acceptable portions of a State plan, prior to approval of the entire annual State application for financial assistance. The Act does not permit this.

Changes have been made to proposed § 465.9 (a) and (b) to reflect the role of the Regional Representative.

12. § 465.10 Development and Implementation of a State Plan by the Director

DOE received one comment which indicated confusion regarding whether States are required to participate in the comprehensive EES program. DOE would like to clarify that such participation is voluntary. State plans developed by the Director according to § 465.10 will be transmitted to the Governor. If within the subsequent 90-day period, the Governor notifies the Secretary in writing of his or her objection, the State plan will not be implemented. Language has been added to proposed § 465.10(d) to clarify this point.

Another comment questioned the value of a State plan developed by the Director. DOE will maintain proposed § 465.10, since this procedure is mandated by the Act.

One comment suggested that DOE revise proposed § 465.10(b) to specify that the Director's notice to the Governor prior to developing a State plan be in written form. DOE regards this comment as well taken, and has so amended proposed § 465.10(b). DOE has amended proposed § 465.10(a)(2) to reflect the responsibility of the Regional Representative in disapproving an annual State application.

13. § 465.11 Administrative Review

DOE received two comments regarding the composition of the review panel as specified in proposed § 465.11(e). One comment suggested that both the Federal representatives should not be DOE employees, and the other comment urged inclusion of a person representative of EES user groups. In response, DOE has amended proposed § 465.11(e)(2) to read "one person representative of DOE", and has amended proposed § 465.11(e)(3) to read "one person representative of the EES target audiences in the State affected."

DOE received one comment which suggested that administrative review procedures should be available to any party in a State excluded from participation in EES. DOE believes this to be an inappropriate method to assure public participation in the State plan. The States are required in § 465.7(b)(5) to provide opportunity for comment on the State plan prior to or during its development, and to describe how the comments received affected the contents of the State plan. In this way, DOE may review an annual State application to ascertain the adequacy of the State's public comment procedure. The comment also urged DOE to include provisions for judicial review in the regulation. Such provisions are outside the scope of this rulemaking.

DOE has amended each paragraph of the proposed section to reflect the role of the Regional Representative in the administrative review process.

A technical correction has been made to proposed § 465.11(c) (1) and (2), by inserting the word "denial", between "intended" and "termination." Proposed § 465.11(g) has been amended to indicate that the Regional Representative shall submit the review panel's report and his or her recommendations to the Director as well as

to the Secretary. Additional technical corrections were made to proposed § 465.11 (i) and (j).

14. § 465.12 Prohibited Expenditures

DOE received six comments regarding proposed § 465.12(a)(3). Several of these questioned the meaning of the prohibition against demonstration of conservation techniques and technologies not commercially available. Although proposed § 465.12(a)(3) has not been changed, DOE would like to take the opportunity in this preamble to clearify the intent of the provision.

The focus of the comprehensive EES program is on connecting small energy users with conservation techniques and technologies that are currently available to them. Research, development and demonstration activites aimed at creating or testing new conservation techniques and technologies are outside this focus and prohibited by § 465.12(a)(3).

DOE is aware, however, that a particular demonstration of conservation techniques or technologies that are available to target audiences can be an effective EES service. For this reason, DOE will permit such pratical demonstrations as long as the item demonstrated can be demonstrated can be obtained commercially by target audience. Likewise, in the case of demonstrating "homemade" devices, the materials necessary for constructing the device should be available commercially. The rationale is that State programs and services should not encourage the adoption of conservation techniques and technologies that cannot be obtained by a target audience. If necessary, States may modify an existing building or structure in order to provide a practical demonstration. As stated in § 465.12(a)(1), the States may not, however, use EES grant funds to construct a new building, or repair an existing one.

In response to one comment, DOE has amended proposed § 465.12(a)(1) to delete the prohibition agaist the purchase of materials. DOE also has added a new § 465.12(c) to reflect the 10 percent limitation on expenditures for a States's independent evaluation activities. This new section is discussed in section 3 of this preamble.

15. § 465.13 Recordkeeping

One comment suggested that State recordkeeping requirements under the comprehensive EES program be similar to those required by SECP. Another questioned why DOE is requiring access to records regarding funds not supplied under the comprehensive EES program.

DOE's intent is to conform EES administrative procedures to those of SECP to the fullest extent possible, consistent with the differing legislative authorites for the programs. For the comprehensive EES program, the Act authorizes DOE to require records of the source and amount of any funds not supplied by the Secretary.

DOE has made five technical corrections to proposed § 465.13, by substituting "Secretary" for "Director."

16. § 465.14 Reports

Two comments expressed confusion regarding the purpose of the guarterly program performance reports, believing that DOE would require quarterly evaluations of the impact of State programs on their target audiences. DOE would like to clarify that such evaluations will not be required in the quarterly program performance reports. Instead, to facilitate DOE's evaluation of the comprehensive EES program, States will submit, as part of the quarterly performance report, summaries of activity data related to two State programs selected by the State for the purposes of DOE's evaluation. No impact analysis will be required of the State.

Another comment queried DOE regarding the format of the State quarterly performance report. DOE's proposed reporting forms are now under review and will be sent to the States upon approval.

In response to another comment's concern that DOE use reporting procedures for the comprehensive EES program that are similar to those of SECP, DOE anticipates making use of the Grants Management Summary Report which is being use by a number of States for reporting under the SECP. One comment advocated inclusion of the State's EEs program performance report as a section of the State's SECP report. DOE will retain a separate EES report due to the differing authorities for the programs.

DOE received one comment that after the first year, State program performance reports should be required annually rather than quarterly. DOE believes that presently such a decision is premature.

DOE has amended proposed § 465.14 to indicate that State reports will be submitted to the Regional Representative and has made two additional technical corrections.

17. § 465.15 Administration of Financial Assistance

DOE has made a number of technical corrections to proposed § 465.15. Proposed § 465.15(d) has been deleted since it is not relevant to the administration of financial assistance under the comprehensive EES program. Other proposed subsections have been reordered for reasons of clarity.

18. Final Regulation

The proposed as well as final regulation is in accordance with Executive Order 12044, and found to be a significant rulemaking for regulatory analysis, but not major, so that no analysis of its economic impacts is required.

In accordance with DOE's obligations under the National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. 4321 et seq., an evaluation of the potential environmental impacts of the proposed and final regulation has been prepared by DOE. Based on the Environmental Assessment (DOE/EA-0042) of the comprehensive EES program, DOE has determined that this regulation will not constitute a major Federal action having a significant effect on the quality of the human environment. Accordingly, an environmental impact statement will not be prepared. However, DOE has an obligation to review programs proposed for funding under this regulation and determine whether a site-specific environmental review is required.

(The National Energy Extension Service Act, enacted as title V of the Energy Research and Development Administration Authorization Act of 1977, title V of Pub. L. 95-39 Stat. 191 et seq., 42 U.S.C. 7001 et seq.; Department of ENergy Organization Act, Pub. L. 95-91 Stat. 965 et seq., 42 U.S.C. 7101 et seq.; Federal Grant and Cooperative Agreement Act of 1977, Pub. L. 95-224, 92 Stat. 3 et seq., 41 U.S.C. 501 et seq.; E.O. 12009, 42 FR 46267; E.O. 12044, 43 FR 12660.)

In consideration of the foregoing, subchapter D, chapter II of Title 10, Code of Federal Regulations is amended by establishing part 465 as set forth below, effective November 1, 1978.

Issued in Washington D.C., September 28, 1978.

WILLIAM P. DAVIS,
Deputy Director of Administration.

Suchapter D, chapter II of Title 10, Code of Federal Regulations is amended by establishing part 465 as follows:

Sec.
465.1 Purpose and scope.
465.2 Definitions.
465.3 Comprehensive Energy Extension Service program.
465.4 Comprehensive program and plan for Federal energy education, extension and information activities. [Reserved]
465.5 National Advisory Board.
465.6 Financial assistance.
465.7 Annual State applications.
465.8 Submission and contents of State plans.
465.9 Approval of annual State applications and State plans.
465.10 Development and implementation of a State plan by the Director.
465.11 Administrative review.
465.12 Prohibited expenditures.
465.13 Recordkeeping.
465.14 Reports.
465.15 Administration of financial assistance.

V 43/191 OCT 2 78 UMI

AUTHORITY: National Energy Extension Service Act, enacted as title V of the Energy Research and Development Administration Authorization Act of 1977, title V of Pub. L. 95-39, 91 Stat. 191 et seq., 42 U.S.C. 7001 et seq.; Department of Energy Organization Act, Pub. L. 95-91, 91 Stat. 965 et seq., 42 U.S.C. 7101 et seq.; Federal Grant and Cooperative Agreement Act of 1977, Pub. L. 95-224, 92 Stat. 3 et seq., 41 U.S.C. 501 et seq.; E.O. 12009, 42 FR 46267; E.O. 12044 43 FR 12660.

§ 465.1 Purpose and scope.

This part contains the regulation adopted by DOE to establish a comprehensive Energy Extension Service program which shall—

(a) Establish a positive energy outreach program directed toward small businesses and individual energy users and the organizations that influence their energy consumption;

(b) Stimulate, provide for and supplement programs for the conduct of evaluation, planning and other technical assistance of energy conservation efforts, including energy outreach activities of States; and

(c) Provide financial and technical assistance to the States for State plans which contribute to the implementation of the comprehensive Energy Extension Service program.

§ 465.2 Definitions.

As used in this part—

"Act" means the National Energy Extension Service Act, title V of Pub. L. 95-39, 42 U.S.C. 7001 et seq.

"Barriers to energy conservation" means problems or obstacles identified by small energy users which prevent or hinder them from adopting conservation techniques and technologies.

"Building" means any structure which includes provisions for a heating, cooling or hot water system, or which is used as a residential dwelling unit.

"Community action agency" means a private corporation or public agency established pursuant to the Economic Opportunity Act of 1964, Pub. L. 88-452, 42 U.S.C. 2701 et seq., which is authorized to administer funds received from Federal, State, local or private funding entities to assess, design, operate, finance and oversee antipoverty programs.

"Conservation techniques and technologies" means actions likely to result in energy conservation.

"Director" means the Director of the EES office of DOE.

"DOE" means the Department of Energy.

"Energy audit" means a procedure to measure the consumption or cost of energy in order to identify conservation techniques and technologies in a building or industrial process.

"EES" means Energy Extension Service.

"EES office" means the national office of DOE established to develop and carry out the comprehensive EES program in accordance with the provisions of this part.

"Energy conservation" means energy conservation, efficient energy use or the utilization of renewable energy resources.

"Governor" means the chief executive officer of a State and the Mayor of the District of Columbia, or a person duly designated in writing by the Governor to act upon his or her behalf.

"Grantee" means a State or entity of the State named in the notice of grant award as the recipient of financial assistance provided under this part.

"Regional Representative" means the Regional Representative of the Secretary.

"SECP" means the State energy conservation plans developed and implemented pursuant to 10 CFR 420.

"Secretary" means the Secretary of the Department of Energy.

"Service" means technical assistance, instruction, information dissemination, energy audit or a practical demonstration concerning one or more conservation techniques and technologies.

"Small business" means an independently owned concern which together with its affiliates is not dominant in its field and either does not have average annual receipts for the last 3 years of more than $12 million or does not have more than 400 employees.

"Small energy users" means residential consumers, individuals and groups of individuals, small businesses including agricultural and commercial establishments, and units of State and local governments.

"Special State project" means a unique or innovative activity which is likely to bring about energy conservation in furtherance of the objectives of the Act, and which is not part of a State plan.

"State" means any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, the Virgin Islands, American Samoa, the Commonwealth of the Northern Mariana Islands, and the Trust Territory of the Pacific Islands.

"State program" means a set of related services provided to a target audience which is used to implement a portion of a State plan.

"Target audience" means the persons intended to receive services provided under a State program.

"Technical assistance" means assistance, other than direct financial assistance, including instruction, expert advice, information dissemination and practical demonstrations.

"Technical support" means activities provided by a State, such as specialized analyses, preparation of materials, training or other activities, which are necessary to implement a State plan effectively.

§ 465.3 Comprehensive Energy Extension Service program.

(a) DOE has established the EES office, administered by a Director, to develop and carry out the comprehensive EES program established by this part.

(b) The comprehensive EES program shall identify, develop and demonstrate in a practical manner, opportunities for energy conservation. This program shall be developed and implemented with particular regard for increasing the capability of small energy users to make informed energy decisions.

(c) The Director shall implement the comprehensive EES program by—

(1) Carrying out activities, through technical assistance where appropriate, for the identification, development and practical demonstration of opportunities for energy conservation;

(2) Collecting information and undertaking actions to eliminate barriers to energy conservation identified by small energy users;

(3) Carrying out activities that shall encourage the sharing of information, experience and materials among the States regarding the comprehensive EES program;

(4) Providing financial assistance through the Regional Representative for the implementation of a State plan; and

(5) Providing technical assistance for the development, implementation or modification of a State plan.

(d) The Director shall take such steps as he or she may determine to be necessary to minimize conflict between existing services in the private sector that are similar to the services provided under the comprehensive EES program. For this purpose, the Director shall at least once a year—

(1) Consult with the National Advisory Board, referred to in § 465.5; and

(2) After publishing a notice of inquiry and public meeting in the FEDERAL REGISTER, obtain written and oral comments from the public.

§ 465.4 Comprehensive Program and Plan for Federal Energy Education, Extension and Information Activities. [Reserved.]

§ 465.5 National Advisory Board.

(a) The Secretary shall appoint a National Advisory Board which shall consist of not less than 15 nor more than 20 members. The members shall include persons representative of the interests of State, county, and local governments, State universities, community colleges, community action agencies, energy users, small businesses and agriculture.

(b) The Secretary shall designate one member of the Board to serve as Chairman and shall provide the Board with the services and facilities, as may be necessary to carry out its functions.

(c) The Board shall carry on a continuing review of the operation of the comprehensive EES program established by § 465.3 and the State plans approved by the Regional Representative according to § 465.9, for the purpose of evaluating their effectiveness in achieving the objectives of the Act and determining how their operation might be improved in order to further these objectives.

(d) The Board shall report annually to the Congress, the Secretary, and the Director on the status of the comprehensive EES program, including any recommendations the Board may have for administrative or legislative changes needed to improve operation of the comprehensive EES program.

(e) The Secretary shall reimburse Board members for the full amount of any expenses necessarily incurred by them in the performance of their duties as such.

§ 465.6 Financial assistance.

(a) The Regional Representative shall provide financial assistance, on a calendar year basis, from funds available for any fiscal year to each State having an approved annual application according to § 465.9.

(b) Financial assistance shall be allocated among the States from funds available for any fiscal year based on the following formula—

(1) One-half shall be divided equally among all States; and

(2) One-half shall be divided on the basis of the State's population as reported by the Department of Commerce, Bureau of Census, in the most recent decennial census.

(c) If a State's allocation of financial assistance is not obligated by the Regional Representative during the fiscal year, the allocation shall be reallocated among the States for the next calendar year according to paragraph (b) of this section.

(d) Notwithstanding the provisions of paragraph (b) of this section, the Director may reserve from the funds appropriated for any fiscal year an amount to provide financial assistance to States for special State projects. This amount shall be determined by the Director, but in no event shall exceed 10 percent of the appropriated funds.

§ 465.7 Annual State applications.

(a) The Regional Representative shall send a copy of the regulation to the Governor of each State and invite him or her to submit the first annual State application.

(b) To be eligible for financial assistance under this part, a State shall submit an original and two copies to the Regional Representative of an annual State application executed by the Governor. The first annual State application shall be submitted not later than 180 days from the date of issuance of this regulation. Subsequent annual State applications shall be submitted on or before September 30 of the following years.

(c) An annual State application shall contain—

(1) The name and address of the grantee;

(2) The State plan or modifications of it, as required by § 465.8 (a) and (b) respectively;

(3) A budget and listing of milestones for the activities to be carried out in each of the State programs contained in the State plan by calendar quarters for the year in which financial assistance will be provided;

A description of policies and procedures employed by the State which assure that financial assistance provided under this part does not supplant the expenditure of State or local funds for the same purposes, but rather supplements Federal, State, or local funds, and increases the expenditure of the State or local funds to the maximum extent practicable;

(5) A written summary and chronology of the procedures which were used to provide organizations and individuals with opportunity to comment on the State plan prior to or during its development. The opportunity to comment shall be provided to representatives of energy users and producers, State, county, and local officials, State universities, and community colleges, cooperatives extension services, community action agencies and other public, private, or nonprofit organizations which are involved in active energy outreach activities. The written summary shall include—

(i) The name of the organizations afforded an opportunity to comment; and

(ii) How the comments received affected the contents of the State plan.

(6) A description of anticipated environmental impacts of any services which include the modification of buildings or structures to provide a practical demonstration of conservation techniques and technologies.

(d) The Governor may request an extention of the annual submission date by submitting a written request to the Regional Representative not less than 15 days prior to the date referred to in paragraph (b) of this section. The extension shall only be granted if, in the Regional Representative's judgment, acceptable and substantial justification is shown and the extension would further the objectives of the Act.

§ 465.8 Submission and contents of State plans.

(a) A State shall submit a State plan with—

(1) The first annual State application; and

(2) The annual State application submitted every 3 years thereafter.

(b) A State shall submit, with the annual State application, modifications to the State plan, if appropriate, for the years not referred to in paragraph (a) of this section.

(c) A State plan shall be developed for a 3-year period and contain—

(1) A description of the objectives to be achieved for the three year period by implementation of the State plan, which shall include—

(i) Why the objectives were selected, with particular reference to potential energy savings, increased use of renewable resources and the types and numbers of people affected;

(ii) How the State programs included in the State plan, and the emphasis and funding given to each, together represent a strategy to achieve these objectives;

(iii) How implementation of the State plan shall supplement and be coordinated with other energy conservation programs being carried out in the State with Federal funds or under other Federal laws, with particular reference to university programs providing extension services and the State's SECP; and

(iv) How existing organizations, including State, local, university, or other organizations, will be used to the optimum extent to assist in the implementation of the State plan;

(v) How the State plan provides for information dissemination to small businesses and addresses organizations which influence the energy consumption of small energy users;

(vi) How the State plan makes energy audits available to small energy users, within personnel and funding limitations;

(2) A description for each State program in the State plan, which shall include—

(i) The target audience, why it was selected and the estimated number of persons which the State program expects to reach;

(ii) The services to be provided, including—

(A) How the services will meet the needs of the target audience;

(B) The conservation techniques and technologies to be used in each service;

(C) The type and estimated number of any energy audits if any are included; and

V 4 3 / 1 9 1
0 C 2 7 8

(D) The geographic areas in which the services shall be delivered and why these areas were selected;

(iii) Any technical support which is necessary to provide the services, including the organization that will provide the technical support and why the organization was selected; and

(iv) The organization which shall implement the State program and any other organizations which shall provide a service to the target audience, why the selection was made and the approximate number of any new personnel to be employed to implement the State program;

(3) A description of the organization which shall administer the overall development and implementation of the State plan, which shall include—

(i) Why the administering organization was selected;

(ii) The provisions made for coordination between the administering organization and any other organizations assisting in the implementation of the State plan; and

(iii) The relationship between the administering organization and the grantee if the two are not the same;

(4) A description of the methods and procedures which shall be used to—

(i) Identify barriers to energy conservation from responses which shall be obtained from target audiences;

(ii) Communicate information concerning the barriers to energy conservation to organizations within the State that have the capability or authority to remove or influence the barriers; and

(iii) Periodically report the results of such communication to the target audiences identified in subparagraph (c)(4)(i) of this section;

(5) A description of the administrative procedures to be used in the implementation of the State plan which shall include—

(i) The procedures to be used to respond to suggestions and inquiries from the public regarding energy conservation;

(ii) The procedures to be used to publicize and disseminate up-to-date and easily understood information on the services available to small energy users under the State plan and under other Federal programs and activities of the State regarding conservation techniques and technologies; and

(iii) The system to be used to review, for technical accuracy, any publication or other material which the State shall prepare or use in a State program;

(6) A description of the purpose, methods and procedures of the independent evaluation activities, if any, that the State shall undertake regarding the State programs or services;

(7) A description of any additional technical support not described in subparagraph (c)(2)(iii) of this section which is required to facilitate implementation of the State plan. If existing organizations are not available to provide this additional technical support or the technical support identified in subparagraph (c)(2)(iii), the State may propose to establish a technical support institute, at one or more colleges or universities designated by the Governor. The purpose of the technical support institute shall be to assist in the implementation of the State plan by providing analyses and technical support which is required for effective implementation of the State plan. If such an institute is proposed, the State shall provide a detailed justification which shall describe—

(i) Why the institute is needed;

(ii) How the institute specifically relates to the implementation of the State plan; and

(iii) The purpose, location, size, and specific activities of the institute; and

(8)(i) A description of the procedures that the grantee will use to achieve timely implementation of the State plan; and

(ii) An assurance that the grantee will maintain or require other participating entities within the State to maintain, and make available upon request to the Regional Representative, such records as the Secretary may require, with respect to the use and expenditures of financial assistance provided to the grantee, or to entities within the State, under this part.

§ 465.9 Approval of annual State applications and State plans.

(a) The Regional Representative shall review each timely State annual application and provide financial assistance if he or she determines that—

(1) The State plan meets the objectives of the Act;

(2) The annual State application and the State plan meet the requirements of § 465.7 and § 465.8, respectively; and

(3) Implementation of the State plan by the State conforms to the requirements of this part.

(b) If the annual State application is not approved according to paragraph (a) of this section, the Regional Representative shall return it to the State together with a written statement describing why the annual State application fails to meet the requirements of this part. The State shall have a reasonable time period, as determined by the Regional Representative, to amend its annual State application and submit it for reconsideration according to paragraph (a) of this section.

§ 465.10 Development and implementation of a State plan by the Director.

(a) The Director shall develop a State plan which meets the requirements of § 465.8, if—

(1) A State does not submit an annual State application in accordance with § 465.7; or

(2) The Regional Representative finally disapproves an annual State application according to § 465.11.

(b) Prior to developing a State plan under this section, the Director shall provide written notice and an opportunity for comment to the Governor.

(c) A State plan developed by the Director shall be transmitted to the Governor of the State and shall not be implemented for 90 days after the date of transmittal. Notwithstanding any provisions of this section to the contrary, no State plan developed by the Director according to paragraph (a) of this section shall be implemented if the Governor, within the 90-day period, notifies the Secretary in writing of his or her objection to the implementation of the State plan.

(d) In implementing a State plan developed according to this section to which the Governor has not objected during the 90-day period referred to in paragraph (c) of this section, the Director shall make maximum use of regional, State, or local organizations which deliver services which are appropriate for purposes of this part. The Director shall coordinate his or her activities in implementing the State plan with all other regional, State, or local organizations which deliver services which are related to, but not directly involved in, the implementation of the State plan.

(e) A State plan developed by the Director for a State whose financial assistance has been terminated according to § 465.11, shall provide for the continuation of all activities under the State plan which meet the requirements of this part.

§ 465.11 Administrative review.

(a) If the Regional Representative intends to deny an annual State application resubmitted by the Governor according to § 465.9(b) or refuses to accept an annual State application resubmitted by the Governor after the time period referred to in § 465.9(b) has expired, the Regional Representative shall give notice to the Governor.

(b) If the Regional Representative determines that implementation of a State plan approved according to § 465.9 fails to meet the requirements of this part, the Secretary shall give notice to the Governor of his or her intent to terminate or suspend financial assistance to the grantee.

(c) The notice required by paragraphs (a) or (b) of this section shall be issued in writing by registered mail

with return receipt requested and include—

(1) A statement of the reasons for the intended denial, termination or suspension of financial assistance including an explanation of whether any amendments or other actions would result in compliance with this part;

(2) The date, place and time of a public hearing to be held by a review panel concerning the intended denial, termination or suspension of financial assistance. The hearing shall be held within 15 working days after the date of receipt by the Governor of the notice; and

(3) The manner in which views may be presented.

(d) The Governor may submit written views with supporting data to the Regional Representative on or prior to the date of the public hearing and shall be offered an opportunity to make an oral presentation at the public hearing.

(e) No person who is a member of the EES office shall be a member of the review panel. The review panel shall be appointed by the Regional Representative and shall consist of—

(1) One person generally representative of State interests other than a person who represents the interests of the State whose application is being considered;

(2) One person representative of DOE; and

(3) One person representative of the EES target audiences in the State affected.

(f) The review panel shall consider all relevant views and data submitted on or prior to the date of the public hearing. The review panel shall submit a written report containing its findings and recommendations to the Regional Representative within 10 working days after the date of the public hearing.

(g) The Regional Representative shall submit the report, together with his or her recommendations, to the Director and to the Secretary within 5 working days after receipt of the report.

(h) The Secretary shall issue a final determination, accompanied by a statement of the reasons for the actions taken, within 10 working days after receipt of the submission from the Regional Representative.

(i) Upon issuance of the notice referred to in paragraphs (a) or (b) of this section, the Secretary may suspend financial assistance to the grantee pending a final determination. If the Secretary makes a final determination adverse to the grantee, the Regional Representative may terminate continued financial assistance to the grantee.

(j) If financial assistance to a grantee has been terminated, the Regional Representative may continue to provide financial assistance to persons other than the grantee to implement any acceptable provision of the State plan for the remainder of the calendar year.

§ 465.12 Prohibited expenditures.

(a) No financial assistance provided to a State under this part shall be used to—

(1) Construct or repair a building or structure;

(2) Purchase land, a building or structure or any interest therein; or

(3) Conduct, or purchase equipment to conduct, research and development or demonstration of conservation techniques and technologies not commercially available.

(b) No more than 20 percent of the financial assistance awarded to a State under this part shall be used to purchase equipment, office supplies or library materials.

(c) No more than 10 percent of the financial assistance provided to a State under this part shall be used to conduct the independent evaluation activities authorized in § 465.8(c)(6).

§ 465.13 Recordkeeping.

Each State or other entity within a State receiving financial assistance under this part shall make and retain records required by the Secretary, including records which fully disclose the amount and disposition of financial assistance received; the cost of administration; the total cost of all activities for which assistance is given or used; the source and amount of any funds not supplied by the Secretary; and any data and information which the Secretary determies are necessary to protect the interests of the United States and to facilitate an effective financial audit and performance evaluation. The Secretary, or any of his or her duly authorized representatives, shall have access, until three years after the completion of the activities involved, to any books, documents, records or receipts which the Secretary determines are related or pertinent, either directly or indirectly, to any financial assistance provided under this part.

§ 465.14 Reports.

Each State receiving financial assistance under this part shall submit to the Regional Representative a quarterly program performance report and a quarterly financial statement. The program performance report shall contain such information as the Director may prescribe in order to monitor effectively the implementation of the State plan. The reports shall be submitted to the Regional Representative within 30 days following the end of each calendar quarter.

§ 465.15 Administration of financial assistance.

Grants provided under this part shall comply with the requirements of—

(a) Office of Management and Budget Circular A-102, entitled "Uniform Administrative Requirements for Grants-in-Aid to State and Local Governments;"

(b) Office of Management and Budget Circular A-95, entitled "Evaluation, Review and Coordination of Federal and Federally Assisted Programs and Projects;"

(c) Federal Management Circular 73-2 (34 CFR 255), entitled "Audit on Federal Operations and Programs by Executive Branch Agencies;"

(d) Federal Management Circular 74-4 (34 CFR 255), entitled "Cost Principles Applicable to Grants and Contracts with State and Local Governments;"

(e) Office of Management and Budget Circular A-97, entitled "Rules and Regulations Permitting Federal Agencies to Provide Specialized or Technical Services to State and Local Units of Government under Title IIII of the Intergovernmental Coordination Act of 1968;"

(f) Treasury Circular 1082 Revised, entitled "Notification to States of Grant-in-Aid Information;"

(g) Treasury Circular 1075, entitled "Treasury Fiscal Requriements Manual"; and

(h) Other procedures which DOE or the Director may from time to time prescribe for the administration of financial assistance provided under this part.

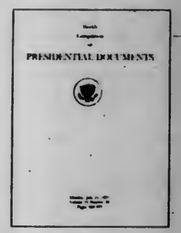
The authentic text behind the news . . .

The Weekly Compilation of PRESIDENTIAL DOCUMENTS



Administration of Jimmy Carter

This unique service provides up-to-date information on Presidential policies and announcements. It contains the full text of the President's public speeches, statements, messages to Congress, news conferences, personnel appointments and nominations, and other Presidential materials released by the White House.

The Weekly Compilation carries a Monday dateline and covers materials released during the preceding week. Each issue contains an Index of Contents and a Cumulative Index to Prior Issues.

Separate indexes are published quarterly, semiannually, and annually. Other features include lists of acts approved by the President and of nominations submitted to the Senate, a checklist of White House press releases, and a digest of other Presidential activities and White House announcements.

Published by Office of the Federal Register, National Archives and Records Service, General Services Administration

AGENCY PUBLICATION ON ASSIGNED DAYS OF THE WEEK

The following agencies have agreed to publish all documents on two assigned days of the week (Monday/Thursday or Tuesday/Friday). This is a voluntary program. (See OFR notice 41 FR 32914, August 6, 1976.)

Monday	Tuesday	Wednesday	Thursday	Friday
DOT/COAST GUARD	USDA/ASCS		DOT/COAST GUARD	USDA/ASCS
DOT/NHTSA	USDA/APHIS		DOT/NHTSA	USDA/APHIS
DOT/FAA	USDA/FNS		DOT/FAA	USDA/FNS
DOT/OHMO	USDA/FSQS		DOT/OHMO	USDA/FSQS
DOT/OPSO	USDA/REA		DOT/OPSO	USDA/REA
CSA	CSC		CSA	CSC
	LABOR			LABOR
	HEW/FDA			HEW/FDA

Documents normally scheduled for publication on a day that will be a Federal holiday will be published the next work day following the holiday.

Comments on this program are still invited. Comments should be submitted to the Day-of-the-Week Program Coordinator, Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408

NOTE: As of August 14, 1978, Community Services Administration (CSA) documents are being assigned to the Monday/Thursday schedule.

federal register
Area Code 202 Phone 523-5240

Published daily, Monday through Friday (no publication on Saturdays, Sundays, or on official Federal holidays), by the Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C., Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. 1). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The FEDERAL REGISTER provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive orders and Federal agency documents having general applicability and legal effect, documents required to be published by Act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The FEDERAL REGISTER will be furnished by mail to subscribers, free of postage, for $5.00 per month or $50 per year, payable in advance. The charge for individual copies is 75 cents for each issue, or 75 cents for each group of pages as actually bound. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

There are no restrictions on the republication of material appearing in the FEDERAL REGISTER.

FEDERAL REGISTER PAGES AND DATES—OCTOBER

Pages	Date
45337–45545	Oct. 2
45547–45819	3

V 43/192 OCT 3 78 UMI

Revised "Table of Effective Dates and Time Periods—October 1978"

This table is for use in computing dates certain in connection with documents which are published in the FEDERAL REGISTER subject to advance notice requirements or which impose time limits on public response.

Federal Agencies using this table in calculating time requirements for submissions must allow sufficient extra time for FEDERAL REGISTER scheduling procedures.

In computing dates certain, the day after publication counts as one. All succeeding days are counted except that when a date certain falls on a weekend or holiday, it is moved forward to the next Federal business day. (See 1 CFR 18.17)

A new table will be published monthly in the first issue of each month. January dates are in 1979.

Dates of FR publication	15 days after publication	30 days after publication	45 days after publication	60 days after publication	90 days after publication
October 2	October 17	November 1	November 16	December 1	January 2
October 3	October 18	November 2	November 17	December 4	January 2
October 4	October 19	November 3	November 20	December 4	January 2
October 5	October 20	November 6	November 20	December 4	January 3
October 6	October 23	November 6	November 20	December 5	January 4
October 10	October 25	November 9	November 24	December 11	January 8
October 11	October 26	November 13	November 27	December 11	January 9
October 12	October 27	November 13	November 27	December 11	January 10
October 13	October 30	November 13	November 27	December 12	January 11
October 16	October 31	November 15	November 30	December 15	January 15
October 17	November 1	November 16	December 1	December 18	January 15
October 18	November 2	November 17	December 4	December 18	January 16
October 19	November 3	November 20	December 4	December 18	January 17
October 20	November 6	November 20	December 4	December 19	January 18
October 23	November 7	November 22	December 7	December 22	January 22
October 24	November 8	November 24	December 8	December 26	January 22
October 25	November 9	November 24	December 11	December 26	January 23
October 26	November 13	November 27	December 11	December 26	January 24
October 27	November 13	November 27	December 11	December 26	January 25
October 30	November 14	November 29	December 14	December 29	January 29
October 31	November 15	November 30	December 15	January 2	January 29

NOTE: On page x of the issue of Monday, October 2, 1978, in the "Table of Effective Dates and Time Periods—October 1978," the dates for "October 5" were inadvertently omitted. For the convenience of the reader, the table is being republished in its entirety.

Title 3—The President

Memorandum of October 2, 1978

Determination Under Sections 406 and 202 of the Trade Act; Clothespins From the People's Republic of China

Memorandum for the Special Representative for Trade Negotiations

THE WHITE HOUSE,
Washington, October 2, 1978.

Pursuant to sections 406(b) and 202 of the Trade Act of 1974 (P.L. 93-618), I have determined the action I will take with respect to the report of the United States International Trade Commission (USITC), transmitted to me on August 3, 1978, concerning the results of its investigation of a petition for import relief filed by the Clothespin and Veneer Products Association on behalf of the domestic industry producing clothespins provided for in items 790.05, 790.07 and 790.08 of the Tariff Schedules of the United States.

After considering all relevant aspects of the case, including those considerations set forth in section 202(c) of the Trade Act of 1974, I have determined that provision of import relief is not in the national economic interest.

The imposition of import relief would not be an effective means to promote adjustment in the domestic industry. While imports from the PRC have become an increasingly important component of U.S. imports, other sources still accounted for seventy-three percent of U.S. imports in 1977. Foreign sources, other than the PRC, are able to supply clothespins to the U.S. market at prices significantly below the prices charged by U.S. producers. Moreover, existing foreign capacity would not be a limitation on foreign producer ability to increase shipments to the U.S. Thus, third country suppliers would likely fill any excess U.S. demand resulting from a limitation of any kind on imports of clothespins from the PRC.

In addition, it should be noted that the USITC has instituted an investigation under section 201 of the Trade Act of 1974 to determine whether clothespins from all foreign suppliers are being imported into the United States in such quantities as to be a substantial cause of serious injury, or threat thereof, to the domestic industry. A determination on this case by the USITC is due by November 21, 1978. The import problems facing the domestic clothespin industry will be considered further within the context of this pending escape clause case.

This determination is to be published in the FEDERAL REGISTER.

Jimmy Carter

rules and regulations

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each month.

Title 5—Administrative Personnel

CHAPTER I—CIVIL SERVICE COMMISSION

PART 213—EXCEPTED SERVICE

Department of Energy; Department of Transportation

AGENCY: Civil Service Commission.

ACTION: Final rule.

SUMMARY: This amendment excepts under schedule C certain positions at the Department of Energy and Department of Transportation because they are confidential in nature. Appointments may be made to these positions without examination by the Civil Service Commission.

EFFECTIVE DATE: September 13, 1978.

FOR FURTHER INFORMATION CONTACT:

Michael Sherwin, 202-632-4533.

Accordingly, 5 CFR 213.3331(f)(4) and 213.3394(j)(1) are added as set out below:

§ 213.3331 Department of Energy.

• • • • • •

(f) *Office of the Inspector General.* • • •

(4) One executive assistant to the Inspector General.

• • • • • •

§ 213.3394 Department of Transportation.

• • • • • •

(j) *Research and Special Programs Administration.*

(1) One secretary (steno) to the Administrator.

(5 U.S.C. 3301, 3302; E.O. 10577, 3 CFR 1954-1958 Comp., p. 218.)

UNITED STATES CIVIL SERVICE COMMISSION,
JAMES C. SPRY,
Executive Assistant to the Commissioners.

[FR Doc. 78-27844 Filed 10-2-78; 8:45 am]

[6325-01]

PART 213—EXCEPTED SERVICE

Department of Justice; Environmental Protection Agency; Department of Health, Education, and Welfare; Department of Transportation

AGENCY: Civil Service Commission.

ACTION: Final rule.

SUMMARY: This amendment excepts under schedule C certain positions at the Department of Justice; Environmental Protection Agency; Department of Health, Education, and Welfare; and Department of Transportation because they are confidential in nature. Appointments may be made to these positions without examination by the Civil Service Commission.

EFFECTIVE DATE: September 9, 1978.

FOR FURTHER INFORMATION CONTACT:

Michael Sherwin, 202-632-4533.

Accordingly, 5 CFR 213.3310(e)(3) and 213.3394(d)(7) are amended and 213.3316(n)(11) and 213.3318(a)(8) are added as set out below:

§ 213.3310 Department of Justice.

• • • • • •

(e) *Civil Division.* • • •

(3) Two special assistants to the Assistant Attorney General.

• • • • • •

§ 213.3316 Department of Health, Education, and Welfare.

• • • • • •

(n) *Office of the Assistant Secretary for Human Development.* • • •

(11) One deputy commissioner to the Commissioner, Rehabilitation Services Administration.

• • • • • •

§ 213.3318 Environmental Protection Agency.

(a) *Office of the Administrator.* • • •

(8) One special assistant to a Regional Administrator.

• • • • • •

§ 213.3394 Department of Transportation.

• • • • • •

(d) *Federal Highway Administration.* • • •

(7) Two Special Assistants to the Administrator.

(5 U.S.C. 3301, 3302; E.O. 10577, 3 CFR 1954-1958 Comp., p. 218.)

UNITED STATES CIVIL SERVICE COMMISSION,
JAMES C. SPRY,
Executive Assistant to the Commissioners.

[6325-01]

PART 213—EXCEPTED SERVICE

Department of Labor; Export-Import Bank of the United States

AGENCY: Civil Service Commission.

ACTION: Final rule.

SUMMARY: This amendment to schedule C (1) excepts a position from competitive status at the Export-Import Bank of the United States because it is confidential in nature and (2) changes the title and headnote of a position at the Department of Labor from Private Secretary to the Deputy Under Secretary for Economic Policy Review to Private Secretary to the Deputy Assistant Secretary for Policy Evaluation and Research to reflect the current title of the supervisor and an organizational redesignation. Appointments may be made to these positions without examination by the Commission.

EFFECTIVE DATES: Department of Labor—August 23, 1978; Export-Import Bank of the United States—August 22, 1978.

FOR FURTHER INFORMATION CONTACT:

Michael Sherwin, 202-632-4533.

Accordingly, the headnote of 5 CFR 213.3315 (j) and (j)(1) and 213.3342(b) are amended as set out below:

V 43 / 192 OCT 3 78 UMI

§ 213.3315 Department of Labor.

• • • • • •

(j) *Office for Policy Evaluation and Research.*

(1) One private secretary to the Deputy Assistant Secretary for Policy Evaluation and Research.

• • • • • •

§ 213.3342 Export-Import Bank of the United States.

• • • • • •

(b) One private secretary and one special assistant, Systems Analysis to the First Vice President.

(5 U.S.C. 3301, 3302; E.O. 10577, 3 CFR 1954-1958 Comp., p. 218.)

UNITED STATES CIVIL SERVICE COMMISSION,
JAMES C. SPRY,
Executive Assistant to the Commissioners.

[FR Doc. 78-27845 Filed 10-2-78; 8:45 am]

[6325-01]

PART 213—EXCEPTED SERVICE

Department of Treasury; Department of Commerce; Administrative Office of the U.S. Courts

AGENCY: Civil Service Commission.

ACTION: Final rule.

SUMMARY: This amendment excepts under schedule C certain positions at the Department of Treasury, Department of Commerce, and Administrative Office of the U.S. Courts because they are confidential in nature. Appointments may be made to these positions without examination by the Civil Service Commission.

EFFECTIVE DATE: September 14, 1978.

FOR FURTHER INFORMATION CONTACT:

Michael Sherwin, 202-632-4533.

Accordingly, 5 CFR 213.3305(a)(80) and 213.3314(r)(12) are added and 213.3372 is amended as set out below:

§ 213.3305 Department of Treasury.

(a) *Office of the Secretary.* • • •

(80) One special assistant to the Assistant Secretary (Domestic Finance).

• • • • • •

§ 213.3314 Department of Commerce.

(r) *National Oceanic and Atmospheric Administration.* • • •

(12) One deputy director to the Director, Office of Congressional Liaison.

• • • • • •

§ 213.3372 Administrative Office of the U.S. Courts.

(a) *Office of the Director.*

(1) One legislative liaison officer.

(2) One legislative analyst/adviser.

(5 U.S.C. 3301, 3302; EO 10577, 3 CFR 1954-1958 Comp., p. 218.)

UNITED STATES CIVIL SERVICE COMMISSION,
JAMES C. SPRY,
Executive Assistant to the Commissioners.

[FR Doc. 78-27843 Filed 10-2-78; 8:45 am]

[6325-01]

PART 213—EXCEPTED SERVICE

Executive Office of the President; Department of Energy; Small Business Administration

AGENCY: Civil Service Commission.

ACTION: Final rule.

SUMMARY: This amendment excepts under schedule C certain positions in the Executive Office of the President, Department of Energy, and Small Business Administration because they are confidential in nature. Appointments may be made to these positions without examination by the Civil Service Commission.

EFFECTIVE DATE: September 7, 1978.

FOR FURTHER INFORMATION CONTACT:

Michael Sherwin, 202-632-4533.

Accordingly, 5 CFR 213.3303(a)(1) and 213.3331(h)(1) are amended and 213.3332(j) is added as set out below:

§ 213.3303 Executive Office of the President.

(a) *Office of Management and Budget.*

(1) Five secretaries to the Director.

• • • • • •

§ 213.3331 Department of Energy.

• • • • • •

(h) *Office of the Assistant Secretary for Conservation and Solar Applications.*

(1) One confidential assistant (secretary), one staff assistant, and one executive assistant to the Assistant Secretary.

• • • • • •

§ 213.332 Small Business Administration.

• • • • • •

(j) One special assistant to the Director, Office of Public Communications.

(5 U.S.C. 3301, 3302; E.O. 10577, 3 CFR 1954-1958 Comp., p. 218.)

Title 7—Agriculture

Chapter XIV—COMMODITY CREDIT CORPORATION, DEPARTMENT OF AGRICULTURE

SUBCHAPTER C—EXPORT PROGRAMS

[Amdt. 7]

PART 1488—FINANCING OF SALES OF AGRICULTURAL COMMODITIES

Subpart A—Financing of Export Sales of Agricultural Commodities From Private Stocks Under CCC Export Credit Sales Program (GSM-5)

Miscellaneous Amendments

AGENCY: Commodity Credit Corporation, Department of Agriculture.

ACTION: Final rule.

SUMMARY: This amendment clarifies the CCC Export Credit Sales Program (7 CFR Part 1488) regulations to make it clear that U.S. banks and branch banks shall be liable without regard to risk for payment of bank obligations confirmed by them if such confirmations are made without regard to risk.

EFFECTIVE DATE: October 3, 1978.

FOR FURTHER INFORMATION CONTACT:

L. T. McElvain, telephone: 202-447-3224.

ADDRESS: Commercial Export Programs, Office of the General Sales Manager, U.S. Department of Agriculture, 14th Street and Independence Avenue, SW., Washington, D.C. 20250.

SUPPLEMENTARY INFORMATION: This amendment to the CCC Export Credit Sales Program makes it clear that U.S. banks and branch banks shall be liable without regard to risk for payment of bank obligations confirmed by them if such confirmations are made without regard to risk. Since the amendment is merely for clarification of the regulations, it is hereby found and determined that compliance with the procedure in Executive Order 12044 is unnecessary. Therefore, this amendment is issued without compliance with such procedure.

FINAL RULE

Accordingly, Part 1488 of 7 CFR containing the terms and conditions of the CCC Export Credit Sales Program Regulations (GSM-5) (42 FR 10999, corrected at 42 FR 13535 and 42 FR 13561, and amended at 42 FR 27569, 42 FR 30833, 42 FR 57949, 43 FR 1786, 43 FR 25991 and 43 FR 29932), is hereby amended as follows:

§ 1488.12 [Amended]

In § 1488.12, paragraph (a) is amended by (i) adding after the words "confirmed by them" the words "without regard to risk" and (ii) adding before the period at the end of paragraph (a) the words "or (iii) as provided in paragraphs (c) and (d)."

(Sec. 5(f), 62 Stat. 1072 (15 U.S.C. 714c); sec. 4, 80 Stat. 1528 (7 U.S.C. 1707))

Signed at Washington, D.C., on September 26, 1978.

KELLY HARRISON,
Vice President, Commodity Credit Corporation and General Sales Manager, Office of the General Sales Manager.

[FR Doc. 78-27926 Filed 10-2-78; 8:45 am]

[6355-01]

Title 16—Commercial Practices

SUBCHAPTER C—FEDERAL HAZARDOUS SUBSTANCES ACT REGULATIONS

PART 1505—REQUIREMENTS FOR ELECTRICALLY-OPERATED TOYS OR OTHER ELECTRICALLY-OPERATED ARTICLES INTENDED FOR USE BY CHILDREN

Amendments to Power Cord Requirements

AGENCY: Consumer Product Safety Commission.

ACTION: Final rule.

SUMMARY: The Commission amends the Requirements for Electrically-Operated Toys or Other Electrically-Operated Articles Intended for Use by Children (16 CFR Part 1505). The amendment will allow the use of several types of acceptable cords with handheld educational or hobby-type electrical products intended for heating, such as woodburning tools, rather than the one type cord previously specified in the regulation. The type cord used will depend on the weight of the product. In addition, the Commission amends the regulation to clarify that cords can be no smaller than No. 18 AWG (American wire gauge) in conductor cross sectional area for all electrically-operated toys or other electrically-operated articles intended for use by children, to provide adequate short circuit protection against fire and shock.

EFFECTIVE DATE: The amendments are effective October 3, 1979. The amendments are applicable to all subject products introduced into interstate commerce on or after the effective date.

FOR FURTHER INFORMATION CONTACT:

David W. Thome, Directorate for Compliance and Enforcement, Consumer Product Safety Commission, Washington, D.C. 20207 301-492-6400.

SUPPLEMENTAL INFORMATION: In the FEDERAL REGISTER of March 14, 1978 (43 FR 10575), the Consumer Product Safety Commission (CPSC) proposed for public comment amendments to 16 CFR Part 1505, Requirements for Electrically-Operated Toys or Other Electrically-Operated Articles Intended for Use by Children. The proposed amendment to § 1505.5(e)(5) would allow the use of several types of cords, depending upon the product's weight, for hand-held educational or hobby-type products intended for heating, such as woodburning tools.

The purpose of the proposed amendment is to require lighter, more flexible cords to be used on such products weighing ½ pound or less to reduce the cord's influence on the possibility of the product's tipping over. Cords with greater insulation would be required on those products weighing more than ½ pound. The Commission believes this amendment is necessary if these electrical toys are not to present an unreasonable risk of personal injury due to a thermal hazard caused by their tipping over.

§ 1505.5(e)(5) of the standard required in part that power cords on toys be type SP-2 as defined in the National Electric Code (NEC) or its equivalent, or a heavier general-use type. A cord equivalent to SP-2, or a heavier general use type would under the NEC, be a cord having a wire gauge no smaller than 18 AWG. The Commission in the proposal stated it was amending the standard to require the use of cords having a minimum wire gauge of 18 AWG. In fact, the amendment only clarifies that 18 AWG is the smallest size wire gauge that could be used since the regulation in effect already required a minimum 18 AWG wire. Wire gauges smaller than 18 AWG create the possibility that the cord, in the event of a short circuit, will smolder and burn and expose live parts rather than opening a fuse or circuit breaker. The Commission believes the requirement for a minimum 18 AWG cord is necessary if electrically-operated products intended for use by children are not to present an unreasonable risk of personal injury due to electric shock and fire hazards.

V 43 / 192 OCT 3 1978 UMI

COMMENTS RECEIVED

The proposal of March 14, 1978 invited interested persons to submit written comments on or before May 15, 1978. Two comments were received: One from a manufacturer and one from a professional engineer.

The manufacturer stated that few, if any, retailers buy or sell electrical products that are not UL approved. Because of this, the commenter suggested that, since the Commission's proposed amendment is based on current UL standards, the requirement should be changed to permit any cords complying with current UL standards.

The Commission acknowledges that the amendments are based on the current cord requirements in the Underwriters Laboratories standard for electric heating applicances, UL 499. However, while all the cord types specified in the amendment set forth below are approved by UL, the converse is not true. There are some cords included in UL 499 for use on hand-held hobby products weighing less than ½ pound that would not be permitted by this amendment. These cords, types TP, TPT and XT, may have current carrying conductors smaller than 18 AWG, the minimum believed by the Commission to be necessary to insure adequate short circuit protection. In addition, it is the Commission's policy to incorporate in its regulations only requirements in a voluntary standard effective as of a particular date. Amendments to voluntary standards that have been referenced in Commission regulations will be considered by the Commission and amendments to its regulations will be proposed as appropriate. If this procedure were not followed, Commission regulations could change without action by the Commission and without notice to the public and an opportunity for public comment.

The professional engineer commented that the requirement for cord selection based on the product's weight fails to anticipate design configurations such as a shift of the center of gravity or guarding that could eliminate tipover problems. The commenter stated that a product weighing more than ½ pound may have its weight distributed in such a way that it may have a greater potential for tipover than a lighter product.

The requirement for lighter, more flexible cords (Types SP-1 SPT-1 and HPD) for appliances weighing ½ pound or less is intended to reduce risk of personal injury from fire or shock by minimizing the influence of the cord on the possibility of the appliance's tipping over. The regulation does not preclude any design concepts, such as shifting the center of gravity or providing guards, that could also address tipover problems. For heavier products, the Commission believes the protection provided by cords with thicker insulation than types SP-1 and SPT-1 overrides the remote possibility that a design feature of a heavier product would present a greater tipover hazard than lighter products.

This commenter also stated that the proposed amendment to section 1505.5(e)(6), requiring a minimum of 18 AWG rather than 20 AWG, is not supported by test data.

The amendment to the regulation does not impose a new requirement upon manufacturers. No. 20 AWG wire is not allowed in electrically operated toys under the existing regulation. No. 18 AWG wire conductor is one trade size larger than No. 20 AWG. No 20 AWG wire in laboratory tests conducted by the Commission has smoked and burned under conditions forseeable with electric toys. It is the Commission's view that No. 18 AWG is necessary to assure that under the anticipated conditions of use of hand-held products where there is considerable flexing of the cord in close proximity to the child, the fuse or circuit breaker would trip in the event a short circuit occurs to avoid a burn or fire. The Commission believes that reducing the conductor size a minimum of 18 AWG to 20 AWG, as the commenter suggests would be contrary to current safe practices intended to provide protection from short circuits since a product with a power cord having conductors smaller than 18 AWG could, in a short circuit situation, overheat and cause a fire without causing the fuse or circuit breaker to trip.

ENVIRONMENTAL CONSIDERATIONS

The CPSC's interim environmental review procedures, 16 CFR 1021.5, provide that an environmental review is generally not required for amendments to an existing standard that do not alter the principal purpose or effect of the standard. The amendments below do not alter the principal purpose or effect of the electrical toy regulations. They allow manufacturers to use a variety of cords on products subject to the amendments rather than just one type cord. The Commission stated in its proposal that it did not believe there would be any significant environmental effects which would necessitate an environmental review from the promulgation of these amendments. No comments were received relevant to this issue and no information is available to the Commission that would alter this position.

CONCLUSION

The Commission has considered the potential thermal hazard presented by hand-held educational or hobby-type products intended for heating, such as woodburning tools, due to tipping over because of the influence of the electrical cord, and it has considered the potential or electric shock and fire hazards if cords smaller than 18 AWG are used on electrically-operated products intended for use by children. The Commission has also considered the comments received in response to its March 14, 1978 proposal and has concluded that the amendments set forth below are necessary.

Accordingly, pursuant to provisions of the Federal Hazardous Substances Act section 2 (f)(1)(D), (r), (s), (t), 3(e)(1), 74 Stat. 372, 374, 375, as amended, 83 Stat. 187-189, 15 U.S.C. 1261, 1262) and under authority vested in the Commission by the Consumer Product Safety Act (Pub. L. 92-573, section 30(a), 86 Stat. 1231, 15 U.S.C. 2079(a)), the commission amends title 16 CFR Part 1505 as follows:

1. Section 1505.5(e) (5) and (6) are amended to read as follows:

§ 1505.5 Electrical design and construction.

* * * * * *

(e) *Power supply connections (cords and plugs).* * * *

(5) A flexible electrical power cord provided on a toy shall be type SP-2 (as defined in the "National Electrical Code," Chapter 4, article 400, pages 230-241 (1978), [1] published by the National Fire Production Association), or its equivalent, or a heavier general-use type, and shall not be less than 5 feet nor more than 10 feet in length when measured as the overall length of the attached cord outside the enclosure of the toy, including fittings up to the face of the attachment-plug cap. However, hand-held educational or hobby-type products intended for heating, such as woodburning tools, shall use one of the type cords designated below, in accordance with the weight of the product without the cord:

Weight of appliance (without cord)	*and cord type*
½ lb. (0.227 kg) and lighter:	SP-1, SPT-1, HPD.
Heavier than ½ lb. (0.227 kg):	SP-2, SPT-2, SV, SVO, SVT, SVTO, HPD, HPN, SJ, SJO, SJT, SJTO.

(6) A flexible cord and plug shall have a current-carrying capacity of not less than the ampere rating of the toy, and the conductor of the cord shall have a cross sectional area no less than No. 18 AWG (American wire gauge).

* * * * * *

Effective date: These amendments are effective October 3, 1979.

The Commission had suspended the application of the existing 16 CFR 1505.3(e)(5) regarding the type of cord to be used with hand-held educational or hobby-type products, such as woodburning tools (39 FR 2611, January 23, 1974). This suspension remains in effect until the effective date of these amendments.

(Sections 2 (f)(1)(D), (r), (s), (t), 3(e)(1), 74 Stat. 372, 374, 375, as amended, 83 Stat. 187-189 (15 U.S.C. 1261, 1262); section 30(a), 86 Stat. 1231 (15 U.S.C. 2079 (a)).)

Dated: September 28, 1978.

SADYE E. DUNN,
Consumer Product Safety Commission.

Title 18—Conservation of Power and Water Resources

CHAPTER I—FEDERAL ENERGY REGULATORY COMMISSION

SUBCHAPTER E—REGULATIONS UNDER THE NATURAL GAS ACT

PART 154—RATE SCHEDULES AND TARIFFS

[Docket No. RM78-23]

Interstate Pipeline Recovery of State of Louisiana First Use Tax

AGENCY: Federal Energy Regulatory Commission.

ACTION: Final rule.

SUMMARY: This rule establishes certain procedures for recovery of the Louisiana first use tax by interstate natural gas pipelines. On July 6, 1978, the Governor of Louisiana signed into law the tax which is proposed to become effective April 1, 1979. The Commission has directed the Commission's Solicitor to challenge the constitutionality of the tax in Federal District Court and to seek to enjoin collection of the tax by Louisiana pending completion of judicial review. The rule sets forth the rate treatment and accounting procedures to be followed during the pendency of the litigation.

EFFECTIVE DATE: August 28, 1978.

FOR FURTHER INFORMATION CONTACT:

Charles E. Bullock, Office of General Counsel, Federal Energy Regulatory Commission, Washington, D.C. 20426, 202-275-4232.

On July 6, 1978, the Governor of Louisiana signed into law the Louisiana first use tax. The tax of 7 cents per Mcf would be imposed on certain gas in interstate commerce which passes through the State of Louisiana. The tax is proposed to become effective as of April 1, 1979. Therefore the Commission has determined that certain procedures should be established for recovery of this tax by interstate natural gas pipelines. It is particularly appropriate to establish such procedures in light of the fact that this Commission on August 16, 1978, directed the Commission's Solicitor to challenge the constitutionality of the tax in Federal District Court and to seek to enjoin collection of the tax by Louisiana pending completion of judicial review. In addition, the Commission authorized the Solicitor to seek intervention, or to otherwise set forth the views of this Commission, in any other forums where the constitutionality of the tax may be challenged.[1]

Should the collection of the tax be enjoined by the courts during the entire period the validity of the tax is pending in court, no collection of such amounts by pipelines in their jurisdictional rates would be permitted by this Commission until such time as the tax is found to be lawful by a final and nonappealable court order. In that event, the pipelines shall keep account of their contingent tax liability during the pendency of court review. Appropriate rate relief will be granted if the tax is ultimately held to be valid and constitutional.

Should the tax be required to be paid by the pipeline during the pendency of the litigation, the Commission requires that the pipelines record in a separate account the amounts paid, plus carrying charges at 9 percent per annum or such other rate as the Commission may establish. No costs reflecting the tax shall be permitted in the pipelines' rates until such time as the tax is determined to be constitutional and valid by a final and nonappealable order.

The Commission is concerned that there may not be an adequate remedy in Louisiana State law to permit pipelines to recover amounts paid (even under protest) in the event the tax is collected during the period of litigation and is later found to be unconstitutional. However, if the interstate pipelines subject to the tax can show that (1) they have undertaken those legal actions available to them to determine the constitutionality of the tax and (2) they in fact can recover the amounts paid from Louisiana in the event the tax is paid under protest and later found to be invalid, the Commission will permit the filing of applications under which the pipelines would collect the tax, subject to refund, pursuant to a temporary tracking provision similar to a purchased gas adjustment clause. Any funds collected pursuant to such a tracking provision must be escrowed pending the outcome of the court litigation. Upon a final and nonappealable court order finding the tax invalid, the funds in the escrow account shall be promptly refunded to the pipelines' customers. Such applications would only be permitted where the tax is required to be paid by the pipelines during the pendency of the court litigation.

It is important that this order be issued without notice and public comment procedures to put pipelines on notice that they will not be permitted to reflect the Louisiana first use tax in general section 4 rate cases (which usually involve a 30-day notice period plus a 5-month suspension by the Commission) in order to collect the Louisiana first use tax. If pipelines were planning to file general rate cases to collect the tax, they would have to commence preparation of such cases immediately in order to make the rates effective by April 1, 1979, which is the proposed effective date of the tax.

The Commission finds: For the reasons discussed in the body of this order good cause exists to issue this rule without notice and public comment procedure. For the same reasons there is good cause to make this regulation effective immediately.

The Commission, acting pursuant to authority granted by the Natural Gas Act, as amended, particularly sections 4, 5 and 16 thereof (52 Stat. 822, 824, 830; 56 Stat. 83, 84; 61 Stat. 459; 76 Stat. 72; 15 U.S.C. 717c, 717f, 717o) and in accordance with sections 552 and 553 of title 5 of the United States Code, orders:

(A) Section 154.38 is amended by adding a new paragraph (h) to read as follows:

§ 154.38 Composition of rate schedule.

* * * * * *

(h) *Pipeline recovery of the State of Louisiana first use tax.* (1) Subject to the conditions set forth in subparagraph (2), no pipeline shall be permitted to reflect costs associated with the Louisiana first use tax in its rates prior to the date the tax is determined to be valid and constitutional by a final and nonappealable court order. (2) Should a pipeline be required to pay the Louisiana first use tax during the pendency of litigation of the constitutionality of the tax, the pipeline will be permitted to collect the tax

[1] In addition, the Commission directed the Solicitor to inform other interested Federal agencies of the Commission's decision to challenge the constitutionality of the tax.

V 43 / 192 OCT 3 1978 UMI

subject to refund if it can show: (a) It has undertaken all legal action available to it to determine the constitutionality of the tax, and (b) it will be able to recover the tax paid by them to the State of Louisiana in the event the tax is declared invalid by a final, nonappealable court order. Should such a showing be made, the Commission will establish by order temporary procedures to permit pipelines to recover the taxes. Funds collected will be held in escrow and subject to refund during the pendency of litigation. Absent such a showing, the pipeline will remain subject to subparagraph (1).

(B) The order is hereby made effective upon issuance.

(C) The Secretary shall cause prompt publication of this order in the FEDERAL REGISTER.

By the Commission.

KENNETH F. PLUMB,
Secretary.

Title 20—Employees' Benefits

CHAPTER III—SOCIAL SECURITY ADMINISTRATION, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

[Reg. No. 16]

PART 416—SUPPLEMENTAL SECURITY INCOME FOR THE AGED, BLIND, AND DISABLED

Exclusion of Receipts From Lands Held in Trust for Indian Tribes From Countable Income and Resources

AGENCY: Social Security Administration, HEW.

ACTION: Final regulations.

SUMMARY: These rules exclude certain receipts distributed to members of Indian tribes from consideration as income or a resource under the Supplemental Security Income (SSI) program. The receipts are derived from certain submarginal lands conveyed to Indian tribes and held in trust by the United States. Exclusion of the receipts will preclude the denial or reduction of financial assistance or other benefits to which tribal members or households would otherwise be entitled under the Social Security Act or any other Federal or federally assisted program. The regulation implements in part section 6 of Pub. L. 94-114, October 17, 1975.

EFFECTIVE DATE: These rules shall be effective October 3, 1978. However, in accordance with the law which these rules reflect, the exclusions are effective October 17, 1975.

FOR FURTHER INFORMATION CONTACT:

Mr. S. J. Weissman, Legal Assistant, Social Security Administration, 6401 Security Boulevard, Baltimore, Md. 21235, telephone: 301-594-7341.

SUPPLEMENTARY INFORMATION: On April 28, 1978, these amendments to the regulations were published (43 FR 18205) as a Notice of Proposed Rulemaking.

BACKGROUND

Submarginal Indian lands were originally purchased by the United States as part of the general emergency relief measures necessitated by the severe depression of the 1930's and a series of natural disasters. These parcels were acquired under title II of the National Industrial Recovery Act of June 16, 1933 (48 Stat. 200); the Emergency Relief Appropriation Act of April 8, 1935 (49 Stat. 115); and section 55 of the Act of August 24, 1955 (49 Stat. 750, 781).

Subsequent to these purchases Congress enacted legislation (the act of July 20, 1956 (70 Stat. 581), the act of August 2, 1956 (70 Stat. 941), the act of October 9, 1972 (86 Stat. 795), and section 1 of the act of October 13, 1972 (86 Stat. 806)) which conveyed in trust for certain Indian tribes some of the parcels which were purchased during the Depression. The accrued income, however, was not generally transferred to the appropriate Indian tribes.

DISCUSSION OF PUB. L. 94-114

Pub. L. 94-114 conveyed the remaining submarginal lands from the United States to the various Indian tribes to be held in trust by the United States and the accrued income of the lands previously conveyed under acts cited in the prior paragraph.

Section 5(a) of Pub. L. 94-114 provides that receipts derived from property conveyed by Pub. L. 94-114, the act of July 20, 1956, the act of August 2, 1956, the act of October 9, 1972, and section 1 of the act of October 13, 1972, which were received by the United States subsequent to such acquisition by the United States and prior to conveyance back to the Indian tribes will be deposited to the credit of the Indian tribe receiving such land. Excluded are receipts received prior to the enactment of Pub. L. 94-114 from the leasing of public domain minerals which were subject to the Mineral Leasing Act of 1920 (41 Stat. 437) as amended and supplemented. Section 5(b) provides that receipts derived by the United States subsequent to enactment of Pub. L. 94-114 from any contract, permit, or lease or otherwise will be deposited to the credit of the Indian tribes receiving such land.

Section 6 of Pub. L. 94-114 further provides that any such receipts distributed to members of Indian tribes shall not be considered income or resources or otherwise utilized as a basis for denying or reducing the financial assistance or other benefits to which such household or member would otherwise be entitled to under the Social Security Act or any other Federal or federally assisted program.

The exclusion (as authorized by Pub. L. 94-114) applies to receipts derived from lands of the following Indian tribes:

Tribe	Reservation	State
1. Bad River Band of the Lake Superior Tribe of Chippewa Indians of Wisconsin.	Bad River	Wisconsin.
2. Blackfeet Tribe	Blackfeet	Montana.
3. Cherokee Nation of Oklahoma.		Oklahoma.
4. Cheyenne River Sioux Tribe.	Cheyenne River.	South Dakota.
5. Crow Creek Sioux Tribe.	Crow Creek	Do.
6. Lower Brule Sioux Tribe.	Lower Brule	Do.
7. Devil's Lake Sioux Tribe.	Fort Totten	North Dakota.
8. Fort Belknap Indian Community.	Fort Belknap	Montana.
9. Assiniboine and Sioux Tribes.	Fort Peck	Do.
10. Lac Courte Oreilles Band of Lake Superior Chippewa Indians.	Lac Courte Oreilles.	Wisconsin.
11. Keweenaw Bay Indian Community.	L'Anse	Michigan.
12. Minnesota Chippewa Tribe.	White Earth	Minnesota.
13. Navajo Tribe	Navajo	New Mexico.
14. Oglala Sioux Tribe.	Pine Ridge	South Dakota.
15. Rosebud Sioux Tribe.	Rosebud	Do.
16. Shoshone-Bannock Tribe.	Fort Hall	Idaho.
17. Standing Rock Sioux Tribe.	Standing Rock.	North Dakota and South Dakota.
18. Seminole Indians		Florida.
19. Pueblos of Zia and Jemez.		New Mexico.
20. Stockbridge Munsee Indian Community.		Wisconsin.
21. Burns Indian Colony.		Oregon.

THE FINAL REGULATIONS

Sections 416.1146(n) and 416.1236(a)(13) are being added to provide that the receipts derived from the lands described above will be excluded as income or a resource in the SSI program.

DISCUSSION OF COMMENTS

Interested persons were given the opportunity to submit, within 30 days, data, views, or arguments with regard to the proposed amendments. Three comments were received and are discussed below.

COMMENT: Two commenters agreed with these amendments and suggested that the exclusion be extended to the Aid to Families with Dependent Children (AFDC) program.

RESPONSE: The exclusion contained in these amendments is, in fact, applicable to the AFDC program. Section 6 of Pub. L. 94-114, upon which these amendments are based, provides that such receipts distributed to members of Indian tribes shall not be considered income or resources or otherwise utilized as a basis for denying or reducing the financial assistance or other benefits under the Social Security Act, or any other Federal or federally assisted program. The Department is publishing in this issue of the FEDERAL REGISTER a similar amendment to Part 233 of Title 45 of the Code of Federal Regulations, which applies to the AFDC program.

COMMENT: One commenter stated that these amendments are not fair or equitable. The commenter points out that the very people who benefit from this exclusion are "double dippers" in the sense that the land they receive their income from does not contribute taxes from which they receive their benefits. In addition, the commenter states that all persons receiving public assistance should meet the same criteria.

RESPONSE: Elimination of this exclusion is beyond the scope of these regulations as the exclusion is specifically required by section 6 of Pub. L. 94-114.

(Sections 1102, 1611, 1612, 1613, and 1631 of the Social Security Act, 49 Stat. 647, as amended, 86 Stat. 1466, 86 Stat. 1468, 86 Stat. 1470, and 86 Stat. 1475; (42 U.S.C. 1302, 1382, 1382a, 1382b, and 1383); sec. 6 of Pub. L. 94-114, 89 Stat. 579.)

(Catalog of Federal Domestic Assistance Program No. 13.807, Supplemental Security Income Program.)

Accordingly these amendments are hereby adopted without change as set forth below.

Dated: August 16, 1978.

DON WORTMAN,
Acting Commissioner of Social Security.

Approved: September 26, 1978.

JOSEPH A. CALIFANO, Jr.,
Secretary of Health, Education, and Welfare.

Part 416 of Chapter III of Title 20 of the Code of Federal Regulations is amended as set forth below:

1. Section 416.1146 is amended by adding paragraph (n) to read as follows:

§ 416.1146 Exclusions from income; provided by other statutes.

For the purpose of § 416.1145(a), payments or benefits provided under a Federal statute other than title XVI of the Social Security Act where exclusion from income is required by such statute include:

* * * * *

(n) Effective October 17, 1975, pursuant to section 6 of Pub. L. 94-114 (89 Stat. 577, 25 U.S.C. 459c) receipts distributed to members of certain Indian tribes which are referred to in section 5 of Pub. L. 94-114 (89 Stat. 577, 25 U.S.C. 459d).

2. Section 416.1236 is amended by adding paragraph (a)(13) to read as follows:

§ 416.1236 Exclusions from resources; provided by other statutes.

(a) For the purpose of § 416.1210(j), payments or benefits provided under a Federal statute other than title XVI of the Social Security Act where exclusion from resources is required by such statute include:

* * * * *

(13) Effective October 17, 1975, pursuant to section 6 of Pub. L. 94-114 (89 Stat. 577, 25 U.S.C. 459e), receipts distributed to members of certain Indian tribes which are referred to in section 5 of Pub. L. 94-114 (89 Stat. 577, 25 U.S.C. 459d).

[FR Doc. 78-27936 Filed 10-2-78; 8:45 am]

[4110-03]

Title 21—Food and Drugs

CHAPTER I—FOOD AND DRUG ADMINISTRATION, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

SUBCHAPTER A—GENERAL

PART 14—PUBLIC HEARING BEFORE A PUBLIC ADVISORY COMMITTEE

Topical Analgesic Panel; Termination

AGENCY: Food and Drug Administration.

ACTION: Final rule.

SUMMARY: In accordance with the public advisory committee procedures, this document announces the termination of the Topical Analgesic Panel and amends the regulation listing the standing advisory committees. The Panel was terminated on August 8, 1978, because it was no longer needed.

EFFECTIVE DATE: October 3, 1978.

FOR FURTHER INFORMATION CONTACT:

Lee Geismar, Bureau of Drugs (HFD-510), Food and Drug Administration, Department of Health, Education, and Welfare, 5600 Fishers Lane, Rockville, Md. 20857, 301-443-4960.

SUPPLEMENTARY INFORMATION: The Topical Analgesic Panel reviewed and evaluated available data concerning the safety and effectiveness of nonprescription topical analgesic drug products. Its report on OTC Topical Otics was published in the FEDERAL REGISTER of December 16, 1977 (42 FR 63556). Its report on skin protectants was published in the FEDERAL REGISTER of August 4, 1978 (43 FR 34628), and its report on sunscreens was published in the FEDERAL REGISTER of August 25, 1978 (43 FR 38206). Further conclusions and recommendations regarding external analgesics will be published in future issues of the FEDERAL REGISTER.

Accordingly, the Panel is no longer needed because its purpose has been served. On August 8, 1978, the Panel was abolished by the Secretary, Department of Health, Education, and Welfare, as the Commissioner of Food and Drugs requested.

Therefore, under the Federal Food, Drug, and Cosmetic Act (sec. 701(a), 52 Stat. 1055 (21 U.S.C. 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), part 14 is amended in § 14.100 List of standing advisory committees by deleting paragraph (c)(20)(i)(*f*) and marking it reserved.

V 43 / 192 OCT 3 1978 UMI

Effective date: Since this is a technical conforming amendment to part 14 (21 CFR Part 14), the Commissioner finds that there is good cause for the rule to be effective immediately upon publication in the FEDERAL REGISTER, October 3, 1978.

(Sec. 701(a), 52 Stat. 1055 (21 U.S.C. 371(a)).)

Dated: September 27, 1978.

WILLIAM F. RANDOLPH,
Acting Associate Commissioner for Regulatory Affairs.

[4110-03]

SUBCHAPTER B—FOOD FOR HUMAN CONSUMPTION

[Docket No. 76P-0354]

PART 146—CANNED FRUIT JUICES

Standards of Identity for Frozen Concentrate for Lemonade and Colored Lemonade; Confirmation of Effective Date

AGENCY: Food and Drug Administration.

ACTION: Confirmation of effective date.

SUMMARY: This document confirms the effective date of the stayed provision of the final regulation that revised the standards of identity for frozen concentrate for lemonade and frozen concentrate for colored lemonade.

EFFECTIVE DATES: Compliance with the final regulations, except for the stayed provision, including any labeling changes, could have begun December 14, 1976. Compliance with the provision confirmed by this document may begin October 3, 1978, and all products initially introduced into interstate commerce after July 1, 1979, shall fully comply.

FOR FURTHER INFORMATION CONTACT:

F. Leo Kauffman, Bureau of Foods (HFF-414), Food and Drug Administration, Department of Health, Education, and Welfare, 200 C Street SW., Washington, D.C. 20204, 202-245-1164.

SUPPLEMENTARY INFORMATION: In the FEDERAL REGISTER of October 15, 1976 (41 FR 45543), the Commissioner of Food and Drugs issued a final regulation revising the standards of identity for frozen concentrate for lemonade (21 CFR 146.120) (formerly § 27.101) and frozen concentrate for colored lemonade (21 CFR 146.126) (formerly § 27.102) to: (1) Permit the use of any safe and suitable nutritive carbohydrate sweetener; (2) remove the proportionality limitation on the use of sweeteners other than sugar; and (3) require the label declaration of all optional ingredients.

The final regulation provided that any person who would be adversely affected could at any time on or before November 15, 1976, file written objections to the final regulation and, if desired, request a hearing on the specific provisions to which there were objections.

Two objections and one letter in support of the objections were received. The objections were to specific provisions of the final regulation and requested a public hearing. The Ventura Coastal Corp. and Sunkist Growers objected to the provision that would permit the use of any safe and suitable nutritive carbohydrate sweeteners, and to the fact that the standard no longer sets out a proportionality limitation on the use of sweeteners other than sugar.

The letter from the Processors Council of the California-Arizona Citrus League supported Ventura's objection and urged the Commissioner to grant its request for a hearing. The Corn Refiners Association, the petitioner, filed responses to the comments and objections after the closing date of the objection period.

In the FEDERAL REGISTER of March 21, 1978 (43 FR 11695), the Commissioner issued a notice of partial confirmation of effective date of the final regulation and stay of the provision to which objections had been filed. Section 146.120(a) was stayed to the extent that it would provide for the use of one or any mixture of safe and suitable nutritive carbohydrate sweeteners without any proportionality limitation.

Ventura Coastal Corp. and Sunkist Growers have now withdrawn their objections and requests for a hearing. Subsequently, the Processors Council of the California-Arizona Citrus League withdrew its support of the Ventura Coastal objection. Therefore, all obstacles to confirmation of the stayed provisions have been removed.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 401, 701(e), 52 Stat. 1046 as amended, 70 Stat. 919 as amended (21 U.S.C. 341, 371(e))) and under authority delegated to the Commissioner (21 CFR 5.1), notice is given that the objections received were withdrawn, and that the effective date of §§ 146.120 and 146.126, as published in the FEDERAL REGISTER of October 15, 1976, is confirmed as follows: Compliance with these regulations except for the stayed provision was permitted to begin on December 14, 1976. Compliance with the provision confirmed by this document may begin October 3, 1978, and all products initially introduced into interstate commerce on or after July 1, 1979, shall fully comply.

Dated: September 27, 1978.

WILLIAM F. RANDOLPH,
Acting Associate Commissioner for Regulatory Affairs.

[4110-03]

[Docket No. 77F-0284]

PART 176—INDIRECT FOOD ADDITIVES; PAPER AND PAPERBOARD COMPONENTS

Components of Paper and Paperboard in Contact With Aqueous and Fatty Foods

AGENCY: Food and Drug Administration.

ACTION: Final rule.

SUMMARY: This document amends the food additive regulations to provide for the safe use of a polymer as a retention and drainage aid in the manufacture of paper and paperboard for food-contact use. Betz Laboratories, Inc. filed a petition for such use.

DATES: Effective October 3, 1978; objections by November 2, 1978.

ADDRESS: Written objections to the office of the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857:

FOR FURTHER INFORMATION CONTACT:

John J. McAuliffe, Bureau of Foods (HFF-334), Food and Drug Administration, Department of Health, Education, and Welfare, 200 C Street SW., Washington, D.C. 20204, 202-472-5690.

SUPPLEMENTARY INFORMATION: Notice was given in the FEDERAL REGISTER of October 7, 1977 (42 FR 54617) that a food additive petition (FAP 6B3202) had been filed by Betz Laboratories, Inc., Somerton Road, Trevose, Pa. 19047, proposing that § 176.170 Components of paper and paperboard in contact with aqueous and fatty foods (21 CFR 176.170) be amended to provide for the safe use of diethyl(2-hydroxyethyl)methylammonium methyl sulfate, acrylate, polymer with acrylamide as a retention and drainage aid employed prior to the sheet-forming operation in the manufacture of paper and paperboard for food-contact use.

The Commissioner of Food and Drugs, having evaluated data in the petition and other relevant material, concludes that § 176.170 should be amended as set forth below.

Therefore, under the Federal Food, Drug, and Cosmetic Act (sec. 409(c)(1), 72 Stat. 1786 (21 U.S.C. 348(c)(1))) and under authority delegated to the Commissioner (21 CFR 5.1), part 176 is amended in § 176.170(a)(5) by alphabetically inserting a new item in the list of substances to read as follows:

§ 176.170 Components of paper and paperboard in contact with aqueous and fatty foods.

* * * * * * *

(a) * * *
(5) * * *

List of substances	Limitations
* * * * *	
Diethyl(2-hydroxyethyl) methylammonium methyl sulfate, acrylate, polymer with acrylamide, chemical abstract service registry No. [26796-75-8] having 90-95 mole pct. acrylamide, a nitrogen content of not more than 19.7 pct. (Kjeldahl, dry basis), and a residual acrylamide monomer content of not more than 0.1 pct. The finished polymer in a 1 pct. by weight aqueous solution has a minimum viscosity of 900 centipoises at 25° C as determined by LVT-series Brookfield viscometer using a No. 2 spindle at 12 r.p.m. (or by equivalent method).	For use only as a retention aid and drainage aid employed prior to the sheet-forming operation in the manufacture of paper and paperboard at a level not to exceed 0.15 pct. by weight of finished dry paper and paperboard fibers.

Any person who will be adversely affected by the foregoing regulation may at any time on or before November 2, 1978, submit to the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857, written objections thereto and may make a written request for a public hearing on the stated objections. Each objection shall be separately numbered and each numbered objection shall specify with particularity the provision of the regulation to which objection is made. Each numbered objection on which a hearing is requested shall specifically so state; failure to request a hearing for any particular objection shall constitute a waiver of the right to a hearing on that objection. Each numbered objection for which a hearing is requested shall include a detailed description and analysis of the specific factual information intended to be presented in support of the objection in the event that a hearing is held; failure to include such a description and analysis for any particular objection shall constitute a waiver of the right to a hearing on the objection. Four copies of all documents shall be submitted and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this regulation. Received objections may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

EFFECTIVE DATE. This regulation shall become effective October 3, 1978.

(Sec. 409(c)(1), 72 Stat. 1786 (21 U.S.C. 348(c)(1)).)

Dated: September 26, 1978.

WILLIAM F. RANDOLPH,
Acting Associate Commissioner for Regulatory Affairs.

Title 24—Housing and Urban Development

CHAPTER VIII—LOW INCOME HOUSING, DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. 78-575]

PART 260—INTEREST SUBSIDY GRANTS

Extension of Deadline

AGENCY: Department of Housing and Urban Development.

ACTION: Final rule.

SUMMARY: HUD is amending the Interest Subsidy Grant Regulations to extend the date by which State agencies must issue eligible obligations and on which HUD commitments for grants expire. This action will permit the program to continue in effect for 2 more years.

EFFECTIVE DATE: October 1, 1978.

ADDRESS: Rules Docket Clerk, Office of the General Counsel, Room 5218, HUD, 451 Seventh Street SW., Washington, D.C. 20410, 202-755-7603. This is not a toll-free number.

FOR FURTHER INFORMATION CONTACT:

Neil Churchill, Housing Program Specialist, Office of Assisted Housing Development, Office of Housing, U.S. Department of Housing and Urban Development, Room 6255, 451 Seventh Street SW., Washington, Washington, D.C. 20410, telephone 202-755-5830. This is not a toll-free number.

SUPPLEMENTARY INFORMATION: HUD is amending 24 CFR 260.5(j) to extend the deadline by which a State agency must issue an obligation pursuant to the Interest Subsidy Grant Regulations and on which the HUD commitment of interest subsidy grants terminates, from September 30, 1978, to September 30, 1980.

This rule is being published effective October 1, 1978. Notice and public procedure are impractical and contrary to the public interest because a failure to extend the deadline by the end of the fiscal year (September 30, 1978) would result in the interest subsidy grant funds being unavailable until a final rule extending the deadline was published. This unavailability of funds might constitute an impoundment of budget authority, which would be contrary to the intent of the Secretary. See the Impoundment Control Act of 1974, Pub. L. 93-344, 88 Stat. 297, 332 et seq.

A Finding of Inapplicability with respect to Environmental Impact has been prepared in accordance with HUD Handbook 1390.1. A copy of the Finding is available for inspection in the Office of the Rules Docket Clerk at the address set forth above.

Accordingly, 24 CFR 260.5(j) is revised to read:

§ 260.5 Program standards.

* * * * * *

(j) A commitment of interest subsidy grants under this part shall automatically terminate in the event the applicant fails to issue the eligible obligation for which the grants were requested within 90 days after the issue date specified in its application, except that one extension period of 30 days may be permitted at the discretion of the Federal Housing Commissioner. However, in no event may the obligation be issued any later than September 30, 1980. The commitment of interest subsidy grants under this part shall automatically terminate if the applicant fails to issue the eligible obligation prior to September 30, 1980.

* * * * * *

(Sec. 7(d), Department of Housing and Urban Development (42 U.S.C. 3535(d)).)

Issued at Washington, D.C., September 29, 1978.

LAWRENCE B. SIMONS,
Assistant Secretary for Housing, Federal Housing Commissioner.

CHAPTER X—FEDERAL INSURANCE ADMINISTRATION, DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

SUBCHAPTER B—NATIONAL FLOOD INSURANCE PROGRAM

[Docket No. FI-4161]

PART 1917—APPEALS FROM FLOOD ELEVATION DETERMINATION AND JUDICIAL REVIEW

Final Flood Elevation Determination for the City of Oxnard, Ventura County, Calif.

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: Final base (100-year) flood elevations are listed below for selected locations in the city of Oxnard, Ventura County, Calif. These base (100-year) flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the national flood insurance program (NFIP).

EFFECTIVE DATE: The date of issuance of the flood insurance rate map (FIRM), showing base (100-year) flood elevations, for the city of Oxnard, Calif.

ADDRESS: Maps and other information showing the detailed outlines of the flood-prone areas and the final elevations for the city of Oxnard, Ventura County, Calif., are available for review at city hall, 305 West Third Street, Oxnard, Calif.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410, 202-755-5581 or toll-free line 800-424-8872.

SUPPLEMENTARY INFORMATION: The Federal Insurance Administrator gives notice of the final determinations of flood elevations for the city of Oxnard, Calif.

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), 87 Stat. 980, which added section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448), 42 U.S.C. 4001-4128, and 24 CFR 1917.4(a)). An opportunity for the community or individuals to appeal this determination to or through the community for a period of ninety (90) days has been provided. No appeals of the proposed base flood elevations were received from the community or from individuals within the community.

The Administrator has developed criteria for flood plain management in flood-prone areas in accordance with 24 CFR Part 1910.

The final base (100-year) flood elevations for selected locations are:

Source of flooding	Location	Elevation in feet, national geodetic vertical datum
Beardsley Wash	0.51 mi upstream of Wright Rd.	170
	0.33 mi upstream of Wright Rd.	163
	0.27 mi upstream of Wright Rd.	150
	Wright Rd.....	147
	500 ft downstream of Wright Rd.	120
	1,250 ft downstream of Wright Rd.	115
	0.34 mi downstream of Wright Rd.	106
	0.43 mi downstream of Wright Rd.	101

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended (42 U.S.C. 4001-4128); and Secretary's delegation of authority to Federal Insurance Administrator, 43 FR 7719.)

Issued: August 8, 1978.

GLORIA M. JIMENEZ,
Federal Insurance Administrator.

These base (100-year) flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the national flood insurance program (NFIP).

EFFECTIVE DATE: The date of issuance of the flood insurance rate map (FIRM), showing base (100-year) flood elevations, for Cobb County, Ga.

ADDRESS: Maps and other information showing the detailed outlines of the flood-prone areas and the final elevations for Cobb County, Ga., are available for review at Cobb County Courthouse, 10 East Park Square, Marietta, Ga.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410, 202-755-5581 or toll-free line 800-424-8872.

SUPPLEMENTARY INFORMATION: The Federal Insurance Administrator gives notice of the final determinations of flood elevations for Cobb County, Ga.

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), 87 Stat. 980, which added section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448), 42 U.S.C. 4001-4128, and 24 CFR 1917.4(a)). An opportunity for the community or individuals to appeal this determination to or through the community for a period of ninety (90) days has been provided. No appeals of the proposed base flood elevations were received from the community or from individuals within the community.

The Administrator has developed criteria for flood plain management in flood-prone areas in accordance with 24 CFR Part 1910.

The final base (100-year) flood elevations for selected locations are:

Source of flooding	Location	Elevation in feet, national geodetic vertical datum
Chattahoochee River.	I-20	760
	I-75	774

[Docket No. FI-4202]

PART 1917—APPEALS FROM FLOOD ELEVATION DETERMINATION AND JUDICIAL REVIEW

Final Flood Elevation Determination for the city of Naperville, DuPage County, Ill.

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: Final base (100-year) flood elevations are listed below for selected locations in the city of Naperville, DuPage County, Ill. These base (100-year) flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the national flood insurance program (NFIP).

EFFECTIVE DATE: The date of issuance of the flood insurance rate map (FIRM), showing base (100-year) flood elevations, for the city of Naperville, DuPage County, Ill.

ADDRESS: Maps and other information showing the detailed outlines of the flood-prone areas and the final elevations for the city of Naperville, DuPage County, Ill., are available for review at the entrance of the Council Chambers, Naperville, Ill.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410, 202-755-5581 or toll-free line 800-424-8872.

SUPPLEMENTARY INFORMATION: The Federal Insurance Administrator gives notice of the final determinations of flood elevations for the city of Naperville, DuPage County, Ill.

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), 87 Stat. 980, which added section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448), 42 U.S.C. 4001-4128, and 24 CFR 1917.4(a)). An opportunity for the community or individuals to appeal this determination to or through the community for a period of ninety (90) days has been provided. No appeals of the proposed base flood elevations were received from the community or from individuals within the community.

The Administrator has developed criteria for flood plain management in flood-prone areas in accordance with 24 CFR Part 1910.

The final base (100-year) flood elevations for selected locations are:

PART 1917—APPEALS FROM FLOOD ELEVATION DETERMINATION AND JUDICIAL REVIEW

Final Flood Elevation Determination for the Township of Masonville, Delta County, Mich.

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: Final base (100-year) flood elevations are listed below for selected locations in the township of Masonville, Delta County, Mich. These base (100-year) flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the national flood insurance program (NFIP).

EFFECTIVE DATE: The date of issuance of the flood insurance rate map (FIRM), showing base (100-year) flood elevations, for the township of Masonville, Mich.

ADDRESS: Maps and other information showing the detailed outlines of the flood-prone areas and the final elevations for the township of Masonville, Delta County, Mich., are available for review at Rapid River Fire Hall, Main Street, Rapid River, Mich.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410, 202-755-5581 or toll-free line 800-424-8872.

SUPPLEMENTARY INFORMATION: The Federal Insurance Administrator gives notice of the final determinations of flood elevations for the township of Masonville, Mich.

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), 87 Stat. 980, which added section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448), 42 U.S.C. 4001-4128, and 24 CFR 1917.4(a)). An opportunity for the community or individuals to appeal this determination to or through the community for a period of ninety (90) days has been provided. No appeals of the proposed base flood elevations were received from the community or from individuals within the community.

The Administrator has developed criteria for flood plain management in flood-prone areas in accordance with 24 CFR Part 1910.

The final base (100-year) flood elevations for selected locations are:

Source of flooding	Location	Elevation in feet, national geodetic vertical datum
Rapid River	U.S. Highway 2	592
	County Road I-26	598
	County Road I-18 (upstream side).	621
	County Road I-14	652
	Soo Line RR	658

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended (42 U.S.C. 4001-4128); and Secretary's delegation of authority to Federal Insurance Administrator, 43 FR 7719.)

Issued: August 8, 1978.

GLORIA M. JIMENEZ,
Federal Insurance Administrator.

[Docket No. FI-4190]

PART 1917—APPEALS FROM FLOOD ELEVATION DETERMINATION AND JUDICIAL REVIEW

Final Flood Elevation Determination for the Village of Lordstown, Trumbull County, Ohio

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: Final base (100-year) flood elevations are listed below for selected locations in the village of Lordstown, Trumbull County, Ohio. These base (100-year) flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the national flood insurance program (NFIP).

EFFECTIVE DATE: The date of issuance of the flood insurance rate map (FIRM), showing base (100-year) flood elevations, for the village of Lordstown, Trumbull County, Ohio.

ADDRESS: Maps and other information showing the detailed outlines of the flood-prone areas and the final elevations for the village of Lordstown, Trumbull County, Ohio, are available for review at Village Administration Office, Village of Lordstown, 1455 Salt Springs Road SW., Lordstown, Ohio 44481.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410, 202-755-5581 or toll-free line 800-424-8872.

SUPPLEMENTARY INFORMATION: The Federal Insurance Administrator gives notice of the final determinations of flood elevations for the village of Lordstown, Trumbull County, Ohio.

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), 87 Stat. 980, which added section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448), 42 U.S.C. 4001-4128, and 24 CFR 1917.4(a)). An opportunity for the community or individuals to appeal this determination to or through the community for a period of ninety (90) days has been provided. No appeals of the proposed base flood elevations were received from the community or from individuals within the community.

The Administrator has developed criteria for flood plain management in flood-prone areas in accordance with 24 CFR Part 1910.

The final base (100-year) flood elevations for selected locations are:

Source of flooding	Location	Elevation in feet, national geodetic vertical datum
Duck Creek	Just upstream of Hewitt-Gifford Rd.	896
Mud Creek	Just upstream eastern corporate limit.	873
	Just upstream Carson Salt Spring Rd.	880
	Just upstream Sooptown Rd.	919
	Just downstream State Rd. 45.	958

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended (42 U.S.C. 4001-4128); and Secretary's delegation of authority to Federal Insurance Administrator, 43 FR 7719.)

Issued: August 31, 1978.

GLORIA M. JIMENEZ,
Federal Insurance Administrator.

EFFECTIVE DATE: The date of issuance of the flood insurance rate map (FIRM), showing base (100-year) flood elevations, for the city of Toledo, Oreg.

V 43 / 192 / OCT 3 1978 UMI

ADDRESS: Maps and other information showing the detailed outlines of the flood-prone areas and the final elevations for the city of Toledo, Lincoln County, Oreg., are available for review at city hall, Toledo, Oreg.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410, 202-755-5581 or toll-free line 800-424-8872.

SUPPLEMENTARY INFORMATION: The Federal Insurance Administrator gives notice of the final determinations of flood elevations for the city of Toledo, Oreg.

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), 87 Stat. 980, which added section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448), 42 U.S.C. 4001-4128, and 24 CFR 1917.4(a)). An opportunity for the community or individuals to appeal this determination to or through the community for a period of ninety (90) days has been provided. No appeals of the proposed base flood elevations were received from the community or from individuals within the community.

The Administrator has developed criteria for flood plain management in flood-prone areas in accordance with 24 CFR Part 1910.

The final base (100-year) flood elevations for selected locations are:

Source of flooding	Location	Elevation in feet, national geodetic vertical datum
Yaquina River	At confluence with Depot Slough.	13
	Butler Bridge Road*	13
Depot Slough	1st St*	13
	Yaquina Bay Road*	13
Olalla Slough	SE 10th St*	13

*Upstream side.

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended (42 U.S.C. 4001-4128); and Secretary's delegation of authority to Federal Insurance Administrator, 43 FR 7719.)

Issued: September 5, 1978.

GLORIA M. JIMENEZ,
Federal Insurance Administrator.

PART 1917—APPEALS FROM FLOOD ELEVATION DETERMINATION AND JUDICIAL REVIEW

Final Flood Elevation Determination for the city of Sunset Valley, Travis County, Tex.

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: Final base (100-year) flood elevations are listed below for selected locations in the City of Sunset Valley, Travis County, Tex. These base (100-year) flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the national flood insurance program (NFIP).

EFFECTIVE DATE: The date of issuance of the flood insurance rate map (FIRM), showing base (100-year) flood elevations, for the city of Sunset Valley, Travis County, Tex.

ADDRESS: Maps and other information showing the detailed outlines of the flood-prone areas and the final elevations for the city of Sunset Valley, Travis County, Tex, are available for review at City Clerk's Office, Sunset Valley City Hall, Austin, Tex. 78764

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410, 202-755-5581 or toll-free line 800-424-8872.

SUPPLEMENTARY INFORMATION: The Federal Insurance Administrator gives notice of the final determinations of flood elevations for the city of Sunset Valley, Travis County, Tex.

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), 87 Stat. 980, which added section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448), 42 U.S.C. 4001-4128, and 24 CFR 1917.4(a)). An opportunity for the community or individuals to appeal this determination to or through the community for a period of ninety (90) days has been provided. No appeals of the proposed base flood elevations were received from the community or from individuals within the community.

The Administrator has developed criteria for flood plain management in flood-prone areas in accordance with 24 CFR Part 1910.

The final base (100-year) flood elevations for selected locations are:

Source of flooding	Location	Elevation in feet, national geodetic vertical datum
Sunset Valley Branch.	Just upstream of Pillow Rd.	666
	Just upstream of Lone Oak Trail.	668
Williamson Creek	Reese Rd. (extended)	670
	Western corporate limits.	708
Dry Fork Branch of Williamson Creek.	Oakdale Dr. (extended)	680

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended (42 U.S.C. 4001-4128); and Secretary's delegation of authority to Federal Insurance Administrator, 43 FR 7719.)

Issued: July 26, 1978.

[Docket No. FI-4218]

PART 1917—APPEALS FROM FLOOD ELEVATION DETERMINATION AND JUDICIAL REVIEW

Final Flood Elevation Determination for the City of Helper, Carbon County, Utah

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: Final base (100-year) flood elevations are listed below for selected locations in the city of Helper, Carbon County, Utah. These base (100-year) flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the national flood insurance program (NFIP).

EFFECTIVE DATE: The date of issuance of the flood insurance rate map (FIRM), showing base (100-year) flood elevations, for the city of Helper, Utah.

ADDRESS: Maps and other information showing the detailed outlines of the flood-prone areas and the final elevations for the city of Helper, Carbon County, Utah, are available for review at city hall, 73 South Main Street, Helper, Utah.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410, 202-755-5581 or toll-free line 800-424-8872.

SUPPLEMENTARY INFORMATION: The Federal Insurance Administrator gives notice of the final determinations of flood elevations for the city of Helper, Carbon County, Utah.

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), 87 Stat. 980, which added section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448), 42 U.S.C. 4001-4128, and 24 CFR 1917.4(a)). An opportunity for the community or individuals to appeal this determination to or through the community for a

period of ninety (90) days has been provided. No appeals of the proposed base flood elevations were received from the community or from individuals within the community.

The Administrator has developed criteria for flood plain management in flood-prone areas in accordance with 24 CFR Part 1910.

The final base (100-year) flood elevations for selected locations are:

Source of flooding	Location	Elevation in feet, national geodetic vertical datum
Price River	Poplar St.	5,804
	Ivy St. (downstream side).	5,805
	Ivy St.*	5,813
	Bridge (near Third North St.).	5,877
Spring Canyon, Wash.	Main St.*	5,880
	Hill St.*	5,907

* Upstream side.

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended (42 U.S.C. 4001-4128); and Secretary's delegation of authority to Federal Insurance Administrator, 43 FR 7719.)

Issued: August 8, 1978.

Title 26—Internal Revenue

CHAPTER I—INTERNAL REVENUE SERVICE, DEPARTMENT OF THE TREASURY

SUBCHAPTER A—INCOME TAX

[T.D. 7567]

PART 1—INCOME TAX; TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1953

Automatic Extension of Time for Filing Corporate and Individual Income Tax Returns

AGENCY: Internal Revenue Service, Treasury.

ACTION: Final regulations.

SUMMARY: This document provides final regulations relating to the automatic extension of time for filing Corporate and Individual Income Tax Returns. These regulations provide necessary guidance to the public and affect corporations and individuals seeking an automatic extension of time for filing income tax returns.

DATE: The regulations are effective for applications for automatic extensions filed after October 3, 1978.

FOR FURTHER INFORMATION CONTACT:

David Jacobson, Legislative and Regulations Division, Office of the Chief Counsel, Internal Revenue Service, 1111 Constitution Avenue NW., Washington, D.C. 20224, Attention: CC:LR:T, 202-566-3923, not a toll-free call.

SUPPLEMENTARY INFORMATION: This Treasury decision eliminates the requirement that Forms 7004 (Application for Automatic Extension of Time to File Corporate Income Tax Return), and 4868 (Application for Automatic Extension of Time to File U.S. Individual Income Tax Return), be filed in duplicate. When this regulation takes effect, only an original of these forms need be filed. Because this regulation is nonsubstantive and essentially procedural, it is found unnecessary to issue this Treasury decision with notice and public procedure. For the same reasons, this regulation is not a significant regulation under paragraph 8 of the proposed Treasury Directive appearing in the FEDERAL REGISTER for May 24, 1978 (43 FR 22319).

DRAFTING INFORMATION

The principal author of this regulation was David Jacobson of the Legislation and Regulations Division of the Office of Chief Counsel, Internal Revenue Service. However, personnel from other offices of the Internal Revenue Service and Treasury Department participated in developing the regulation, both on matters of substance and style.

ADOPTION OF AMENDMENTS TO THE REGULATIONS:

Accordingly, 26 CFR Part 1 is amended as follows:

PARAGRAPH 1. Section 1.6081 is deleted.

PARAGRAPH 2. Section 1.6081-3 is amended as follows:

1. Paragraph (a)(1) is amended by deleting the words "in duplicate".

2. Paragraph (a)(2) is amended by deleting the words "original of the" and the last sentence.

3. Paragraph (b) is amended by deleting the words "original of such" and the last sentence.

PARAGRAPH 3. Section 1.6081-4 is amended as follows:

1. Paragraph (a)(2) is amended by deleting the words "in duplicate".

2. Paragraph (a)(3) is amended by deleting the words "original of the".

3. Paragraph (a)(5) is amended by deleting the second sentence.

Because this regulation is nonsubstantive and essentially procedural, it is found unnecessary to issue it with notice and public procedure under subsection (b) of section 553 of Title 5 of the United States Code or subject to the effective date limitation of subsection (d) of that section.

This Treasury decision is issued under the authority contained in section 7805 of the Internal Revenue Code of 1954 (68A Stat. 917; 26 U.S.C. 7805).

JEROME KURTZ,
Commissioner of Internal Revenue.

Approved: September 25, 1978.

DONALD C. LUBICK,
Assistant Secretary of the Treasury.

§ 1.6081-3. Automatic extension of time for filing corporation income tax returns.

(a) *In general.* A corporation shall be allowed an automatic extension of time to the fifteenth day of the third month following the month in which falls the date prescribed for the filing of its income tax return provided the following requirements are met:

(1) An application must be prepared on Form 7004, "Application for Automatic Extension of Time to File U.S. Corporation Income Tax Return", and must be signed by a person authorized by the corporation to request such extension. Such person must be a person authorized under section 6062 to execute the return of the corporation; a person currently enrolled to practice before the Treasury Department; or after November 7, 1965, either an attorney who is a member in good standing of the bar of the highest court of a State, possession, territory, commonwealth, or the District of Columbia, or a certified public accountant duly qualified to practice in a State, possession, territory, commonwealth, or the District of Columbia.

(2) The application must be filed on or before the date prescribed for the filing of the return of the corporation with the internal revenue officer with whom the corporation is required to file its income tax return. The corporation shall make a remittance of an estimated amount of tax which shall not be less than would be required as the first installment under section 6152(a)(1) should the corporation elect to pay the tax in installments.

Upon the timely filing of Form 7004, properly prepared, the three-month extension shall be considered as allowed. If the taxpayer elects to pay in installments the tax shown on Form 7004, the installment privilege provided in section 6152(a)(1) is limited to the amount shown on the form.

(b) *Consolidated returns.* An application for an automatic extension of time for filing a consolidated return shall be made by a person authorized by the parent corporation to request such extension. Such person must be a person authorized under section 6062 to execute the return of the parent corporation; a person currently enrolled to practice before the Treasury Department; or after November 7, 1965, either an attorney who is a member in good standing of the bar of the highest court of a State, possession, territory, commonwealth, or the District of Columbia, or a certified public accountant duly qualified to practice in a State, possession, territory, commonwealth, or the District of Columbia. There shall be attached to such application a statement listing the name and address of each member of the affiliated group for which such consolidated return will be made. For taxable years beginning after December 31, 1970, the application shall be filed with the internal revenue officer with which the parent corporation will file its income tax return. Upon the timely filing of Form 7004 with the internal revenue officer with which such corporation files its return, the 3-month extension shall be considered as granted to the affiliated group for the filing of its consolidated return or for the filing of each member's separate return.

(c) *Special rule for the extension of time for the payment of tax.* Notwithstanding the application of § 1.6081-1(a), any automatic extension of time for filing a corporation income tax return granted under paragraph (a) or (b) of this section shall not operate to extend the time for payment of any tax due on such return.

(d) *Termination of automatic extension.* The district director, including the Director of International Operations, or the director of a service center may, in his discretion, terminate at any time an automatic extension by mailing to the corporation (parent corporation in the case of an affiliated group), or the person who requested such extension for the corporation, a notice of termination. The notice shall be mailed at least 10 days prior to the termination date designated in such notice. The notice of termination shall be sufficient for all purposes when mailed to the corporation at its address shown on Form 7004 or to the person who requested such extension for the corporation at his last known address or last known place of business, even if such corporation has terminated its existence, or such person is deceased or is under a legal disability.

(e) Paragraphs (a) through (d) of this section shall not apply to returns filed by a DISC pursuant to section 6011(c)(2).

§ 1.6081-4. Automatic extension of time for filing individual income tax return.

(a) *In general.* (1) An individual who is required to file an income tax return on Form 1040 for any taxable year ending on or after December 31, 1971, shall be allowed an automatic 2-month extension of time to file such return after the date prescribed for filing of the return only if the requirements contained in subparagraphs (2), (3), and (4) of this paragraph are met.

(2) An application must be prepared on Form 4868 "Application for Automatic Extension of Time to File U.S. Individual Income Tax Return," and must be signed by the taxpayer or other person duly authorized by the taxpayer to request such extension. Such other person must either be an attorney who is a member in good standing of the bar of the highest court of a State, possession, territory, commonwealth, or the District of Columbia; a certified public accountant duly qualified to practice in a State, possession, territory, commonwealth, or the District of Columbia; a person currently enrolled to practice before the Treasury Department; a duly authorized agent holding a power of attorney with respect to the filing of income tax returns; or a person standing in a close personal or business relationship to the taxpayer where such taxpayer is unable to sign the application because of illness, absence, or other good cause.

(3) The application must be filed on or before the date prescribed for the filing of the return of the individual with the internal revenue officer with whom the individual is required to file his income tax return.

(4) Such application for extension must show the full amount properly estimated as tax for such taxpayer for such taxable year, and such application must be accompanied by the full remittance of the amount properly estimated as tax which is unpaid as of the date prescribed for the filing of the return.

(5) Upon the timely filing of Form 4868, properly prepared, and accompanied by remittance of the full amount of the estimated unpaid tax liability, the 2-month extension shall be considered as allowed. Except in undue hardship cases, no extension of time for filing an individual income tax return shall be granted under § 1.6081-1 until an individual has properly availed himself of the provisions of this paragraph.

(b) *Special rule for the extension of time for the payment of tax.* Notwithstanding the application of § 1.6081-1(a), any automatic extension of time for filing an individual income tax return granted under paragraph (a) of this section shall not operate to extend the time for the payment of any tax due on such return.

(c) *Termination of automatic extension.* The district director, including the Director of International Operations, or the director of a service center may, in his discretion, terminate at any time an automatic extension by mailing to the taxpayer, or the person who requested such extension for the taxpayer, a notice of termination. The notice shall be mailed at least 10 days prior to the termination date designated in such notice. The notice of termination shall be sufficient for all purposes when mailed to the taxpayer at his address shown on Form 4868 or to the person who requested such extension for the taxpayer at his last known address or last known place of business, even if such person is deceased or is under a legal disability.

SUBCHAPTER E—PESTICIDE PROGRAMS

PART 180—TOLERANCES AND EXEMPTIONS FROM TOLERANCES FOR PESTICIDE CHEMICALS IN OR ON RAW AGRICULTURAL COMMODITIES

Malathion

AGENCY: Office of Pesticide Programs, Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This rule establishes a tolerance for residues of the insecticide malathion on wild rice. The request was submitted by the Interregional Research Project No. 4. This regulation establishes a maximum per-

V 43 / 192 OCT 3 1978 UMI

missible level for residues of malathion on wild rice.

EFFECTIVE DATE: October 3, 1978.

FOR FURTHER INFORMATION CONTACT:

Mrs. Patricia Critchlow, Registration Division (TS-767), Office of Pesticide Programs, EPA, 401 M Street SW., Washington, D.C. 20460, 202-755-2516.

SUPPLEMENTARY INFORMATION: On July 31, 1978, the EPA published a notice of proposed rulemaking in the FEDERAL REGISTER (43 FR 33264) in response to a pesticide petition (PP 7E1881) submitted to the Agency by the Interregional Research Project No. 4 (IR-4), New Jersey State Agricultural Experiment Station, P.O. Box 231, Rutgers University, New Brunswick, N.J. 08903, on behalf of the IR-4 Technical Committee and the Agricultural Experiment Station of Minnesota. This petition proposed that 40 CFR 180.111 be amended by establishing a tolerance for residues of the insecticide malathion (*O,O*-dimethyl dithiophosphate of diethyl mercaptosuccinate) in or on the raw agricultural commodity wild rice at 8 parts per million (ppm). No comments or requests for referral to an advisory committee were received in response to this notice of proposed rulemaking.

It has been concluded, therefore, that the proposed amendment to 40 CFR 180.111 should be adopted without change, and it has been determined that this regulation will protect the public health.

Any person adversely affected by this regulation may, on or before November 2, 1978, file written objections with the Hearing Clerk, EPA, Room M-3708, 401 M Street SW., Washington, D.C. 20460. Such objections should be submitted and specify the provisions of the regulation deemed to be objectionable and the grounds for the objections. If a hearing is requested, the objections must state the issues for the hearing. A hearing will be granted if the objections are supported by the grounds legally sufficient to justify the relief sought.

Effective on the date of publication in the FEDERAL REGISTER, part 180, subpart C, § 180.111 is amended by alphabetically inserting a tolerance for malathion on wild rice at 8 ppm.

(Section 408(e) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 346a(e)).)

Dated: September 26, 1978.

EDWIN L. JOHNSON,
Deputy Assistant Administrator for Pesticide Programs.

Part 180, subpart C, § 180.111 is amended by alphabetically inserting the tolerance of 8 ppm on wild rice in the table to read as follows:

§ 180.111 Malathion; tolerances for residues.

* * * * *

Commodity:	*Parts Per million*

Title 41—Public Contracts and Property Management

CHAPTER 14—DEPARTMENT OF THE INTERIOR

PART 14-1—GENERAL

PART 14-55—PROCUREMENT OF SERVICES

Special Legal Review and Approval of Personal Service Contracts; Requirements

AGENCY: Department of the Interior.

ACTION: Final rule.

SUMMARY: This rule makes changes to the Interior Procurement Regulations by adding a requirement for special legal review and approval of personal service contracts in the Department of the Interior. This document codifies Department regulations previously contained in temporary regulations.

EFFECTIVE DATE: November 2, 1978.

FOR FURTHER INFORMATION CONTACT:

William Opdyke, 202-343-5914.

SUPPLEMENTARY INFORMATION: The primary author of this rule is William Opdyke, Division of Procurement and Grants, Office of Administrative and Management Policy, Department of the Interior, 202-343-5914.

NOTE.—The Department of the Interior has determined that this document does not contain a major rule requiring preparation of an Inflation Impact Statement under Executive Order 11821 or OMB Circular A-107.

It is the general policy of the Department of the Interior to allow time for interested parties to take part in the rulemaking process. However, the amendments contained herein are entirely administrative in nature. Therefore, the rulemaking process is waived.

Accordingly, pursuant to the authority of the Secretary of the Interior contained in 5 U.S.C. 301, 41 CFR is amended as stated below.

Dated: September 25, 1978.

RICHARD R. HITE,
Deputy Assistant Secretary of the Interior.

Subpart 14-1.3—General Policies

1. The Table of Contents for Subpart 14-1.3 is amended by adding a new § 14.1.352-3 to read as follows:

Subpart 14-1.3—General Policies

* * * * *

Sec.
14-1.352-3 Legal approval of personal service contracts.

2. A new § 14-1.352-3 is added and reads as follows:

Subpart 14-1.3—General Policies

* * * * *

§ 14-1.352-3 Legal approval of personal service contracts.

(a) In addition to the legal review requirements of § 14-1.352-2, all personal service contracts shall be approved in writing by the Office of the Solicitor prior to award of contract. For the purposes of this special legal review requirement, personal service contracts are defined as those contracts for services which are customarily or presently performed by Government personnel, including both support and technical services. The categories of service contracts listed under § 14-55.104(a) of this chapter are exempt from the special legal review requirement.

(b) Procuring activities (see § 14-1.205 of this chapter) are encouraged to obtain legal review of proposed personal service contracts as defined in paragraph (a) of this section prior to the issuance of a solicitation. However, that review will not eliminate the requirements for the special legal review and written approval of the Office of the Solicitor prior to award of contract.

Subpart 14-55.1—Contracts for Services

3. The Table of Contents for Subpart 14-55.1 is amended by adding a new § 14-55.105 as follows:

Subpart 14-55.1—Contracts for Services

* * * * *

Sec.
14-55.105 Legal approval of personal service contracts.

4. A New § 14-55.105 is added and reads as follows:

Subpart 14-55.1—Contracts for Services

* * * * *

§ 14-55.105 Legal approval of personal service contracts.

The instructions in § 14-1.352-3 of this chapter concerning special legal review requirements for personal service contracts shall be observed by all procuring activities.

Title 45—Public Welfare

CHAPTER II—OFFICE OF FAMILY ASSISTANCE (ASSISTANCE PROGRAMS), DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

PART 233—COVERAGE AND CONDITIONS OF ELIGIBILITY IN FINANCIAL ASSISTANCE PROGRAMS

NEED AND AMOUNT OF ASSISTANCE

Disregard of Receipts From Lands Held in Trust for Indian Tribes as Income and Resources

AGENCY: Social Security Administration, HEW.

ACTION: Final regulations.

SUMMARY: These rules exclude certain receipts distributed to members of Indian tribes from consideration as income or a resource under the Financial Assistance Payments programs. The receipts are derived from certain submarginal lands conveyed to Indian tribes and held in trust by the United States. Exclusion of the receipts will preclude the denial or reduction of financial assistance or other benefits to which tribal members or households would otherwise be entitled under the Social Security Act or any other Federal or federally assisted program. The regulation implements in part, section 6 of Pub. L. 94-114, October 17, 1975.

DATES: This amendment shall be effective October 3, 1978. However, in accordance with the law which these rules reflect, the exclusions are effective October 17, 1975.

Comment period: Although the Notice of Proposed Rulemaking is being dispensed with for the reasons cited in the Supplementary Information section, consideration will be given to any data, views, or arguments pertaining thereto, which are submitted on or before December 4, 1978.

ADDRESSES: Comments should be submitted in writing to the Commissioner of Social Security, Department of Health, Education, and Welfare, P.O. Box 1585, Baltimore, Md. 21203.

Copies of all comments received in response to this notice will be available for public inspection during regular business hours at the Washington Inquiries Section, Office of Information, Social Security Administration, Department of Health, Education, and Welfare, North Building, Room 5131, 330 Independence Avenue SW., Washington, D.C. 20201.

FOR FURTHER INFORMATION CONTACT:

Miss Alice Stewart, Entitlement and Administrative Policy Branch, Office of Family Assistance, 330 C Street SW., Washington, D.C. 20201, telephone 202-245-7477.

SUPPLEMENTARY INFORMATION: Submarginal Indian lands were originally purchased by the United States as part of the general emergency relief measures necessitated by the severe depression of the 1930's and a series of natural disasters. These parcels were acquired under title II of the National Industrial Recovery Act of June 16, 1933 (48 Stat. 200); the Emergency Relief Appropriation Act of April 8, 1935 (49 Stat. 115); and section 55 of the Act of August 24, 1955 (49 Stat. 750, 781).

Subsequent to these purchases Congress enacted legislation (the Act of July 20, 1956 (70 Stat. 581), the Act of August 2, 1956 (70 Stat. 941), the Act of October 9, 1972 (86 Stat. 795), and section 1 of the Act of October 13, 1972 (86 Stat. 806)), which conveyed in trust for certain Indian tribes some of the parcels which were purchased during the Depression. The accrued income, however, was not generally transferred to the appropriate Indian tribes.

DISCUSSION OF PUB. L. 94-114

Pub. L. 94-114 conveyed the remaining submarginal lands from the United States to the various Indian tribes to be held in trust by the United States and the accrued income of the lands previouly conveyed under acts cited in the prior paragraph.

Section 5(a) of Pub. L. 94-114 provides that receipts derived from property conveyed by Pub. L. 94-114, the Act of July 20, 1956, the Act of August 2, 1956, the Act of October 9, 1972, and section 1 of the Act of October 13, 1972, which were received by the United States subsequent to such acquisition by the United States and prior to conveyance back to the Indian tribes will be deposited to the credit of the Indian tribe receiving such land. Excluded are receipts received prior to the enactment of Pub. L. 94-114 from the leasing of public domain minerals which were subject to the Mineral Leasing Act of 1920 (41 Stat. 437) as amended and supplemented. Section 5(b) provides that receipts derived by the United States subsequent to enactment of Pub. L. 94-114 from any contract, permit, or lease, or otherwise will be deposited to the credit of the Indian tribe receiving such land.

Section 6 of Pub. L. 94-114 further provides that any such receipts distributed to members of Indian tribes shall not be considered income or resources or otherwise utilized as a basis for denying or reducing the financial assistance or other benefits to which such household or member would otherwise be entitled to under the Social Security Act or any other Federal or federally assisted program.

The disregard (as authorized by Pub. L. 94-114) applies to receipts derived from lands of the following Indian tribes:

Tribe, Reservation, and State

1. Bad River Band of the Lake Superior Tribe of Chippewa Indians of Wisconsin, Bad River, Wisconsin.
2. Blackfeet Tribe, Blackfeet, Montana.
3. Cherokee Nation of Oklahoma, Oklahoma.
4. Cheyenne River Sioux Tribe, Cheyenne River, South Dakota.
5. Crow Creek Sioux Tribe, Crow Creek, South Dakota.
6. Lower Brule Sioux Tribe, Lower Brule, South Dakota.
7. Devil's Lake Sioux Tribe, Fort Totten, North Dakota.
8. Fort Belknap Indian Community, Fort Belknap, Montana.
9. Assiniboine and Sioux Tribes, Fort Peck, Montana.
10. Lac Courte Oreilles Band of Lake Superior Chippewa Indians, Lac Courte and Oreilles, Wisconsin.
11. Keweenaw Bay Indian Community, L'Anse, Michigan.
12. Minnesota Chippewa Tribe, White Earth, Minnesota.
13. Navajo Tribe, Navajo, New Mexico.
14. Oglala Sioux Tribe, Pine Ridge, South Dakota.
15. Rosebud Sioux Tribe, Rosebud, South Dakota.
16. Shoshone-Bannock Tribe, Fort Hall, Idaho.
17. Standing Rock Sioux Tribe, Standing Rock, North Dakota and South Dakota.
18. Seminole Indians, Florida.
19. Pueblos of Zia and Jemez, New Mexico.
20. Stockbridge Munsee Indian Community, Wisconsin.
21. Burns Indian Colony, Oregon.

THE FINAL REGULATIONS

The regulations clarify that these receipts will be disregarded as income or a resource in the Financial Assistance Payments programs. Accordingly, § 233.20(a)(4)(ii)(*m*) is being added to reflect the disregard in Pub. L. 94-114.

This amendment to the regulations is being published in final. It is a substantive rule which excludes certain

V 43 / 192 OCT 3 78 UMI

receipts as income and resources as required by section 6 of Pub. L. 94-114. This section went into effect on October 17, 1975, and the rules have already been implemented by the Social Security Administration. Consequently, the Secretary finds that it would be unnecessary and impracticable to publish the rules with notice of Proposed Rulemaking.

(Sec. 1, 402, 1002, 1102, 1402, and 1602 of the Social Security Act, 42 U.S.C. 301, 602, 1302, 1352, and sec. 6 of Pub. L. 94-114, 89 Stat. 579.)

(Catalog of Federal Domestic Assistance Program No. 13.761, Public Assistance—Maintenance (State Aid).)

Dated: August 16, 1978.

DON WORTMAN,
Acting Commissioner of Social Security.

Approved: September 26, 1978.

JOSEPH A. CALIFANO, Jr.,
Secretary of Health, Education, and Welfare.

Chapter II of Title 45 is renamed to read as set forth above.

Part 233, Chapter II, Title 45 of the Code of Federal Regulations is amended by adding a new paragraph (a)(4)(ii)(*m*) to § 233.20 to read as set forth below:

§ 233.20 Need and amount of assistance.

* * * * *

(4) *Disregard of income common to OAA, AFDC, AB, APTD, or AABD.*

(i) * * *

(ii) Provide that, in determining eligibility for public assistance and the amount of the assistance payment, the following will be disregarded as income and resources:

* * * * *

(*m*) Effective October 17, 1975, pursuant to section 6 of Pub. L. 94-114 (89 Stat. 577, 25 U.S.C. 459e) receipts distributed to members of certain Indian tribes which are referred to in section 5 of Pub. L. 94-114 (89 Stat. 577, 25 U.S.C. 459d).

Title 49—Transportation

CHAPTER X—INTERSTATE COMMERCE COMMSSION

SUBCHAPTER A—GENERAL RULES AND REGULATIONS

[Corrected Amdt. No. 5 to S.O. No. 1240]

PART 1033—CAR SERVICE

Chicago and North Western Transportation Co. Authorized To Operate Over Tracks of Kansas City Southern Railway Co.

AGENCY: Interstate Commerce Commission.

ACTION: Extension of emergency order (Corrected Amendment No. 5 to Service Order No. 1240).

SUMMARY: This amendment extends for 5 months an emergency order issued April 9, 1976, which authorized the Chicago and North Western Transportation Co. (CNW) to operate an unused yard of the Kansas City Southern Railway Co. (KCS) at Kansas City, Mo. Increases in traffic on the CNW in the Kansas City area have resulted in severe congestion and delays to shipments in the Kansas City terminals of that line. The adjoining Hennig Street Yard of the KCS is no longer needed by that line because of changes in operating patterns.

Use of this yard by the CNW enables that line to move traffic through Kansas City without the excessive delays previously encountered. Service Order No. 1240 is published in full in volume 41 of the FEDERAL REGISTER at page 15698. Paragraph *Effective date* has been corrected.

DATES: Effective 11:59 p.m., August 31, 1978. Expires 11:59 p.m., January 31, 1979.

FOR FURTHER INFORMATION CONTACT:

C. C. Robinson, Chief, Utilization and Distribution Branch, Interstate Commerce Commission, Washington, D.C. 20423, telephone 202-275-7840, telex 89-2742.

Decided August 29, 1978.

Upon further consideration of Service Order No. 1240 (41 FR 15698,48343; 42 FR 22367, 44546; 43 FR 9282, and 43 FR 39795), and good cause appearing therefor:

It is ordered, § 1033.1240 Service Order No. 1240. (Chicago and North Western Transportation Co. authorized to operate over tracks of the Kansas City Southern Railway Co.) is amended by substituting the following paragraph (e) for paragraph (e) thereof:

(e) *Expiration date.* The provisions of this order shall expire at 11:59 p.m., January 31, 1979, unless otherwise modified, changed, or suspended by order of this Commission.

Effective date. This amendment shall * become effective at 11:59 p.m., August 31, 1978.

(49 U.S.C. 1(10-17))

A copy of this amendment shall be served upon the Association of American Railroads, Car Service Division, as agent of all railroads subscribing to the car service and car hire agreement under the terms of that agreement, and upon the American Short Line Railroad Association. Notice of this amendment shall be given to the general public by depositing a copy in the Office of the Secretary of the Commission, at Washington, D.C., and by filing a copy with the Director, Office of the Federal Register.

By the Commission, Railroad Service Board, members Joel E. Burns, Robert S. Turkington and John R. Michael.

NANCY L. WILSON,
Acting Secretary.

[S.O. No. 1269, Amdt. 3]

PART 1033—CAR SERVICE

Missouri Pacific Railroad Co. Authorized To Operate Over Tracks of Atchison, Topeka & Santa Fe Railway Co.

AGENCY: Interstate Commerce Commission.

ACTION: Emergency Order (Amendment No. 3 to Service Order No. 1269).

SUMMARY: The Missouri Pacific's line between Winfield, Kans., and Arkansas City, Kans., has been damaged by flooding and is inoperable. Service Order No. 1269 authorizes the Missouri Pacific to operate over parallel tracks of the Atchison, Topeka & Sante Fe between those points in order to provide continued railroad service to shippers served by the undamaged portions of this line. Service Order No. 1269 is published in full in volume 42 of the FEDERAL REGISTER at page 34883. Amendment No. 3 extends this order for 6 months.

DATES: Effective 11:59 p.m., September 30, 1978. Expires 11:59 p.m., March 31, 1979.

FOR FURTHER INFORMATION CONTACT:

C. C. Robinson, Chief, Utilization and Distribution Branch, Interstate Commerce Commission, Washington, D.C. 20423, telephone 202-275-7840, telex 89-2742.

Decided September 27, 1978.

Upon further consideration of Service Order No. 1269 (42 FR 34883, 54294, and 43 FR 14476), and good cause appearing therefor:

It is ordered, § 1033.1269 Service Order No. 1269 Missouri Pacific Railroad Co. authorized to operate over tracks of the Atchison, Topeka & Santa Fe Railway Co. is amended by substituting the following paragraph (c) for paragraph (c) thereof:

(c) *Expiration date.* The provisions of this order shall expire at 11:59 p.m., March 31, 1979, unless otherwise modified, changed, or suspended by order of this Commission.

Effective date. This amendment shall become effective at 11:59 p.m., September 30, 1978.

(49 U.S.C. 1(10-17))

A copy of this amendment shall be served upon the Association of American Railroads, Car Service Division, as agent of all railroads subscribing to the car service and car hire agreement under the terms of that agreement, and upon the American Short Line Railroad Association. Notice of this amendment shall be given to the general public by depositing a copy in the Office of the Secretary of the Commission, at Washington, D.C., and by filing a copy with the Director, Office of the Federal Register.

By the Commission, Railroad Service Board, members Joel E. Burns, Robert S. Turkington, and John R. Michael. Member Joel E. Burns not participating.

NANCY L. WILSON,
Acting Secretary.

[S. O. No. 1341]

PART 1033—CAR SERVICE

Chicago, Milwaukee, St. Paul & Pacific Railroad Co. Authorized To Operate Over Tracks of Chicago & North Western Transportation Co.

AGENCY: Interstate Commerce Commission.

ACTION: Emergency Order, Service Order No. 1341.

SUMMARY: The Chicago & North Western Transportation Co.'s line between Lake Crystal, Minn., and Winnebago, Minn., is inoperable because of track conditions and has been placed under embargo. Several shippers located at Winnebago are urgently in need of rail service to ship their products. The Chicago, Milwaukee, St. Paul & Pacific Railroad Co. has agreed to operate over tracks of the Chicago & North Western Transportation Co. in Winnebago in order to serve those shippers. Service Order No. 1341 authorizes operation by the Chicago, Milwaukee, St. Paul & Pacific over tracks of the Chicago & North Western at Winnebago, Minn.

DATES: Effective 12:01 a.m., September 27, 1978. Expires 11:59 p.m., March 31, 1979.

FOR FURTHER INFORMATION CONTACT:

Charles C. Robinson, Chief, Utilization and Distribution Branch, Interstate Commerce Commission, Washington, D.C. 20423, telephone 202-275-7840, telex 89-2742.

SUPPLEMENTARY INFORMATION: The Order is printed in full below.

Decided September 27, 1978.

The line of the Chicago & North Western Transportation Co. (CNW) serving Winnebago, Minn., is inoperable because of track conditions depriving shippers located adjacent to these tracks of essential railroad service. The Chicago, Milwaukee, St. Paul & Pacific Railroad Co. (Milw), connects with the CNW in Winnebago and has consented to operation over the tracks of the CNW in Winnebago. The CNW has consented to this use of its tracks by the Milw.

It is the opinion of the Commission that an emergency exists requiring operation of Milw trains over these tracks of the CNW in the interest of the public; that notice and public procedure are impracticable and contrary to the public interest; and that good cause exists for making this order effective upon less than 30 days' notice.

It is ordered,

§ 1033.1341 Service Order No. 1341.

(a) *Chicago, Milwaukee, St. Paul & Pacific Railroad Co. authorized to operate over tracks of Chicago & North Western Transportation Co.* The Chicago, Milwaukee, St. Paul & Pacific Railroad Co. (Milw) is authorized to operate over tracks of the Chicago & North Western Transportation Co. (CNW) at Winnebago, Minn.

(b) *Application.* The provisions of this order shall apply to intrastate, interstate, and foreign traffic.

(c) *Rates applicable.* Inasmuch as this operation by the Milw over tracks of the CNW is deemed to be due to carrier's disability, the rates applicable to traffic moved by the Milw over the tracks of the CNW shall be the rates which were applicable on the shipments at the time of shipment as originally routed.

(d) Nothing in this order shall be deemed to prejudge the ultimate findings of the Commission in Dockets 28412 and AB-1 (Sub No. 57).

(e) *Effective date.* This order shall become effective at 12:01 a.m., September 27, 1978.

Expiration date. The provisions of this order shall expire at 11:59 p.m., March 31, 1979, unless otherwise modified, changed, or suspended by order of this Commission.

(49 U.S.C. 1(10-17)

A copy of this order shall be served upon the Association of American Railroads, Car Service Division, as agent of the railroads subscribing to the car service and car hire agreement under the terms of that agreement and upon the American Short Line Railroad Association. Notice of this order shall be given to the general public by depositing a copy in the Office of the Secretary of the Commission at Washington, D.C., and by filing a copy with the Director, Office of the Federal Register.

By the Commission, Railroad Service Board, members Joel E. Burns, Robert S. Turkington and John R. Michael. Member Joel E. Burns not participating.

H. G. HOMME, Jr.,
Acting Secretary.

[7035-01]

SUBCHAPTER B—PRACTICE AND PROCEDURE

[Ex Parte No. 274 (Sub-No. 2)]

PART 1121—ABANDONMENT OF RAILROAD LINES AND DISCONTINUANCE OF SERVICE

Abandonment of Railroad Lines; Correction

AGENCY: Interstate Commerce Commission.

ACTION: Correction of regulations.

SUMMARY: This will correct ommissions in the regulations caused by prior erroneous notices in the FEDERAL REGISTER. This rule corrects FR Doc. 77-14047 which appeared at page 25327 in the issue of May 17, 1977.

FOR FURTHER INFORMATION CONTACT:

Edward J. Schack, 202-275-7581.

SUPPLEMENTARY INFORMATION: The Commission amended the abandonment regulations on May 3, 1977. An error was made in the publication of §§ 1121.22(c) and 1121.32(d)(1) in 42 FR 25327 (1977).

1. Section 1121.22(c) was modified to read as follows:

• • • • •

"(C) Republication of category 3 lines, which prior to November 1, 1976, were already set for oral hearing, modified procedure, or for which an order has been issued finding public convenience and necessity not to require compliance with the section."

Section 1121.22(c) should have been modified by adding the previous sentence to the end of the section.

The correct version of § 1121.22(c) should read as follows:

• • • • •

"(C) The Commission shall publish a black and white version of the initial and each amended system diagram map as submitted in accordance with § 1121.20(d) and accompanying line description in the FEDERAL REGISTER. The carrier shall: (i) Publish in a newspaper of general circulation in each county within which is located a line in category 1 through 3 (§ 1121.20(b)(1)-(3)) or a line which has been amended, a notice containing a black-and-white copy of the system diagram map (or a portion of a map clearly depicting its lines in such county) and a description of each such line; (ii) post a copy of the newspaper notice in each agency station or terminal on each line in categories 1 through 3 (§ 1121.20(b)(1)-(3)), or on each line which has been amended, or if there is no agency station on the line, at any station through which business for the line is received or forwarded, and (iii) furnish, at reasonable cost, upon request of any interested person a copy of its color-coded or black and white system diagram map and the publication in the county newspaper shall so indicate. Republication of category 3 lines, which prior to November 1, 1976, were already set for oral hearing, modified procedure, or for which an order has been issued finding public convenience and necessity not to require future continued operation of the line, is not required for compliance with the section."

• • • • •

2. A cross-reference to other sections of the regulation was omitted in § 1121.32(d)(1). The section as printed read:

"(d)(1) Computation of the revenues attributable, avoidable cost, and reasonable return on value for the line to be abandoned for the base year (as defined by § 1121.11(c) and to the extent such branch level data is available), in accordance with the methodology prescribed in § 1121.45, as exhibit 1." This section should have read as follows: "Computation of the revenues attributable, avoidable costs, and reasonable return on value for the line to be abandoned for the base year (as defined by § 1121.11(c) and to the extent such branch level data is available), in accordance with the methodology prescribed in § 1121.41-44, as applicable, and submitted in the form called for in § 1121.45, as exhibit 1."

The cross references which were omitted were modified by a notice published at 43 FR 7624 (1978). Incorporating these cross references into § 1121.32(d)(1) results in the section correctly reading as follows:

• • • • •

"(d)(1) Computation of the revenues attributable, avoidable costs, and reasonable return on value for the line to be abandoned for the base year (as defined by § 1121.11(c) and to the extent such branch level data is available), in accordance with the methodology prescribed in §§ 1121.41-1121.45, as applicable, and submitted in the form called for in § 1121.46, as exhibit 1."

These changes correct omissions in prior publications of this regulation.

NANCY L. WILSON,
Acting Secretary.

Title 50—Wildlife and Fisheries

CHAPTER I—U.S. FISH AND WILDLIFE SERVICE, DEPARTMENT OF THE INTERIOR

SUBCHAPTER B—TAKING, POSSESSION, TRANSPORTATION, SALE, PURCHASE, BARTER, EXPORTATION, AND IMPORTATION OF WILDLIFE AND PLANTS

PART 20—MIGRATORY BIRD HUNTING

Late Seasons, and Bag and Possession Limits for Certain Migratory Game Birds in the United States; Corrections

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Correction of final rule.

SUMMARY: This document corrects and/or clarifies season dates and bag and possession limits for late season migratory bird hunting in Pennsylvania, Arkansas, Michigan, Colorado, New Mexico, Arizona, Idaho, Montana (Pacific Flyway portion), Nevada, and Washington, published by the Service on September 21, 1978.

EFFECTIVE DATE: October 3, 1978.

FOR FURTHER INFORMATION CONTACT:

John P. Rogers, Chief, Office of Migratory Bird Management, U.S. Fish and Wildlife Service, Department of the Interior, Washington, D.C., telephone 202-254-3207.

SUPPLEMENTARY INFORMATION: In FR Doc. 78-26459 appearing at page 42960 in the FEDERAL REGISTER of Thursday, September 21, 1978, errors were detected by the Service and are being corrected. Some of these errors are typographical in nature and others result from misunderstanding season selections and/or limits set by States. Since time is of the essence—some seasons open as early as September 30, 1978—the Director found that notice and public procedure thereon was impracticable and contrary to the public interest and good cause existed for making these corrections effective immediately upon publication so that Federal and State agencies, hunters, and the general public are properly informed.

1. On page 42963, in the table under § 20.104, under Seasons in the Pacific Flyway, the season dates for common snipe in Idaho are in error, presently reading as follows:

Idaho:[3]	
Columbia Basin	Oct. 7 to Jan. 17.
Remainder of State	Oct. 7 to Jan. 14.

The season dates for common snipe in Idaho are corrected to read as follows:

Idaho:[3]	
Columbia Basin	Oct. 7 to Jan. 14.
Remainder of State	Oct. 7 to Jan. 7.

2. On page 42964, in the table under § 20.105(c), under Seasons in the Pacific Flyway, the season dates for gallinules in Idaho are in error, presently reading as follow:

Idaho:	
Columbia Basin	Oct. 7 to Jan. 7.
Remainder of State	Oct. 7 to Jan. 14.

The season dates for gallinules in Idaho are corrected to read as follows:

Idaho:	
Columbia Basin	Oct. 7 to Jan. 14.
Remainder of State	Oct. 7 to Jan. 7.

3. On page 42964, in the table under § 20.105, under Seasons in the Pacific Flyway, the season dates for gallinules in New Mexico are in error, presently reading as follows:

New Mexico[4]	Oct. 31 to Jan. 7.

The season dates for gallinules in New Mexico are corrected to read as follows:

New Mexico[4]	Oct. 7 to Jan. 7.

4. On page 42966, under § 20.105(d), in the table for the Atlantic Flyway, under Pennsylvania, the Canada goose limits for the Southeastern Zone of Pennsylvania are in error, presently reading as follows:

Geese:			
Canada:			
In southeastern zone[11].	Oct. 11 [10] to Dec. 19 and Dec. 26 to Jan. 13.	4	8

The Canada goose limits for the Southeastern Zone of Pennsylvania are corrected to read as follows:

Geese:			
Canada:			
In Southeastern Zone [11].	Oct. 11 [10] to Dec. 19 and Dec. 26 to Jan. 13.	3	6

5. On page 42968, under § 20.105(d), in the table for the Mississippi Flyway, the season dates for white-fronted geese in Arkansas were omitted, the line presently reading as follows:

White-fronted	2	2

The season dates for white-fronted geese in Arkansas are corrected to read as follows:

White-fronted	Nov. 10 to Jan. 18.	2	2

6. On page 42971, under § 20.105(d), footnote 14 for the Mississippi Flyway table is in error, presently reading as follows:

"In Michigan, in the southeastern Canada Goose Management Area—(as described in 1977 Federal regulations and current State regulations)—from Oct. 11 through Nov. 14, the daily bag limit is 1 Canada goose or 2 white-fronted geese or 1 of each, and the possession limit is 1 Canada and 2 white-fronted geese; from Nov. 15 through Dec. 9, the daily bag limit is 2 Canada geese or 2 white-fronted geese or 1 of each, and the possession limit is 2 Canada and 2 white-fronted geese.

Footnote 14 for the Mississippi Flyway table is corrected to read as follows:

"In Michigan, in the southeastern Canada Goose Management Area—(as described in 1977 Federal regulations and current State regulations)—the Canada goose season will extend from October 11 through December 9. From October 11 through November 14, the daily bag limit is 1 Canada goose or 2 white-fronted geese or 1 of each, and the possession limit is 1 Canada and 2 white-fronted geese; from November 15 through December 9, the daily bag limit is 2 Canada geese or 2 white-fronted geese or 1 of each, and the possession limit is 2 Canada and 2 white-fronted geese.

7. On page 42972, under § 20.105(d), in the second column of Flywaywide Restrictions under the Central Flyway, the 7-line paragraph pertaining to mallards is included in error, reading as follows:

Mallards—No more than 4 mallards of which no more than 1 may be a female may be included in the aggregate daily bag limit on ducks, and no more than 8 mallards of which no more than 2 may be females may be possessed.

The Flywaywide Restrictions under the Central Flyway are corrected by deleting the 7-line paragraph pertaining to mallards.

8. On page 42973, under § 20.105(d), in the table for the Central Flyway, the season dates for ducks in New Mexico are in error, the line presently reading as follows:

New Mexico:		
Ducks..	Oct 21 to Jan. 21	Point system.

The season dates for ducks in New Mexico are correged to read as follows:

Ducks..	Oct 31 to Jan. 21	Point system.

9. On page 42975, under § 20.105(d), for the Pacific Flyway, the first sentence of the last paragraph in column 2 (above the table) is in error, presently reading as follows:

The season dates for mergansers, coots, gallinules and snipe are the same as those for ducks in the following tables. The first sentence of the last paragraph in column 2 (above the table) is corrected to read as follows:

The season dates for mergansers and coots are the same as those for ducks in the following tables.

10. On page 42975, under § 20.105(d), in table for the Pacific Flyway, under Arizona, the limits for dark geese in the Remainder of State are in error, the line presently reading as follows:

Remainder of State	Nov. 9 to Jan. 19...	.....	.....
Including no more than:			
Dark (no more than 2 Canada geese or 3 white-fronted geese in the daily bag and possession limits).			

[10]The limits for dark geese in the Remainder of the State [of Arizona] are corrected to read as follows:

Remainder of State	Nov. 9 to Jan. 19...	.....	.....
Including nor more than:		3	3
Dark (no more than 2 Canada geese or 3 white-fronted geese in the daily bag and possession limits).			

11. On page 42976, under § 20.105(d), in the table for the Pacific Flyway, under Geese in Idaho, the first word of the area description in the 20th line from the bottom is in error, presently reading as follows:

Blain County lying south and	Oct 28 to Dec. 24..	3	6

The first word of the area description in the 20th line from the bottom is corrected to read as follows:

Blaine County lying south and	Oct. 28 to dec. 24..	3	6

12. On page 42977, under § 20.105(d), in the table for the Pacific Flyway, in the Bag and Possession Limits columns, the limits for dark and white geese in Montana are in error, the lines presently reading as follows:

Dark	3	3
White (no more than 1 Ross' goose in the daily bag and possession limits).		

The limits for dark and white geese in Montana are corrected to read as follows:

Dark	2	2
White (no more than 1 Ross' goose in the daily bag and possession limits).	3	3

13. On page 42977, under § 20.105(d), in the table for the Pacific Flyway, under Nevada, that portion of the table pertaining to Geese in the White River Valley in Nye County is in error, presently reading as follows:

White River Valley in Nye County (any species except Aleutian Canada goose).	Dec. 13 to Dec. 24.	1 per season.

That portion of the table pertaining to geese in the White River Valley in Nye County, Nevada, is corrected to read as follows:

White River Valley in Nye County (any species except Aleutian Canada goose).	Dec. 13-Dec. 24.....	.....	.....
Including no more than:	.....	1	1
Dark goose.			
White (including no more than 1 Ross' goose in the daily bag and possession limits).	.....	3	3

V 43 / 192 OCT 3 1978 UMI

14. On page 42981, under § 20.107(c), the season dates for taking whistling swans in Churchill County, Nevada, are in error, presently reading October 7, 1978, through January 7, 1979.

The season dates for taking whistling swans in Churchill County, Nevada, are corrected to read November 4, 1978, through January 7, 1979.

15. On page 42981, under § 20.109, in the table for the Central Flyway, the portion of the table for Colorado is in error, presently reading as follows:

Colorado:	
Geese	Oct 21 to Nov. 4.

The portion of the table for Colorado is corrected to read as follows:

Colorado:	
Ducks, geese, mergansers and coots.	Oct 21 to Nov. 4.

16. On page 42981, under § 20.109, in the table for the Central Flyway, the North Dakota season was erroneously omitted from the table. The table is corrected by adding the North Dakota season between the last line of seasons under New Mexico ("Sandhill cranes.....Oct. 14 to Jan. 28.[7]) and Oklahoma, as follows:

New Mexico:	
• • • • • •	
Sandhill cranes	Oct. 14 to Jan. 28.[7]
North Dakota:	
Ducks, geese, mergansers and coots.	Sept. 30 to Dec. 3.
Oklahoma	
• • • • • •	

17. On page 42981, under § 20.109, in the table for the Pacific Flyway, the portion of the table for Colorado is in error, presently reading as follows:

Colorado:	
Geese	Oct. 21 to Nov. 3.

That portion of the table for Colorado is corrected to read as follows:

Colorado:	
Ducks, geese, mergansers and coots.	Oct 21 to Nov 3.

18. On page 42981, under § 20.109, in the table for the Pacific Flyway, the portion of the table for Washington is in error, presently reading as follows:

Washington:	
All species of migratory game birds allowed under regular seasons:	
Eastern Washington (area defined elsewhere).	
Western Washington (area defined elsewhere)	Oct 7 to Oct. 13 and Jan. 15 to Jan. 21

The portion of the table for Washington is corrected to read as follows:

Washington:	
All species of migratory game birds allowed under regular seasons:	
Eastern Washington (area defined elsewhere).	Oct. 7 to Oct. 13.
Western Washington (area defined elsewhere).	Oct. 7 to Oct. 13 and Jan. 15 to Jan. 21.

AUTHORSHIP

The primary author of this document is Henry M. Reeves, Office of Migratory Bird Management, working under the direction of John P. Rogers, Chief.

proposed rules

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules

[3410-15]

DEPARTMENT OF AGRICULTURE

Rural Electrification Administration

[7 CFR Part 1701]

ENERGY CONSERVATION AND FUTURE SERVICE REQUIREMENTS

Proposed REA Bulletin 120-2

AGENCY: Rural Electrification Administration.

ACTION: Proposed rule.

SUMMARY: The Rural Electrification Administration (REA) proposes to issue REA bulletin 120-2, Energy Conservation and Future Service Requirements. This proposed bulletin encourages energy conservation among REA electric cooperative members and establishes a procedure to provide additional information for system planning and for forecasting REA loan fund requirements.

The continuing load growth being experienced by REA borrower systems coupled with the inflationary impact on investments in new electric generation facilities and increasing fuel costs are requiring tremendous new capital outlays for REA-financed systems. Therefore, it is extremely critical that new systems be planned and designed as efficiently as possible.

REA borrows contacts with their consumers, both new and existing, provide an opportunity to discuss energy conservation and gather information on the members' future plans for installation of additional electrical appliances and machinery. This information will be useful to the borrowers for system planning and forecasting future capital requirements. The information provided to REA will assist REA to monitor the energy conservation efforts on a national basis and will be useful to REA in estimating future REA electric loan fund requirements nationally.

DATE: Public comments must be received by REA no later than December 4, 1978.

ADDRESS: Written comments may be submitted to Harlan M. Severson, Assistant to the Administrator, Rural Electrification Administration, Room 4324, South Building, U.S. Department of Agriculture, Washington, D.C. 20250, telephone No. 202-447-4246. All written submissions made pursuant to this notice will be made available for public inspection at the Office of the Assistant to the Administrator, during regular business hours.

FOR FURTHER INFORMATION CONTACT:

Harlan M. Severson, 202-447-4246.

SUPPLEMENTARY INFORMATION: Notice is hereby given that pursuant to the Rural Electrification Act, as amended (7 U.S.C. 901 et seq.), REA proposes to issue REA bulletin 120-2. A copy of this notice and the proposed bulletin are being mailed to all REA-financed electric distribution systems. Others may secure a copy in person or in writing from REA at the address indicated above.

Dated: September 27, 1978.

JOSEPH VELLONE,
Acting Administrator.

SMALL BUSINESS ADMINISTRATION

[13 CFR Part 121]

SMALL BUSINESS SIZE STANDARDS

Special Salvage Timber Sales (SSTS) Set-Aside for Preferential Treatment for Small Business Concerns

AGENCY: Small Business Administration.

ACTION: Proposed rule.

SUMMARY: The purpose of the special salvage timber sales (SSTS) program is to assist small business logging and manufacturing firms in the forest products industry through the generation and preferential offering of additional U.S. Forest Service (USFS) administered salvage sawtimber sales. The SBA/USFS joint SSTS program is separate and distinct from the existing small business set-aside program involving USFS timber. Initial testing in a limited number of forests in the western United States is intended to start during the fall/winter of 1978. The SBA proposed SSTS size standard and related supplementary information are outlined below. The proposed USFS policy and procedures applicable to the SSTS program will be published as a separate FEDERAL REGISTER item and will reference this lead notification.

DATES: Comments are invited on or before November 2, 1978. Effective date for initiating this test of the SSTS program is November 1, 1978.

ADDRESS COMMENTS TO: John D. Whitmore, Size Standards Division, Small Business Administration, 1441 L Street NW., Washington, D.C. 20416.

FOR FURTHER INFORMATION CONTACT:

Roland E. Berg, Chief, Property Sales Assistance Division, telephone: 202-653-6078/6079.

SUPPLEMENTARY INFORMATION:

GENERAL

Pursuant to a notice published in the FEDERAL REGISTER on July 19, 1978 (43 FR 31022), the Small Business Administration (SBA) in conjunction with the U.S. Forest Service (USFS) held public meetings on August 8 and 9, 1978, respectively, in Sacramento, Calif., and Portland, Oreg., to obtain information on a proposal to establish a set-aside program for firms with 25 or fewer employees. The program, called the special salvage timber sales (SSTS) program is intended to operate on portions of the additional volumes of salvage generated by the salvage sale fund established by Section 14h of the National Forest Management Act (NFMA). It is anticipated that the salvage fund will permit increases in the volume of salvage sales currently offered by USFS.

The meetings were well attended and various points of views were ably presented. The public was advised that procedures for the proposed test of the SSTS program would be published for the purpose of obtaining any additional written comment. Further, that this proposed test procedure would incorporate, where appropriate, the input received during the aforementioned meetings.

The SBA, in conjunction with the USFS, proposes to test the SSTS program in accordance with procedures enumerated below, which were modified to incorporate comments identified during the August 1978 meetings. It is intended to initiate testing of the proposed procedures as soon as possible after receipt and consideration of comments generated as a result of this proposal.

V 4 3 / 1 9 2 0 C 3 7 8 UMI

INTENT OF THE RULE CHANGE

The SSTS program will require a proposed rule change to 13 CFR Part 121 (Sec. 121.3-9(b)) of chapter I of SBA rules and regulations to provide preferential bidding on special salvage timber sales to insect-infested, dead, damaged or down timber to logging and forest product concerns. The intent of the SSTS program is to expand present timber sale activity to utilize Federal timber now going to waste. The rule change is to be implemented on a test basis initially, is a proposal adding to, and not substituting for, present rules and regulations defining small business concerns for the sale of Government-owned property (timber). The additional definition of small business concerns eligible to purchase small business preferentially treated sales applies only to those U.S. Forest Service Sales designed as special salvage timber sales (SSTS).

PROGRAM GUIDELINES

The special guidelines intended to be followed in the establishment and implementation of a 1-year pilot test of the program are: (a) The applicable SBA size standard definition for eligible concerns is to limit this program to a small business concern that: (1) is primarily engaged in the logging or forest products industry, (2) is independently owned and operated, (3) is not dominant in its field of operation, and (4) together with its affiliates, its number of employees has not exceeded 25 persons during any pay period for the past 12 months; (b) funding for the SSTS program would generally come from the revolving salvage sale account established by the National Forest Management Act of 1976, and that account would not be limited to the SSTS program; (c) "salvage" would be defined as "insect-infested, dead, damaged or down timber" as provided in the National Forest Management Act; (d) in general, the 70/30 rule will apply to the SSTS program. This rule requires that no more than 30 percent of the advertised volume of a given sale may be manufactured by concerns exceeding 500 employees. Exception to the rule will be agreed to by the appropriate SBA area industrial specialist and the USFS representative. The prime basis for exception to the 70/30 rule will be where competition for manufacturing is lacking, competition is considered to exist where there are two or more qualified mills in the market area. The advertised sawtimber volume for SSTS program purchases by nonmanufactures will be accounted for and to be credited to large or small business based on the estimated distribution for manufacturing purposes. The crediting to the appropriate industry size, based on anticipated distribution, insures full compatibility with the small business timber set-aside 6-month period analyses; (e) specific individual sale volume limits will be prescribed but sales of sawtimber will be defined and conducted as follows: (1) Sale period no more than 1 year, (2) sale will involve only minor road construction or other improvements, (3) sale will not include catastrophic damage, (4) relatively small sales to be completed by SSTS defined logger/forest products concerns of average capability in the area, (5) sales will be jointly selected by the appropriate Forest Service and respective SBA representatives and will be comprised of timber normally used by small business in the market area, (6) sales procedures will include self-certification. Appropriate reports will be required to permit monitoring of the program, (7) bidding procedures and other applicable requirements unless otherwise stated above will be in accordance with existing procedures/regulations; (f) the program will be tested in limited number of forests in order to allow flexibility and alterations which may be necessary in the development of specific limits and controls applicable to the new program. Results can be reviewed during and after the prescribed 1 year trial period, and accommodations made; (g) appropriate rule/manual changes will be jointly developed by SBA/USFS to describe the proposed program.

The purpose of the test is to permit detemination of the effectiveness of currently proposed procedures and to make adjustments where necessary. A Forest Service interim directive, outlining the Forest Service procedures applicable to this test program as outlined above, will be publised separately.

COMMENTS RECEIVED AND PROPOSAL CHANGES

The test program outlined above incorporates proposed changes to the program outlined in the July 19, 1978, FEDERAL REGISTER (43 FR 31022). These changes reflect industrywide comment received both during the August 1978 meetings and by mail, and are generalized as follows: (a) The 25-person size standard excludes any reference to contract personnel as desired by many in the logging industry; (b) the national forests elected for the initial test represent an expansion over the proposed two to four national forests initially planned. These test forests are intended to test the SSTS potential with no limit on the number of sales or volume that may be appropriate. This expansion in number of forests again responds to a number of requests generated by members of the logging and forest products industry; (c) the 70/30 rule does not apply where a competitive market is deemed not to exist. This adjustment to the 70/30 rule reflects the comments received from all portions of the forest products industry.

Accordingly, we propose to amend § 121.3-9 by adding new paragraphs as follows:

§ 121.3-9 Definition of small business for sales of Government property.

. . . . . .

(c) Special salvage timber sales. (1) In connection with sale of Government-owned special salvage timber, designated by the USFS as SSTS, a small business is a concern that:

(i) Is primarily engaged in the logging or forest products industry;

(ii) Is independently owned and operated;

(iii) Is not dominant in its field of operation; and

(iv) Together with its affiliates, its number of employees does not exceed 25 persons during any pay period for the last 12 months.

(2) In the case of Government-owned special salvage timber reserved for or involving preferential treatment of small businesses, restricting the disposal of timber and, when the special salvage timber being purchased is to be resold, a concern is a small business when: (i) It is a small business within the meaning of paragraph (c)(1) of this section, and

(ii) It agrees that it will not sell to a concern which is not a small business within the meaning of paragraph (b)(1) of this section more than 30 percent of such timber or, in the case of timber from certain geographical areas set forth in schedule E of this part, more than the percentage established therein for such area. The term "sell" includes but is not limited to the exchange of sawlogs for sawlogs on a product-for-product basis with or without monetary adjustment, and an indirect transfer such as the sale of the assets of (or a controlling interest in) a concern after it has been awarded one or more set-aside sales of timber. Under the latter circumstances, if, after being awarded a set-aside sale of timber a small business concern merges with or becomes subject to the control of a large business, so much of such timber (or sawlogs therefrom) shall be sold to one or more small businesses as is necessary for compliance with the 30 percent (50 percent in Alaska) restriction.

(3) In the case of Government-owned special salvage timber reserved for or involving preferential treatment of small businesses, restricting the disposal of timber, and when the special salvage timber purchased is not to be resold in the form of sawlogs to be manufactured into lumber and timbers, a concern is a small business when: (i) It meets the criteria contained in paragraph (c)(1) of this section, and

(ii) It agrees that in manufacturing lumber or timbers from such sawlogs cut from the Government timber, it will do so only with its own facilities or those of concerns that qualify under paragraph (b)(1) of this section as a small business. This provision assumes that the successful bidder will remain a small business until the products have been manufactured. Accordingly, if, after acquiring the set-aside sale the bidder is purchased by, becomes controlled by, or merged with a large business, so much of such timber (or sawlogs therefrom) as is necessary shall be sold to one or more small businesses for compliance with the 30 percent (50 percent in Alaska) restriction. Any concern which self-certifies as a small business concern for the purpose of award under a small business set-aside sale of Government timber is expected to maintain evidence that it did so in good faith. Accordingly, such a concern will have to maintain for a period of 3 years the name, address, and size status of each concern to whom the timber or sawlogs were sold or disposed, and the log species, grades, and volumes involved. Such concern, and any subsequent small business concern that acquires the sawlogs, also shall require its small business purchasers to maintain similar records for a period of 3 years. Further, if the timber purchased is not to be resold in the form of sawlogs, but is to be manufactured into lumber or timbers by a concern other than the bidder, the bidder must maintain records to show the name, address, and size status of the concern manufacturing the sawlogs into lumber or timbers.

(4) In the case of Government-owned special salvage timber reserved for or involving preferential treatment of small businesses, when the special salvage timber may be disposed of without restriction (when there are less than two qualified mills in the market area) to small or other than small businesses, a concern is a small business when it is a business within the meaning of paragraph (c)(1) of this section.

Dated: September 26, 1978.

PATRICIA M. CLOHERTY,
Deputy Administrator.

FEDERAL TRADE COMMISSION

[16 CFR Part 13]

[Docket No. 9107]

HARNISCHFEGER CORP., ET AL.

Consent Agreement with Analysis To Aid Public Comment

AGENCY: Federal Trade Commission.

ACTION: Provisional consent agreement.

SUMMARY: In settlement of alleged violations of Federal law prohibiting unfair acts and practices and unfair methods of competition, this provisionally accepted consent agreement, among other things, would require a Brookfield, Wis. manufacturer of lattice-boom cranes and the Northwest Engineering Co., a Green Bay, Wis. competitor, to provide the FTC with evidence that all merger agreements between them have been terminated, and return all confidential documents exchanged during negotiations. The order would prohibit the firms from acquiring any part of each other's lattice-boom business until July 31, 1981, without furnishing the Commission with 60-days notice of such intention. Should the Commission issue a complaint challenging the transaction during this period, the firms would be required to postpone the proposed merger or acquisition until administrative proceedings were concluded.

DATE: Comments must be received on or before November 30, 1978.

ADDRESS: Comments should be directed to: Office of the Secretary, Federal Trade Commission, 6th Street and Pennsylvania Avenue NW., Washington, D.C. 20580.

FOR FURTHER INFORMATION CONTACT:

Alfred F. Dougherty, Jr., Director, Bureau of Competition, Federal Trade Commission, 6th Street and Pennsylvania Avenue NW., Washington, D.C. 20580, 202-523-3601.

SUPPLEMENTARY INFORMATION: Pursuant to Section 6(f) of the Federal Trade Commission Act, 38 Stat. 721, 15 U.S.C. 46 and § 3.25(f), of the Commission's Rules of Practice (16 CFR § 3.25(f)) notice is hereby given that the following consent agreement containing a consent order to cease and desist and an explanation thereof, having been filed with and provisionally accepted by the Commission, has been placed on the public record, together with material submitted to the Commission that is not exempt from disclosure under the Freedom of Information Act, for a period of sixty (60) days. Public comment is invited. Such comments or views will be considered by the Commission and will be available for inspection and copying at its principal office in accordance with section 4.9(b)(14) of the Commission's Rules of Practice (16 CFR 4.9(b)(14)).

AGREEMENT CONTAINING CONSENT ORDER TO CEASE AND DESIST

In the matter of Harnischfeger Corp., a corporation, and Northwest Engineering Co., a corporation.

This agreement herein, by and among Harnischfeger Corp., a corporation, by its duly authorized officer, Northwest Engineering Co., a corporation, by its duly authorized officer, hereinafter sometimes referred to collectively as respondents, and their attorneys, and counsel for the Federal Trade Commission, is entered into in accordance with the Commission's Rule governing consent order procedure. In accordance therewith the parties hereby agree that:

1. Respondent Harnischfeger Corp. (hereinafter Harnischfeger) is a corporation existing and doing business under and by virtue of the law of the State of Delaware, with its principal place of business at 13400 Bishops Lane, Brookfield, Wis.

2. Respondent Northwest Engineering Co. (hereinafter Northwest) is a corporation existing and doing business under and by virtue of the law of the State of Delaware, with its principal place of business at 201 West Walnut Street, Green Bay, Wis.

3. Respondents have been served with the complaint issued by the Federal Trade Commission on March 13, 1978 charging them with violation of section 5 of the Federal Trade Commission Act and section 7 of the Clayton Act.

4. Respondents admit all jurisdictional facts set forth in the Commission's complaint in this proceeding.

5. Respondents waive:

(a) Any further procedural steps;

(b) The requirement that the Commission's decision contain a statement of findings of fact and conclusions of law; and

(c) All rights to seek judicial review or otherwise to challenge or contest the validity of the order entered pursuant to this agreement.

6. This agreement shall not become a part of the public record of the proceeding unless and until it is accepted by the Commission. If this agreement is accepted by the Commission, it, together with related materials pursuant to Rule 3.25(f), will be placed on the public record for a period of sixty (60) days and information in respect thereto publicly released. The Commission thereafter may either withdraw its acceptance of this agreement and so notify the respondents, in which event it will take such action as it may con-

V 43/192 OCT 3 1978 UMI

sider appropriate, or issue and serve its decision in disposition of the proceeding. The Commission may at any time pending issuance of this order require hearings on the relief requirements provided by this order.

7. This agreement is for settlement purposes only and does not constitute an admission by respondents that the law has been violated as alleged in the Commission's complaint in this proceeding.

8. This agreement contemplates that, if it is accepted by the Commission, and if such acceptance is not subsequently withdrawn by the Commission pursuant to the provisions of § 3.25(f) of the Commission's Rules, the Commission may without further notice to respondents, (1) Issue its decision containing the following order to cease and desist in disposition of the proceeding, and (2) make information public in respect thereto. When so entered the order to cease and desist shall have the same force and effect and may be altered, modified or set aside in the same manner and within the same time provided by statute for other orders. The order shall become final upon service. Mailing of the decision containing the agreed-to order to respondents' addresses as stated in this agreement shall constitute service. Respondents waive any right they might have to any other manner of service. The complaint may be used in construing the terms of the order, and no agreement, understanding, representation, or interpretation not contained in the order or in the agreement may be used to vary or contradict the terms of the order.

9. Respondents have read the complaint and the order contemplated hereby. They understand that once the order has been issued they will be required to file one or more compliance reports showing that they have fully complied with the order and that they may be liable for civil penalties in the amount provided by law for each violation of the order after it becomes final.

ORDER

DEFINITIONS

For purposes of this order the following definition shall apply:

"Lattice-boom cranes" means cranes mounted either on crawlers or rubber-tired vehicles powered by one or more engines, the boom hoists of which are carried out by wire rope, and which are generally operated by a conventional gear train controlled by brakes and clutches.

I.

It is ordered, That Harnischfeger Corp. (Harnischfeger) and Northwest Engineering Co. (Northwest) do forthwith provide evidence that all agreements which provided for the merger of a newly formed subsidiary of Harnischfeger into Northwest and which would result in Northwest becoming a wholly-owned subsidiary of Harnischfeger have been terminated. Harnischfeger and Northwest each shall forthwith return any confidential documents provided by the other in connection with the merger agreement, and nothing herein contained shall relieve any party from any obligations of confidentiality imposed by agreement between them or by operation of law.

II.

It is further ordered, That until July 31, 1981 neither Harnischfeger nor Northwest shall acquire either directly or indirectly any part of the lattice boom crane business of each other, whether represented by securities or assets, until sixty (60) days following receipt by the Director of the Bureau of Competition of the Federal Trade Commission of written notice of the proposed acquisition or merger, which notice shall specifically refer to this order. If within sixty (60) days of receipt by the Director of said notice the Commission issues an administrative complaint challenging the proposed acquisition or merger, such proposed acquisition or merger shall not be consummated, nor shall any steps be taken to effectuate such proposed acquisition or merger until the administrative complaint issued by the Commission is dismissed by the Commission, until a final order as defined in 15 U.S.C. §§ 21 and 45 is entered, or until a consent order is entered and served upon the respondents in that administrative proceeding. If within the aforesaid sixty (60) days the Bureau of Competition receives any written position papers from either Harnischfeger or Northwest and the Bureau recommends issuance of a complaint, the Bureau shall promptly forward to the Commission such papers together with the written notice submitted to the Bureau Director. In the event that within sixty (60) days of the Director's receipt of said notice the Commission issues an administrative complaint challenging the proposed acquisition or merger, the Bureau of Competition shall exert its best efforts to complete the administrative proceeding in an expedited manner.

The execution of a contract between Harnischfeger and an independent distributor or dealer who also is, or formerly was, a distributor or dealer for Northwest shall not be deemed the acquisition of any part of the lattice boom crane business of Northwest under this paragraph, and the execution of a contract between Northwest and an independent distributor or dealer who also is, or formerly was, a distributor or dealer for Harnischfeger shall not be deemed the acquisition of any part of the lattice boom crane business of Harnischfeger under this paragraph, except that Harnischfeger and Northwest shall not jointly execute a contract between them and an independent distributor or dealer.

III.

It is further ordered, That until July 31, 1981 the total sales for each quarterly period or portion thereof based on a calendar year, between Harnischfeger and Northwest shall not account, either directly or indirectly, for an amount equivalent to 4 percent or more of Northwest's total sales for the previous fiscal year. Sales as used herein means the dollar value of total product and part shipments and shall be accounted for as of the date of shipment.

IV.

It is further ordered, That Harnischfeger and Northwest each shall notify the Commission at least thirty (30) days prior to any proposed corporate change such as dissolution, assignment or sale, resulting in the emergence of a successor corporation, the creation or dissolution of subsidiaries or any other change which may affect compliance arising out of this order.

V.

It is further ordered. That Harnischfeger and Northwest each shall within sixty (60) days after service upon it of this order file with the Commission a written report setting forth in detail the manner and form in which it has complied with this order. Thereafter, on or before August 15, 1979 and annually thereafter until August 15, 1981, each shall file with the Commission a written report setting forth in detail the manner and form in which it has complied with this order for the immediately preceeding consecutive 12 month period ending on July 31st. The fact that any activity is not prohibited by this order shall not bar a challenge to it by the United States Government, any agency thereof or any person.

JAMES A. TOBIN,
Acting Secretary.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[18 CFR Chapter I]

[Docket No. RM78-12]

INCENTIVE RATE OF RETURN FOR THE ALASKA NATURAL GAS TRANSPORTATION SYSTEM

Revised Notice of Proposed Rulemaking

AGENCY: Federal Energy Regulatory Commission.

ACTION: Proposed rule.

SUMMARY: The Federal Energy Regulatory Commission (the Commission) hereby gives notice of a revised proposal to establish certain terms and conditions to the conditional certificates of public convenience and necessity previously issued in the Alaska Natural Gas Transportation System proceedings (Docket Nos. CP78-123, CP78-124, and CP78-125). The proposed terms and conditions would establish an incentive rate of return on equity to reward the applicants for final certificates for project completion under budgeted cost and penalize them for project completion over budgeted cost.

DATE: Written comments by October 6, 1978.

ADDRESS: All filings should reference Docket No. RM78-12 and should be addressed to: Office of the Secretary, Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426.

FOR FURTHER INFORMATION CONTACT:

John Adger, Director, Alaska Natural Gas Project Office, Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, 202-275-3827.

U.S. FEDERAL ENERGY REGULATORY COMMISSION

Before Commissioners: Charles B. Curtis, Chairman; Don S. Smith, Georgiana Sheldon; Matthew Holden; and George R. Hall.

Incentive Rate of Return for The Alaska Natural Gas Transportation System—Docket No. RM78-12.

REVISED NOTICE OF PROPOSED RULEMAKING

(Issued Sept. 15, 1978)

Notice is hereby given, pursuant to the Administrative Procedure Act (5 U.S.C. 553), the Natural Gas Act, sections 4, 5, 7, and 16 (15 U.S.C. 717c, 717d, 717f, and 717o), and the Alaska Natural Gas Transportation Act, section 9 (15 U.S.C. 719g), that the Federal Energy Regulatory Commission (Commission) is considering the adoption of revised terms and conditions concerning an incentive rate of return (IROR) on equity for the certificates of public convenience and necessity for the Alaska Natural Gas Transportation System (ANGTS). Conditional certificates were issued by the Commission on December 16, 1977, *Alcan Pipeline Company, et al.,* Docket No. CP78-123, CP78-124, and CP78-125).

On May 8, 1978, in a notice of proposed rulemaking, the Commission announced that it is considering the adoption of terms and conditions concerning an IROR on equity for the certificates of public convenience and necessity for the ANGTS.[1] In this notice, the Commission invited interested parties to submit written comments on the proposed rule by May 31, 1978. By notice issued May 26, this comment period was extended to June 14, 1978. Parties were also allowed to file reply comments by June 23, 1978. Though some of these comments were received after the extension period, the Commission has considered all of the comments in revising the terms and conditions first proposed in the May 8 notice.

The Commission will entertain further comments from interested parties on the revised terms and conditions presented herein. An abbreviated comment period is provided, for the Commission intends expeditious adoption of the proposed rule.

Terms and Conditions—Attachment

[1] 43 FR 20245-20246 (May 11, 1978).

I. INTRODUCTION

The Commission received 24 comments on the proposed rulemaking from interested parties. Two comments were received from the Commission staff: One from the Office of Regulatory Analysis and another from the Office of Pipeline and Producer Regulation.

Three State governments or regulatory agencies filed comments: The State of Alaska, the State of California and the Public Utilities Commission of the State of California, and the Public Service Commission of the State of New York.

Three comments were received from companies that have applied for certificates to build and operate a segment of the ANGTS: Alaskan Northwest Natural Gas Transportation Co., Northern Border Pipeline Co., and Pacific Gas Transmission Co. and Pacific Interstate Transmission Co.

Twelve comments were received from other interstate natural gas pipeline companies: Columbia Gas Transmission Corp., Michigan Wisconsin Pipeline Co., Northern Natural Gas Co., Natural Gas Pipeline Co., Northwest Pipeline Co., Panhandle Eastern Pipe Line Co., Texas Gas Transmission Corp., Tennessee Gas Pipeline Co. and Midwestern Gas Transmission Co., Transcontinental Gas Pipe Line Co., Texas Eastern Transmission Corp. and Trans-Western Pipeline Co., Texas Gas Transmission Corp., and United Gas Pipe Line Co.

Four comments were received from other interested parties: The American Gas Association, the Southern California Edison Co., the Upper Tanana Development Corp., and the Williams Bro. Engineering Co.

Having evaluated these comments, the Commission issues this revised notice in order to incorporate improvements suggested by valid criticisms and to respond to criticisms with

V 43/192 OCT 3 78 UMI

which the Commission does not agree. In addition, this revision includes further discussion of the concept and design of the IROR, in order to clarify the IROR proposal and to establish a common conceptual ground for further comment.

The revised proposal includes five changes to the terms and conditions originally proposed in the May 8 notice:

1. Certain concepts have been restated to make them more readily understood.

2. The method of adjusting for inflation in determining the cost performance ratio has been altered to more equitably remove the effects of inflation from the workings of the IROR.

3. The condition listing certain changes in scope for the project has been deleted. The subject of changes in the scope is a matter of utmost importance but will require further time to resolve; therefore the Commission will consider it in a separate rulemaking to be initiated as soon as appropriate staff work and studies have been completed.

4. The one-time adjustment to the rate base will be calculated so as to account for the entire difference between the incentive rate of return and the equity rate that would be earned on a pipeline of comparable operating risk.

5. Application of the IROR concept to the Western Leg has been dropped.

In addition to these changes in terms and conditions, this notice of proposed rulemaking invites comment on a revised IROR schedule which the Commission believes to be more realistic than those examples set forth in the previous notice. The actual values that will apply, as well as the permissible rates of return based thereon, of course, must be evaluated and determined in an evidentiary proceeding.

The construction of the example is also based on the assumptions that (1) the final cost estimates filed with the Commission, after adjustment for inflation and changes in pipeline design and routing, will not differ significantly from those submitted in March 1977, and (2) the separate change of scope rulemaking will not significantly reduce the risk borne by the project sponsors. Any changes in that risk must lead to corresponding changes in the allowed compensation for bearing such risk.

II. THE INCENTIVE RATE OF RETURN CONCEPT

A. *Purpose of an incentive rate of return*

The President's *Decision* on the Alaska Natural Gas Transportation System mandates the use of an incentive rate of return (IROR) to deter cost overruns during the construction of this project.

The traditional tool for cost control in pipeline construction has been regulatory oversight, with the attendant threat of disallowing any investment imprudently incurred during construction. Such a regulatory approach, however, is a blunt instrument that is effective only to counteract extreme cases of management's lack of foresight or diligence. Before any costs may be disallowed from the rate base they must be shown to have been imprudently incurred, which implies that only those costs attributable to patently unreasonable management action may be disallowed.

A regulated utility has an economic incentive to increase its return by expanding its rate base and the negative incentive to avoid disallowance of imprudently incurred costs.[2] Better cost-control awareness should be obtained by providing as an incentive for the utility the reward of a greater return. This sort of incentive operates for competitive industries but is generally absent under conventional utility regulation.

The economic impetus toward cost control will be achieved by tying the allowed rate of return to the degree of cost overrun experienced on the project: superior cost control will be rewarded with a higher rate of return. The IROR is designed to complement the disallowance of costs mechanism by offering economic rewards for holding down all costs. Thus, project managers will be rewarded for eliminating costs which are avoidable, even though the costs, if incurred, would later have been classified as "prudent." Without IROR, all prudent costs would simply be included in the rate base, and there would be only the most general impetus to attain superior cost control. With the economic incentives embodied in the IROR, the project sponsors will find it in their own interest to seek out and use opportunities to reduce any construction costs that could be reduced. Project managers are in a much better position to detect such opportunities than is the Commission, and the degree of regulatory oversight can be scaled down.[3]

Under the conventional regulation approach, consumers are forced to bear all the costs of overruns, since increased costs may be required to be added to the rate base. Under the IROR policy, however, the burden of cost overruns will be distributed between consumers and equity investors. Investors, the group to which management must answer, will benefit from superior cost-control results. Also, the consumer interest will be served by assurance that there is a sharing of the risks of cost overruns.

In sum, the IROR should lead to savings in construction costs, which will be divided between lower costs to consumers and higher returns to investors as a reward for cost control. Thus, the ultimate effect of applying IROR to hold down costs will be to provide lowercost gas to consumers and just and reasonable returns to investors.

To reach this goal, the Commission proposes to incorporate the following principles for designing the IROR, each of which is discussed more fully in later sections:

(1) The IROR must provide incentives to reward cost control performance and avoid or minimize cost overruns.

(2) The IROR must provide just and reasonable compensation for investors, in order that sufficient capital may be attracted to finance the project.

(3) The cost to consumers should be lower where cost overruns have been minimized and investors have been awarded an incentive return.

B. *Establishing an incentive rate of return schedule*

The Commission, in the rulemaking here proposed, will design the IROR schedule so as to accomplish the goals of the rulemaking. The design consists quite simply of attaching a separate rate of return to each level of cost control performance. Careful consideration is required in order to design an effective schedule that will yield the desired effect.

1. *Benchmark rates of return and risk premiums.* As a starting point for setting the IROR schedule, certain rates of return can be used as benchmarks. These benchmark rates of return are specifically linked to the various types of unusual risk facing this project.

a. *Operation phase rate.* This is the rate of return to be allowed on the adjusted rate base. It is a starting point for determining the actual incentive rate that will be allowed. This rate should be the rate allowed on pipelines of similar operating risk without allowance for any special construction and completion risks of the Alaska pipeline. (These risks are compensated for with the nonincentive rate, described below.)

b. *Nonincentive rate.*[4] This rate is arrived at after evaluating the special risks inherent in the Alaska project. It equals the sum of the operation phase rate and a project risk premium for those construction and completion risks unique to the Alaska pipeline project. This rate, which does not account for the IROR risk, is the rate which would be granted after conventional regulatory proceedings.

c. *Center rate.* The center rate includes compensation for all risks associated with the project. Specifically, it reflects the operation phase rate, the project risk premium, and the IROR risk premium. (The center rate is equivalent to the nonincentive rate plus the IROR risk premium.) The IROR risk premium is to compensate investors for the risk introduced by the variability in the allowed rate of return implied by adoption of IROR. The center rate will be earned if actual project costs equal the forecasted level of cost overruns, after adjustment for inflation and changes in scope (the subject of a separate proceeding).

In establishing these benchmark rates of return, the Commission's primary consideration will be to determine the just compensation for bearing the risks of this project. These risks are affected by (among other factors):

The type of cost-of-service tariff to be granted for this project;

The beneficial effect on marketability of the Alaskan gas if its cost is rolled in with the cost of other gas;

The unusual construction and noncompletion risks faced by this pipeline;

The financial plan and final capital structure developed by the project sponsors;

The variability in allowed rates of return imposed by the IROR; and

The degree of flexibility allowed in adjusting estimated costs.

2. *Cost performance ratio.*[5] The cost performance ratio is an index of the degree of cost overruns or underruns. It is simply the ratio of actual construction costs, including an allowance for funds used during construction (adjusted for inflation), divided by estimated construction costs (adjusted for any changes in scope): Cost performance ratio equals actual costs divided by estimated costs equals deflated actual rate base divided by projected rate base.

In the proposal, this is the ratio between the deflated actual rate base and the projected rate base as defined in the conditions below. The deflated actual rate base is derived from the actual construction costs and schedule according to standard procedures followed by all pipelines, and includes the allowance for funds used during construction (AFUDC). The projected rate base is the rate base derived from the final cost and schedule estimates submitted by the applicants.

The IROR schedule relates a rate of return to each cost performance ratio. As the ratio increases, signifying overruns, the associated rate of return decreases.

3. *The marginal rate of return.*—a. *The concept of the marginal rate.* Any schedule relating increased costs to the allowed rate of return on equity established by this Commission (the IROR schedule) will imply or define at least one marginal rate of return. This Commission must consider that marginal rate in order to determine the cost-control incentive created by the schedule. Similarly, equity investors or project sponsors must consider the implicit marginal rate in order to determine the rewards available to them for holding down cost overruns. The relationship of the marginal rate to the investors' cost of capital determines the amount of effort that is economically justified to avoid cost overruns.

The marginal return is the return on the incremental dollors invested to move from cost performance ratio to another. To illustrate:

Cost Ratio and Allowed ROR

1.2—17.8 percent.
1.3—17.0 percent.
1.4—16.4 percent.

Assume that the ratio of 1.3 has already been reached shortly before project completion. Then, in order to complete the project, more funds must be invested and a ratio of 1.4 must be reached. If the project had been completed at 1.3 (30 percent overrun), the allowed ROR would have been 17.0 percent. Since the project may actually be completed at 1.4 (40 percent overrun), the allowed ROR on all equity is decreased to 16.4 percent. Given these rates of return, it follows that the actual return earned on the additional dollars invested to move from 1.3 to 1.4 (regarded as $1.3 and $1.4 million, the incremental investment is then $0.1 million) is 8 percent. This results from the following calculation:

(earnings at 1.4)−(earnings at 1.3)/increase in rate base-(1.4)(.1636)−(1.3)(.17)/1.4−1.3-0.08-8 percent marginal return.

Once again, the rate of return on the additional $0.1 million is 8.0 percent even though the rate of return on the entire $1.4 million is 16.4 percent.

b. *The importance of the marginal rate.* The investors seek to invest funds so as to earn a rate of return higher than the cost of the capital. If capital costs more than an investment earns, then that investment will not be made.

An investor's profits will be maximized only when each unit of capital invested is itself as profitable as possible. The project sponsors plan to assemble a pool of capital large enough to finance any degree of cost overrun which has a substantial probability. A marginal rate below the cost of capital will give the project sponsors an extra incentive to avoid having to finance the overrun in order to insure that parts of that pool will be available for future projects whenever possible.

Under IROR, an investor faced with the prospect of financing cost overruns will examine the return on his investment of the additional unit of capital necessary to pay for the overrun. If he finds that return to be lower than his cost of capital, he will strive to avoid having to undertake the investment which the overrun requires.

The marginal rate must be set below investor's cost of capital if the IROR is to offer rewards for reducing overruns. If the marginal rate were above the cost of capital, then overruns might be attractive equity investments, and the IROR would have failed its primary purpose.

The marginal rate, and thus the degree of incentive, can be set independectly of the center rate. An IROR schedule can maintain the same incentive to control costs, even though the overall level of compensation in the schedule might be moved up or down.

Since the calculation of the cost performances ratio includes the AFUDC, a low marginal rate also provides incentives for avoiding construction delays. If construction is delayed, the AFUDC account grows. This raises the deflated actual rate base and the cost performance ratio, with a corresponding decline in the allowed rate of return. Therefore, meeting the construction schedule will avoid penalties in much the same way as does reducing cost overruns.

4. *The center point.* One of the cost performance ratios must be chosen as the starting point for constructing the IROR schedule. Once that point has been assigned a rate of return, and the marginal rate has been chosen, the entire schedule can be determined.

The center point is that cost performance ratio which is associated with the center rate of return. Ratios above the center point will yield rates of return below the center rate. Ratios

---

[2] The Commission recognizes that additional incentives to control cost of service on this project are created by the sponsors' interest in insuring marketability for the delivered gas.

[3] We further note that the IROR concept is useful when a selection must be made among competing applications and where the relative ability to control costs is a material factor in the selection. IROR rewards the successful applicant if its performance matches its projections.

[4] In the May 8, 1978, notice, the nonincentive rate was referred to as the "normal rate

Footnotes continued on next page

Footnotes continued from last page

of return." This was meant to signify the rate which would have been determined in normal regulatory proceedings if the IROR were not being applied. The "normal rate" was widely misunderstood to be the rate earned on normal pipeline operations. Thus, for clarity, the rate of return referred to in the May 8 notice as the "normal rate of return" will henceforth be called the "nonincentive rate."

[5] For purposes of determining cost performance ratios, the term "rate base" is used to refer to capital or investment costs and is not intended to refer to rate base in the conventional sense.

V 43 / 192 OCT 3 78 UMI

below the center point will be rewarded as underruns, with rates of return greater than the center rate.

In order for the center rate to be perceived by investors as adequate compensation for risk, it should be the rate of return that they can realistically expect their investment to yield. As a result, the center point should be set at the most likely cost performance ratio. Then, if the final costs are at the expected levels, the center rate will be earned.

C. *One-time adjustment to the rate base*

In order to facilitate analysis and exposition of the subject, the discussion has up to this point been based on the premise that the incentive rate of return would apply to actual construction costs; that is, a varying rate of return would be used as the incentive mechanism.

The proposed rulemaking accomplishes an equivalent result by adjusting the rate base and allowing the operation phase rate on the adjusted rate base. The present value of the revenues provided by application of the operation phase rate to the adjusted rate base would equal the present value of the revenues provided by application of the allowed incentive rate of return to the actual rate base.[6]

The procedure for determining the one-time adjustment is: (1) Project the equity portion of depreciation and the after-tax return on equity over the life of the pipeline, based on the incentive rate and the conventional rate base; (2) calculate the present value of this stream of income, using the operating phase rate as the discount rate; and (3) replace the existing equity investment in the pipeline at the time of startup with this present value total.[7]

This one-time adjustment procedure does not change the present value of the project's revenue stream, as compared to the incentive rate of return. Because of this, the one-time adjustment methodology should yield the same result as varying the rate of return during operation.

The Commission, however, selects the one-time adjustment for two reasons. First, it will simplify future determinations of a just and reasonable rate of return for the pipeline. As financial conditions change over the next three or four decades, the rates of return allowed for all pipelines will vary. Under the one-time adjustment to the rate base herein adopted, the future determination of rates of return for the ANGTS can be made without having to consider the IROR mechanism or any penalties or premiums that were awarded for performance during the construction phase of the project. The one-time adjustment will continue to reflect those premiums, so that future rate of return determinations need only consider then-current conditions, not past events.

The second reason is that failure to adopt the one-time adjustment would complicate future financing for expansions or loopings of the Alaskan gas project. Certainly the risks of participation in the project now are materially different from those to be associated with investments made years later on expansions of the system.[8] Without the one-time adjustment, a separate rate of return and a separate rate base would have to be established for an expansion or looping. Additionally performance in controlling costs in constructing the initial system should not prejudice additions to, or expansions of, that system.

III. SUMMARY AND EVALUATION OF COMMENTS ON THE MAY 8, 1978, NOTICE

One of the Commission's purposes in issuing this revised notice is to reduce the confusion surrounding the IROR concept which was apparently caused by the May 8 notice. To that end, the preceding section was intended to clarify the concept, design, and operation of an IROR mechanism.

This section specifically addresses many of the comments filed in response to the May 8 notice. All comments were carefully considered. Some contained valid criticisms and suggestions. The Commission incorporated these in its revised proposal.

A. *Applicability of the IROR*

1. *Proposals to completely abandon IROR.* Several of the comments on the proposed rulemaking of May 8, 1978, advocate outright abandonment of the entire IROR concept. The major arguments are (a) that the Commission is not legally required to employ IROR, and (b) that other, existing cost-control devices are adequate.

The second argument has been addressed in section I of this notice. As for the first argument, the legal requirement on the Commission to establish some type of incentive mechanism stems both from the Agreement on Principles with Canada (Agreement) and from the President's *Decision and Report to Congress on the Alaska Natural Gas Transportation System* (*Decision*).

The Agreement governs the two countries' plans to implement the joint project and was made a part of the President's *Decision*. The *Decision* gained the force of law when it was approved on November 2, 1977, by joint resolution of the Congress.[9]

Section 4(b) of the Agreement states: [10]

> • • • the return on the equity investment in the Pipeline will be based on a variable rate of return for each company owning a segment of the Pipeline, designed to provide inventives to avoid cost overruns and to minimize costs consistent with sound pipeline management.

The "Pipeline" referred to in this passage is defined in annex I to the agreement. It includes all segments of the project other than those in the lower 48 states. Thus, the agreement, through its inclusion in the *Decision* and its subsequent approval by Congress and by the Government of Canada, requires the application of some type of incentive system to the Alaskan and Canadian portions of the project.

In addition, the terms and conditions of the *Decision* (sec. 5) could be read as requiring the application of some type of incentive system to the entire project, as spelled out in the following passage: [11]

> If the direct capital cost estimates • • • for the overall project • • • materially and unreasonably exceed the comparable capital cost estimates filed by Alcan • • • on March 8, 1977, • • • the FPC may not issue a certificate for the project. If these final capital cost estimates are not excessive under the above standard, the FPC *may* use these final estimates for the U.S. segments as the basis for fixing a variable rate of return on equity that will reward the applicant for project completion under budgeted cost and penalize the applicant for project completion above budgeted cost. The variable rate of return shall be set to provide substantial incentives to construct the project without incurrent overruns. [Footnotes omitted.] [Emphasis added.]

Various comments argued that the term "may" in this section of the *Decision* gave the Commission flexibility in choosing whether to impose an inventive mechanism. Such an interpretation, however, is inconsistent with the entire theme and purpose of the President's *Decision*. The proper interpretation is that the Commission must fix an incentive system for the project but may use the final capital cost estimates filed with the Commission prior to certification as the basis for that system. In other words, the *Decision* allows the Commission to select the basis for the mechanism, but requires that a mechanism be imposed. Further, since section 5 specifies terms and conditions for the entire project, we deem the Commission to be required by the *Decision* to assure that some type of incentive mechanism exists on all segments of the ANGTS.

The reason that the *Decision* requires imposition of an incentive mechanism to control costs is to protect the consumer and also to facilitate private financing of the project. The President in the *Report* left the implementation of such a mechanism to the Commission, with instructions "to balance the economic incentive with administrative feasibility." [12] While the President spoke in general terms of a variable rate of return, therefore, the Commission was at the same time given sufficient discretion in implementing the incentive mechanism to avoid a result which is not in the public interest. As discussed below in section IV. C, the Commission, after balancing economic incentive against administrative feasibility, believes that application of the IROR to the western leg segment of ANGTS is neither appropriate nor mandated.

2. *Application to segments in the lower 48 States.* A number of the comments argued that it is unnecessary to apply the IROR mechanism to segments of the ANGTS in the lower 48 states, because the potential for cost overruns on these segments is much less than in Alaska.

It has already been shown that the *Decision* requires the existence of some type of incentive system to the entire project. Even if it were not a legal requirement, however, it would be in the public interest to apply the IROR mechanism to the Alaskan and northern border segments of the ANGTS. The need for economic incentives throughout regulated industries was explained in the Introduction, and the need for such incentives to reduce costs on the lower 48 segments is just as real as on the Alaskan and Canadian portions of the project.

The difference between the Arctic segments and the conventional segments is in the degree of certainty in cost estimates. It is more difficult to predict Arctic construction costs than to predict the costs of conventional construction. Consequently, even though nonoverrun incentives may be the same, higher overruns may be incurred on the Arctic segments. It does not therefore follow, however, that cost-control incentives are not needed on the conventional construction segments. All of the reasons for applying some type of incentive system to the Arctic segments are equally valid for the conventional construction segments.

Some comments asserted that there are major practical problems in trying to apply an IROR mechanism to the western leg, because it will be part of existing operating systems and would not be project financed. Slightly different procedures would be needed for the western leg, but there appear to be no insurmountable problems in developing these procedures.[13] The commission has decided not to apply IROR as herein described to the western leg, however, because the net effect of doing so would be to increase costs to consumers. On the assumption that the financing plan for the Western Leg, which was presented to the President and made part of the report accompanying his *Decision*, is the one which is utilized, we believe that other, existing incentives to reduce construction costs are adequate for this segment of the system. (See sec. IV. C.)

Another problem mentioned in the comments is that parts of the lower 48 segments might be built in advance of the Alaska segment in order to carry Canadian gas.[14] Even so, we propose to apply the IROR mechanism to the northern border facilities. These facilities are part of the ANGTS, and thus application of some type of incentive mechanism is required by the *Decision*.

3. *Designing different IROR schedules for different segments.* Both the Office of Regulatory Analysis and the Office of Pipeline and Producer Regulation argued that different IROR schedules would be appropriate for each segment of the project. Their comments made two points:

(a) A major consideration in designing the IROR schedule is risk compensation. The investors must be adequately rewarded for bearing the risks of noncompletion, as well as the risks that severe overruns will lead to lower rates of return through the operation of the IROR. These risks differ among the segments of the project, and the associated risk premiums awarded to investors should therefore correspond to the actual risks of each segment.

(b) The differences in the probable severity of cost overruns may imply that different incentives should be used for each segment: Where overruns are easy to avoid, a weaker incentive may be adequate.

Both these points argue for the design of separate IROR schedules for the different project segments. The Commission agrees with the first argument and will consider setting different values for the center rate and the center point for each segment to compensate for differences in risk. As to the second argument, however, the Commission at this time sees no reason to believe that the difficulty of searching out and implementing opportunities to reduce costs will vary between segments.

4. *Exempting certain equity funds from IROR.* The State of Alaska argued in its comments that the holders of convertible debentures would have no control over cost overruns, yet would be subject to the established incentive rate of return upon conversion of the debt to equity. Thus, certain investors could be penalized for behavior over which they claim to have no control.

It seems unlikely, however, that holders of convertible debt will have no control over costs. It will be in their interest to insure cost reduction, and the negotiation of their indenture agreement should allow them an opportunity to exert their influence over cost control procedures. Furthermore, the administrative problems involved in exempting certain equity funds from the incentive rate may be significant, especially if the operation phase rate is changed in the future.

B. *Effect of IROR on project financing*

1. *Project feasibility.* Alaskan Northwest, in its comments filed June 13, 1978, claims that the IROR mechanism will prevent private financing of the project. It then offers an alternative which it terms acceptable. The alternative, however, is identical in concept to the IROR mechanism contained in this draft revision. It cannot be the company's argument, therefore, that the general idea of IROR could

[6] In the notice of May 8, the Commission proposed a one-time adjustment to the rate base upon commissioning or startup of pipeline operations. This adjustment would have been equivalent in present value to the difference between the incentive rate (determined by the degree of cost control measured by the cost performance ratio) and the nonincentive rate of return. In this notice, we instead propose to make a one-time adjustment equivalent to the difference between the incentive rate and the operation phase rate. In this way, all of the unusual risks faced during the construction period (including risk due to IROR) will be compensated for by the one-time adjustment. Future rate of return determinations will then be based on consideration of the operating risks only.

[7] Some of the comments argue that uncertainties about the future operation of the pipeline will make the present value of the return of equity and the return to equity uncertain and thus make the precise size of the one-time adjustment uncertain. The Commission agrees that is is impossible to predict with certainty such things as throughput, tax rates, operation costs, or ultimate capacity. The type of cost-of-service tariff that this Commission is likely to approve will provide a high degree of certainty as to the return of equity and the return to equity over the life of the project, once the size of the equity investment and the allowed rate of return are fixed.

[8] The project sponsors have already provided some recognition of the changing nature of project risks as the project progresses with the discount schedule for late entry which was made part of their partnership agreement. The Commission endorsed that concept in approving the relevant portion of the partnership agreement by order of June 30, 1978, in docket No. CP78-123 (at pp. 7-11), and seeks to reinforce it with the rate base adjustment methodology.

[9] Act of November 8, 1977, Pub. L. 95-158, 91 Stat. 1268 (1977).

[10] *Decision*, p. 51.

[11] *Decision*, p. 36.

[12] *Report*, p. 123.

[13] In some respects it is less complicated to apply the IROR mechanism to conventional lower 48 pipelines. Because the construction technology and pipeline design are more familiar, there are fewer uncertainties in the cost estimates. Thus, the problem of changes in scope or changes in cost beyond the sponsor' control is reduced.

[14] A conditional import authorization was issued on June 7, 1978. *Northwest Alaskan Pipeline Co.*, Docket Nos. CP78-123, et al.

V 4 3 / 1 9 2

prevent financing. Rather, it must be protesting the details and parameter values contained in the first notice.

The IROR schedule is designed so that investors will reject the project only if they anticipate overruns so high that the project would no longer be in the public interest.[15] At all lower levels of anticipated overruns, however, the allowed rate of return will be high enough to attract investors to the project.

In order to insure capital attraction, the Commission will build into the IROR schedule two important features:

(a) A risk premium to compensate investors for the special risks imposed by the IROR wil be included in the center rate. This premium will be in addition to the compensation for the risks due to construction and operation. It will be designed to compensate investors for the fact that the IROR imposes variability on their possible returns.

(b) The IROR schedule will be designed so that rates of return below those of other investments will result only if cost overruns reach an unacceptably high level.[16] If potential investors reject the project because of the risk that the IROR mechanism will produce a low return, it will be because they place a higher probability on large cost overruns than does this Commission.

In addition to providing rates of return adequate to compensate for the risks of this project, the IROR will provide return rewards for controlling costs. This feature should be looked upon favorably by investors.

Prior to final certification, the sponsors will be required to show that they have obtained debt and equity capital sufficient to complete construction, even in the event of cost overruns. To secure such commitments, the capital suppliers wil have to be convinced that the project is economically feasible and that adequate cost-control provisions have been made to limit cost overruns. To that end, an IROR plan will be supportive of the capital market's demand for cost-control assurance.

Committments of capital should also be promoted by Commission actions designed to enhance the economic feasibility of the project. At an early stage of the proceedings before the FPC, it was generally agreed that a cost-of-service tariff and rolled-in pricing would be required for this project, in order to provide assurance of revenues to capital suppliers. The Commission is therefore prepared to approve a cost-of service tariff (with some service interrruption qualifications), to go into operation once gas flow commences. (The *Decision* prohibits any charges to customers prior to gas deliver.[17]) It is also probable that the cost of the gas will be rolled in with the cost of other gas available to the sponsoring companies.

2. *Effect on project debt.* Many of the comments pointed out that, in the event of overruns, a reduced equity rate of return would lower the coverage ratios for the project debt. This normally implies higher-cost debt financing or more difficulty in obtaining debt, since lower coverage tends to indicate higher probability of default.

On this project, however, the cost-of-service tariff will yield extremely dependable revenues, so that the probability of default will be very low regardless of equity and earnings coverage. The allowed revenues would always be more than sufficient for debt service, and would be so stable that the conventional interpretation of a thin coverage ration would not apply. Debt holders should not, therefore, react negatively to the IROR, and should be reassured by its tendency to reduce overruns, since overruns more than anything else threaten the project's viability. Reduced overruns also mean that debt holders will not be required to advance further funds to finance those overruns. In sum, it seems that on balance the IROR concept offers debt holders more benefits than risks.

Even though it seems highly unlikely that the IROR itself will prevent debt financing, some comments raised the possibility that the one-time adjustment to the rate base could hinder debt service. This concern was voiced by the financial advisers to the Alaskan Northwest partnership.[18] These advisers stated that debt financing would be unavailable if the rate base could be so much reduced that depreciation would be inadequate to cover senior debt principal repayment.

Even under the most extreme IROR mechanism imaginable, the reduction in rate base could not exceed the total equity investment in the project. Therefore, the depreciation component of the remaining rate base would always be adequate to repay the debt principal. Also, the rate of return on that rate base would always be more than adequate to cover interest on the debt.

A different problem might occur if the rate of debt repayment were much higher than the allowed rate of depreciation of the rate base. But this would constitute a problem of the timing of the cash flows, as opposed to a shortfall in the collection of the total sums required to service debt. Should this problem surface in the project's debt financing plan, the Commission will consider whatever adjustments are necessary to resolve it.[19] The problem should not arise, however. The sponsors and suppliers of debt should recognize the certainty of operating income which the cost-of-service tariff provides. This certainty should enable them to structure the debt repayments over a large period of the life of the project.

3. *Effect on project equity.* Many of the comments concerning the effect of IROR on equity have already been treated in the section entitled Project Feasibility. The ability of the project to attract equity funds is crucial. This section discusses some other specific issues of interest to equity holders.

a. *Risks due to IROR.* The principal effect of IROR on equity is to introduce some variability in the allowed return to equity, which implies that the equity investment is somewhat more risky. All funds invested in the equity portion of the project (25 percent of total) will receive the incentive rate of return determined from the IROR schedule which is ultimately adopted by the Commission. Since the allowed rate of return will vary according to cost control performance, the actual allowed rate of return cannot be determined in advance. Equity investors will have to form expectations about rate of return based on their expectations of the cost of the project.

These added risks due to the IROR are similar to ordinary business risks faced in competitive industries. In such industries, firms with lower costs are rewarded with higher profits, and equity investors must make judgments as to which firms will be most profitable. Imposing the IROR on a regulated industry is merely an attempt to inject ordinary profitmaking incentives—and thus also some ordinary business risks—into a regulated industry. The risks associated with IROR should therefore not be unfamiliar to most investors.

b. *Marginal return on equity.* An issue which has generated considerable misunderstanding is the marginal return to equity investment in cost overuns. The effect of the marginal rate has been explained. The essential point is that *all* equity investment will be awarded the rate of return determined from the IROR schedule, and as overruns increase, that rate of return for *all* equity funds will decrease.

In the example IROR schedule contained in this notice, a cost overun of 40 percent above the costs filed with the Commission in March 1977, after adjustments for inflation and design changes required by the Government, implies 16.4 percent return on equity for all equity invested, while a 30 percent overrun will be awarded a 17 percent rate of return on all equity invested. This unavoidably implies that those equity funds invested to provide for the overrun from 30 percent to 40 percent receive only an 8 percent return. When this is "rolled in" with the return on the funds receiving 17 percent, however, the total result is a single pool of equity which covers the 40 percent overrun and which receives a 16.4 percent return.[20]

The marginal rate is important in determining the strength of the incentive to avoid overruns, but the compensation of equity investors is determined by the incentive rate of return on equity, which can be read directly from the IROR schedule.

c. *Double leverage.* The comments of Northwest Pipeline Corp. pointed out that the IROR could lead to violation of indenture agreements for companies with existing debt structures. The effect of any such restriction is subject to the control of the parent companies in their determination of the financing plan.

To the extent that part of the investment of project "equity" actually consists of parent corporation debt, varying the allowed return on project equity will affect the debt coverage of the parent. This could conceivably violate the indenture agreements of some of the parent corporations of the partnership. This seems unlikely, however, since the adoption of IROR materially increases the prospects that sponsor parent companies will not violate indenture debt limits, because the IROR reduces construction costs.

C. *Cost estimation and control*

Most of the comments filed included protestations that investors should not be penalized for cost overruns which are beyond the sponsors' control. In this connection, the comments argued that the list of changes in scope for which projected costs should be adjusted included in the May 8 notice was deficient. Because of the importance and commplexity of this problem, the Commission has decided to consider the issue in a separate proceeding to be initiated as soon as possible.

An issue closely related to uncontrollable cost increases is that of inflation. Many of the comments dealt with methods of adjusting projected costs for the effects of inflation. These comments are discussed below, in the explanation of the Commission's new proposal on inflation adjustments.

The State of Alaska expressed concern that the IROR mechanism would prompt the project sponsors to reduce the quality of project construction in order to lower costs. The inferior construction would then have to be compensated for through higher operation and maintenance expenses. This strategy would hold down the cost performance ratio but would result in higher costs to consumers.

Although this strategy is a theoretical possibility, we believe that there is relatively little latitude at the current stage of project development to alter the pipeline design or construction methods to shift costs to the operating period. There are always tradeoffs in design such as that between additional compression (capital cost) and higher fuel cost (operating cost), but this Commission, the Federal inspector, and other Government agencies will closely monitor the pipeline design and construction to assure that the pipeline is built to the appropriate technical standards.

D. *Investment tax credit*

The Office of Regulatory Analysis argued that the investment tax credit should be considered in determining the marginal rate in the IROR schedule. As the discussions of the marginal rate and the overall IROR schedule in later sections of this notice indicate, the Commission has not and will not consider the investment tax credit in determining the IROR schedule.

E. *Neutral zone in IROR schedule*

Many of the comments proposed a center zone, in which the rate of return would not decline. For example, for cost overruns between 0 percent and 40 percent, no penalty would be assessed, and a schedule might look like this:

Cost performance ratio:	*ROR (Percent)*
1.0	17.0
1.2	17.0
1.4	17.0
1.6	16.4

This proposal has the drawback that no cost-control incentives exist in the range 1.0 to 1.4. If the project were virtually complete at 1.2, then investment in overruns up to 1.4 would earn a marginal rate of 17 percent.

F. *Varying the marginal rate*

The Office of Regulatory Analysis suggested two reasons for choosing different marginal rates for different ranges of Cost Performance Ratios:

1. The difficulty of avoiding overruns may vary along the range of possible cost outcomes. ORA asserts that the strength of the incentive should vary accordingly: Where overruns are more difficult to avoid, greater rewards for cost control should be offered.

Although this argument has some theoretical appeal, the Commission cannot see any a priori reason to believe that cost overruns will be any easier to control at any stage of project completion. The Commission prefers to reserve the simplicity of a single marginal rate, set at a level that insures an incentive effect at all possible outcomes.

The Commission believes that much of the effort involved in containing cost overruns will be invested in planning prior to commencement of construction. A constant marginal rate will allow the project sponsors to establish policies for controlling overruns prior to construction which are commensurate with all of their financial constraints, including the incentive effect of the marginal rate, and retain those same policies throughout the construction period. Such constancy in and of itself should be helpful in controlling cost overruns.

[15] In the *Decision* (p. 180) it is estimated that an increase in direct capital costs of 124 percent (in constant dollars) over the Mar. 1977 estimates would make the project uneconomic from a national point of view.

[16] A number of comments argue that any IROR schedule which allows for the possibility, no matter how remote, that the allowed rate of return might fall below that of comparable investments in the U.S. economy would be unjust, unreasonable, and confiscatory, depriving investors of their property in violation of the Constitution. In the case of a pipeline for which no IROR mechanism has been established, the Commission concedes that it would normally be unreasonable to lower the rate of return below rates earned in other comparable investments after the pipeline had been constructed and after equity owners had invested their money. However, prior to the expenditure of any funds for construction of this project, this Commission will establish an IROR schedule that will tie the allowed rate to cost control, clearly a valid regulatory purpose. As long as the principles of this mechanism are clearly specified in advance of construction, are fairly applied, and are agreed to by the investors, it can hardly be termed either unreasonable or confiscatory if poor cost control produces a rate of return below that earned on other investments. *cf; FPC* v. *Sierra Pacific Power Co.*, 350 U.S. 348 (1956) and *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp.*, 350 U.S. 332 (1956) (when a public utility or pipeline enters into a fixed rate contract which become unprofitable, the Commission cannot allow a rate increase unless the contract rate becomes so low as to severely impair the ability of the utility to maintain service). Moreover, as in this case "(e)conomic regulation under the commerce power, affecting an industry generally, is not a taking of property if the value of property is thereby reduced or business risks increased." *Southern Louisiana Area Rates Cases*, v. *FPC*, 428 F. 2d 407, 428 (5th Cir.), *cert. denied*, 400 U.S. 950 (1970).

[17] *Decision*, p. 37.

[18] Bank of America and Citibank, letter to John G. McMillian dated June 2, 1978, attached to Alaskan Northwest reply comments.

[19] For example, a minimum bill might be utilized in cost-of-service tariff which would insure debt service, including sinking fund payments.

[20] Here again, there may be restrictions on distribution of return among different contributions to the pool under prior agreements among those contributors. See footnote 8 above.

OCT 3 1978

V 4 3 / 1 9 2

2. This notice proposes to compensate investors for IROR risk by raising the level of the center rate of return as a result of adding the IROR risk premium. ORA suggests that compensation should instead be granted by increasing the possible rewards for cost underruns.

If the rewards for underruns were increased while the penalties for overruns remained the same, the expected return to investors would have increased. The value to investors of the higher potential rewards depends on the probability they attach to cost underruns. Designing the IROR schedule in this fashion requires the use of very low (even negative) marginal rates for low-cost performance ratios.

Gas consumers may prefer this method of compensating for investment risk, since it reduces their risk. The ORA alternative would result in a broader range of values for the incentive rate but would tend to reduce the range of values for the cost of service expected to be paid by consumers.

The major reservation about this alternative approach is that the increase in the incentive rate for lower values of the cost performance ratio may have to be very large in order to provide the same compensation for risk as would be provided by simply raising the center rate. If investors think underruns are unlikely, then they will attach little importance to the potential high rewards. Moreover, equity investors may be more concerned about the "downside potential" than about large possible gains. These two factors in combination could mean that extremely high rewards would have to be offered in order to match the effect of a small increase in the center rate.

G. *Accounting treatment of rate base adjustment*

In their comments, the Office of Pipeline and Producer Regulation and Tennessee Gas argued that the one-time adjustment introduced complex accounting and tax considerations into cost-of-service calculations.

We propose to consider the one-time adjustment to the rate base as an adjustment to the allowance for equity funds used during construction. Such procedures are already necessary in cost-of-service calculations without an IROR mechanism, since the allowance for equity funds used during construction must be recognized as a cost of the investment. The depreciation of equity AFUDC, however, is not utilized in calculating taxable income. Under current procedures, this is recognized in calculating corporate income taxes as a component of the cost of service.

Thus, the same procedures that are now used to account for the tax implications of the equity AFUDC account would be applicable to treatment of the one-time adjustment to the rate base. No new procedures will be needed.

H. *Alternative methods of applying IROR*

Many comments on the originally proposed rulemaking favored the application of the IROR schedule during the construction period only, in which case the one-time adjustment to the rate base would instead be accomplished through variation of the equity AFUDC rates of return.

This approach was considered by the Commission, since its incentive effect could be made comparable to the mechanism proposed in this notice. In order for the two approaches to be equivalent, however, the range of rates of return in the IROR schedule must be far greater for the AFUDC rate method than for the currently proposed method. This is because, under the AFUDC rate method, the incentive rate and return would be applied only during the construction period, rather than over the life of the project. Consequently, the total present value of any reward or penalty would be far smaller than if the same incentive rate were to be applied for the entire project life. These smaller rewards and penalties constitute a lesser incentive.

The degree of incentive effect of a given marginal rate can be properly evaluated only if it is derived from an IROR schedule that is in effect for the entire project life. The same IROR schedule applied to a shorter period yields smaller rewards or penalties and therefore a lesser incentive effect. For this reason, the Commission would consider the AFUDC rate method only if the range of rates in the IROR schedule were adjusted so as to invest the AFUDC method with an incentive effect equivalent to that attained by the life-of-project method used in this notice.

The Commission's adjustment to rate base methodology also allows clearer recognition of the changed degree of risk associated with the project after gas deliveries commence. By using a rate-base adjustment to compensate for all construction phase risks and insisting on an operation phase rate appropriate for the risks encountered at that time, the Commission is trying to assure that those who bear the construction phase risks have the opportunity to earn a significantly higher rate of return than those who do not. The Commission's preferred method is consistent with the policy objective we were seeking in approving the discounting principle which is part of the sponsoring companies' Partnership Agreement.

I. *Effect on consumers*

Some parties pointed out that IROR entails some costs to consumers. Investors must be allowed higher rates of return as compensation for the risks added by the IROR. In addition, any benefits from cost control must be shared with investors, in the form of the higher incentive returns paid as rewards for good management.

The Commission must structure the IROR mechanism in such a way that the benefits to consumers from cost control outweigh the costs imposed on consumers by IROR. The example IROR schedule presented in this notice is designed to provide consumers with net benefits under very plausible conditions. (See sec. IV.A.5.)

J. *Alternative proposal of Alaskan Northwest*

In its comments, the Alaskan Northwest partnership proposed an alternative IROR mechanism which in many respects is similar to an alternative the Commission discussed in the notice of May 8. The major features of the Alaskan Northwest alternative are:

(1) Only the rate of return on equity during construction (the AFUDC rate) would be increased or reduced by cost control performance.

(2) The incentive rate of return would have a high rate of 20 percent and a low rate of 12 percent. The center rate in the proposed schedule is 17 percent.

(3) In the center of the IROR schedule would be a "neutral" area where the rate of return would not be changed. In the example given by Alaskan Northwest, the neutral area extended from a cost performance ratio of 1.01 to 1.40. In other words, if cost overruns were less than 40 percent over the projected costs, the incentive rate would equal the center rate of 17 percent.

(4) During construction, projected costs would be revised to reflect all changes in prices of materials and labor, changes in design, route, or schedule ordered by Federal or State authorities, force majeure or acts of God, and all other changes in cost beyond the control of the sponsors. Only changes in quantities of materials and labor would be tabulated in cost overrun.

We have constructed an example of how the Alaskan Northwest IROR mechanism would be applied to various cost overruns within the Alaskan segment of the system. The values used in the alternative mechanism are taken from the comments of Alaskan Northwest, while the construction costs, schedule, and financial assumptions are taken from earlier filings and applications, in particular the March 1977 capital cost estimates.

Table I presents an example of the Alaskan Northwest proposal. For comparison, we also show an example of the cost of service under conventional ratemaking—i.e., without an IROR mechanism—for various levels of cost overruns. The costs of service for various levels of the cost performance ratio are calculated by simply increasing all direct capital costs in the March 1977 estimate by the proportion indicated in the cost performance ratio.[21]

The cost of service calculations in 1975 dollars follow the methodology used in the President's *Decision and Report*.[22] In order to measure the cost of service over the life of the project, the present worth average cost of service for a 20-year operation life has been calculated. This average is higher than a simple arithmetic average, but it more accurately reflects the change in cost of service over time.[23]

[21] The cost performance ratio could also be increased by extending the construction schedule without changing direct capital costs.

[22] All capital and operating costs have been increased 5 percent per year to reflect inflation. The per-unit cost of service has then been deflated to 1975 dollars.

[23] The present worth average is that constant charge per unit of gas over the 20-year period which has the same present worth as the declining transportation charge that would result from a conventional cost-of-service calculation. A discount rate of 10 percent is assumed in computing the present worth. A different discount rate would change the average, but the relationship between different values would be the same.

TABLE I

CONVENTIONAL RATE MAKING — 17% AFUDC & Operating Rate			ALASKAN NORTHWEST PROPOSAL — Variable AFUDC Rate & 17% Operating Rate				
Cost Performance Ratio	Rate Base ($ Million)	Present Value Average Cost of Service ($/MCF)	AFUDC Rate (%)	Rate Base ($ Million)	Change in Rate Base ($ Million)	Present Value Average Cost of Service ($/MCF)	Equivalent Operating Rate on Equity (%)
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
0.8	2,769	0.332	20.0	2,804	35	0.339	17.8
1.0	3,461	0.407	18.0	3,476	15	0.410	17.3
1.2	4,154	0.483	17.0	4,154	0	0.483	17.0
1.3	4,500	0.521	17.0	4,500	0	0.521	17.0
1.4	4,846	0.558	17.0	4,846	0	0.558	17.0

2.2	7,615	0.860	12.0	7,464	- 151	0.829	15.7
2.4	8,307	0.936	12.0	8.142	- 165	0.902	15.7

NOTES FOR TABLE I

Column (2) -- Calculated from the March 1977 cost estimates for the Alaska segment in 1975 prices assuming 75 percent debt capitalization, 10 percent interest rate on debt, 17 percent rate of return on equity, and the proportional change in all direct capital costs indicated by column (1).

Column (3) -- Assumes 5 percent annual inflation in capital and operating costs, with the subsequent annual cost of service deflated to 1975 prices using 5-percent deflation factor. Gas fuel cost is $1.60 per MCF. Rate of interest on debt is 10 percent. Rate of return on equity is 17 percent. Present value average cost of service is calculated from the formula:

$$\sum_{t=1}^{20} C_t(1.1)^{-t} / \sum_{t=1}^{20} (1.1)^{-t}$$

where C_t is annual unit cost of service in 1975 prices.

NOTES FOR TABLE I CONT.

Column (4) -- Taken from p. 16 of the initial comments by Alaskan Northwest Transportation Company.

Column (5) -- Same as column (2), except that the AFUDC equity rate is that given in column (4).

Column (6) -- Column (5) minus column (2).

Column (7) -- Same as column (3).

Column (8) -- Rate of return on equity during construction applied to the rate base in column (2) that generates the same present worth at a 10 percent discount rate of the return of equity and after-tax return to equity as does the 17 percent rate of return applied to the rate base in column (5).

OCT 3 1978 UMI

V 43 / 192

A basic feature of the Alaskan Northwest proposal is that the equity rate of return would vary only during construction. The Commission has calculated the equivalent change in the equity rate during operation. By equivalent, the Commission means the operation phase rate applied to the conventional rate base which would produce the same present worth of cash flow to equity investors as would the 17 percent operating rate applied to the rate base derived from the variable AFUDC equity rate.[24] To use an example from table I, with a cost performance ratio of 2.0 equity investors should be indifferent between receiving an operation phase rate of return of 17 percent on the rate base of $7.46 billion or receiving a rate of 15.7 percent on a rate base of $7.62 billion. The rate base of $7.62 billion is the conventional rate base derived from an equity AFUDC rate of 17 percent, while the rate base of $7.46 billion is derived from the equity AFUDC rate lowered to 12 percent because of the assumed large cost overruns.

The Commission's fundamental objection to the Alaskan Northwest proposal is that the implicit marginal rate of return is not less than the rates of return that can be earned on alternatives of equal risk, and thus does not provide sufficient incentive for management to reduce costs. This is obviously the case with the so-called "neutral zone," for values of the cost performance ratio between 1.01 and 1.40, there would be no reduction in the AFUDC equity rate. In this zone, the IROR schedule is flat: the marginal rate is equal to the incentive rate.[25] On all cost overruns within this zone, therefore, sponsors could expect to earn the after-tax rate of return of 17 percent.

Even outside the neutral zone, the marginal rate of return over the operating period would be very high. In table I, the equivalent operating rates of return vary from 17.8 percent for a cost performance ratio of 0.8 to 15.7 percent for a cost performance ratio of 2.2. The marginal rate that would produce this drop in the incentive rate is 14.5 percent.[26] On the average, equity investors could expect the rate of return on their investments in cost overruns to be 14.5 percent: a rate of return high by previous standards of this Commission and higher than one could expect in many other equity investments in the United States. Therefore, this proposed IROR schedule, if applied to the construction phase only, would not offer sufficient incentive to control costs.

A second concern with this proposal involves the relationship among the overall level of allowed rates, the degree of penalty for overruns, and the degree to which projected costs may be revised during the course of construction. The comments of Alaskan Northwest and other project sponsors suggest that they envision a process by which projected costs are continually revised to account for changes to the earlier cost estimates caused by design or routing modifications required by government authorities, force majeure, acts of God, strikes, and changes in prices of labor or materials. While adjustments for some of these events will undoubtedly be required, it is unlikely that the cost performance ratio would ever exceed 1.0 if all of these changes in the projected cost estimates were made. If this Commission were to accept a policy of unlimited adjustments to the sponsors' cost estimates, it would feel compelled to require a lower marginal rate and a lower overall level of rates (a lower center rate of return). The applicant has, however, proposed a very high marginal rate and a center rate of 17 percent, which is substantially and unnecessarily higher than the range of rates allowed by this Commission in the past.

IV. THE COMMISSION'S REVISED PROPOSAL

Using the principles outlined in section II, the Commission has revised the terms and conditions first presented in its May 8 proposal of rulemaking. Included in this section is an example of an IROR schedule. The values in that example are representative of numbers the Commission could approve upon appropriate findings in an evidentiary proceeding. The example is reasonable, given the estimates of the underlying rates of return and risk premiums specified in this section. The actual rates of return will of course be set when the various components of the overall risk distribution framework, such as the scope change process, the capital structure, and the workings of the project company tariff, have been specified and when evidence on the rates of return and risk premiums has been considered by the Commission.

A. *An example IROR schedule*

1. *Benchmark rates of return.* a. *The operation phase rate.* The operation phase rate is the rate of return on equity that will be allowed after the pipeline is in operation and after the one-time adjustment to the rate base has been made. This rate will be set pursuant to the usual process for determining allowable rates for pipelines with similar operating risks.

The degree of the pipeline's operating risk exposure is a point in controversy. Several comments argued that the risk exposure would be substantial. On the other hand, the Office of Regulatory Analysis argues that ANGTS operating risks will be much lower than those of other pipelines, since there will be no risk associated with decline in throughput.

It is true that the cost-of-service tariff eliminates the risk of variations in throughput which are beyond the control of the pipeline by automatically adjusting the transportation tariff accordingly. For certain other service interruptions, however, the cost-of-service tariff will have provisions for lowering rates of return. Service interruptions pose a risk of unknown dimensions, inasmuch as these pipelines will traverse a hostile environment and will have unknown operating conditions. The details of the project company tariff will determine the degree of risk being borne by the sponsoring companies. The dimensions of the pipeline's risk exposure will be an important issue to be resolved in the evidentiary proceedings which will be held.

For present purposes, a rate of return of 13 percent has been chosen as the operation phase rate in the numerical examples to be presented later. The Commission has set rates of return on equity for two pipelines with cost-of-service tariffs: Pacific Gas Transmission (13.0 percent) and Columbia Gulf Transmission (13.5 percent).[27]

The final rate will be determined after more information about risks during the operation phase has been specified in the project company tariff and may vary between segments of the ANGTS. Over time, this rate will then be adjusted up or down as general financial conditions change.

b. *The nonincentive rate.* The nonincentive rate of return on equity is the rate that would be allowed if the IROR mechanism were not employed. This rate should provide equity investors with a risk premuim for the construction phase risks associated with the Alaskan gas project, but should not provide any compensation for the particular risks created by an IROR mechanism.

Fifteen percent has been chosen as an example rate of return on the Alaska segment, for the following reasons:

Fifteen percent is at the lower end of the range discussed by the applicants in the administrative hearings on this case.[28]

Fifteen percent was found reasonable by the administrative law judge who heard the case before the FPC.[29]

Fifteen percent was used in cost-of-service calculations in the FPC's report to the President and in the President's *Decision*.[30]

The difference between the 13 percent operation phase rate and the 15 percent nonincentive rate is intended to compensate for the construction phase risks associated with the Alaskan gas project.

The rate for the Northern Border segment may be somewhat less than the rate for the Alaska segment, since it will be built in a more familiar environment and does not involve as much uncertainty as the Alaskan segment. Because it is part of a large, complex system and because its success is dependent on successful completion of other segments, however, it may still present more risk than conventional lower 48 pipelines.

c. *The center rate.* The center rate of return on equity is the rate specified by the IROR schedule when actual construction cost equal the expected level of cost overruns: i.e., the rate which is the center point of the schedule. Because of the uncertainty about the ultimate rate of return created by the IROR mechanism, this center rate must have a premium over the rate that would be allowed if no IROR mechanism were used.

Seventeen percent is used in this example as the center rate for the Alaska segment. The 2 percentage point difference between the nonincentive rate and the center rate represents compensation for the risks created by the IROR mechanism.

Since there is less uncertainty about construction costs for the more conventional pipeline construction on the Northern Border system, the compensation for the risks of the IROR mechanism may be less on that segment. This implies a smaller difference between the center rate and the nonincentive rate. Again, more definitive information in the complete structure of allocation of project risks must be available before the Commission can make a final determination of this rate.

2. *The marginal rate.* In determining a marginal rate of return that will embody a significant incentive to control costs, the Commission must compare the marginal rate to the cost of the capital that sponsors invest in the equity portion of the project. A marginal return below the cost of that capital will discourage sponsors from investing in overruns.

The sponsors' cost of capital will be determined by their own costs of equity and debt, as well as by the composition of the capital they invest in the equity portion of the project. If sponsors were to invest only equity, then an effective marginal rate would only need to be lower than the cost of equity. If the sponsors raise their capital for the equity portion of the project through some combination of debt and equity, however, then the marginal rate must be set below the weighted average cost of that capital. If the sponsors were to finance this investment completely through the sale of debt, then the marginal rate would have to be less than the after-tax cost of debt.

The potential investors for the equity portion of the project are diversified corporations that invest in other U.S. industries. This suggests that their costs of equity are near some average of the returns on equity available in all U.S. industries. This number is, of course, not directly observable in the marketplace, since part of the return is appreciation in stock market prices. Studies of historic earned rates of return show that the long-run rate of return on common stock (dividends plus capital gain) ranges from 9 to 11 percent.[31] Adjusted for the 85 percent exclusion rule for intercorporate dividends, this would suggest a return of 8 to 10 percent. In light of current expectations that future inflation will be higher than the average over past decades, these rates of return could be increased by perhaps 3 percentage points, to 11 to 13 percent.

The current market rate on long-term debt is near 10 percent, implying an after-tax cost of debt of roughly 5 percent. Assuming that investments in the project equity are financed at a typical debt ratio of .60, these rough estimates of capital costs can be used in calculating an example of an effective marginal rate. The weighted average cost of capital implied by the assumptions is: (.4)(13)+(.6)(5)=8.2.

Based on this calculation, an 8 percent marginal rate is embodied in the example IROR schedule.

3. *The center point.* The center point of the IROR schedule is that cost performance ratio associated with the center rate of return. The center point should represent the expected level of costs after adjustments for inflation and design changes. If the final cost estimates do not differ significantly from the March 1977 estimates, a center point for the Alaska segment might be 1.3, as used in the example. The center point on the Northern Border segment may be lower.[32] If the project sponsors prefer significant freedom to revise cost estimates for reasons other than inflation, it seems likely that the recommended center points should be lower.

4. *The example schedule.*—Having estimated values for the center rate, the marginal rate, and the center point, an entire IROR schedule can be determined. The example resulting from a center rate of 17 percent, a marginal rate of 8 percent, and a center point of 1.3 is shown below.[33]

8 pct Marginal Rate

17 pct Center Rate

1.3 Center Point

Performance ratio:	*ROR (Percent)*
.8	22.6
1.0	19.7
1.2	17.8
1.3	17.0
1.4	16.4
1.6	15.3
1.8	14.5
2.0	13.9
2.2	13.3
2.4	12.9

Pursuant to this schedule, a rate of return of 19.7 percent would be allowed for the Alaskan segment if actual costs after correction for inflation and changes in scope were no higher than the March 1977 estimates (a cost performance ratio of 1.0). For a 30 percent overrun (a cost performance of 1.3), a rate of 17 percent would be allowed. At a 67 percent overrun from the corrected March 1977 estimates, the rate would be reduced to 15

---

[24] The discount rate used is 10 percent.

[25] An IROR schedule that does not reduce the average rate as the cost performance ratio increases exhibits a marginal rate equal to the average rate. The average will decline only if the marginal is less than the average.

[26] Calculated from the ratio [(2.2)(15.7)−(0.8)(17.8)]/(2.2−0.8).

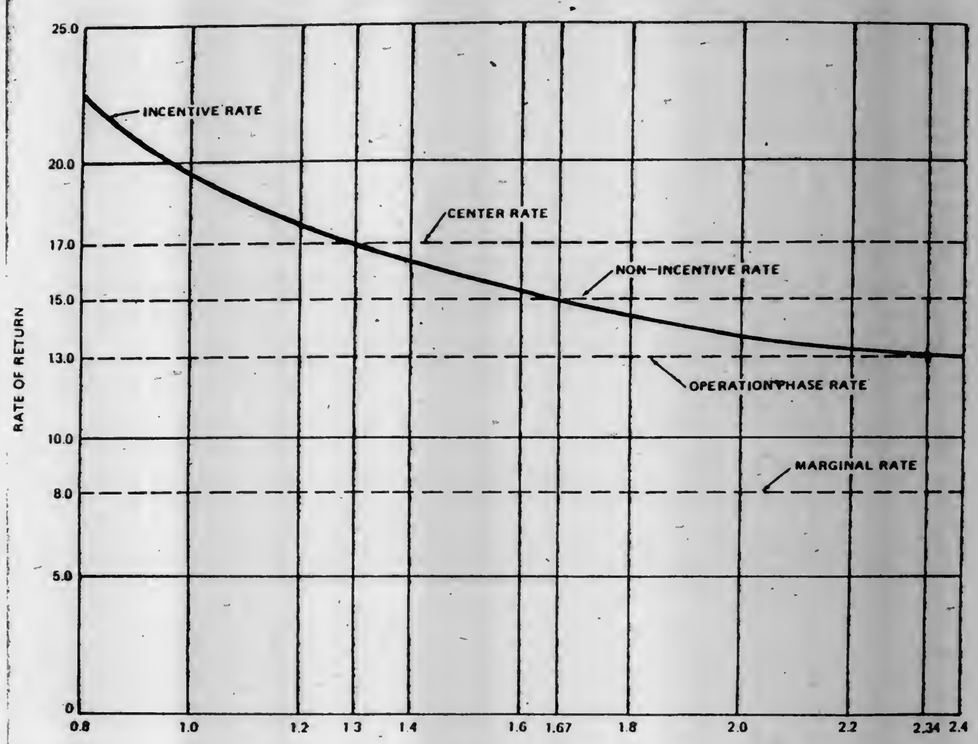
Blume, "Demand for Risky Assets," *American Economic Review*, December 1975. Roger G. Ibbotsen and Rex A. Sinquefield, "Stocks, Bonds, Bills, and Inflation: Year-by-Year Historical Returns (1926-74)," *Journal of Business*, Jan. 1976.

[32] Page 155 of the Report accompanying the President's *Decision* states that overruns are expected to increase direct capital costs for the Alaskan segment from the Mar. 1977 estimate of $1.812 billion to $2.38 billion, excluding AFUDC and in constant 1975 dollars. This would be an increase of 31 percent. On page 157, a comparison of current dollar costs including AFUDC shows an expected overrun of 24 percent for the Alaskan segment ($4.147 versus $3.335 billion) and 10 percent for the Northern Border segment ($1.573 versus $1.427).

[33] A value of the incentive rate (R) can be determined for any value of the cost performance ratio (A) from the formula:

$$R = [(17)(1.3) + 8(A - 1.3)]/A$$
$$= 8 + (11.7)/A.$$



OCT 3 1978

V 43 / 192 OCT 3 1978

percent (the nonincentive rate). In other words, only a constant dollar cost increase equal to two-thirds of the original estimate would lower the rate of return in this example below the rate that would be allowed if no IROR mechanism had been adopted. At a 134 percent overrun—i.e., a cost performance ratio of 2.34—the rate of return would be reduced to 13 percent (the operation phase rate). In other words, only for more than a doubling of construction costs would the rate of return in this example be reduced below what is being allowed for other pipelines.[34]

[34] The average equity rate allowed by this Commission for some 31 natural gas pipeline rate cases in 1976 and 1977 was 12.94 percent.

AN EXAMPLE OF A REASONABLE IROR SCHEDULE

This example of the Commission's revised proposal is displayed in table II, which shows the incentive rate for various levels of the cost performance ratio, the size of the one-time adjustment to the rate base, and the adjusted rate base. It also gives the present value average cost of service.

5. *Benefit to consumers.* As discussed earlier, the IROR mechanism may result in higher rates of return allowed on equity, which will increase costs to consumers. However, the IROR mechanism will create an incentive for management to reduce construction costs, thus benefiting consumers. On balance, the Commission believes that the benefit of lower construction costs will outweigh the possibly higher rate of return to equity attributable to the IROR mechanism.

In the situation where cost overruns exceed 60 percent of the originally estimated costs, column (4) of table II [35] shows that the IROR will be less than would probably be allowed by more typical ratemaking procedures. Consumers thus would clearly benefit from the IROR in this situation. [36]

If cost overruns are less than 60 percent, the incentive rate of return will be higher than would conventionally be allowed. However, the incentive effect of the IROR should result in lower construction costs than would be the case without the IROR. If cost reductions are reasonable, consumers will realize a net benefit.

Column (9) of table II shows for each cost performance ratio the minimum reduction in construction costs necessary for consumers to realize a net benefit. For a cost performance ratio of 1.3 (the level expected in the President's *Decision*), a reduction in construction costs of only 6 percent below what those costs would have been without the IROR will offset the higher rate or return. For a lower cost performance ratio of 1.0, the necessary reduction in construction costs is about 14 percent below what those costs would have been without the IROR. The IROR is expected to reduce construction costs by at least these amounts; consequently, consumers should, on balance, benefit from the IROR mechanism.

16B. *Inflation adjustment*

The initial proposal recognized that the sponsors should not be held responsible for increases in costs that resulted from general inflation in the economy. The initial rulemaking proposed to divide the final cost estimate into a number of categories for which cost or price indexes were available. These indexes would then be used to inflate the projected costs and thus increase the projected rate base to account for inflation.

This approach has a major weakness. If the pipeline experienced major construction delays resulting in costs incurred after the period anticipated in the applicant's final cost and schedule estimates, this approach would provide no protection against inflation during the schedule extension, since no projected costs were anticiapted for this period. Suppose for example that the applicant had projected a 5-year construction period, but because of delays during construction substantial expenditures projected for the 5th year were actually incurred in the 6th year. Suppose, too, that because of high rates of inflation these expenditures are much higher than had they been incurred during the 5th year. Since the projected costs show no expenditures during the 6th year, there is no adjustment for inflation during the 6th year.

[35] The break-even cost reduction is calculated by determining the percentage difference in the cost of service with and without the IROR mechanism, for the same cost performance ratio. This is not strictly accurate, since the operating cost component of cost of service does not increase with cost overruns, but is illustrative of the degree of savings in capital costs which are required for the IROR to produce a cost-effective result.

[36] For cost performance ratios greater than 1.6, the IROR mechanism would actually have to cause an increase in construction costs of a certain minimum percentage, before consumers would be worse off with the IROR mechanism in effect. Thus, for example, column (9) of table II indicates that, for a cost performance ratio of 2.2, the IROR mechanism would have to increase costs by more than 5 percent (i.e., a reduction of minus 5.0) before consumers would not benefit from the IROR proposal.

V 43/192 OCT 3 78 UMI

NOTES FOR TABLE II

Column (2) -- Same as column (2) in table I except that the AFUDC equity rate is 15 percent.

Column (3) -- Same as column (3) in table I except that the equity rate of return during operation is 15 percent and the rate base is given in column (2).

Column (4) -- Calculated from the formula:

$$\frac{(17.0)\ (1.3) + 8.0\ [\text{Col. } 1 - 1.3]}{\text{Col. } 1}$$

For example, at a cost performance ratio of 2.2:

$$\frac{(17.0)(1.3) + 8.0\ [2.2 - 1.3]}{2.2} = 13.3$$

where the marginal rate of return is 8 percent and the Center Rate is 17 percent, at a Cost Performance Ratio of 1.3.

NOTES FOR TABLE II CONT.

Column (5) -- Present value (at 13.0 percent discount rate) of the return of equity and after-tax return to equity at the operating equity rate of return given in Column (4) minus the equity investment in the rate base given in Column (2).

Column (6) -- Column (5) plus column (2).

Column (7) -- Same as column (3) in table I except that the rate of return on equity during operation is 13.0 percent and the rate base is given in column (6).

Column (8) -- The AFUDC equity rate that would produce the rate base in column (6).

Column (9) -- Calculated from the formula:

$$\frac{\text{column (7)} - \text{column (3)}}{\text{column (3)}}$$

The revised approach is to divide the actual construction costs into cost categories for which price or cost indexes are available. These indexes will be used to deflate actual costs to base-year costs. The adjustment for inflation will thereby also apply to costs that occur beyond the projected period of construction. This rate base adjusted for inflation will be termed the deflated actual rate base in 1978 dollars (or whatever year is the base year for making cost estimates). The deflated actual rate base in 1978 dollars will be divided by the projected rate base (in 1978 dollars) to determine the cost performance ratio and thus the incentive rate of return.

A number of comments on the initial proposal emphasized the need to choose price indexes that reflect the inflation experienced in pipeline construction in the specific geographic areas where the pipelines will be built. The Commission fully recognizes the problem mentioned in many comments that no price index perfectly measures the inflation experienced by any individual or any project. For example, the widely used consumer price index is only an approximation of the inflation experienced by any particular consumer.[37] The same problem will exist for each cost category in the Alaskan gas project. However, the Commission believes that existing, widely accepted indexes do not bias the measure of inflation in any particular direction. Certainly for some categories of costs the price indexes may overestimate the actual rate of inflation.

The Alaskan Northwest partnership requests that the inflation rate for Alaska be used instead of the national inflation rate, because the costs in Alaska are higher. Construction costs are assuredly higher in Alaska. (The construction of the oil pipeline in Alaska provides considerable information on the premiums that must be paid for Alaskan labor or materials and supplies used in Alaska. The cost estimates submitted by the sponsors recognized these premiums.) But it does not necessarily follow that the rate of change in costs (the inflation rate) in Alaska will be either higher than or lower than the rest of the nation. Considering the advantages of using the national rate, and in the absence of clear evidence that the regional rate will differ significantly from the national rate, the Commission would plan to use the national rate of inflation.

[37] The problem results because a price index measures the inflation for a specified bundle or market basket of commodities. If price increases differ greatly between the commodities, an individual who buys a slightly different combination of commodities could experience a very different actual rate of inflation than the index indicates.

The Alaskan Northwest partnership also suggests that the cost of each unit of labor or materials is also beyond its control. It argues that only the quantities of labor and materials should be considered controllable. The Commission agrees that changes in prices or unit costs caused by general inflation are beyond the sponsor's control and will accordingly adjust such costs for inflation by use of cost or price indexes. However, the size of the enterprise relative to the Alaskan economy and the natural gas pipeline industry would indicate that the sponsors should have a major ability to influence wages and prices and should be given an incentive to do so. The labor costs, for example, will probably be the result of negotiations between the sponsors or their contractors and labor unions. As the quantity of labor required will be very large, we believe the project sponsors will have some ability to influence the price they pay.

It is not the Commission's intention to penalize the project sponsors for the effects of inflation; rather, it is the Commission's intention to hold them harmless for cost increases due to general inflation. The Commission's concern with the sponsors' approach is their implicit assumption that they are powerless to affect the prices they pay.

C. *Application to the western leg*

Pacific Gas Transmission (PGT) and Pacific Interstate Transmission state that difficulties would be encountered in determining the size of the one-term adjustment to the rate base for the western leg segment of the ANGTS. They argue that problems are created because the western leg will be an expansion of an existing system and will be owned and operated by a corporation with an existing financial structure.

A slightly different procedure would be needed for the western leg than is used for the project-financed northwest border and Alaska segments. The attached terms and conditions state that the return of equity and after-tax return on equity over the life of the system will be estimated based on a financing and capitalization plan approved by the Commission. For the western leg, it might be possible for the Commission to use a financing and capitalization plan that is representative of the overall financial structure of the company owning the western leg.

The comments also argued that further complications would be created by the possibility of the early construction of a portion of the western leg and northern border segments to carry Canadian gas as part of an "advance delivery" of Alaska gas. The only complication we see resulting from applying the IROR mechanism to the facilities needed to transport Canadian gas is that the depreciation rate for the pipeline may be relatively high, reflecting the shorter period of the contract for Canadian gas. This simply means that the projection of the return of equity and the after-tax return to equity used to calculate the one-time adjustment to the rate base would be based on a relatively high rate of depreciation reflecting the relatively short period for which gas reserves would be dedicated to the pipeline at the time of authorization of these facilities.

The consideration which persuades us not to apply the IROR to the western leg is cost to consumers. The looping of an existing pipeline along an existing right-of-way to transport an assured supply of gas is an undertaking of convetional risk, particularly considering the assurance of adequate revenues provided by a cost-of-service tariff. Because of this conventional risk, the financing plan presented to the President and included in the *Decision*[38] called for 100 percent recourse debt financing for this segment. As distinct from project financing wherein the project itself must provide assurance of debt service, the debt to be used for the western leg is to be issued by the sponsoring companies, Pacific Gas Transmission for thew Washington and Oregon segments and Pacific Gas & Electric for the Northern California segment, and guaranteed by the parents. This type of financing is much lower in cost than the mixture of debt and equity which will be used to finance the other segments of the project.

Use of the IROR mechanism on the western leg would undoubtedly increase financing costs. Debt costs would likely increase because of the additional risk, but more importantly the debt/equity ratio would likely decrease. The use of 100 percent debt financing will increase the proportion of debt in the total capitalization of the sponsoring companies to high levels. This is particularly true for Pacific Gas Transmission. The additional risk created by the IROR may make such high levels of debt capitalization impractical and thus require some equity financing for the western leg. Particularly in view of the tax consequences of additional equity financing, the Commission believes the additional financing costs associated with imposition of the IROR mechanism on the western leg would more than offset the benefits of reduced construction costs which might be expected to be achieved.

The Commission also believes that cost control incentives are already present in the use of 100 percent debt

[38] *Decision*, pp. 109-110.

V 4 3 / 1 9 2

O C 3 7 8

financing. An incentive effect occurs on equity benefits of cost overruns. Also, the impact of that debt on the parent companies' financial conditions—debt guarantee capacity and overall credit rating—will cause them to insist on stringent construction cost-control measures for the western leg. Although not as focused as the IROR mechanism, the Commission believes this incentive will be adequate to insure proper control of construction costs for the western leg.

Having found that the present western leg financing plan already includes a sufficient incentive mechanism, we also note that imposition of IROR to the western leg would be administratively infeasible, not in the sense of ease of application, supra, but in terms of impact on the consumer. The 100 percent recourse debt financing of the western leg should result in a lower cost of service (due to higher bond rating and lower cost of recourse debt and favorable tax consequence of debt financing) without IROR than with it.

In the Commission's considered judgment, the application or IROR to the western leg lacks the salutary regulatory effect which it will have on the other segments of the project. There is already adequate incentive to control construction costs, and the two bases underlying the President's variable rate of return condition have already been satisfied: the consumer is better off under the existing western leg financing plan, and the recourse nature of the debt acts to assure private financing.

V. Relation of This Rulemaking to the Change-of-Scope Proceeding

Throughout this notice, reference has been made to the relationship of the values of an IROR schedule to the outcome of the separate change-of-scope proceeding. That interdependence shoud be emphasized, for even though the change-of-scope question has been spun off to a separate proceeding, the resolution of the question will be a major determinant in the selection of the final values used in the IROR schedule.

The greater the flexibility that is allowed in adjusting for scope changes, the less is the risk of cost overruns borne by the project sponsors. The actual values in the IROR schedule are partly determined by the risk of cost overruns, and anything that changes the amount of that risk will change the proper compensation for risk to be allowed in the IROR schedule.

Greater flexibility in adjusting costs also reduces the incentives to control costs. The final treatment of scope changes will also affect the Commission's choice of a marginal rate.

The illustrative values in the IROR schedule were based on the March 1977 cost estimates. Revisions in these cost estimates, other than for inflation and scope changes required by the Government, also will affect the final selection of values in the IROR schedule.

The proper values for the different types of rates and ratios (of which estimates have been provided in this notice) must be determined through an evidentiary proceeding to be conducted when all elements of the risk allocation framework have been put in place. We expect that the project sponsors are eager to have this process completed. It is our intention that these matters be resolved as expeditiously as possible.

VI. Written Comment Procedures

The Commission invites interested persons to submit written comments with data, views, and other information concerning the matters set forth in this notice. An original and 14 copies should be filed with the Secretary of the Commission by October 6, 1978. Comments should be submitted to the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, and should reference Docket No. RM78-12.

All written submissions will be placed in the Commission's public files and will be available for public inspection in the Commission's Office of Public Information, 825 North Capitol Street NE., Washington, D.C. 20426, during regular business hours.

In consideration of the foregoing, the Commission proposes that the following terms and conditions be attached to the certificates of public convenience and necessity to be issued by the Commission for the Alaska Natural Gas Transportation System, as set forth below.

By the Commission.

Kenneth F. Plumb,
Secretary.

Terms and Conditions

(1) *Applicability.* The incentive rate of return (IROR) rule will apply to two of the three segments of the Alaskan Natural Gas Transportation System within the United States as defined in the President's *Decision and Report to Congress on the Alaska Natural Gas Transportation System* (referred to hereafter as the *Decision*). These segments are: (1) The portion of the system within the State of Alaska, and (2) the portion of the system from the United States/Canadian border near Monchy in the Province of Saskatchewan to a point near Dwight in the State of Illinois. In the following terms and conditions, the term pipeline refers to each of these two segments, and the terms and conditions apply to each. The values for schedules, parameters, or variables to be established by the Commission in order to implement the IROR rule pursuant to some future evidentiary proceeding may be different for each of the segments.

(2) *Cost performance ratio.* Pursuant to the second finance term and condition of the *Decision* (p. 36), the rate of return on equity during the operating period of the pipeline will be increased if the pipeline is completed under budgeted cost and reduced if the pipeline is completed over budeted cost. The relationship between budgeted cost and completed cost will be determined by a cost performance ratio. This is ratio of the deflated actual rate base (see condition 4 below) to the projected rate base (see condition 5 below).

(3) *Incentive rate of return schedule.* An IROR schedule which may be in the form of a table or formula. The IROR schedule will specify a value for the IROR for each value of the cost performance ratio. The IROR schedule will compensate equity investors for the degree of construction cost overrun and schedule delay risk which they bear. The IROR schedule will take into account financing plans, depreciation schedules, and any other factors which the Commission determines to be relevant and important.

(4) *Deflated actual rate base.* The deflated actual rate base will be determined at the start of operations from direct capital or construction costs after conversion into base year prices (see condition 8 below) actually incurred in the construction of the pipeline. The deflated actual rate base will include only those direct capital costs which the Commission finds to be prudently incurred. An allowance for funds used during construction (AFUDC) will be included. The AFUDC will be based on the direct capital costs in the base year prices, the actual interest rates paid on debt during construction, and the nonincentive rate of return on equity defined below in condition 10.

(5) *Projected rate base.* The projected rate base will be calculated at the start of operations from the final cost and schedule estimate submitted to and approved by the Commission pursuant to condition 6 below after adjustment for changes in scope pursuant to condition 9 below. An AFUDC will be included and will be calculated from the final cost and schedule estimate, the actual interest rates experienced during construction, and amounts of debt and equity that would have been outstanding if the expenditures for construction as projected in the final cost and schedule estimate had actually occurred, and the nonincentive rate of return on equity defined below in condition 10.

(6) *Final cost and schedule estimate.* Pursuant to the second finance condition in the *Decision*, the applicant for a certificate of public convenience and necessity for the pipeline shall submit to the Commission a final cost and schedule estimate in 1975 prices, adjusted to reflect any design changes resulting from the agreement on principles with Canada and any addendum thereto, for comparison with the capital cost estimates filed by Alcan with the Federal Power Commission on March 8, 1977. This final cost and schedule estimate must also be submitted in 1978 or later base-year prices and with costs set forth according to formats to be specified by the Commission. (See condition 7.) The March 1977 cost estimate referred to in the second finance term and condition in the *Decision* must also be resubmitted in the same format for comparability with the final cost estimate. An explanation of any significant differences between the March 1977 and the final cost and schedule estimate must be provided. The date of the base-year period for submitting costs may be determined by the applicant.

(7) *Cost estimate format.* All cost estimates shall be sumbitted to the Commission according to specifications to be determined by the Commission. Prior to submittal of the final cost and schedule estimate, the applicant may submit a proposal for the cost estimate format to the Commission. The cost estimate format will specify the functional categories or components into which the total cost estimate must be divided and the key paramenters or assumptions for which values must be provided. Each functional category of cost must be further divided according to the time period in which the costs are estimated to occur. The breakdown of costs shall be in sufficient detail that the Commission may compare the various cost estimates and determine the reasonableness of any changes.

(8) *Adjustment of actual construction costs for inflation.* Actual costs of construction found to be prudently incurred by the Commission will be divided into a number of cost categories and further divided into periods of time when the costs were incurred. For each cost category, the Commission will specify a price or cost index that will be used to measure the inflation experience for commodities or services in that category. The actual costs of construction in each cost category and in each time period will be divided by the ratio of the value of the price index for that category and for that period of time by the value of the index in the base year. Each cost or price index will be an existing index that is widely used to measure the increase in prices for that category of commodities or services. The Commission will give first preference to indexes published by the U.S. Government, but indexes published by private institutions may also be used if widely used and generally accepted. The applicant may submit to the Commission proposed price or cost indexes with its proposed cost estimate format mentioned in condition 7.

(9) *Changes in scope.* Prior to calculating the projected rate base for determining the cost performance ratio, the final cost and schedule estimate will be adjusted to reflect increases and decreases in cost that result from certain events not anticipated in preparing the final cost and schedule estimate, or to reflect agreed changes in values of parameters from those assumed in making the final estimate. The type and number of such events or changes in parameters and the procedure for adjusting the final cost and schedule estimate will be determined by the Commission pursuant to a future rulemaking, hearing, or order.

(10) *Nonincentive rate of return.* Prior to final certification of the pipeline, the Commission shall specify a nonincentive rate of return on equity that compensates equity investors for any abnormal risks they will bear during the construction of the pipeline, excluding the risk created by the IROR rule. To the extent that equity investors in this pipeline bear greater construction phase risks than investors in other regulated gas pipelines, this rate will be higher than the general range of rates allowed for other pipelines. Once established, this rate will not be altered during the construction phase of the pipeline.

(11) *Operation phase rate of return.* Prior to final certification of the pipeline, the Commission shall specify an operation phase rate of return that is within the general range of rates of return for other pipelines with similar operating risks. This rate of return will be determined separately and independently from the IROR. Pursuant to the Natural Gas Act, throughout the operation of the pipeline, the operation phase rate of return may be altered to reflect changes in rates allowed for other pipelines of similar operating risk or to provide just and reasonable compensation to equity investors.

(12) *Cost of service calculation.* After the initiation of service and during the operating life of the pipeline, the transportation charge will be based on standard procedures for determining cost of service except that the rate of return on equity will be the operation phase rate defined above in condition 11 and the rate base will include a one-time adjustment calculated pursuant to condition 13 below.

(13) *Adjustment to rate base.* Upon completion of construction and commissioning of the pipeline, a conventional rate base will be calculated based on generally accepted procedures and using the nonincentive rate of return defined above in condition 10 as the equity rate of return for determining the allowance for equity funds used during construction. A one-time adjustment to the equity AFUDC account in the rate base will then be calculated in three steps. First, the revenue stream from the after-tax return of equity through depreciation of the rate base and from the after-tax return on equity will be estimated over the life of the pipeline, based on the conventional rate base, on an after-tax rate of return on equity capital equal to the IROR determined pursuant to condition 3 above, and on a financing and capitalization plan approved by the Commission. Second, the present worth of this revenue stream will be calculated using a discount rate equal to the operation phase rate determined pursuant to condition 11 above. Third, the difference between this present worth sum and the equity investment in the pipeline, including the allowance for equity funds used during construction based on the nonincentive rate of return on equity, will be added to the allowance in the rate base for equity funds used during the construction. If the difference is negative, the allowance for equity funds during construction in the rate base will be reduced.

[Docket No. 78C-0216]

ORANGE B

Termination of Listing

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: This document proposes to amend the color additive regulations by revoking the regulation listing Orange B for use in food. This action is based on data that raise concern about the safety of Orange B. The effect of this proposal would be to revoke color additive certification for Orange B and to prevent further use of Orange B in coloring the casings or surfaces of frankfurters and sausages.

DATE: Comments by December 4, 1978.

FOR FURTHER INFORMATION CONTACT:

Gerad L. McCowin, Bureau of Foods (HFF-334), Food and Drug Administration, Department of Health, Education, and Welfare, 200 C Street SW., Washington, D.C. 20204, 202-472-5740.

SUPPLEMENTARY INFORMATION:

BACKGROUND

The color additive Orange B (disodium salt of 1-(4-sulfophenyl)-3-ethylcarboxy-4-(4-sulfonaphthylazo)-5-hydroxypyrazole) is regulated for use in coloring the casings of frankfurters and sausages under § 74.250 (21 CFR 74.250). A notice published in the FEDERAL REGISTER of July 9, 1965 (30 FR 8727), stated that a petition (CAP 27) for the listing of Orange B as a color additive in food was filed by the Certified Color Industry Committee, c/o Hazleton Laboratories, Inc., P.O. Box 30, Falls Church, Va. 22046 (now the Certified Color Manufacturers Association, 900 17th Street NW., Washington, D.C. 20006). Orange B was added to Part 74—Listing of Color Additive Subject to Certification (21 CFR Part 74) by a regulation published in the FEDERAL REGISTER of January 4, 1966 (31 FR 8). It was authorized for coloring the casings or surfaces of frankfurters and sausages with the restriction that the quantity of the color additive not exceed 150 parts per million (p.p.m.) by weight of the finished food, and that it be certified in accordance with the regulations under 21 CFR Part 80. The effective date of the listing regulation for Orange B was confirmed on March 9, 1966 (31 FR 4127); there were no objections or requests for hearing.

On January 19, 1978, and again on April 6, 1978, Stange Co., the only producer of Orange B in the United States at the present time, reported to the Food and Drug Administration that, by the application of improved analytical methods, it had detected trace amounts of β-naphthylamine in some batches of the intermediate sodium naphthionate and in some batches of Orange B. β-Naphthylamine was not detectable in sodium naphthionate or Orange B by previous analytical techniques. With additional separation procedures, Stange Co. could lower the quantity of contaminating β-naphthylamine in Orange B to 1 part per billion (p.p.b.) or less. The Stange Co. representatives stated that it is unlikely, however, that they could completely eliminate β-naphthylamine from sodium naphthionate or Orange B.

To resolve the questions concerning β-naphthylamine, the FDA requested that Stangé Co. promptly provide a full report to substantiate the possible contamination of the intermediate and the final color with β-naphthylamine. In the meantime, Stange Co. has decided to discontinue the further production of Orange B. Copies of correspondence between Stange Co. and FDA and memoranda of meetings and other relevant information concerning this matter are on public display at the office of the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857.

CHEMISTRY

Orange B is an azo compound that is formed by the coupling of diazotized naphthionic acid with 1-(4-sulfophenyl)-3-ethylcarboxy-5-hydroxypyrazolone. Naphthionic acid or its salt, sodium naphthionate, is synthesized by sulfonating α-naphthylamine. α-Naphthylamine is producted by the reduction of α-nitronaphthalene, which is in turn produced by the nitration of naphthalene.

Nitration of naphthalene produces predominantly α-nitronaphthalene, but the formation of other nitration products such as β-nitronaphthalene, 1,5-dinitronaphthalene, and 1,8-dinitronaphthalene is also likely. The reduction of α-nitronaphthalene to form α-naphthylamine would be accompanied by the reduction of the nitro groups of other nitronaphthalenes that might be present. Therefore, β-nitronaphthalene would have to be completely removed from α-nitronaphthalene in order to eliminate the formation of β-naphthylamine when α-naphthylamine is produced.

The data show that there could be as much as 27 p.p.m. α-naphthylamine, and in some cases as much as 2 p.p.m. β-naphthylamine, in sodium naphthionate. The specifications used in the certification of Orange B contain a limit of "not more than 0.2 percent" for naphthionic acid. Smaller quantities of α-naphthylamine and β-naphthylamine are found in some preparations of Orange B itself. By purifying sodium napththionate with activated carbon, the β-naphthylamine level can be reduced to less than 0.5 p.p.b. in both sodium naphthionate and Orange B. The manufacture is confident that modification of the drying process can prevent the desulfonation of sodium naphthionate, and that separation techniques can be further implemented to produce Orange B that would contain undetectable levels of β-naphthylamine with a method sensitive to a few parts per trillion (p.p.t.). It is uncertain whether sodium naphthionate itself could ever be produced so that it would be completely free from contamination by any β-naphthylamine.

In addition to the possibility that free β-naphthylamine is present and can be carried to the final product unchanged during manufacturing, β-naphthylamine could also be diazotized, and the diazonium salt would couple with pyrazolone to form a subsidiary color, if metabolized in the manner characteristic of azo dyes or if degraded during the manufacture of the product containing this color, would yield free β-naphthylamine. Furthermore, since β-naphthylamine is found in some preparations of sodium naphthionate, it would be possible that sulfonated β-naphthylamine could be present in sodium naphthionate. The full report submitted by Stange Co. shows that heating increases the content of α-naphthylamine and β-naphthylamine in sodium naphthionate. It would be reasonable to assume that this increase in β-naphthylamine is the result of desulfonation of sulfonated β-naphthylamine produced during the sulfonation of α-naphthylamine to form naphthionic acid. Under proper conditions during manufacture, sulfonated β-naphthylamine could also break down to yield free β-naphthylamine. Neither the manufacturer nor FDA has any experimental information on the quantity of sulfonated β-naphthylamine, β-naphthylamine subsidiary color, and sulfonated β-naphthylamine subsidiary color in commercial samples of Orange B.

To establish with confidence the absence of β-naphthylamine in Orange B, it would be necessary to eliminate β-naphthylamine from the intermediate naphthionic acid or sodium naphthionate used in the synthesis of Orange B. Unless an alternative route of synthesis for the intermediate, insuring the absence of β-naphthylamine, becomes available commercially, the nondetection of β-naphthylamine or its complexes in Orange B cannot be construed as meaning that β-naphthylamine is absent from Orange B.

PROPOSED ACTION

The toxicity of β-naphthylamine is well known—it has been considered a carcinogen for many years. In its evaluation of the data on β-naphthylamine, the International Agency for Research on Cancer (IARC) stated that 2-naphthylamine, another name for β-naphthylamine, is carcinogenic in the mouse hamster, dog, and monkey. This report also stated that there are considerable epidemiological data that establish that β-naphthylamine is a bladder carcinogen in humans (IARC Monographs, 4, 1974).

The Commissioner of Food and Drugs finds that the use of Orange B as a color additive could result in exposure of consumers to β-naphthylamine. Based on the information available at this time, free β-naphthylamine (up to 2 p.p.m.) is present in the intermediate used to produce the color. The intermediate, naphthionic acid or its sodium salt, can be present in the finished color at levels as great as 2,000 p.p.m. Free β-naphthylamine (up to 0.5 p.p.b.) is also found in Orange B itself. There is a possibility that any subsidiary color produced from β-naphthylamine could yield free β-naphthylamine when metabolized or degraded. The evidence supports the conclusion, even without the additional supportive data from the manufacture, that Orange B will contain at the least trace amounts of β-naphthylamine.

The Commissioner has previously viewed with concern the possibility that any color additive for food drug, or cosmetic use might contain β-naphthylamine. Two colors, Ext. D&C Yellow No. 9 and Ext. D&C Yellow No. 10, which were synthesized from β-naphthylamine, were prohibited by FDA from use in externally applied drugs and cosmetics because of a finding that they might contain β-naphthylamine (21 CFR 81.10). Four other colors, D&C Red No. 10, D&C Red No. 11, D&C No. 12, and D&C Red No. 13, which are synthesized from 2-amino-1-naphthalenesulfonic acid, were also prohibited by FDA from use in drugs and cosmetics because 2-amino-1-naphthalenesulfonic acid could contain β-naphthylamine as a contaminant (see FEDERAL REGISTER of December 13, 1977 (42 FR 62475)).

Under the provisions of the Color Additive Amendments of 1960 (21 U.S.C. 376(b)(4)), "The Secretary shall not list a color additive under this section for a proposed use unless the data before him establish that such use, under the conditions of use specified in the regulations, will be safe * * *." In addition, the "Delaney Clause" of the Color Additive Amendments of 1960 (21 U.S.C. 376(b)(5)(B)), provides that "A color additive (1) shall be deemed unsafe, and shall not be listed, for any use which will or may result in ingestion of all or part of such additive, if the additive is found by the Secretary to induce cancer when ingested by man or animal, or if it is found by the Secretary, after tests which are appropriate for the evaluation of the safety of the additives for use in food, to induce cancer in man or animal, * * *." In view of the information now available, the Commissioner concludes that there is no longer an adequate basis for the listing regulation of Organe B and that the listing regulation of this color for use in food should be revoked to protect the public health.

When the final rule based on this proposal becomes effective, all certifications issued prior to that time for batches of Orange B will be revoked, and the addition of this color to any food will cause such product to be adulterated within the meaning of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 301 et seq.) and subject to regulatory action. This prohibition would apply to the use of Orange B and mixtures of colors containing Orange B as a color additive as defined in 21 U.S.C. 321(t). The Commissioner is not proposing to request a recall from the market of frankfurters or other sausage products containing Orange B if they were manufactured or were in process before the effective date of the final regulation. In light of the fact that the manufacturer of Orange B has ceased production of the color and the Commissioner's expectation that existing stocks of Orange B will largely, if not entirely, be used up during the administrative process leading to revocation of the listing for Orange B, few products containing Orange B are likely still to be available. A recall would thus not be necessary to protect the public health. Moreover, the very small levels of β-naphthylamine that may be in Orange B present no significant risk to public health during the short time while existing stocks are used up. Information on the quantity of existing stocks of Orange B and products colored with Orange B anticipated at the conclusion of the administrative process, i.e., in 4 to 6 months when a final order will be issued, should be submitted along with other comments.

The Commissioner is aware that the supplies of suitable alternative color additives may be difficult to obtain immediately. Consequently, food labeling that states that the product contains "artificial color" or that specifically identifies Orange B would be permitted to be used with the uncolored product or products containing alternative colors during the time necessary to obtain supplies of revised labeling or until 1 year after the effective date of the final regulation published in the FEDERAL REGISTER, whichever occurs first.

The Commissioner has carefully considered the environmental effects of this action, and because the action will not significantly affect the quality of the human environment, has concluded that an environmental impact statement is not required. A copy of the FDA environmental assessment, together with copies of the other documents mentioned above, are on file with the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857.

Therefore, under the Color Additive Amendments of 1960 (sec. 706, 74 Stat. 399-407 (21 U.S.C. 376)) and under authority delegated to him (21 CFR 5.1), the Commissioner proposes that parts 74 and 81 be amended as follows:

§ 74.250 [Revoked]

1. In part 74, by revoking § 74.250 *Orange B.*

2. In part 81, § 81.30 is amended by adding new paragraph (p) to read as follows:

§ 81.30 Cancellation of certificates.

* * * * * *

(p)(1) Certificates issued for Orange B and all mixtures containing the color additive are cancelled and have no effect after (insert effective date of final regulation) and use of the color additive in the manufacture of food after this date will result in adulteration.

(2) The Commissioner finds, on the basis of the scientific evidence before him, that no action has to be taken to remove from the market food products containing the color additive.

Interested persons may, on or before December 4, 1978, submit to the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

In accordance with Executive Order 12044, the economic effects of this proposal have been carefully analyzed, and it has been determined that the proposed rulemaking does not involve major economic consequences as defined by that order. A copy of the regulatory analysis assessment is on file with the Hearing Clerk, Food and Drug Administration.

Dated: September 22, 1978.

WILLIAM F. RANDOLPH,
Acting Associate Commissioner for Regulatory Affairs.

SACCHARIN

Withdrawal of Proposed Rulemaking

AGENCY: Food and Drug Administration.

ACTION: Withdrawal of proposed rule.

V 4 3 / 1 9 2

SUMMARY: The agency is withdrawing a proposed rule requiring that a warning statement about the health risks from saccharin consumption be affixed to vending machines that dispense saccharin-containing food. The proposal is being withdrawn because the vending machine warning is not likely, at this time, to add significantly to consumer awareness of the health risks of saccharin consumption, and because there are anticipated problems in insuring compliance with the proposal. Therefore, saccharin warning stickers are not required on vending machines.

EFFECTIVE DATE: October 3, 1978.

FOR FURTHER INFORMATION CONTACT:

Caesar A. Roy, Bureau of Foods (HFF-310), Food and Drug Administration, Department of Health, Education, and Welfare, 200 C Street SW., Washington, D.C. 20204, 202-245-1186.

SUPPLEMENTARY INFORMATION: The Saccharin Study and Labeling Act (SSLA), Pub. L. 95-203, became law on November 23, 1977. Section 4(c) of the SSLA (21 U.S.C. 343a) authorizes, but does not require, the Commissioner of Food and Drugs to prescribe regulations to require vending machines that dispense food containing saccharin (e.g., diet soft drinks) "to bear a statement of the risks to health which may be presented by the use of saccharin." Section 4(c) of the SSLA (21 U.S.C. 343a) also provides that food sold through a vending machine that does not bear the required warning statement is deemed to be misbranded under section 403 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 343).

In the FEDERAL REGISTER of February 10, 1978 (43 FR 5851), the Commissioner proposed to require warning statements on vending machines that dispense food that contains saccharin. Twenty-seven comments were received on the proposal. Many of the comments opposed any requirement for warning statements on vending machines, arguing that the warning already in place on each food package (see the FEDERAL REGISTER of Dec. 9, 1977 (42 FR 62209)), the posters required to be displayed in retail stores warning about the risks to health that may be presented by consumption of saccharin (see the FEDERAL REGISTER of Mar. 3, 1978 (43 FR 8793)), and past and current news stories have adequately apprised consumers about saccharin. The comments argued that warnings on vending machines would be unlikely to add significantly to public awareness of the health risks of saccharin consumption.

Comments also pointed out the practical difficulties in insuring that the warning statement is affixed to all vending machines. Many vending machines, for example, are owned and operated by service station owners who ordinarily do not have direct access to the manufacturers of soft drinks. These manufacturers, in most cases, would be the persons expected to affix or provide the vending machine warning stickers. Other comments asserted that the cost of obtaining and affixing the stickers would exceed their value in informing consumers about saccharin. Many comments also inquired about the specifics of the proposal, e.g., the content, location, and size of the warning stickers. Finally, a few comments supported the proposal as being necessary to offset the effects of extensive advertising for saccharin-containing foods.

After carefully assessing the comments on the proposal, the Commissioner has decided to withdraw the proposal for the reasons stated below.

The Commissioner believes that most consumers are aware of the presence of saccharin in various foods and of the risk of cancer that saccharin consumption presents. The warning statements on each food package and the signs required to be posted in retail stores will continue to remind consumers of the risk of cancer from saccharin consumption. While warning stickers on vending machines would undoubtedly add to the frequency of the reminders, its contribution to consumer awareness about saccharin is not likely to be so appreciable at this time as to warrant the cost of obtaining and affixing the stickers to vending machines.

Second, the practical problems of insuring that warning stickers are made available to the owners or operators of each vending machine, and the difficulties inherent in enforcing the requirement, suggest that it would be prudent at this time to withdraw the proposal. As noted above, vending machines are often owned and operated by persons with no direct access to the manufacturers of foods that contain saccharin. It is the manufacturers who ordinarily would be expected to print and affix the warning stickers. Although individual vending machine owners might well print their own stickers, due to either ignorance of the requirement or conscious decision, a large number, if not most, would be unlikely to do so.

Furthermore, a requirement for vending machine warning stickers would, for all practical purposes, have to be self-enforcing. There are tens of thousands of vending machines in the United States. Routine inspections by FDA are not made of vending machines, although State and local governments sometimes do inspect these machines. Nevertheless, it is not realistic to expect that resources would be available for widespread enforcement of the requirement. The experience thus far with compliance by retail stores with the requirement to post warning posters indicates the difficulties that should be anticipated with a requirement for warnings on vending machines.

With respect to the retail store poster requirement, the Commissioner advises that FDA has asked the States and localities to be attentive to the requirement when they are conducting inspections of the stores. There is no excuse for the apparent widespread failure of retail stores to comply with the poster requirement. Under section 4(b)(1) of the SSLA (21 U.S.C. 343(p)(1)), food that contains saccharin that is sold in a retail store that fails to display the required posters is misbranded. FDA, in cooperation with the States and localities, intends to continue to monitor the compliance with this requirement. Failure to adhere to this requirement may well result in seizure of saccharin and of food containing saccharin in a store.

For the reasons stated above, the Commissioner has decided to withdraw the proposal to require warning stickers to be displayed on vending machines that dispense food that contains saccharin.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 201(s), 301, 403, 701(a), 52 Stat. 1042-1043 as amended, 1055, 72 Stat. 1784 as amended (21 U.S.C. 321(s), 331, 343, and 371(a)), and the Saccharin Study and Labeling Act (sec. 4(c), 91 Stat. 1453 (21 U.S.C. 343a)), and under authority delegated to the Commissioner (21 CFR 5.1), the proposal to add new § 101.12 to part 101 of chapter I of title 21 of the Code of Federal Regulations is hereby withdrawn.

Dated: September 21, 1978.

WILLIAM F. RANDOLPH,
Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 78-27657 Filed 10-2-78; 8:45 am]

[Docket No. 78N-0320]

REQUIREMENTS FOR DESIGNATING THE MANUFACTURER'S NAME ON A DRUG OR DRUG PRODUCT'S LABEL

Notice of Proposed Rulemaking

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is proposing rules that would specify the conditions under which a person may be identified on the label of a drug or drug product as its manufacturer. This action would revoke the agency's "man-in-the-plant" policy, which has been used to determine who is the manufacturer of certain drugs or drug products. The agency believes the continued application of the "man-in-the-plant" policy would mislead consumers about who actually manufactured certain drugs or drug products.

DATE: Comments by December 4, 1978.

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857.

FOR FURTHER INFORMATION CONTACT:

Michael C. McGrane, Bureau of Drugs (HFD-30), Food and Drug Administration, Department of Health, Education, and Welfare, 5600 Fishers Lane, Rockville, Md. 20857, 301-443-5220.

SUPPLEMENTARY INFORMATION: If a drug or drug product's label does not contain the name and place of business of the manufacturer, packer, or distributor of the drug or drug product, the drug or drug product is misbranded under section 502(b)(1) of the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 352(b)(1)). The name and place of business of any one of those persons clearly meets the statutory requirement, and the person responsible for the label of the drug or drug product may place the name or names of any one or more of those persons on the label. Under § 201.1 (21 CFR 201.1) of the Agency's general drug labeling regulations, however, if the name of a packer or distributor of a drug or drug product appears on the drug or drug product's label to meet the requirements of the act, it must be qualified by a phrase, such as "manufactured for" or "distributed by," that reveals the person's relationship to the drug or drug product. The name of the manufacturer of the drug or drug product on the label may also be qualified, but, if a name appears without qualification, the agency regards that name as a claim by the named person to be the manufacturer of the drug or drug product. The appearance of a name on a drug or drug product's label without qualification, if the name is not that of the manufacturer, would be misleading within the meaning of section 502(a) of the act. A drug is misbranded under section 502(a) of the act if its labeling is false or misleading in any particular, and section 201(m) of the act (21 U.S.C. 321(m)) defines labeling as all labels and other written, printed, or graphic matter upon the drug, its containers or wrappers, or accompanying the drug.

The Commissioner of Food and Drugs believes that compliance with these label requirements for most drugs and drug products presents no problems because the drugs or drug products are either manufactured, packed, and distributed by a single person or manufactured by one person and packed or distributed by another. Thus, the person performing any one of those functions can be identified easily. In a few cases, however, problems concerning the identification of the manufacturer of a drug or drug product have arisen. These problems occur primarily when several persons perform different manufacturing operations to produce a drug or drug product, or when a person performs the manufacturing operations under a contractor leasing agreement with another person who markets the drug or drug product and who wants to be identified on the drug or drug product's label as its manufacturer. The growing complexities of drug manufacturing processes, the need for specialized facilities to perform certain manufacturing operations, and the need for temporary use of additional manufacturing facilities if the demand for a drug or drug product increases or the original facilities are out of service have all contributed to the use of leased or contract facilities for drug manufacturing. In the case of a drug or drug product for which several persons perform manufacturing operations, identifying the manufacturer for label purposes is difficult. The Agency has permitted any one of the persons who performs what the agency views as important manufacturing operations for the particular drug or drug product to be identified as the manufacturer on its label. Those determinations have often been made, however, on a case-by-case basis, and a consistent policy has not developed. In the case of the drug or drug product manufactured by one person under a contract or leasing agreement with another person, the agency has determined who could be identified on the drug or drug product's label as the manufacturer under the so-called "man-in-the-plant" policy.

Under the "man-in-the-plant" policy, a person who leases the facilities of, or contracts with, another person to manufacture a drug or drug product in the second person's facilities, may be identified on the drug or drug product's label as its manufacturer, if the first person places one or more employees in the manufacturing facility to control and supervise the production of the drug or drug product. The participation of the first person's employee or employees in the manufacture of the drug or drug product may range from limited supervision by one or two employees to total control and direction of all the second person's employees, equipment, and buildings.

Several aspects of the "man-in-the-plant" practice have been the subject of hearings before the Subcommittee on Monopoly and Anticompetitive Activities of the Senate Select Committee on Small Business, in November 1977 and, more recently, before the House Subcommittee on Oversight and Investigations of the Committee on Interstate and Foreign Commerce. (A copy of the transcript of each hearing has been placed on public display in the office of the hearing clerk, FDA.) As a result of the house hearings, the Secretary of Health, Education, and Welfare, the Commissioner and the Chief Counsel of FDA have written to the chairman and staff of the House subcommittee seeking suggestions and the individual views of the subcommittee members on the scope and content of this proposed regulation. Those letters, as well as any comments that are received, are being placed on public display in the office of the hearing clerk.

The Commissioner shares the concern expressed by both subcommittees, that the continued use of the "man-in-the-plant" policy may mislead consumers about who manufactured a drug or drug product. The Commissioner emphasizes, however, that the policy is not associated with any apparent health hazards. Even where the "man-in-the-plant" policy is followed, the agency is clearly able to act, and has acted, in instances involving violations of product quality standards. Nevertheless, the public is entitled to know when a company is distributing a drug or drug product it did not manufacture.

As a result of his reevaluation, the Commissioner concludes that the agency's present "man-in-the-plant" policy is no longer appropriate as a basis for identifying a firm as the manufacturer of a drug or drug product for the purposes of section 502(a) and (b)(1) of the act. Accordingly, the Commissioner proposes to amend § 201.1 to state clearly who may be identified as the manufacturer of a drug or drug product on its label under section 502(a) and (b)(1) of the act. The Commissioner also proposes to limit the identification of persons on the labels of drugs and drug products to the manufacturer, packer, or distributor. He further proposes specific requirements that qualify the names of packers and distributors on the label by referring to the function the named person performs.

V 4 3 / 1 9 2

The legislative history of section 502(b)(1) of the act is consistent with the Commissioner's proposed action. The Food and Drug Act of 1906 contained no section comparable to section 502(b)(1). Section 402(b)(1) of S. 5, 74th Congress, 1st and 2d session (1935), as reported in the Senate, however, provided as follows: "A drug shall be deemed to be misbranded—(b) If in package form it fails to bear a label containing (1) the name and place of business of the manufacturer, packer, seller, or distributor * * *."

The Senate report on S. 5 explained that section 402(b)(1) mirrored section 302(e)(1) (misbranded food) of S. 5 (S. Rep. No. 361, 74th Cong., 1st sess. (1935)). With respect to section 302(e)(1), the Senate report states: "The inclusion of this provision has been generally recommended by the industries affected. It is intended to prevent the sale of commodities under labels which remain silent with respect to the sponsorship of the products or which utilize merely fictitious names."

Section 17(c) of the second version of S. 5 (75th Cong., 1st and 3d sess. (1935)), which was enacted into the present act, carried over intact section 402(b)(1) of the first S. 5. Neither the Senate nor the House reports on S. 5 contain any explanatory material concerning the meaning of "manufacturer" in section 17(c) or its renumbered successors.

Because the term "manufacturer" is not defined in section 502(b)(1) of the act or its legislative history, the Commissioner believes the term should be given its common or ordinary meaning. *62 Cases of Jam* v. *United States*, 340 U.S. 593 (1951); *Addison* v. *Holly Hill Fruit Products, Inc.*, 322 U.S. 607 (1944). The general dictionary definition is helpful. For example, Webster's New Collegiate Dictionary (1976) defines the verb "manufacture," in part, as: "to make into a product suitable for use."

The Commissioner notes that, although its decisions are not controlling, the Federal Trade Commission (FTC) has, from time to time, had occasion to decide who qualifies as a "manufacturer" within the meaning of 16 CFR 500.5 (a), (b) of regulations promulgated under section 4 of the Fair Packaging and Labeling Act (15 U.S.C. 1453). The FTC's regulations are nearly identical to FDA's current regulations (21 CFR 201.1(a)-(c)) and, similarly, do not define "manufacturer." However, in a 1969 Statement of General Policy or Interpretation, the FTC determined that, for the purpose of 16 CFR 500.5(a), a person or firm who supplies a formula or specifications, or both, to a contract packager, but who does not take any part of the actual production of the consumer commodity, is not the manufacturer of the commodity. This is true whether the person or firm who supplies the formula or specifications, or both, also supplies the raw materials which are to be reacted, mixed, or otherwise modified to produce the consumer commodity. 16 CFR 503.3(c).

FTC's clarification of the identity of the manufacturer, packer, or distributor for the purpose of 16 CFR 500.5 is consistent with advisory opinions issued under the Federal Trade Commission Act. For example, in a 1966 advisory opinion, FTC stated that it would not be proper for a clock distributor to represent itself as a manufacturer if it performed a "small part" of the manufacturing process on the clocks: The amount of manufacturing which a concern must engage in to justify representing itself as a manufacturer will vary from case to case, depending on the specific circumstances. Your question, however, indicates you intend to operate as a manufacturer only in the technical sense and not in a substantive way, in an attempt to justify the use of a term not otherwise a correct description of your business. We likewise do not believe, in these circumstances, that it would be proper to represent your company as a manufacturer. 16 CFR 15.98(d).

Because the clocks were imported in a finished state, FTC advised the distributor that it would not be proper to use the word "manufacturing" in the distributor's trade name or advertising, or to otherwise represent itself as a manufacturer. The Commission was of the opinion that the use of such word "would have the tendency to lead customers and others into the belief, contrary to fact, that they are dealing directly with the manufacturer and so to mislead or deceive them." 16 CFR 15.98(b).

That a "manufacturer" is a person who through significant and substantial operations "make[s] into a product suitable for use" is clear from a more recent advisory opinion. In 1970, FTC advised that because they "shape[d] basic materials and components into finished products by handlabor and by machinery" producers of electronic display systems who used components purchased from many sources could refer to themselves as "manufacturer[s]" in promotional materials sent to the press. 16 CFR 15.417.

Several FTC "Foreign Origin" advisory opinions take a similar approach to the definition of "made." Thus, a manufacturer was advised not to mark "Made in U.S.A." on imported blades of cutlery to be finished and assembled in this country because a blade is a "significant component" of cutlery. 16 CFR 15.217. Likewise, a marketer of toys was advised not to use the labeling description "Made in U.S.A." for a tool kit containing 18 American and 2 Japanese items, where the latter represented 16 percent of the value of the kit and were a "substantial" portion of the components. 16 CFR 15.22.

In determining the circumstances in which a person may truthfully be represented as the "manufacturer" of a product, the FTC has considered the extent of the person's involvement in the steps required to produce the product. The Commissioner believes that a similar approach should be adopted in establishing standards for determining when a person may be regarded as the manufacturer of a drug or drug product for the purpose of drug labeling.

The Commissioner therefore proposes in § 201.1(b) to define the term "manufacture" of a drug or drug product to be the person who performs all of the significant operations which apply to the drug or drug product. He then proposes to identify 10 manufacturing operations that he believes are significant in formulating a drug or drug product: (1) Mixing, (2) granulating, (3) milling, (4) molding, (5) lyophilizing (free-drying), (6) tableting, (7) encapsulating, (8) coating, (9) sterilizing, and (10) filling sterile, aerosol or gaseous drugs into dispensing containers.

A mixing operation would be required to produce most drugs or drug products including liquid oral dosage forms. Granulating, tableting, encapsulating, and coating operations generally are required only for solid oral dosage forms. A milling operation is required for a dosage form such a topical ointment. A molding operation is required for a dosage form such as a suppository. Lyophilizing (freeze-drying) and sterilizing operations and filling sterile drugs into dispensing containers generally are required for injectable drug products. Filling aerosol or gaseous products into dispensing containers generally is required for topical or inhalation dosage forms of a drug product.

A person could be identified as the manufacturer of a drug or drug product only if the person performed all of the listed operations required to produce the drug or drug product. For example, a person would be the manufacturer of a lyophilized drug product for injection if the person performed the mixing and sterilizing operations filled the sterile drug into its containers, and performed the lyophilizing operation. Under proposed § 201.1(d), if another person performed the lyophilizing operation on the drug, the person performing all other operations would only be permitted to be designated as a manufacturer of the drug product if the person performing the lyophilizing operation were designated as a joint manufacturer.

The Commissioner proposes to add § 201.1 a new paragraph (c) which would state the conditions under which a person would be considered to have performed a manufacturing operation listed in paragraph (b). Proposed paragraph (c) would establish three conditions that a person must meet to qualify as a manufacturer of a drug or drug product. The conditions are that the manufacturing operations listed in proposed paragraph (b): (1) Be performed by individuals, a majority of whom are permanent full-time employees of the person and are subject to the person's direction and control throughout the performance of the operation; (2) be performed on premises that are continuously owned or leased by the person and are subject to the person's direction and control, and (3) be performed on equipment that is continuously owned or leased by the person. To be considered the manufacturer, the person must perform the manufacturing operation, including the appropriate in-process quality control operations required for the drug or drug product, in accordance with these standards. However, the person would not be required to perform laboratory tests on samples taken during processing. Laboratory testing of samples is not required to perform an operation listed in proposed § 201.1(b) because sample testing is sometimes performed by specialized contract laboratories. The Commissioner believes that sample testing, although an integral part of good manufacturing practices, would not commonly be considered by the lay person to be a manufacturing activity. In-process quality control operations, however, are so closely related to the performance of the manufacturing operation itself that a person who performs the operation would necessarily also perform the in-process quality control operations.

The Commissioner does not believe that the conditions for determining whether a person performs an operation listed in proposed § 201.1(b) can be more narrowly defined, although he encourages comments with alternative language that would improve upon the proposed requirements. Some flexibility is necessary, however, in view of the many variables presented by drug manufacturing situations. Accordingly, the Commissioner believes that the terms "permanent full-time employees of the person," "subject to the person's direction and control," and "continuously owned or leased by the person," should be applied according to their common or ordinary meaning. The Commissioner is not advising drug manufacturers on employee/employer contractual arrangements or on legal arrangements for owning or leasing buildings or equipment. The Commissioner emphasizes that the purpose of this proposal is to insure that a person who is represented on the label of a drug or drug product as its manufacturer performs the required manufacturing operations under conditions that consumers would consider to qualify the person as a manufacturer. Thus, the application of the common or ordinary meaning of the conditions under proposed § 201.1(c) is appropriate.

The Commissioner proposes in § 201.1(d) that the name of the manufacturer on a drug or drug product's label be the firm name under which the establishment at which the manufacturing operation is performed is registered under part 207 (21 CFR part 207). In addition, the name must meet the requirements of proposed § 201.1(e) discussed below. The Commissioner also proposes to amend § 207.20 (21 CFR 207.20) to provide that any part of an establishment may be registered only by one person at any one time. Thus, a manufacturing site, such as an area of a building where tableting presses are located, may not be covered by two establishment registrations. These proposed requirements would permit the easy identification of the person who actually performed the manufacturing operation. To insure that attempts are not made to circumvent these requirements by frequent changes in establishment registrations, the Commissioner also proposes to amend § 207.26 (21 CFR 207.26) to require that any change in a registered establishment's firm name within 6 months of the establishment's registration be supported by a signed statement of the establishment's owner or operator that the change is not made for the purpose of changing the name of the manufacturer of a drug or drug product under § 201.1.

The Commissioner further proposes § 201.1(d) that, if no person performs all of the manufacturing operations listed in proposed paragraph (b) for the production of a drug or drug product, no person may claim to be the sole manufacturer of the drug or drug product and no name of a sole manufacturer may appear on the label. However, if any representation is made as to the identity of the manufacturer of the drug or drug product, the representation is required to identify each person who performs one or more of the operations listed in proposed paragraph (b) that are required to produce the drug or drug product, and the names are to be qualified by the introductory phrase "Jointly Manufactured by ————." Accordingly, if one person performs all manufacturing operations that are required to produce the drug or drug product, and performs them within the meaning of proposed paragraph (c), that person may be identified on the drug or drug product's label as its manufacturer. If manufacturing operations required to produce the drug or drug product are performed by two or more persons, however, the label of the drug or drug product may bear the name of the packer or distributor, or it may identify each person who performs a required manufacturing operation within the meaning of the proposed requirements as a joint manufacturer, or both. If joint manufacturers are listed on the label of the drug product, the names would be required to be printed together in the same type size and style of print.

The Commissioner proposes to redesignate current § 201.1(b) as § 201.1(e) and to amend it to state that a separately incorporated subsidiary of a company would be required to use its actual corporate name and not the name of its parent company. A separately incorporated subsidiary of a company is a separate "person" within the meaning of section 201(e) of the act and should, therefore, be identified in drug labeling instead of the parent company.

The Commissioner proposes to redesignate current § 201.1(c) as § 201.1(f) and to amend it to require that the name of the packer or distributor be qualified by either the phrase "Packed by ————" or "Distributed by ————," as appropriate. Section 201.1(c) currently provides that other qualifications may be used to identify the person, and qualifying phrases, such as "Manufactured for ————" and "Manufactured to the specifications of ————" have been used to identify distributors of a drug product. The Commissioner believes that such a phrase is misleading because the consumer who does not closely examine the label may easily misread it and assume the person named is the manufacturer of the drug or drug product. In addition, the Commissioner believes that the second qualifying phrase is often used even when the specifications are no more demanding than those generally applied to the drug or drug product. In many cases the drug or drug product also may be manufactured to the same specifications but sold without the qualification by a different distributor. Thus, a consumer who compares the labels of the two drugs or drug products might be misled by the qualification. In addition, § 201.1(c) has resulted in the use of abbreviations, such as "Dis.," to identify a person as the distributor of a drug or drug product. The Commissioner believes that such abbreviations do not adequately inform consumers that the named person is not the man-

OCT 3 1978 UNT

V 43/192 OCT 3 78

ufacturer of the drug or drug product. Restricting the use of qualifying phrases would eliminate these problems. Accordingly, the Commissioner proposes to amend § 314.8(a)(6)(ii) (21 CFR 314.8(a)(6)(ii)), under which an amendment requiring a supplemental new drug application providing for an additional distributor may be put into effect without advance approval by FDA, if the name of the distributor on the label is accompanied by an appropriate qualifying phrase. Section 314.8(a)(6)(ii), thus, would be revised to reflect the proposed changes in § 201.1.

The Commissioner proposes in new § 201.1(g) to require that the label of a drug or drug product state, as required under proposed § 201.1(f), whether the person named on the drug product is the manufacturer, packer, or distributor, if the drug product bears a mark, imprint, or other identifying written, printed, or graphic matter immediately upon each dosage unit. Many drug products currently bear a mark or imprint immediately upon each dosage unit that identifies the manufacturer, packer, or distributor of the product. The Commissioner encourages this practice and believes that it significantly contributes to identification of drug products, particularly in emergency situations such as identification by a poison control center. He believes, however, that the practice also has a potential to mislead consumers by suggesting that the person identified by the mark or imprint is the manufacturer of the drug product, if the label of the product does not clearly and conspicuously identify whether that person is the manufacturer, packer, or distributor of the product.

The Commissioner emphasizes that the proposed definition of "manufacturer" applies only for the purposes of section 502(a) and (b)(1) of the act. It does not affect the definition of "manufacturer" under the drug registration and listing regulations in Part 207, nor does it affect the application of the current good manufacturing practice regulations in Parts 210, 211, 225, 226, and 229 (21 CFR Parts 210, 211, 225, 226, and 229). This proposal also does not affect the requirements of § 200.10 (21 CFR 200.10), under which FDA considers extramural independent contracting facilities as an extension of a manufacturer's own facilities for the purpose of disclosing to the manufacturer information obtained during an inspection of an extramural facility.

The Commissioner proposes that the final rule based on this proposal be effective 60 days after the final rule is published in the FEDERAL REGISTER, except that proposed § 201.1(f) (1) and (2) would be effective for all drugs or drug products introduced or delivered for introduction initially into interstate commerce 12 months after the final rule is published in the FEDERAL REGISTER or when printing plates are revised in the normal course of business, whichever occurs first. Because the proposed changes in § 201.1(f) (1) and (2) ordinarily would result only in changes in labeling that would eliminate abbreviations or qualifying phrases that were formerly considered to be synonymous with the phrases that would now be required, the Commissioner believes that an extended effective date to permit persons to exhaust current supplies of labels is appropriate. This extended effective date is consistent with agency practice respecting the length of time allowed for labeling changes in situations where no apparent safety problem is involved (see the FEDERAL REGISTER of August 25, 1978 (43 FR 37985), prescription drug dispensing container requirements). In addition, the Commissioner recognizes that it is expensive for persons to change printing plates and large inventories of labels likely existing at this time. The Commissioner expects, however, that most, if not all, of the labeling to which the extended effective date applies will have been exhausted by the time that extended date occurs. After the effective date of the final rule, no person may introduce or deliver for introduction initially into interstate commerce any drug or drug product to which the regulations apply unless the labeling of that drug or drug product complies with the requirements set forth in the regulations.

The potential envirohmental effects of this action have been carefully considered, and FDA has concluded that the action will not significantly affect the quality of the human environment. This action is one of a type for which the agency has determined that the preparation of an environmental impact statement is not required, except in rare and unusual circumstances. 21 CFR 25.1(f)(12). Accordingly, the preparation of an environmental impact analysis report for this action is not required under 21 CFR 25.1(g).

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 502, 701(a), 52 Stat. 1050-1051 as amended, 1055 (21 U.S.C. 352, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Title 21 of the Code of Federal Regulations be amended as follows:

PART 201—LABELING

1. By revising § 201.1 to read as follows:

§ 201.1 Drugs; name and place of business of manufacturer, packer, or distributor.

(a) A drug or drug product (as defined in § 320.1 of this chapter) in finished package form is misbranded under section 502(a) and (b)(1) of the act if its label does not bear conspicuously the name and place of business of the manufacturer, packer, or distributor as required under this section.

(b) As used in this section, and for the purposes of section 502(a) and (b)(1) of the act, the manufacturer of a drug or drug product is the person who performs all of the following operations that are required to produce the product:

(1) Mixing, (2) granulating, (3) milling, (4) molding, (5) lyophilizing, (6) tableting, (7) encapsulating, (8) coating, (9) sterilizing, and (10) filling sterile, aerosol, or gaseous drugs into dispensing containers.

(c) A person performs an operation listed in paragraph (b) of this section only if the operation is performed, including the performance of the appropriate in-process quality control operations, except laboratory testing of samples taken during processing, as follows:

(1) By individuals, a majority of whom are permanent full-time employees of the person and, throughout the performance of the operation, are subject to the person's direction and control;

(2) On premises that are continuously owned or leased by the person and subject to the person's direction and control; and

(3) On equipment that is continuously owned or leased by the person.

(d) The name of the manufacturer under paragraph (a) of this section is the firm name under which an establishment (as defined in § 207.3(b) of this chapter), at which the operations listed in paragraph (b) of this section are performed, it registered under Part 207 of this chapter at the time the product is produced. In addition, the name shall meet the requirements of paragraph (e) of this section. If no person performs all of the operations listed in paragraph (b) of this section that apply to the product, no representation may be made that any one person is the sole manufacturer, and any representation as to the identity of the manufacturer shall list each person who performs one or more of the operations listed in paragraph (b) of this section, as a joint manufacturer. A list of joint manufacturers shall be qualified by the phrase "Jointly Manufactured By ———," and the names of all of the manufacturers shall be printed together in the same type size and style.

(e) The requirement for declaration of the name of the manufacturer, packer, or distributor shall be deemed to be satisfied, in the case of a corporation, only by the actual corporate name, which may be preceded or followed by the name of the particular division of the corporation. A separately incorporated subsidiary shall only use its actual corporate name and not the name of its parent company. Abbreviations for "Company," "Incorporated," etc., may be used and "The" may be omitted. In the case of an individual, partnership, or association, the name under which the business is conducted shall be used.

(f) No person, except the manufacturer, packer, or distributor may be identified on the label of a drug or drug product. If the manufacturer is identified, the name may be stated with or without a qualification that identifies the person as the manufacturer of the drug or drug product. The appearance on a drug or drug product's label of a person's name without qualification is a representation that the named person is the sole manufacturer of the product. That representation is false and misleading, and the drug or drug product is misbranded under section 502(a) of the act, if the person is not the manufacturer of the product in accordance with this section. If the packer or distributor is named on the label of a drug or drug product, the following is required:

(1) If the packer is identified, the name is qualified by the phrase "Packed by ———."

(2) If the distributor is identified, the name is qualified by the phrase "Distributed by ———."

(g) If a person's name, mark, imprint, or other identifying written, printed, or graphic matter appears directly on the drug product (e.g., capsule or tablet), the label is required to state, as required under this section, whether the person named on the drug product is the manufacturer, packer, or distributor of the product.

(h) The statement of the place of business, shall include the street address, city, State, and ZIP Code; however, the street address may be omitted if it is shown in a current city directory or telephone directory. The requirement for inclusion of the ZIP Code shall apply only to consumer commodity labels developed or revised after the effective date of this section. In the case of nonconsumer packages, the ZIP Code shall appear either on the label or the labeling (including the invoice).

(i) If a person manufactures, packs, or distributes a drug or drug product at a place other than the person's principal place of business, the label may state the principal place of business in lieu of the actual place where such drug or drug product was manufactured or packed or is to be distributed, unless such statement would be misleading.

PART 207—REGISTRATION OF PRODUCERS OF DRUGS AND LISTING OF DRUGS IN COMMERCIAL DISTRIBUTION

2. By revising § 207.20(a) to read as follows:

§ 207.20 Who must register and submit a drug list.

(a) Owners or operators of all drug establishments, not exempt under section 510(g) of the act or Subpart D of this Part 207, that engage in the manufacture, preparation, propagation, compounding, or processing of a drug or drugs are required to register and to submit a list of every drug in commercial distribution (except that listing information may be submitted by the parent, subsidiary, and/or affiliate company for all establishments when operations are conducted at more than one establishment and there exists joint ownership and control among all the establishments). Such owners or operators are required to register and to submit a list of every drug in commercial distribution (except that listing information may be submitted by the parent, subsidiary, and/or affiliate company for all establishments when operations are conducted at more than one establishment and there exists joint ownership and control among all the establishments), whether or not the output of such establishment or any particular drug so listed enters interstate commerce, except that drug listing is not required at this time for the manufacturing, preparation, propagation, compounding, or processing of an animal feed (including a feed concentrate, a feed supplement, and a complete animal feed) bearing or containing an animal drug. No owner or operator may register an establishment, if any part of the establishment is registered by any other owner or operator.

* * * * *

3. By revising § 207.26 to read as follows:

§ 207.26 Amendments to registration.

Changes in individual ownership, corporate or partnership structure location or drug-handling activity, shall be submitted by Form FD-2656 (Registration of Drug Establishment) as amendment to registration within 5 days of such changes. A change is a registered establishment's firm name within 6 months of the registration of the establishment is required to be supported by a signed statement of the establishment's owner or operator that the change is not made for the purpose of changing the name of the manufacturer of a drug or drug product under § 201.1 of this chapter. Changes in the names of officers and directors of the corporations do not require such amendment but must be shown at time of annual registration.

PART 314—NEW DRUG APPLICATIONS

4. By revising § 314.8(a)(6)(ii) to read as follows:

§ 314.8 Supplemental applications.

(a) * * *

(6) * * *

(ii) There are no changes from the conditions of the approved application except for a different and suitable proprietary name of the drug (if one is used) and the name and address of the distributor as used on the label and labeling. The name of the distributor shall be accompanied by the qualifying phrase "distributed by".

* * * * *

Interested persons may, on or before December 4, 1978, submit to the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

In accordance with Executive Order 12044, the economic effects of this proposal have been carefully analyzed, and it has been determined that the proposed rulemaking does not involve major economic consequences as defined by that order. A copy of the regulatory analysis assessment supporting this determination is on file with the Hearing Clerk, Food and Drug Administration.

Dated: September 28, 1978.

DONALD KENNEDY,
Commissioner of Food and Drugs.

FEDERAL COMMUNICATIONS COMMISSION

[47 CFR Part 73]

[Docket No. 21383; RM-2814]

FM BROADCAST STATION IN CAMP LEJEUNE, N.C.

Order Extending Time for Filing Response To Petition for Reconsideration

AGENCY: Federal Communications Commission.

ACTION: Order extending time.

SUMMARY: Action taken herein extends the time for filing responses to a petition for reconsideration involving FM channel changes in Camp Lejeune, N.C. Petitioner, Marin Broadcasting Corp., states the additional time in needed so that a full response can be prepared to the petition for reconsideration.

DATE: Responses to the petition for reconsideration must be received on or before October 3, 1978.

ADDRESSES: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT:

Carol P. Foelak, Broadcast Bureau, 202-632-7792.

SUPPLEMENTARY INFORMATION: In the matter of Amendment of § 73.202(b) Table of Assignments, FM Broadcast Stations. (Camp Lejeune, N.C.). Order extending time for filing responses to a petition for reconsideration (See also 43 FR 33772, Aug. 1, 1978.

Adopted: September 22, 1978.

By the Chief, Broadcast Bureau:

1. On August 24, 1978, a petition for reconsideration was filed by Francon, Inc., concerning the above-captioned matter. The date for filing response to this petition is presently September 25, 1978.

2. Counsel for Marine Broadcasting Corp. filed a request for an extension of time to and including October 3, 1978, to file a response to the aforementioned petition for reconsideration. Counsel states that due to the press of business he cannot prepare a full response by the current date for filing. He advises that counsel for Francon, Inc., and Seaboard Broadcasting Corp. have consented to the requested extension.

3. We are of the view that the public interest would be served by this extension so that parties may file any information which might be helpful to the Commission in reaching a decision in this proceeding.

4. Accordingly, *It is ordered*, That the date for filing responses to the petition for reconsideration in Docket No. 21383, is extended to and including October 3, 1978.

5. This action is taken pursuant to authority found in sections 4(i), 5(d)(1), and 303(r) of the Communications Act of 1934, as amended, and section 0.281 of the Commission's Rules.

FEDERAL COMMUNICATIONS COMMISSION,
WALLACE E. JOHNSON,
Chief, Broadcast Bureau.

[BC Docket No. 78-306; RM-3114]

TELEVISION BROADCAST STATIONS IN FORT WALTON BEACH, FLA.

Proposed Changes in Table of Assignments

AGENCY: Federal Communications Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: Action taken herein proposes the assignment of a first UHF television channel to Fort Walton Beach, Fla. Petitioner, Joint Communications Co., states the proposed channel could bring a first local television service to Fort Walton Beach.

DATES: Comments must be received on or before November 21, 1978, and reply comments must be received on or before December 11, 1978.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT:

Mildred B. Nesterak, Broadcast Bureau, 202-632-7792.

SUPPLEMENTARY INFORMATION: In the matter of amendment of § 73.606(b), table of assignments, television broadcast stations (Fort Walton Beach, Fla.)

Adopted: September 22, 1978.

Released: September 27, 1978.

By the Chief, Broadcast Bureau:

1. The Commission has before it for consideration a petition for rulemaking,[1] filed by Joint Communications Co. ("petitioner"). The petition seeks amendment of § 73.606(b) of the Commission's rules, the television table of assignments, by assigning television Channel 17 to Fort Walton Beach, Fla. An opposition to the proposal was filed by Offshore Telephone Co. ("Offshore").

2. Fort Walton Beach (pop. 19,994) in Okaloosa County (pop. 88,187),[2] is located in northwest Florida, on the Gulf of Mexico, approximately 60 kilometers (37 miles) east of Pensacola, Fla. Fort Walton Beach presently has no local television broadcast service.

3. Petitioner states that Fort Walton Beach is the largest city in Okaloosa County and a rapidly growing community whose population has increased 44.2 percent between 1960 and 1970. We are told that the county's economy is based on military/government (site of Eglin Air Force Base), tourism, agriculture, forestry, service industry, and manufacturing/production. Petitioner claims that although Fort Walton Beach receives commercial television service from other stations, none of these stations put a grade A signal over the community. It alleges that off-air television reception is so limited that over 70 percent of the television households in Okaloosa County have cable television. Petitioner has submitted detailed socio-economic and geographic profiles of Fort Walton Beach in an effort to show the need for a local television channel assignment.

4. In opposing comments, Offshore asserts that channel 17 is not available for assignment to any location in the Gulf of Mexico region due to the dedication and use of those frequencies on a shared basis by communications common carriers in the Offshore Radio Telecommunications Service stations in the Gulf. Offshore states it is only opposed to the assignment of channel 17 to Fort Walton Beach, not to the assignment of some other channel. It notes that an engineering study reveals that either Channel 35 or channel 46 could be assigned to Fort Walton Beach in compliance with the distance separation requirements.

5. Channel 17, in accordance with action [3] taken by the Commission, is not available for assignment to Fort Walton Beach because of its use by communications common carriers to provide communication services to petroleum exploration and drilling rigs in the Gulf of Mexico. However, a staff study confirms Offshore's statement that channel 35 could be assigned to Fort Walton Beach in conformity with the minimum distance separation requirements and other technical criteria without requiring changes to television assignments at other communities listed in the table of assignments. We therefore make that proposal here.

6. In view of the fact that the proposed assignment could provide Fort Walton Beach with a first local television service, the Commission finds it would be in the public interest to seek comments in a rulemaking.

7. Therefore, notice is hereby given that the Commission proposes to amend the television table of assignments, § 73.606(b) of the Commission's rules, with respect to Fort Walton Beach, Fla., as follows:

City	Channel No.	
	Present	Proposed
Fort Walton Beach, Fla.		35

8. The Commission's authority to institute rulemaking proceedings, showings required, cut-off procedures, and filing requirements are contained in the attached appendix and are incorporated by reference herein.

NOTE.—A showing of continuing interest is required by paragraph 2 of the appendix before a channel will be assigned.

9. Interested parties may file comments on or before November 21, 1978, and reply comments on or before December 11, 1978.

FEDERAL COMMUNICATIONS COMMISSION,
WALLACE E. JOHNSON,
Chief, Broadcast Bureau.

APPENDIX

1. Pursuant to authority found in sections 4(i), 5(d)(1), 303 (g) and (r) and 307(b) of the Communications Act of 1934, as amended, and § 0.281(b)(6) of the Commission's rules, it is proposed to amend the FM Table of Assignments, § 73.606(b) of the Commission's rules and regulations, as set forth in the notice of proposed rulemaking to which this appendix is attached.

2. *Showings required.* Comments are invited on the proposal(s) discussed in the notice of Proposed rulemaking to which this appendix is attached. Proponent(s) will be expected to answer whatever questions are presented in initial comments. The proponent of a proposed assignment is also expected to file comments even if it only resubmits or incorporates by reference its former pleadings. It should also restate its present intention to apply for the channel if it is assigned, and, if authorized, to build the station promptly. Failure to file may lead to denial of the request.

3. *Cut-off procedures.* The following procedures will govern the consideration of filings in this proceeding.

(a) Counterproposals advanced in this proceeding itself will be considered, if advanced in initial comments, so that parties may comment on them in reply comments. They will not be considered if advanced in reply comments. (See § 1.420(d) of Commission rules.)

(b) With respect to petitions for rulemaking which conflicts with the proposal(s) in this notice, they will be considered as comments in the proceeding, and public notice to this effect will be given as long as they are filed before the date for filing initial comments herein. If they are filed later than that, they will not be considered in connection with the decision in this docket.

4. *Comments and reply comments; service.* Pursuant to applicable procedures set out in §§ 1.415 and 1.420 of the Commission's rules and regulations, interested parties may file comments and reply comments on or before the dates set forth in the notice of proposed rulemaking to which this appendix is attached. All submissions by parties to this proceeding or persons acting on behalf of such parties must be made in written comments, reply comments, or other appropriate pleadings. Comments shall be served on the petitioner by the person filing the comments. Reply comments shall be served on the person(s) who filed comments to which the reply is directed. Such comments and reply comments shall be accompanied by a certificate of service. (See § 1.420 (a), (b), and (c) of the Commission rules.)

5. *Number of copies.* In accordance with the provisions of § 1.420 of the Commission's rules and regulations, an original and four copies of all comments, reply comments, pleadings, briefs, or other documents shall be furnished the Commission.

6. *Public inspection of filings.* All filings made in this proceeding will be available for examination by interested parties during regular business hours in the Commission's Public Reference Room at its headquarters, 1919 M Street NW., Washington, D.C.

[FR Doc. 78-27865 Filed 10-2-78; 8:45 am]

[1] Public notice of the petition was given on May 30, 1978, report No. 1123.

[2] Population figures are taken from the 1970 U.S. Census.

[3] *Notice of proposed rule making and notice of inquiry*, docket No. 20368, released Mar. 10, 1975.

CIVIL AERONAUTICS BOARD

[Docket No. 33427; Order 78-9-112]

AIR PANAMA INTERNACIONAL, S.A.

Order of Suspension and Investigation Regarding Economy Class Student Fares

Adopted by the Civil Aeronautics Board at its office in Washington, D.C., on the 14th day of September 1978.

On August 17, 1978, Air Panama Internacional, S.A. (Air Panama) filed a new round trip economy class student fare between Miami and Panama City for effect October 1, 1978. Set at a level of $140, it applies only to students between the ages of 12 and 24; has a 3- to 17-day minimum-maximum stay; and is available for travel during the periods September 15 through November 30, January 15 through April 8, and April 16 through April 30 of each year.[1] The carrier states this fare will generate student traffic in the market and will enable students interested in the new Panama Canal Treaty to tour the area.

The Board has concluded that the proposed fare may be unjust, unreasonable, unjustly discriminatory, unduly preferential, or otherwise unlawful, and should be investigated. The Board further concludes that it should be suspended pending investigation.

The Board previously has found discount fares limited to students to be unjustly discriminatory.[2] As the U.S. Court of Appeals has stated "the rule of equality is the very core and essence of the fare structure in the transportation industry." Thus, "equality of treatment is paramount," and the factors alleged to justify departure from this rule "are to be weighed in light of that pervasive requirement."[3] The Board has found that special discount fares based upon the particular status of an individual are unjustly discriminatory. *Domestic Passenger-Fare Investigation, Phase 5-Discount Fares,* order 72-12-18, December 5, 1972.

Although the Federal Aviation Act provides for limited departures from the basic "rule of equality," none is set out for students. Air Panama has suggested no unique or extraordinary circumstances, or developmental need sufficient to justify this resort to a patently discriminatory offering.

Accordingly, under the Federal Aviation Act of 1958, as amended, particularly sections 204(a), 404, 801, and 1002(j) thereof,

1. We shall institute an investigation to determine whether the fares and provisions set forth in appendix A below, and rules, regulations, or practices affecting such fares and provisions, are or will be unjust, unreasonable, unjustly discriminatory, unduly preferential, unduly prejudicial, or otherwise unlawful, and if we find them to be unlawful, we shall take appropriate action to prevent the use of such provisions or rules, regulations, or practices;

2. Pending hearing and decision by the Board, we shall suspend the tariff provisions specified in appendix A hereof and defer their use from October 1, 1978, to and including September 30, 1979, and shall permit no changes to be made to these tariff provisions during the period of suspension except by order or special permission of the Board;

3. We shall submit this order to the President[4] and it shall become effective October 1, 1978; and

4. We shall file a copy of this order in the aforesaid tariff and shall serve a copy upon Air Panama International, S.A.

We shall publish this order in the FEDERAL REGISTER.

By the Civil Aeronautics Board.

PHYLLIS T. KAYLOR,[5]
Secretary.

[Docket No. 30635; Order 78-8-205]

ARIZONA SERVICE INVESTIGATION

Order To Show Cause; Correction

Adopted by the Civil Aeronautics Board at its office in Washington, D.C., on the 31st day of August 1978.

In show cause order 78-8-205,[1] in the above case, we asked interested parties to show cause why Sky West Aviation should not be issued permissive subsidy ineligible authority at Yuma, Kingman, Prescott, and Winslow, Ariz., and Blythe and El Centro, Calif., and between the Grand Canyon and Phoenix and Flagstaff and Phoenix. In that same order and in companion order 78-8-195 we clearly indicated that our intent was to grant the carrier authority to provide service on a permissive, subsidy ineligible basis, in all of the markets in which Cochise was certificated except Page, Ariz. Thus, the cities of Los Angeles and Tucson should also be included in the list of cities for which we propose authority for Sky West.

Dated: September 26, 1978.

PHYLLIS T. KAYLOR,
Secretary.

[6320-01]

[Docket No. 32867; Order 78-9-113]

REEVE ALEUTIAN AIRWAYS, INC.

Order Fixing Final Service Mail Rates

Issued under delegated authority September 27, 1978.

By order 78-9-55, served September 14, 1978, we directed all interested persons, and particularly Reeve Aleutian Airways, Inc., and the Postmaster General, to show cause why the Board should not adopt the proposed findings and conclusions and fix, determine, and publish the final rates proposed therein.

The time designated for filing notice of objection has elapsed and no person has filed a notice of objection or answer to the order. All persons have therefore waived the right to a hearing and all other procedural steps short of fixing a final rate.

Accordingly, pursuant to the Federal Aviation Act of 1958, as amended, and particularly sections 204(a) and 406 thereof, the Board's procedural regulations, 14 CFR Part 302, and the authority delegated by the Board in its organization regulations, 14 CFR 385.16(g):

1. We make final the tentative findings and conclusions set forth in order 78-9-55;

2. The Postmaster General, pursuant to the provision of section 406 of the Federal Aviation Act of 1858, as amended, shall pay Reeve Aleutian Airways, Inc., for the transportation of mail by aircraft over its intra-Alaska routes, the facilities used and useful therefor, and the services connected therewith, on and after June 17, 1978, service mail rates of a line-haul charge of 93.6 cents per great-circle mail ton-mile and a terminal charge of 22.3 cents per pound originated;

3. The Postmaster General shall pay the fixed final service mail rates in their entirety; and

4. We shall serve a copy of this order upon Reeve Aleutian Airways, Inc., and the Postmaster General.

Persons entitled to petition the Board for review of this order pursuant to the Board's regulations, CFR 385.50, may file such petitions within 10 days after the service date of this order.

We shall make this order effective and an action of the Civil Aeronautics Board upon expiration of the above period unless within such period a petition for review is filed or the Board gives notice that it will review this order on its own motion.

We shall publish this order in the FEDERAL REGISTER.

PHYLLIS T. KAYLOR,
Secretary.

APPLICATIONS FOR DUTY—FREE ENTRY OF SCIENTIFIC ARTICLES

The following are notices of the receipt of applications for duty-free entry of scientific articles pursuant to section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Pub. L. 89-651; 80 Stat. 897). Interested persons may present their views with respect to the question of whether an instrument or apparatus of equivalent scientific value for the purposes for which the article is intended to be used is being manufactured in the United States. Such comments must be filed in triplicate with the Director, Statutory Import Programs Staff, Bureau of Trade Regulation, U.S. Department of Commerce, Washington, D.C. 20230, by October 23, 1978.

Regulations (15 CFR 301.9) issued under the cited act prescribe the requirements for comments.

A copy of each application is on file, and may be examined between 8:30 a.m. and 5 p.m., Monday through

[1] Air Tariffs Corporation, Agent, C.A.B. No. 74, Rule No. 611 and 26th Revised Page 322.

Docket No. 78-00376. Applicant: San Diego State Universty, 5300 Campanile Drive, San Diego, Calif. 92182. Article: Calorimetric Unit, Model CP-C and Accessories. Manufacturer: Sodev, Inc. Canada. Intended use of article: The article is intended to be used to measure the partial molal heat capacities of various inorganic and organic electrolytes and nonelectrolytes in aqueous solutions at concentrations from 0.05 molal to saturation and at temperatures up to 80° C. The data will be used to check and extend a theory developed for predicting the thermodynamic properties of aqueous electrolytes and other dissolved species up to 300° C. The data obtained up to 80° C, using the flow microcalorimeter, will be combined with our data above 100° C, which is obtained from heat of solution calorimetry, and will be used to calculate the high temperature thermodynamic properties of electrolytes for comparison with the theory. Application received by Commissioner of Customs: August 28, 1978.

Docket No. 78-00392. Applicant: National Cancer Institute, NIH, Building 10, Room 2A29, 9000 Rockville Pike, Bethesda, Md. 20902. Article: Electron Microscope, Model EM 400 HMG High Magnification Goniometer and Accessories. Manufacturer: Philips Electronics Instruments NVD, the Netherlands. Intended use of article: The article is intended to be used for the examination of plastic sections of tissue, and tissue culture pellets, negative stained specimens of virus preparations and of monolayers of biological molecules. Membrane receptor molecules, virus DNA molecules, chromatin structure will be investigated to: (1) Compare malignant cells, virus-infected cells, and their normal counterparts with regard to antibody and lectin binding; (2) study chromatin changes due to hyperacetylating b chemicals; and (3) study DNA molecules of various viruses for further characterization of viruses and their mutants. Application received by Commissioner of Customs: August 28, 1978.

Docket No. 78-00395. Applicant: University of Michigan, 1024 Chemistry Building, 930 North University Avenue, Ann Arbor, Mich. 48109. Article: Switching Unit, Model 128M and Optional Current Switching Facility for 5 Thermometer. Manufacturer: Automated Systems Lab. Ltd., United Kingdom. Intended use of article: The article is an accessory to an existing Automated AC Bridge manufactured by the same manufacturer which is being used for the study and understanding of the energetic spectrum of matter; the chemical thermodynamic properties of matter including the entropy, enthalpy, tempered Gibbs energy function, etc.; the electronic, structural, as well as the molecular disordering and librational freedom of molecules are both immediate and indirect objectives. Application received by Commissioner of Customs: August 28, 1978.

Docket No. 78-00396. Applicant: University of Chicago Operator of Argonne National Laboratory, 9700 South Cass Avenue, Argonne, Ill. 60439. Article: VRT 2121A Reflex Klystron and accessories. Manufacturer: Varian Associates of Canada, Canada. Intended use of article: The article is intended to be used in a "Zebra-stripe" microwave interferometer set up to measure the electron density in Argonne's APEX Tokamak which is being constructed to study plasma wall interaction of fusion type plasma, methods of heating tokamak discharges to ignition and methods of inducing plasma currents with rf field. Application received by Commissioner of Customs: August 28, 1978.

Docket No. 78-00397. Applicant: University of Chicago, Operator of Argonne National Laboratory, 9700 South Cass Avenue, Argonne, Ill. 60439. Article: Rotating Anode X-Ray Generator, Model GX20 and accessories. Manufacturer: Marconi-Elliott Avionices Ltd., United Kingdom. Intended use of Article: The article is intended to be used to investigate three-dimensional structures of primarily human immunoglobulins and Bence-Jones proteins. Application received by Commissioner of Customs: August 28, 1978.

Docket No. 78-00398. Applicant: Battelle Memorial Institute Pacific Northwest Division, P.O. Box 999, Richland, Wash. 99352. Article: TG-26/V Tunnel Guidance System and Accessories. Manufacturer: ZED Instruments Ltd., United Kingdom. Intended use of article: As part of a blind shaft borer the article is intended to be used to monitor the positon of two laser beams projected from self-plumbing lasers mounted at the surface; transmit signals proportional to laser beam position to a processing unit; and, using this information and data on machine attitude, calculate, and display to the machine operator, the displacement of the machine from the true shaft centerline. Application received by Commissioner of Customs: August 28, 1978.

Docket No. 78-00399. Applicant: University of Illinois, Urbana-Champaign Campus, Purchasing Division, 223 Administration Building, Urbana, Ill. 61801. Article: Superconducting Solenoid with Helium Cryostat and Accessories. Manufacturer: Oxford Instruments Ltd., United Kingdom. Intended use of article: The article is intended to be used to generate a magnetic field which is strong, spatially uniform, and steady in time in studies of a wide variety of problems in the broad area of solid state physics. Application received by Commissioner of Customs: August 28, 1978.

Docket No. 78-00402. Applicant: The University of Texas System Cancer Center, 6723 Bertner Drive, Houston, Tex. 77030. Article: Microlab Tissue Processor and Accessories. Manufacturer: Microlab Products, Canada. Intended use of article: The article is intended to be used, for the investigation of ultrastructural feature of tumors in order to establish ultrastructural criteria for the diagnosis and differential diagnosis of human neoplasms.

Application received by Commissioner of Customs: August 30, 1978.

Docket No. 78-00403. Applicant: Stanford University, 851 Welch Road, Palo Alto, Calif. 94304. Article: Electron Microscope, Model EM 400 with HMG and Accessories. Manufacturer: Philips Electronics Instruments, NVD, the Netherlands. Intended use of article: The article is intended to be used for the studies of the following materials:

(i) Niobium-tin, niobium-germanium and related compounds for superconducting properties;

(ii) Piezoelectric polymers for various electronic applications;

(iii) Extruded and highly worked metals to understand mechanisms of deformation;

(iv) Examination of the structure of amorphous materials;

(v) Tungsten-titanium carbide, extremely hard ceramics for tool cutting;

(vi) Silicon, gallium-arsenide and other epitaxial deposits for semiconductor devices.

The objective of the research is to correlate the properties of materials such as the above with their structure (arrangement of atoms) and microstructure (arrangement of defects). By finding the manner in which structure and microstructure influence materials properties, one can understand the fundamentals of particular behavior and proceed to modify the material and obtain the optimum combination of properties. Application received by Commissioner of Customs: August 31, 1978.

Docket No. 78-00404. Applicant: University of New Hampshire, Department of Chemistry, Durham, N.H. 03824. Article: High Resolution Fourier Transformation Multi-Nuclear Magnetic Resonance Spectrometer System and Accessories Model JNM/FX-90Q. Manufacturer: JEOL Ltd., Japan. Intended use of article: The article is intended to be used for studies of materials derived from research programs in the general areas of organic, inorganic physical, bioinorganic,

environmental, and biochemistry. Pulse fourier transform NMR spectra will be obtained for ^{1}H, ^{2}H, ^{7}Li, ^{11}B, ^{13}C, ^{15}N, ^{17}O, ^{19}F, ^{23}Na, ^{31}P, ^{199}Hg, and ^{113}Cd on various molecules as required by the different projects. Chemical shifts, coupling constants, relaxation times, Nuclear Overhauser Effects, lineshapes and temperature effects on the spectrual parameters will be employed to obtain structural and dynamic information about the various systems under investigation. Application received by Commissioner of Customs: August 31, 1978.

Docket No. 78-00405. Applicant: Boston University School of Medicine, Department of Dermatology, Houseman Research Building, Room 316, 80 East Concord Street, Boston, Mass. 02118. Article: LKB 8800A Ultrotome III Ultramicrotome and Accessories. Manufacturer: LKB Produkter AB, Sweden. Intended use of article: The article is intended to be used to section human and animal tissues and isolated cell components which have been embedded in hardened epoxy resins. Investigations will be conducted involving ultrastructural studies on normal and pathologic tissues, developmental studies on enzyme and subcellular organelle localization in cells and tissues membrane interactions and subcellular changes in cells induced by changes in their biochemical and physical environments. The article will also be used in courses entitled Ultrastructure and Cell Biology which will involve a study of general principles on techniques and the use of the electron microscope to study the fine structure of cells and various subcellular organelles and the employment of cytochemical staining methods to localize various enzymes. Application received by Commissioner of Customs: August 31, 1978.

Docket No. 78-00406. Applicant: Yale University, Purchashing Department, 20 Ashman Street, New Haven, Conn. Article: LKB 8800A Ultrotome III Ultramicrotome and accessories. Manufacturer: LKB Produkter AB, Sweden. Intended use of article: The article is intended to be used in ongoing research involving a variety of mammalian tissues including those of man, mouse, rabbit, and guinea pig. Normal, experimental, and pathologic tissues from each of these species will be examined with respect to their microcirculation. Studies will be conducted to discover how changes in the microcirculation contribute to the development of serious systemic and cutaneous disorders. Application received by Commissioner of Customs: August 31, 1978.

Docket No. 78-00407. Applicant: National Institute of Environmental Health Sciences, Laboratory of Pulmonary Function and Toxicology, P.O. Box 12233, Research Triangle Park, N.C. 27709. Article: LKB 8800A Ultrotome III Ultramicrotome and Accessories. Manufacturer: LKB Produkter AB, Sweden. Intended use of article: The article is intended to be used to section human and animal tissues for study during experiments on the pathobiology of pulmonary disease. Application received by Commissioner of Customs: August 31, 1978.

APPLICATIONS FOR DUTY-FREE ENTRY OF SCIENTIFIC ARTICLES

The following are notices of the receipt of applications for duty-free entry of scientific articles pursuant to section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Pub. L. 89-651; 80 Stat. 897). Interested persons may present their views with respect to the question of whether an instrument or apparatus of equivalent scientific value for the purposes for which the article is intended to be used is being manufactured in the United States. Such comments must be filed in triplicate with the Director, Statutory Import Programs Staff, Bureau of Trade Regulation, U.S. Department of Commerce, Washington, D.C. 20230, by October 23, 1978.

Regulations (15 CFR 301.9) issued under the cited Act prescribe the requirements for comments.

A copy of each application is on file, and may be examined between 8:30 a.m. and 5 p.m., Monday through Friday, in Room 6886C of the Department of Commerce Building, 14th and Constitution Avenue NW., Washington, D.C. 20230.

Docket No. 78-00408. Applicant: Haskins Laboratories, Inc., 270 Crown Street, New Haven, Conn. 06510. Article: Electro-Palatograph. Manufacturer: Rion Co., Ltd., Japan. Intended use of article: The article is intended to be used to register the temporal and spatial pattern of tongue contact on the palate during running speech thus providing a valuable way of studying the details of normal and deviant speech production. The article will be used in combination with other physiological measures of the direction and time course of tongue movement. Application received by Commissioner of Customs: August 31, 1978.

Docket No. 78-00410. Applicant: DHEW, NIH, NIDR, Laboratory of Biological Structure, 9000 Rockville Pike, Building 30, Room 211, Bethesda, Md. 20014. Article: LKB 8800A Ultrotome III Ultramicrotome and Accessories. Manufacturer: LKB Produkter AB, Sweden. Intended use of article: The article is intended to be used for sectioning mineralized and demineralized tooth and bone, exocrine glands, and tissue culture cells which have been embedded in hardened epoxy resins. Studies will be conducted on the process of mineralization, exocrine gland structure and function, cytochemical studies on various cellular organelles, electron diffraction of mineralized tissues, and energy dispersive X-ray analysis of various tissues. The primary objectives of this research are to explore mechanisms controlling the process of mineralization of tissue and to investigate the interrelationships between the structure and function of exocrine glands. The article will also be used in teaching basic electron microscopy and cytochemistry to individuals within the laboratory. Application received by Commissioner of Customs: September 1, 1978.

Docket No. 78-00411. Applicant: DHHR, Division of Health, Louisiana State Chemical Laboratory, 325 Loyola Avenue, State Office Building, Room 827, New Orleans, La. 70112. Article: Sample Fusion Rotary Burner. Manufacturer: Saskatchewan Research Council, Canada. Intended use of article: The article is intended to be used for the study of uranium levels in drinking water. Application received by Commissioner of Customs: September 1, 1978.

Docket No. 78-00412. Applicant: University of Illinois, Urbana-Champaign Campus, Purchasing Division, 223 Administration Building, Urbana, Ill. 61801. Article: 89 mm Widebore 85000 Gauss Superconducting Solenoid Magnet. Manufacturer: Oxford Instruments, United Kingdom. Intended use of article: The article is intended to be used for studies of very low concentrations of deuterium nuclei in biological membranes, dilute protein solution. Experiments will consist of observation of electronic quadrupole splittings of deuterium resonance in artificial and biological membranes labelled with deuterium nuclei. Application received by Commissioner of Customs: September 1, 1978.

Docket No. 78-00413. Applicant: University of Alaska, Biome Center, Fairbanks, Alaska 99701. Article: Carbon Dioxide Analyser, Model 225 II BSS and accessories. Manufacturer: Analytical Development Co., Ltd., United Kingdom. Intended use of article: The article is intended to be used for studies of the photosynthesis of higher plants and bryophytes in the taiga of

V 43/192 OCT 3 78 UMI

central Alaska. Experiments to be conducted include:

(1) CO_2 exchange of black spruce under varied regimes of soil temperature, nutrients, and water status through the growing season,

(2) Moss CO_2 exchange under varied regimes of temperature, light, water status, nutrient concentration,

(3) Tundra plant CO_2 exchange and root respiration under varied light temperature, and soil temperature regimes, and

(4) CO_2 exchange of roots and leaves and stems of deciduous trees under distinct conditions of soil temperature along a successional gradient.

Application received by Commissioner of Customs: September 1, 1978.

Docket No. 78-00414. Applicant: U.S. Department of Agriculture, Agriculture Research Service, Tobacco Research Laboratory, Route 2, Box 16G, Oxford, N.C. 27565. Article: Particulate Matter Prediction Metering Equipment. Manufacturer: W. D. and H. O. Wills Co., United Kingdom. Intended use of article: The article is intended to be used to burn ground tobacco samples in a glass tube in experiments to reduce tar levels in Fluecured tobacco. The objectives of these investigations being conducted is to reduce health hazards associated with tobacco by reducing tar levels. Application received by Commissioner of Customs: September 6, 1978.

Docket No. 78-00415. Applicant: Oregon State University, School of Oceanography, Corvallis, Oreg. 97331. Article: Submersible acoustic transponder. Manufacturer: Institute of Oceanographic Science, United Kingdom. Intended use of article: The article is intended to be used to investigate the behavior and composition of deep-sea scattering layers off Oregon. The organisms which compose the layers are primarily fishes, cephalopods, and crustaceans. Specifically, the article will be used to obtain and transmit information about the depth of the net and the local water temperature to a receiver aboard the research vessel. The monitor also acts as a connecting link (receiver) which, upon receipt of a signal from the vessel, initiates mechanical closing of one of the nets which is part of the trawl. Application received by Commissioner of Customs: September 6, 1978.

Docket No. 78-00416. Applicant: The Regents of the University of California, California College of Medicine, Irvine, Calif. 92717. Article: Scanning Electron Microscope, Model PSEM 500 with Automatic Goniometer Stage and accessories. Manufacturer: Philips Electronics Instruments NVD, the Netherlands. Intended use of article: The article is intended to be used for the following studies:

(1) Experiment investigations of diabetic angiopathy which include the fibrogenesis during wound repair which will include a 3-dimensional study of collagen layering in healing wounds,

(2) Study of receptor sites on liver plasma membranes and individual lymphoid cells,

(3) Diagnosis of tumors of uncertain histogenesis,

(4) Studies of a variety of congenital and acquired pulmonary lesions (hyaline membrane disease) and studies of tumors of neutral origin in young children, and

(5) Examination of both diagnostically and in a related clinical research study.

The article will also be used in the training and teaching of resident physicians, and instilling in them the importance of the scanning electron microscope as an additional tool for making diagnosis, particularly in borderline cases where resolution and 3-dimensional view can be beneficial.

Application received by Commissioner of Customs: September 11, 1978.

Docket No. 78-00417. Applicant: University of Illinois at the Medical Center, Research Resources Center, 933 Building, P.O. Box 6998, Chicago, Ill. 60680. Article: Mass Spectrometer MAT 112S (04-41679), and accessories. Manufacturer: Varian MAT, West Germany. Intended use of article:

The article is intended to be used to conduct the following research projects:

1. Benzo-[a]-pyrene and identification of other carcinogens.
2. Identification of oganosulfur gases.
3. Nitrogen cycling.
4. Chemotaxonomic studies of the alkaloids of Leguminosae.
5. High resolution studies of new anticancer agents from natural sources.
6. Analyses of ginseng saponins using field-desorption.
7. Analyses of synthetic reaction mixtures.
8. Biosynthesis of antibiotics using stable isotopes.
9. Analyses of neurotransmitters in discrete control nervous system structures.
10. Acetylcholine-choline metabolism during simulation of tardive dyskinesia by field desorption.
11. Analyses of toxicological substances.
12. Structural analysis of toxic principles of poisonous plants.
13. Study of cardiac glycosides of milk-wood using field-desorption technique.
14. Synthetic nucleotides for cancer chemotherapy.
15. Human Metabolic products of BHA and BHT.
16. Pharmacokinetics, bioavailability, and metabolism of 6-mercaptopurine in hydrate and anhydrate forms.
17. Human metabolic studies of tolbutamide and nitrofusantoin.
18. Monitoring human blood levels for investigation drugs.
19. Examining metabolites of drugs in biologic tissues.
20. Detection of toxic substances in biologic tissues.

The article will also be used for individualized training for faculty, students, and technical personnel. Application received by Commissioner of Customs: September 11, 1978.

Docket No. 78-00418. Applicant: University of California, San Francisco, 1438 Harbour Way South, P.O. Box 4028, Richmond, Calif. 94804. Article: Radiochromatogram spark chamber system, Model 450/3. Manufacturer: Birchover Instruments Ltd., United Kingdom. Intended use of article: The article is intended to be used for complex studies of the active centers of several enzymes involved in metabolism to better understand the function of these enzymes in normal and pathological states. Application received by Commissioner of Customs: September 11, 1978.

Docket No. 78-00419. Applicant: University of California, San Francisco, 1438 Harbour Way South, P.O. Box 4028, Richmond, Calif. 94804. Article: JASCO Automatic Recording Spectropolarimeter, Model J-500A and accessories. Manufacturer: Japan Spectroscopic Co., Ltd., Japan. Intended use of article: The article is intended to be used to investigate the circular dichroism spectra of peptides and proteins and their complexes with non-covalently bonded molecules. The objectives of the experiments conducted are to relate the circular dichroism spectra to the arrangement of molecular groups in three-dimensional space. In turn, the three-dimensional arrangement of molecular groups will be used to derive the basic molecular forces which stabilize the arrangement and the relationships between molecular arrangement and effect of the molecules on biological systems. Application received by Commissioner of Customs: September 11, 1978.

Docket No. 78-00420. Applicant: University of Texas at Arlington, Purchasing Department, Arlington, Tex. 76019. Article: Strut and Tie Apparatus. Manufacturer: Leybold-Heraeus, West Germany. Intended use of article: The article is intended to be used in the course Physics 1347—Physics for Architects, a study of mechanics which is designed to give students a technical basis of mechanics. Application received by Commissioner of Customs: September 11, 1978.

Docket No. 78-00421. Applicant: Yale University, School of Medicine, Section of Neuroanatomy, 333 Cedar

Street, Room C201, New Haven. Conn. 06510. Article: LKB 2128-010/Ultrotome IV Ultramicrotome and accessories. Manufacturer: LKB Produkter AB, Sweden. Intended use of article: The article is intended to be used to study biological tissues which include nerve and glial cells of the brain. The research will include ultrastructural studies on normal and pathologic brain development, organelle localization in neurons and tissues, membrane interactions between cells. In addition, the article will be used as a teaching aid for students enrolled in the course on "Normal and Pathological Development of Primate Brain" as well as for teaching graduate students in the field of neuroscience. Application received by Commissioner of Customs: September 11, 1978.

Docket No. 78-00238. Applicant: Research Foundation of S.U.N.Y. at Stony Brook, State University of New York at Stony Brook, Department of Materials Science, Stony Brook, N.Y. 11794. Article: Sets of parts and accessories for U.V. monochromator Subassembly. Manufacturer: Bird & Tole, Ltd., United Kingdom. Intended use of article: The articles are accessories to an existing monochromator being used for studies of metals and semiconductors during investigations of electronic energy structure. The experiments to be conducted will consist of photoelectron spectroscopy in the wavelength range 100-800 Angstroms with 1- percent resolution using a monochromator which is integral with the sample chamber. In addition, the article will be used for graduate training in scientific research. Application received by Commission of Customs: September 14, 1978.

Docket No. 78-00423. Applicant: Florida Institute of Technology, Country Club Road, Melbourne, Fla. 32901. Article: LKB 2088 Ultrotome V Ultramicrotome and Accessories. Manufacturer: LKB Produkter AB, Sweden. Intended use of article: The article in intended to be used to section plant, animal, and fungal specimens for ultrastructural studies on development in both animal and plant tissues, and on the cellular changes that occur during the aging of a number of different kinds of organism. Ultrastructural studies on chromosomes and on gene location will also be performed. The article will be used principally in the course, B5011, Electron Microscopy which teaches the principles and techniques for the use of the electron microscope in biological research, including specimen preparation, ultramicrotomy, fixation, staining, and interpretation. Application received by Commissioner of Customs: September 14, 1978.

Docket No. 78-00424. Applicant: Columbia University, International Institute of Human Reproduction, Room 1519, Black Building, 630 West 168th Street, New York, N.Y. 10032. Article: LKB 2088 Ultrotome V Ultramicrotome and Accessories. Manufacturer: LKB Produkter AB, Sweden. Intended use of article: The article is intended to be used to study the ultrastructure of biological cells and tissues; including the analysis of ova, sperm, and a variety of neuroendocrine tissues. In addition, it will be used for the identification of receptors for a variety of hormones by the application of electron dense markers. The experiments to be conducted will include:

(1) Studies of the mechanisms controlling the primate menstrual cycle with emphasis on brain pituitary ovarian hormonal interrelationships.

(2) The definition of the development of the gonadotropic access in long-term organotypic cultures of newborn rodent hypothalamic preoptic areas.

(3) Characterization and functional organization of neurosecretory pathways.

(4) Studies of biochemistry, endocrinology, and genetics of mammalian germ cell production.

(5) Studies of the metabolic aspects and biochemical kinetics of spermatogenesis and the chemistry of sperm motility.

(6) The examination of the structural biochemistry, spermatozoa with emphasis on the role of cystine rich cross-linked protein structures.

(7) Work on the central nervous system with localization of ovarian gonadotropin receptors.

(8) Investigations on the biosynthetic pathways of steroid synthesis.

Application received by Commissioner of Customs: September 14, 1978.

Docket No. 78-00425. Applicant: U.S. Department of Agriculture, Science and Education Administration, FR, Room 8, Building 200, ARC-East, Beltsville, Md. 20705. Article: LKB 2128-010 UM Ultrotome IV Ultramicrotome and accessories. Manufacturer: LKB Produkter AB, Sweden. Intended use of article: The article is intended to be used for studies conducted on the morphology, histochemistry, and cytochemistry of cells and tissues of the reproductive organs of domestic farm animals, including ova sperm cells, gonads, and accessory organs, uterus, pituitary, and appropriate brain centers. Cell fractions from these tissues (e.g., mitochondrial, nuclear, etc.) will be analyzed to determine composition and purity as corollary studies to biochemical investigations. Experiments will be conducted to determine the morphological-physiological response of reproductive cells and tissues to manipulations with various hormones and drugs. Cytochemical changes will be studied utilizing both thick and ultrathin sections. Responses of the reproductive cells to various methods of preservation will be investigated. Application received by Commissioner of Customs: September 14, 1978.

[FR Doc. 78-27837 Filed 10-2-78; 8:45 am]

[3510-25]

CONSOLIDATED DECISION ON APPLICATIONS FOR DUTY-FREE ENTRY OF SCIENTIFIC ARTICLES

The following is a consolidated decision on applications for duty-free entry of scientific articles pursuant to section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Pub. L. 89-651, 80 Stat. 897) and the regulations issued thereunder as amended (15 CFR 301).

A copy of the record pertaining to each of the applications in this consolidated decision is available for public review between 8:30 a.m. and 5 p.m. in room 6886C of the Department of Commerce Building at 14th and Constitution Avenue NW., Washington, D.C. 20230.

Decision: Applications denied. Applicants have failed to establish that instruments or apparatus of equivalent scientific value to the foreign articles, for such purposes as the foreign articles are intended to be used, are not being manufactured in the United States.

Reasons: Subsection 301.8 of the regulations provides in pertinent part:

The applicant shall on or before the 20th day following the date of such notice, inform the Deputy Assistant Secretary whether it intends to resubmit another application for the same article for the same intended purposes to which the denied application relates. The applicant shall then resubmit the new application on or before the 90th day following the date of the notice of denial without prejudice to resubmission, unless an extension of time is granted by the Deputy Assistant Secretary in writing prior to the expiration of the 90-day period. • • • If the applicant fails, within the applicable time periods specified above, to either (a) inform the Deputy Assistant Secretary whether it intends to resubmit another application for the same article to which the denial without prejudice to resubmission relates, or (b) resubmit the new application, the prior denial without prejudice to resubmission shall have the effect of a final decision by the Deputy Assistant Secretary on the application within the context of subsection 301.11 [Emphasis added.]

The meaning of the subsection is that should an applicant either fail to

V 43 / 192

notify the Deputy Assistant Secretary of its intent to resubmit another application for the same article to which the denial without prejudice relates within the 20-day period, or fails to resubmit a new application within the 90-day period, the prior denial without prejudice to resubmission will have the effect of a final denial of the application.

None of the applicants to which this consolidated decision relates has satisfied the requirements set forth above, therefore, the prior denials without prejudice have the effect of a final decision denying their respective applications.

Subsection 301.8 further provides:

• • • the Deputy Assistant Secretary shall transmit a summary of the prior denial without prejudice to resubmission, to the FEDERAL REGISTER for publication, to the Commissioner of Customs, and to the applicant.

Each of the prior denials without prejudice to resubmission to which this consolidated decision relates was based on the failure of the respective applicants to submit the required documentation, including a completely executed application form, in sufficient detail to allow the issue of "scientific equivalency" to be determined by the Deputy Assistant Secretary.

Docket No. 78-00017. Applicant: International Fertility Research Program, Highway 54, Research Triangle Park, N.C. 27709. Article: 2500 Hulka/Clemens Clips. Date of denial without prejudice to resubmission: May 23, 1978.

Docket No. 78-00026. Applicant: National Aeronautics and Space Administration Headquarters, Contracts Division, Code JHC-4, Washington, D.C. 20546. Article: Three (3) Dynamic Flowmeters. Date of denial without prejudice to resubmission: April 13, 1978.

Docket No. 78-00046. Applicant: Texas A. & M. University, Soil and Crop Sciences, College Station, Tex. 77843. Article: Isotope ratio mass-spectrometer Model 602D and accessories. Date of denial without prejudice to resubmission: May 30, 1978.

Docket No. 78-00054. Applicant: Portland State University, College of Science, P.O. Box 751, Portland, Oreg. 97207. Article: One complete Microelectrophoresis Apparatus, MKI. Date of denial without prejudice to resubmission: April 12, 1978.

National Oceanic and Atmospheric Administration

MARINE MAMMALS

Receipt of Application for Permit

Notice is hereby given that an applicant has applied in due form for a permit to take marine mammals as authorized by the Marine Mammal Protection Act of 1972 (16 U.S.C. 1361-1407); and the regulations governing the taking and importing of marine mammals (50 CFR part 216).

1. Applicant: a. Name—State of Alaska, Department of Fish and Game; b. Address—Subport Building, Juneau, Alaska 99801.

2. Type of permit: Scientific research.

3. Name and number of animals: Ringed seal (*Phoca hispida*), 100; bearded seal (*Erignathus barbatus*), 200.

4. Type of activity: To kill ringed seals in the wild and tag bearded seals for the purpose of continuing research and management programs on the biology and distribution of these and other species.

Location of activity: Bering, Chukchi, and Beaufort seas.

Period of activity: 3 years.

Concurrent with the pubication of this notice in the FEDERAL REGISTER the Secretary of Commerce is forwarding copies of this application to the Marine Mammal Commission and the Committee of Scientific Advisors.

Written data or views, or requests for a public hearing on this applicantion shoud be submitted to the Assistant Administrator for Fisheries, National Marine Fisheries Service, Department of Commerce, Washington, D.C. 20235, within 30 days of the publication of this notice. Those individuals requesting a hearing should set forth the specific reasons why a hearing on this particular application would be appropriate. The holding of such hearing is at the discretion of the Assistant Administrator for Fisheries.

All statements and opinions contained in this application are summaries of those of the applicant and do not necessarily reflect the views of the National Marine Fisheries Service.

Documents submitted in connection with the above application are available for review in the following offices: Assistant Administrator for Fisheries, 3300 Whitehaven Street NW., Washington, D.C.; and Regional Director, National Marine Fisheries Service, Alaska Region, P.O. Box 1668, Juneau, Alaska 99802.

Dated: September 5, 1978.

RICHARD B. ROE,
Acting Director, Office of Marine Mammal and Endangered Species, National Marine Fisheries Service.

[3510-22]

UPPER COLUMBIA RIVER BASIN POPULATIONS OF SALMON (ONCORHYNCHUS SPP.) AND STEELHEAD (SALMO GAIRDNERI)

Biological Status Review

AGENCIES: National Marine Fisheries Service, National Oceanic and Atmospheric Administration, Department of Commerce, and U.S. Fish and Wildlife Service, Department of the Interior.

ACTION: Review of status of upper Columbia River Basin populations of Pacific salmon and steelhead trout.

SUMMARY: The National Marine Fisheries Service and U.S. Fish and Wildlife Service are coordinating an interagency review of the status of certain populations of salmon and steelhead occurring in the Columbia River Basin upstream of the confluence with the Snake River to determine if any should be proposed for listing as threatened or endangered under the Endangered Species Act. Anyone having factual information on the status of these stocks is invited to submit it. The review will focus initially on the late spawning—primarily November—runs of Chinook salmon.

FOR FURTHER INFORMATION CONTACT:

Comments should be submitted to Dale R. Evans, Chief, Environmental and Technical Services Division, National Marine Fisheries Service, P.O. Box 4332, Portland, Oreg. 97208. Phone 503-234-3361, extension 4301; FTS 429-4301, on or before November 2, 1978.

SUPPLEMENTARY INFORMATION:

BACKGROUND

Northwest fisheries agencies have begun assembling available information concerning the biological status of upriver stocks of salmon in the Columbia River Basin with regard to provisions of the Endangered Species Act of 1973. The National Marine Fisheries Service, and the U.S. Fish and Wildlife Service are coordinating this status review through the Columbia Basin Fishery Technical Committee of the Columbia River Fisheries Council. The Columbia River Fisheries Council is comprised of the Northwest Regional Directors of the National Marine Fisheries Service and the U.S. Fish and Wildlike Service, the Directors of the Idaho Department of Fish and Game, the Oregon Department of Fish and Wildlife, the Washington Department of Fisheries, and the Washington Department of Game, and the Chairman of the Columbia River Inter-Tribal Fish Commission. If review of the information being gathered indicates listing of certain populations as threatened or endangered is warranted, a proposal to make the listing will be published in the FEDERAL REGISTER with a 90-day comment period. Should any regulations be deemed necessary by the National Marine Fisheries Service for the conservation of the listed species, a proposed rulemaking would be published in the FEDERAL REGISTER either in conjunction with the proposal to list or subsequently with a minimum 60-day review and comment period before the effective date.

After review of the comments received on the proposed listing, and following consultation with the other members of the council, the National Marine Fisheries Service will determine whether to proceed with the listing. This determination and the corresponding listing by the U.S. Fish and Wildlife Service will be published jointly in the FEDERAL REGISTER.

The review now underway will specifically consider effects of habitat degradation, possible overutilization for commercial and sporting purposes, disease, and predation, any inadequacies of existing regulations, and the effects of other natural and man-made factors on salmon and steelhead in the upper Columbia River Basin. The progress of conservation efforts being made to protect and improve stocks of salmon and steelhead and their habitats is also relevant to the determination of whether any should be proposed for listing. For example, juvenile salmon and steelhead have been collected at these dams and at hatcheries and transported in trucks and barges to release sites below Bonneville Dam.

Another major conservation effort, approved by State and Federal fisheries agencies and authorized for construction by the Corps of Engineers is the establishment of up to eight new salmon and steelhead hatcheries to compensate for losses of the fish at the four lower Snake River dams. Construction of the first of these is expected to begin in fiscal year 1979, if construction funding is approved. A portion of the spawning escapement of the upriver fall Chinook is being captured and propagated at other hatcheries to insure availability of an egg source.

The two Federal services will seek the views of the Governors of Washington, Oregon, and Idaho, and will solicit from them information on the status of the populations under consideration. Other interested parties are invited to submit any factual information, especially publications and written reports germane to the assessment of the status of upper Columbia River Basin stocks of salmon and steelhead. The information should be submitted in writing to the above address. Public information meetings will be held as requested or deemed necessary.

This notice of review was prepared by Robert B. Gorrell, Acting Endangered Species Program Manager, National Marine Fisheries Service, 202-634-7461. The two Federal Services have determined that this notice does not contain a major action requiring preparation of an Economic Impact Statement under Executive Order 11949 and OMB Circular A-107.

By letter of January 5, 1978, to the Department of the Interior, Herman J. McDevitt, attorney and member of the Pacific Fishery Management Council, requested a status determination of upriver summer Chinook salmon under the Endangered Species Act. By letter of Janaury 6, 1978, to the Department of the Interior, Mr. McDevitt requested a status determination of Snake River spring Chinook salmon under the Endangered Species Act. Neither of these petitions included "substantial evidence" as required under section 4(c)(2) of the Endangered Species Act to warrant a review. However, notice is hereby given that the two Federal Services have evidence on hand to warrant a biological status review of Pacific salmon and steelhead trout in the upper Columbia River Basin.

Dated: September 28, 1978.

JACK W. GEHRINGER,
Acting Assistant Administrator for Fisheries.

LYNN GREENWALT,
Director, U.S. Fish and Wildlife Service.

[3510-22]

WESTERN PACIFIC REGIONAL FISHERY MANAGEMENT COUNCIL

Meeting

AGENCY: National Marine Fisheries Service, NOAA.

ACTION: Notice of public meeting.

SUMMARY: The Western Pacific Regional Fishery Management Council, established by section 302 of the Fishery Conservation and Management Act of 1976 (Pub. L. 94-265), will hold its 13th regular meeting, to discuss the status of fishery management planning for the precious coral, spiny lobster, and billfish fisheries.

DATE: The meeting will convene at 9 a.m. on Monday, October 23, 1978, and adjourn at approximately 5 p.m. The meeting is open to the public.

ADDRESS: The meeting will be held in the Alii Surf Room 1L0 of the Kona Hilton Hotel, in Kailua-Kona, Hawaii.

FOR FURTHER INFORMATION CONTACT:

Wilvan G. Van Campen, Exective Director, Western Pacific Fishery Management Council, Room 1608, 1164 Bishop Street, Honolulu, Hawaii 96813, telephone 808-523-1368.

SUPPLEMENATRY INFORMATION: For information on seating arrangements, changes to the agenda, and/or written comments, contact the Executive Director.

Dated: September 28, 1978.

WINFRED H. MEIBOHN,
Associate Director, National Marine Fisheries Service.

[3510-25]

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

CLARIFYING THE STATUS OF CERTAIN TEXTILE PRODUCTS EXPORTED FROM INDIA

SEPTEMBER 27, 1978.

On September 26, 1978, a letter, dated September 21, 1978, was published in the FEDERAL REGISTER (43 FR 43539) which announced a reduction in charges of 10.5 million square yards equivalent from the limit established for group II (categories 330-369, 431-469, and 630-669) under the terms of the Bilateral Cotton, Wool, and Man-Made Fiber Textile Agreement of December 30, 1977, as amended, between the Governments of the United States and India. The purpose of this notice is to clarify that the directive of September 21, 1978, is intended to cancel and supersede the directive of July 18, 1978, which permitted entry for consumption and withdrawal from warehouse for consumption of quantities in excess of the group II limit for merchandise in categories 330-369, 431-469, and 630-669, as a group, exported from India after December 31, 1977, and on or before July 7, 1978.

OCT 3 1978

V 4 3 / 1 9 2

In the letter to the Commissioner of Customs, published below, the Chairman of the Committee for the Implementation of Textile Agreements clarifies the intent to cancel the directive of July 18, 1978. The letter also confirms changes in T.S.U.S.A. numbers for certain handloomed and handknotted carpets which were changed pursuant to amendments in the Tariff Schedules of the United States, published in the FEDERAL REGISTER on September 5, 1978 (43 FR 39408).

ARTHUR GAREL,
Acting Chairman, Committee for the Implementation of Textile Agreements.

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS,

SEPTEMBER 25, 1978.

COMMISSIONER OF CUSTOMS,
DEPARTMENT OF THE TREASURY,
Washington, D.C. 20229.

DEAR MR. COMMISSIONER: The purpose of this letter is to clarify that the directive of September 21, 1978, concerning the reduction of 10.5 million square yards equivalent in charges from the Group II ceiling (Categories 330-369, 431-469 and 630-669), established under the terms of the Bilateral Cotton, Wool, and Man-Made Fiber Textile Agreement, between the Governments of the United States and India, cancels and supersedes the directive of July 18, 1978, which lifted the embargo on the Group II limit for merchandise exported from India after December 31, 1977 and on or before July 7, 1978.

For purposes of implementing the directive of September 21, 1978, the following changes in T.S.U.S.A. numbers should also be noted:

T.S.U.S.A. No. 360.0500 changed to 360.0505; 360.1000 changed to 360.1005; 360.1500 changed to 360.1505; 361.4200 changed to 361.4205; 361.4400 changed to 361.4405.

T.S.U.S.A. numbers 361.5422 and 361.5425 were both changed to 361.5418.

This letter will be published in the FEDERAL REGISTER.

Sincerely,

ARTHUR GAREL,
Acting Chairman, Committee for the Implementation for Textile Agreements.

DEPARTMENT OF DEFENSE

Department of the Navy

BOARD OF ADVISORS TO THE SUPERINTENDENT, NAVAL POSTGRADUATE SCHOOL

Meeting

Pursuant to the provisions of the Federal Advisory Committee Act (5 U.S.C. App. I), notice is hereby given that the Board of Advisors to the Superintendent, Naval Postgraduate School, will meet on November 30 and December 1, 1978, in the Mezzanine Conference Room of the Naval Postgraduate School, Monterey, Calif. Sessions of the meeting will commence at 8 a.m. and terminate at 5:30 p.m. both days.

The Board was appointed to advise and assist the Superintendent concerning the Naval Postgraduate School Education Program. Items to be addressed at the meeting include a review of enrollment trends, progress in implementing new curricula, recommendations resulting from scholarly reviews of academic departments and a discussion of academic support facilities and equipment.

For further information concerning this meeting, contact Comdr. Charles J. Cox, Executive Assistant, Code 007, Naval Postgraduate School, Monterey, Calif. 93940, telephone 408-646-2514.

Dated: September 26, 1978.

P. A. WILLIE,
U.S. Navy, Deputy Assistant Judge Advocate General (Administrative Law).

[3128-01]

DEPARTMENT OF ENERGY

Economic Regulatory Administration

[ERA Docket No. BPA 7-3]

SALE OF THERMAL POWER FROM THE HANFORD GENERATING PROJECT

Order Confirming and Approving Special Contract Rates

Notice is hereby given that the Assistant Administrator for Utility Systems, Economic Regulatory Administration, has issued the Order published below confirming and approving special contract rates for the sale of thermal power from the Hanford generating project.

In the Matter of Hanford Generating Project, Bonneville Power Administration ex rel. Resource Applications; Order Confirming and Approving Special Contract Rates

Pursuant to section 301(b) of the Department of Energy Organization Act, 42 U.S.C. 7101 et seq., the function to confirm and approve power rates for the Bonneville Power Administration (BPA or Bonneville) was transferred to the Secretary of Energy. By delegation order No. 0204-4, effective October 1, 1977, 42 FR 60725-27 (Nov. 29, 1977), the Secretary of Energy delegated confirmation and approval authority to the Administrator of the Economic Regulatory Administration (ERA or the Administrator). The Administrator has delegated this authority to the Assistant Administrator for Utility Systems, Economic Regulatory Administration.

BACKGROUND

The Washington Public Power Supply System (WPPSS) entered into an agreement with the Department of Energy (DOE) to extend the supply of byproduct steam from DOE's new production reactor at Hanford, Wash., for the generation of electricity at the Hanford Generating Project (Hanford) until June 30, 1983. In a normal operating year, Hanford will generate approximately 4.5 billion kilowatthours. BPA entered into agreements with WPPSS, several investor-owned utilities (IOU), direct-service industries (DSI) and preference agencies under which the IOU and DSI customers each may purchase specified amounts of Hanford extension energy through June 30, 1983. Provisions in the agreement with DSI customers allow BPA to withdraw certain amounts of Hanford energy to meet the firm power commitments of BPA and preference agencies.

Because of anticipated poor steamflow conditions, BPA withdrew certain amounts of this Hanford energy allocated to DSI customers in November 1977. However, streamflow conditions improved and subsequently ERA, upon request of BPA, confirmed and approved a special rate (10 mills per kilowatt-hour) for the sale of this withdrawn Hanford energy during the period January 1, 1978, through June 30, 1978, 43 FR 16535 (Apr. 19, 1978). The Hanford energy so withdrawn was offered first to DSI customers or other Northwest purchasers and then to utilities in California.

On April 27, 1978, the Assistant Secretary for Resource Applications, on behalf of BPA, requested the Administrator of ERA to confirm and approve for a period ending June 30, 1983, special contract rates that would apply to the sale of the portion of Hanford energy not withdrawn and to future sales of Hanford energy that may be withdrawn by BPA if its system operations indicate that such sales are desirable.

BPA has advised ERA that the special rate will vary from year to year depending on the costs in such year of producing and transmitting Hanford energy. These costs are estimated in the contracts between BPA and the IOU customers and between BPA and the DSI customers (contract Nos. 14-03-79120 and -79121, respectively). Each of the five IOU customers will pay 10 percent of the estimated cost of producing Hanford energy. The remaining 50 percent of the cost will be prorated among the 15 DSI customers according to each customer's usage. Monthly billings for each IOU and DSI customer will be based on estimated operating costs and the revenue therefrom will be placed in a trust account. After the close of each operating year, each customer's account will be adjusted to reflect actual operating costs. Each customer has also agreed to pay its proportional share of the cost of Hanford's environmental program and each DSI customer has agreed to pay the cost associated with the relocation of WPPSS nuclear project No. 1.

The rates for the IOU customers are to apply during the period November 1, 1977, through June 30, 1983. Because the DSI portion of Hanford energy was withdrawn through June 30, 1978, the rates for the DSI customers are to apply during the period July 1, 1978, through June 30, 1983.

DISCUSSION

On June 22, 1978, ERA afforded interested persons the opportunity to file written comments on the proposed special contract rates and to request a public hearing, 43 FR 28031 (June 28, 1978). No written comments were received in response to the Notice and no requests for a public hearing were filed. ERA finds that the special contract rates for the sale of Hanford extension energy will yield sufficient revenues to comply with statutory requirements and that it is appropriate to confirm and approve the rates through June 30, 1983, as requested by the Assistant Secretary.

ORDER

Pursuant to the delegation of authority set forth above, the Assistant Administrator for Utility Systems, Economic Regulatory Administration, orders:

1. The proposed rates and charges for the sale of power and energy generated at the Hanford Project as specified in contract No. 14-03-79120 between the Bonneville Power Administration and investor-owned utilities are hereby confirmed and approved for a period ending June 30, 1983;

2. The proposed rates and charges for the sale of power and energy generated at the Hanford Project as specified in contract No. 14-03-79121 between the Bonneville Power Administration and direct-service industries are hereby confirmed and approved for a period ending June 30, 1983; and

3. The Assistant Secretary for Resource Applications shall cause a copy of this order to be distributed to all appropriate parties on the service list.

Issued in Washington, D.C., this 26th day of September 1978.

DOUGLAS C. BAUER,
Assistant Administrator for Utility Systems, Economic Regulatory Administration, Department of Energy.

[FR Doc. 78-27831 Filed 10-2-78; 8:45 am]

[3128-01]

PEACEFUL USES OF ATOMIC ENERGY

Proposed Subsequent Arrangements

Pursuant to section 131 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2160), notice is hereby given of proposed "subsequent arrangements" under the additional agreement for cooperation between the Government of the United States of America and the European Atomic Energy Community (Euratom) concerning the peaceful uses of atomic energy and the agreements for cooperation between the Government of the United States of America and the Governments of Norway and Austria concerning civil uses of atomic energy.

The subsequent arrangements to be carried out under the above mentioned agreements involve the following retransfers.

APPLICATION NUMBER, COUNTRIES AND DESCRIPTION OF MATERIAL

RTD/EU (NO)-28, Norway to the United Kingdom; 1,690 g of uranium containing 153 g of U-235 and 3.2 g of plutonium in the form of irradiated test fuel rods for postirradiation experiments at the U.K.A.E.A.'s Berkely Laboratories.

RTD/AT (EU)-47, West Germany to Austria; 0.27754 g of uranium in the form of irradiated UO, particles from Euratom (Julich, West Germany) to Austria (Seibersdorf) for destructive testing.

In accordance with section 131 of the Atomic Energy Act of 1954, as amended, it has been determined that these subsequent arrangements will not be inimical to the common defense and security of the United States.

These subsequent arrangements will take effect no sooner than 15 days after publication of this notice.

For the Department of Energy.

Dated: September 28, 1978.

HAROLD D. BENGELSDORF,
Director for Nuclear Affairs, International Programs.

[3128-01]

Office of the Secretary

INTERNATIONAL ENERGY AGENCY INDUSTRY ADVISORY BOARD

Voluntary Agreement and Plan of Action To Implement the International Energy Program; Meeting

In accordance with section 252(c)(1)(A)(i) of the Energy Policy and Conservation Act (Pub. L. 94-163), notice is hereby provided of the following meeting:

A meeting of the Industry Advisory Board (IAB) to the International Energy Agency (IEA) will be held on October 4, 1978, at the headquarters of the IEA, 2 Rue Andre Pascal, Paris 16, France, beginning at 9:30 a.m. The purpose of this meeting of the IAB is to permit attendance by representatives of the IAB at a meeting of the IEA Standing Group on Emergency Questions (SEQ) which is being held at Paris on October 4. The agenda for the meeting is under the control of the SEQ. It is expected that the following draft agenda will be followed and that representatives of the IAB will be invited to join the meeting during discussion of items 5-15 of the agenda, or such other items as may be determined by the SEQ.

1. Approval of draft agenda.
2. Summary record of the 21st meeting.
3. Quarterly oil forecast 3Q78-2Q79.
4. Current situation in the international oil market.
5. Emergency reserves of IEA countries:
(a) Report to the Governing Board on reserves as at July 1, 1978.
(b) Consumer stocks and reporting instructions (oral report by Secretariat).
6. Second allocation systems test (AST-2) (draft report to the Governing Board).
7. Product imbalances:
(a) Proposal for update of the Emergency Management Manual.
(b) Nineteen hundred and seventy-nine workshop (oral statement by Secretariat).
8. Improvement of voluntary offer allocation using mathematical methods (development project).
9. Future allocation tests:
(a) National emergency tests.
(b) Swedish national emergency tests.
(c) Optimum design of emergency tests.
(d) EEC participation (oral report).
10. Distinction between phase I and phase II of oil reallocation.
11. Emergency Management Manual:
(a) French version.
(b) Revision and update procedures.
12. Future work program for SEQ and IAB.
13. Special section of the information system:
(a) Base period final consumption:
(i) Current calculation 3Q77—2Q78.
(ii) Oral report on meeting of special working group.
(b) Report on the trade imbalance meeting in The Hague on September 16.
(c) Questionnaire A/B reporting instructions for quarterly oil statistics system; timing of 1979 emergency data test.
(d) Coordination of work on quarterly oil statistics with that of the European Communities.
14. Future meeting dates.
15. Any other business.

As provided in section 252(c)(1)(A)(ii) of the Energy Policy and Conservation Act, this meeting will not be open to the public. As provided by section 209.32 of DOE regulations, IEP requirements and unanticipated procedural delays in processing this notice require the usual 7-day notice period to be shortened.

Issued in Washington, D.C., September 28, 1978.

LYNN R. COLEMAN,
General Counsel.

[DOE/EIS-0006]

WIND TURBINE GENERATOR SYSTEM, BLOCK ISLAND, WASHINGTON COUNTY, R.I.

Availability of Final Environmental Impact Statement

Notice is hereby given that the U.S. Department of Energy (DOE) has issued a final environmental impact statement, DOE/EIS-0006, Wind Turbine Generator System, Block Island, R.I. The statement was prepared pursuant to implementation of the National Environmental Policy Act of 1969 to analyze the potential environmental impacts associated with the proposed construction and operation of a wind turbine generator system at a site on Block Island, Washington County, R.I. The system will provide operating data applicable to the use of such a system as part of an electric utility network. The statement assesses the potential environmental impacts associated with the construction and operation of the system.

Copies of the final environmental impact statement have been distributed to those who commented on the draft statement, as well as others who requested copies.

Copies of the statement are available for public inspection at the DOE public document rooms located at:

DOE Headquarters, 20 Massachusetts Avenue NW., Washington, D.C.
Albuquerque Operations Office, National Atomic Museum, Kirtland Air Force Base East, Albuquerque, N. Mex.
Chicago Operations Office, 9800 South Cass Avenue, Argonne, Ill.
Chicago Operations Office, 175 West Jackson Boulevard, Chicago, Ill.
Idaho Operations Office, 550 Second Street, Idaho Falls, Idaho.
Nevada Operations Office, 2753 South Highland Drive, Las Vegas, Nev.
Oak Ridge Operations Office, Federal Building, Oak Ridge, Tenn.
Richland Operations Office, Federal Building, Richland, Wash.
San Francisco Operations Office, 1333 Broadway, Oakland, Calif.
Savannah River Operations Office, Savannah River Plant, Aiken, S.C.

A limited number of single copies of the final statement are available for distribution by the Technical Information Center, P.O. Box 62, Oak Ridge, Tenn. 37830, 615-483-8611, extension 34672. The statement is also available from the National Technical Information Service, Springfield, Va. 22161.

Dated at Washington, D.C., this 27th day of September 1978.

For the U.S. Department of Energy.

WILLIAM P. DAVIS,
Deputy Director of Administration.

ENVIRONMENTAL PROTECTION AGENCY

[FRL 981-4; OPP-210011]

PESTICIDE PROGRAMS

Request for Information

AGENCY: Office of Pesticide Programs, U.S. Environmental Protection Agency (OPP, EPA).

ACTION: Notice of request for information.

SUMMARY: The Agency is reviewing information and data relating to the efficacy of Freers Elm Arrester in the treatment of Dutch elm disease. The Agency announces that it is considering issuing a notice of intent to cancel the registration of Freers Elm Arrester and requests the registrant and other interested parties to submit data on the efficacy of Freers Elm Arrester in the treatment of Dutch elm disease.

DATES: The information requested must be received on or before November 17, 1978.

ADDRESS MATERIAL TO: Federal Register Section, Program Support Division (TS-757), Office of Pesticide Programs, EPA, Room 401, East Tower, 401 M Street SW., Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT:

Mr. John Lee, Registration Division (TS-767), Office of Pesticide Programs, EPA, Room 309, East Tower, 401 M Street SW., Washington, D.C. 20460.

SUPPLEMENTARY INFORMATION: The Deputy Assistant Administrator for the Office of Pesticide Programs has determined that data presently available to the Agency indicates that the efficacy of Freers Elm Arrester against Dutch elm disease is questionable and that additional information is required to permit the Agency to complete its review of this question.

I. BACKGROUND

A. GENERAL INFORMATION

Freers Elm Arrester (FEA) is registered for use in the treatment of Dutch elm disease in Iowa, Missouri, Indiana, Illinois, and, provisionally, in Wisconsin. Mercuric chloride is the active ingredient. The registrant claims that FEA acts as a systematic fungicide against *Ceratacystis ulmi*, the causative agent in Dutch elm disease, but makes no claims for efficacy against the bark beetle which carries this fungus and spreads the disease.

The EPA published a notice of intent to cancel mercury-containing pesticides, including FEA, on March 22, 1972 (37 FR 6419). Following a hearing, the administrative law judge's initial decision recommended cancellation of mercury-containing pesticides including FEA. (Dec. 12, 1975). The EPA Adminstrator accepted the recommendation for most mercury-containing pesticides, but did not accept the recommendation as to FEA and permitted the registration to remain in effect. (See In re: *Chapman Chemical Company*, FIFRA Docket No. 246, Feb. 18, 1976).

The administrative law judge had based his recommendation for cancellation of FEA on the absence of data showing that FEA was effective and on the corresponding availability of a substitute pesticide which did not contain mercury and which was stated to be effective against Dutch elm disease. However, after reviewing the initial decision, the EPA Administrator found that the hearing record did not establish that the recommended substitute was, in fact, satisfactory treatment for Dutch elm disease. The Administrator's decision not to cancel FEA was therefore based on the absence of information in the record establishing the availability of an effective substitute. The Administrator did not review or decide the issue of FEA's effectiveness against Dutch elm disease.

In section III of this notice, the Agency summarizes data and information indicating that there is continuing uncertainty regarding the efficacy of FEA. As a result, the Agency is reviewing the registration status of this pesticide and is considering issuing a notice of intent to cancel. To assist in this review, the Agency invites the registrant and other interested persons to submit data relating to the efficacy of FEA in the treatment and prevention of Dutch elm disease.

B. STATUTORY AUTHORITY

The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), as amended (86 Stat. 973, 89 Stat. 751, 7 U.S.C. 136 et seq.) authorizes the FEA Administrator to register pesticides for uses which conform to statutory standards for pesticide registration and to cancel pesticide products which do not comply with these standards. The four principal requirements for registration and continued registration of pesticide products are listed in section 3(c)(5) of FIFRA. Specifically, to register a pesticide, the Administrator must determine if, "when considered with any restictions * * *

(A) [The pesticide's] composition is such as to warrant the proposed claims for it;

(B) Its labeling and other material required to be submitted comply with the requirements of this Act;

(C) It will perform its intended function withour unreasonable adverse effects on the environment; and

(D) When used in accordance with widespread and commonly recognized practice it will not generally cause unreasonable adverse effects on the environment.

The first of these four independent criteria for registration requires the Administrator to determine if the pesticide's composition warrants claims, including claims of efficacy, made for it. To permit the Administrator to make this determination, FIFRA registration procedures require each applicant for registration to file a statement which includes, among other things, "a statement of all claims to be made for [the pesticide]". The Act also allows the Administrator to require submission of a "full description of tests made and the results thereof upon which claims are based" (secs. 3(c)(1) (C) and (D)). These provisions authorize the Administrator to establish minimum standards of efficacy and require applicants and registrants to show that pesticides meet these standards in order to be registered or to continue their registrations.

Agency regulations, at 40 CFR 162.8(b)(2), implement these registration provisions and set forth the following general requirements for efficacy data:

"Data are required to substantiate efficacy claims made for the pesticide product. Evidence of product efficacy will be demonstrated through laboratory and/or field-testing procedures which simulate actual use conditions. Actual test procedures will vary according to the characteristics of the chemical, the type of formulation, the target pest, the use patterns, and the methods and time of application."

The efficacy testing requirements specific for Dutch elm disease are summarized in section II of this notice.

These statutory provisions and regulatory standards establish that efficacy is a requirement for registration and continued registration of pesticides.* Section 6 of the act authorizes the Administrator to issue a notice of intent to cancel registrations of pesticide products which no longer satisfy these and other registration requirements. Thus, the Administrator may cancel the registration of a pesticide whenever he determines that it no longer statisfies the statutory standard for registration which requires, among other things, that "its labeling and other material required to be submitted comply with the requirements of [the] Act." (FIFRA sec. 3(c)(5); 7 U.S.C. 136a(c)(5)).

*EPA is planning to reduce the amount of efficacy data required to be submitted in support of registration applications and the emphasis which is placed on product efficacy in registration and cancellation decisions. The Agency, however, retains the authority to deny or cancel registrations for any pesticide which the Administrator has determined to be ineffective for its intended use. The Agency will exercise this authority in situations where information comes to its attention which demonstrates that a pesticide is ineffective.

II. REGISTRATION GUIDELINES FOR EFFICACY TESTING

Agency regulations at 40 CFR § 162.8 prescribe general standards for test data submitted to support product claims. In addition, the Agency evaluates test data submissions in accordance with specific internal guidelines for efficacy test data for pesticides intended to control Dutch elm disease.[1] The principal test standards for the trunk injection method are as follows:

1. Small trees are not suitable for trunk injection testing;
2. All trees selected for the study should show about the same degree of infection;
3. All trees must be tested to demonstrate the presence or absence of *C. ulmi*, as detailed in the guidelines;
4. The method and timing of treatment should be the same for all trees;
5. Observations should be recorded in late spring or early fall (between June 15 to July 15, and Aug. 15 to Sept. 15) for between 2 to 5 years;
6. Recorded observations should indicate time of treatment, presence or absence of *C. ulmi* by culturing, original extent of wilting or dieback, extent of wilting or dieback for each observation, general condition of the tree, and phytotoxicity;
7. Samples should be taken from various symptomatic areas from the tree's crown;
8. Color photographs before and after treatment should be taken;
9. Evidence offered as an indication of efficacy should show significant difference between treated and untreated (control) trees;
10. Tests should consist of at least 100 treated and 100 untreated (inoculated with *C. ulmi* or naturally infected) trees.

The guidelines also specify that the data sumitted should be sufficiently specific to allow verification and that testimonial evidence is not acceptable.

[1] *Requirements for Evaluating the Effectiveness of Products Claiming Use in the Cure, Control, or Arrest of Dutch Elm Disease*, Registration Division, Pesticides, EPA. (Received by EPA from USDA, Oct. 25, 1973). These guidelines should not be confused with Guidelines for Registering Pesticides, which the Agency is in the process of developing to satisfy FIFRA sec. 3(c)(2) requirements.

III. INFORMATION AND DATA ON THE EFFICACY OF FREERS ELM ARRESTER (FEA)

This section presents data and information on FEA efficacy which the Agency is reexamining in connection with this notice. These data are derived from published and unpublished studies, EPA registration submissions, and affidavits.

A. DATA SUBMITTED TO SUPPORT FEA REGISTRATION

1. *Babler State Park Study* (1)

The registrant submitted a study conducted in Babler State Park (Mo.) and the present registration was granted solely on the basis of this data.

In June 1966, 93 elm trees were treated with FEA and 98 elms were left untreated. Treatment was accomplished by twice injecting FEA into tree trunks to fill ⅝-inch-diameter holes (depth of the holes is unstated). The number of holes per tree was determined by the tree's diameter; "small" trees had two holes each. Untreated trees received water only. Elms were selected at random.

The trees were examined 1 and 2 years after treatment and were visually graded on a scale of 0 (dead) to 4 (healthy) (table 1).

TABLE I.—*Health of Treated and Untreated Elms on a Scale of 0-4*

	4	3	(4 & 3)	2	1	0	(2, 1, 0)
Number of untreated elms 1967	29	33	(62)	28	6	2	(36)
Number of treated elms 1967	33	52	(85)	7	1	0	(8)
Total	62	85	(147)	35	7	2	(44)
Number of untreated elms 1968	11	59	(70)	16	2	4	(22)
Number of treated elms 1968	19	64	(83)	8	1	1	(10)
Total	30	123	(153)	24	3	5	(32)

In the June 1967 observation, 58 percent (85/147) of the trees designated as healthy (graded 4 or 3) had been treated with FEA; 18 percent (8/44) of the trees designated as unhealthy (graded 2, 1, or 0) were treated. Neither of the two dead trees (graded 0) had been treated with FEA. In the June 1968 observation, 54 percent (83/153) of the trees designated as healthy (graded 4 or 3) had been treated; 31 percent (10/32) of the unhealthy trees (graded 2, 1, or 0) were treated. One of the five dead trees (graded 0) had been treated with FEA.

Initially, the Registration Division (USDA) regarded this data as insufficient because it did not indicate whether or not the elms were infected with Dutch elm disease prior to selec-

OCT 3 1978 UMI

V 4 3 / 1 9 2

0 C 3 7 8

tion and treatment,[2] and because the difference between the treated and untreated trees was not considered statistically significant.[3] Subsequently, information was submitted to cure the first defect. It indicated that samples had been taken from most elms before treatment, and that only 10 elms of the nearly 200 trees in the study were positive for *Graphium*, a stage of the fungus associated with Dutch elm disease.[4]

The applicant has never submitted a statistical analysis to cure the second defect. In addition, the data does not reveal whether or not the treated control trees had the same degree of infection prior to test initiation. These are two examples of this study's failure to satisfy the efficacy testing requirements. (See sec. II, items 2 and 9).

2. *Affidavit of S. C. Goard, Assistant Superintendent of Parks, South Bend, Ind. (submitted pursuant to registrant's patent application)* (3)

In May 1962, 60 trees were treated with FEA and 70 trees in the same 8-acre park were untreated. Treatment was accomplished by injecting FEA into the trunk of the tree with an amount sufficient to fill holes 4 to 6 inches in depth twice (diameter of holes is not stated). The number of holes varied according to tree circumference. It was estimated that the amount of FEA per tree ranged from 1 pint to over 1 gallon. At the time of treatment, culture tests and visual inspection of twigs indicated that all trees were infected with Dutch elm disease. (It was not stated whether or not both methods were used for all trees.) The treated and control trees were intermingled throughout the park. After the growing season, seventeen-sixtieths (28 percent) of the treated trees and one-seventieth (1 percent) of the untreated trees were still living.[5]

This data submission does not comport with the guideline requirements in several ways. Some of the more important defects are that it is not stated how the treated and untreated trees were selected, nor whether they had the same degree of infection; there is no statistical analysis as to the significance of the findings; it is unclear whether or not culture samples were taken from all trees; and it is not stated how extensive the sampling was for each tree. (See sec. II, items 2, 3, 7, and 9.)

3. *Affidavit of W. R. Bowers, Forester (submitted pursuant to registrant's patent application)* (2)

In May 1962, in an experimental plot, 25 elms were treated with FEA and 25 elms were untreated. Treatment was accomplished by injecting FEA into the trunk of the tree in an amount sufficient to fill 4- to 6-inch depth holes twice (diameter of the holes is unstated). The number of holes varied according to tree circumference. It was estimated that the range of FEA used per tree was from 1 pint to over 1 gallon. At the time of treatment, all the trees were determined to be infected with Dutch elm disease. The determination was made by visual inspection of twigs from all the trees and culture tests from "most" of the trees. By 1965, twenty-three twenty-fifths (92 percent) of the treated trees and none (0 percent of the untreated trees were still alive.[6]

Again, this data submission does not satisfy some of the efficacy testing requirements. Some of the more critical defects are that it is not stated how the trees were selected or to what extent they were diseased at the time of selection; the number of elms is small; culture samples were not taken from all trees; and the extensiveness of sampling for each tree was not stated. (See sec. II, items 2, 3, 7, and 10.)

4. *Other*

Other EPA file data has not been included in this summary because it is incomplete or otherwise unreliable.

B. OTHER RELEVANT DATA AND INFORMATION

1. *Stipes study* (6)

In a nursery, 28 American elms were treated with FEA and inoculated with *C. ulmi*. Fourteen of these trees were treated before inoculation (preventive group) and 14 were treated after inoculation (therapeutic group). Fifteen trees, inoculated but not treated, served as a control group. FEA was twice injected into the tree trunks to fill 2- or 3½-inch holes. (It is not stated whether the holes' measurement refers to their depth or diameter.)

One year after treatment, FEA had little effect on Dutch elm disease inhibition. The average percentage of "flagging" (visible disease symptoms in the foliage) was 92 percent in the control group contrasted to 87 percent (preventive) and 76 percent (therapeutic) in the treatment groups (table II). The authors concluded that: "[w]hile foliar symptoms in treated trees were less severe than in the checks, there is no indication that the reduction was great enough to make [FEA] an effective control for Dutch elm disease." The number of trees in this study is small. (See sec. II, item 10.)

TABLE II.—*Average Percentage[1] of Flagging*

Observation date[2]	Preventive	Therapeutic	Control
July 1965	53	45	66
September 1965	87	76	92

[1]Date of treatment, September 1964.
[2]Raw data was not submitted.

2. *Hansen II* (5)

In the spring of 1974, in an experimental plot, five elms were treated with FEA[7] and five elms were untreated. All the trees were inoculated with *C. ulmi*, the causal organism of Dutch elm disease. Approximately 2½ years later, the average percentage of flagging was computed for the treated and untreated elms. The average flagging of the untreated elms was 64 percent as contrasted to 48 percent for the treated elms. Among other deviations from the registration guidelines, it is not stated whether this result is statistically significant and the number of trees used is small (see sec. II, items 9 and 10).

3. *Hansen I* (4)

Thirty-eight American elms (9 years old) were treated with FEA[8] and then inoculated with *C. ulmi* (preventive group). Thirty-nine American elms were first inoculated and then treated (therapeutic group). Thirty-nine American elms, inoculated, but not treated, served as a control group. Treatments were randomly assigned in the test area. Trees selected for treatment or control were separated on both sides by nontest trees to reduce the possibility of root-graft transfer of Dutch elm disease.

Less than a month after treatment, 84 percent (⁶⁵⁄₇₇) of the treated trees showed some flagging as contrasted to 79 percent (³⁸⁄₄₈) of the control. One and two months after treatment, there was no statistically significant difference in the average percentage of flagging between the treated and untreated group (table III). One year after treatment, a larger percentage of the treated trees relative to the untreated trees were dying (table III).

In some trees, initial disease symptoms later become latent, indicating arrest. One year after treatment, there was no statistically significant difference in latency between treated and untreated trees (table III). Two years after treatment, there was little measurable difference between treated and untreated trees; 39 percent (³⁹⁄₇₇) of the treated trees were dead as contrasted to 36 percent (¹⁴⁄₃₉) of the untreated trees.

The author concluded that "[i]n these tests, treatment of American elm trees with [FEA] did not significantly reduce the initial symptoms of Dutch elm disease, and was ineffective in arresting [its spread]."

TABLE III.—*Average Percentage[1] of Flagging*

Observation date	Preventive	Therapeutic	Control
June 1974	20.8	20.1	24.4
July 1974	18.4	17.4	23.0
Percentage of Elms With 60 Pct Dieback[1]			
July 1975	23.1	33.3	20.5
Percentage of Elms Which Became Latent			
July 1975	44.7	55.9	64.7

[1]Elms with 60 pct or more dieback are considered dead. Arrest is highly unlikely at this point.
[2]Raw data was not submitted.

In the Hansen I study, leaf and twig samples were taken from approximately one-third of the treated trees and "representative" samples were taken from the untreated trees. Mercury residue determinations were made by atomic absorption using IL AA spectrothotometer, model 353. There was no statistically significant difference in mercury residue between treated and untreated trees (table IV). The author concluded that "[t]his demonstrates that mercury applied in treatment is not moving to the outer branches of the trees to effect preventive or therapeutic action." * * *"

TABLE IV.—*Amount of Mercury Residue (mg Hg/g.) in Twigs and Leaves of Treated and Untreated Elms.*

	Untreated	Treated
Twigs	0.06+0.04	0.06+0.03
Leaves	0.15+0.02	0.12+0.06

4. *Thomas* (7)

Thomas analyzed the mercury content in an elm tree (8-10 inches in diameter, 35-40-feet high) which had been injected with 800 mg. FEA. Upper branch and root samples were taken at five intervals between 1-32 days after treatment; one wood sample was taken from around the injection hole. Samples from untreated elms ranged between 0.03-0.05 ppm. mercury (detection limit: 0.03 ppm).[9]

No mercury was detected in the roots or aerial branches. The only mercury detected was in the area directly around the injection site (table V).

TABLE V.—*Mercury Residue Levels in Untreated and Treated Samples of Branches and Roots*

Sample	Dry weight	Mercury (p.p.m.)
Untreated (branches)	10	0.03
Day 1 treated (branches)	10	.03
Day 7 treated (branches)	10	.03
Day 14 treated (branches)	10	.03
Day 20 treated (branches)	10	.03
Day 32 treated (branches)	10	.03
Untreated (roots)	10	.03
Treated (roots)	10	.03
Injection hole (treated)	10	.04

IV. SUMMARY

As detailed above, much of the data currently available to the Agency fails to meet critical requirements in the guidelines. Indications of minimum effective dosage and effective dosage range are universally lacking. With the exception of the Babler State Park data, tests were conducted on fewer than the 200 trees recommended by the guidelines. The field data does not indicate whether or not the treated and untreated trees showed the same degree of infection prior to treatment. To some extent, this is not a problem for nursery testing because all trees were uniformly inoculated with *C. ulmi* prior to testing. However, since preinoculation culture samples were not taken in the nursery tests, it is possible that some trees were naturally infected and therefore diseased before the start of the study. Descriptions of how samples were taken is universally omitted. The guidelines recommend that they be taken from various symptomatic areas in each tree. Lastly, the final health of the tree has been ascertained visually rather than by the recommended repeated sampling.

V. SOLICITATION OF WRITTEN, SCIENTIFIC INFORMATION ON THE EFFICACY OF FREERS ELM ARRESTER

The Agency is soliciting written views from the registrant, and other interested persons concerning the efficacy of Freers Elm Arrester (FEA). All information and materials sent to EPA as a result of this notice which comply with the guidelines stated herein will be considered in the Agency's determination. Such material, however, will not necessarily be referenced or included in any final document prepared by EPA.

A. REGISTRANT SUBMISSION: CONFIDENTIALITY

The registrant may assert a business confidentiality claim covering part or all of the information submitted. Assertion of confidentiality is accomplished by placing on or attaching to the information a cover sheet upon which is stamped or typed, or appears in other suitable form, language such as "trade secret," "proprietary," or "company confidential." Allegedly confidential portions of otherwise nonconfidential documents should be clearly marked. If confidentiality is asserted, the information covered by the claim will be disclosed by EPA only to the extent and by means of the procedures set forth in 40 CFR Part 2, Subpart B (41 FR 36906, Sept. 1, 1976). If no confidentiality claim accompanies the submitted information, EPA will place the information in the public comment file where it will be available for public inspection. If confidentiality is asserted for a portion of the submitted information, the registrant should furnish two copies to EPA: the first should contain all of the submitted information with that claimed as confidential clearly identified; the second copy should be identical to the first except that all claimed confidential information should be deleted. The first copy will be treated in accordance with the procedures set out above. The second copy will be placed in the public comment file.

B. PUBLIC INSPECTION OF SUBMITTED INFORMATION

All written information and comments submitted in response to this notice will be available for public inspection in the Office of the Federal Register Section from 8:30 a.m. to 4 p.m. during normal working days. Interested persons are encouraged to take advantage of the opportunity to inspect Agency files during normal working hours since: (1) All of the information timely received will be considered before a final determination is made, and (2) the Agency may not publish a summary of all the information received in the FEDERAL REGISTER.

C. GUIDELINES

1. *Materials solicited.* All interested persons are invited to submit scientific information relating to Freers Elm Arrester. The Agency is especially interested in information relevant to FEA efficacy (or that of mercury-containing pesticides generally) in preventing,

[2]Letter from Harold G. Alford, Assistant Director for Registration, USDA, to the Freers Co., May 1, 1968, EPA files, EPA Reg. No. 7452-1.

[3]Memo: June 18, 1968, EPA files, EPA Reg. No. 7452-1.

[4]The cover letter to the data stated that 11 trees were positive for Dutch elm disease of which 9 were untreated. It also states that samples were taken in June 1966, whereas the data indicates samples were taken in May 1966. The cover letter also has an internal contradiction concerning number of treatments. At one point, it states that the elms were treated once with FEA. Later, however, it refers to two treatments, one in June 1966 and one in Aug. 1966. EPA files, EPA Reg. No. 7452-1, Accessions No. 223330, Mar. 1, 1968.

[5]W. R. Bowers, a contractor of the registrant, stated in a letter dated Jan. 28, 1968, that 11 treated and 4 untreated trees were still alive. This conflicts with the information in the affidavit. EPA files, EPA reg. No. 7452-1. accessions No. 223330.

[6]In a letter, W. R. Bowers, a contractor of the registrant, states, "In regards to treatment of elm trees in Lincoln Park * * *. It consisted of the following: 20 trees were treated that showed positive * * *. The trees standing today show (11) trees negative, and 9 removed." This conflicts with the affidavit.

[7]The method of treatment and the amount of FEA used per tree were not stated.

[8]Treatment was accomplished by injecting FEA into the trees' trunks, enough to fill 3¼-inch diameter holes twice (depth of holes not stated).

[9]The analytical method used was a modification of the AOAC method as described by Guteman and Lisk, JAFC, vol. 8, No. 4, July-August 1960, p. 306.

V 4 3 / 1 9 2

arresting, or in other ways controlling Dutch elm disease. Materials relevant to mercury-containing pesticides' phytotoxicity to elms is also solicited.

2. *Special materials.* a. Relevant unpublished research papers should bear the year research was completed, the purpose for which the research was done (i.e., graduate thesis), and the institution, organization, or company for which the research was performed.

b. Scientific comment on relevant, previously published research papers should be submitted with a copy of the original published material, if it is not readily available publicly. Submissions should include complete bibliographic citations of all materials utilized in preparing the comment.

3. *Procedures.*

a. Initial submittals should be postmarked no later than 45 calendar days after publication of this notice, and should bear the identifying notation, OPP-210011.

b. All material submitted must be in typed form and clearly legible and suitable for duplication by normal copying machines.

c. All submitted material, other than general correspondence, should have the following front page format:

Topic
Author(s) full name
Author(s) address (including ZIP code)
Author(s) telephone number (including area code)

d. Any material submitted in a foreign language should be accompanied by an English translation.

e. Information and comments received after the specified time periods will be considered only to the extent practicable.

f. All materials and correspondence should be sent to Federal Register Section, Program Support Division (TS-757), Office of Pesticide Programs, U.S. Environmental Protection Agency, Room 401, East Tower, 401 M Street SW., Washington, D.C. 20460.

Dated: September 26, 1978.

EDWIN L. JOHNSON,
Deputy Assistant Administrator for Pesticide Programs.

SCIENCE ADVISORY BOARD, ENVIRONMENTAL POLLUTANT MOVEMENT AND TRANSFORMATION ADVISORY COMMITTEE

Open Meeting

Under the provisions of Pub. L. 92-463, notice is hereby given of an open meeting of the Environmental Pollutant Movement and Transformation Advisory Committee of the U.S. Environmental Protection Agency Science Advisory Board.

The meeting will be held on October 18 and 19, 1978, on each day in Room 1112A, Crystal Mall 2 (1921 Jefferson Davis Highway, Arlington, Va.), starting at 10 a.m.

The topics of the meeting are: Discussion of statistics and risk assessment methodologies in EPA, an update on activities with respect to microcosm research in EPA laboratories, current status of ground water activities, and topics of current and future interest of Committee members.

Persons desiring to attend the meeting should contact the Environmental Pollutant Movement and Transformation Advisory Committee, Science Advisory Board secretariat at area code 703-557-7710 and ask for Miss Osborne. Persons should indicate their desire to attend by the close of business on October 16, 1978.

DOUGLAS B. SEBA,
Acting Staff Director, Science Advisory Board.

SEPTEMBER 28, 1978.

RECEIPT OF ENVIRONMENTAL IMPACT STATEMENTS

President Carter's Reorganization Plan No. 1 (see President's message of July 15, 1977) transferred certain functions from the Council on Environmental Quality (CEQ) to the Environmental Protection Agency (EPA). Some of these functions relate to operational duties associated with the administrative aspects of the environmental impact statement (EIS) process. In memorandum of agreement No. 1 entered into between CEQ and EPA, dated March 29, 1978, it was agreed that EPA would be the official recipient of EIS's and would publish the availability of each EIS received on a weekly basis. This is the duty formerly carried out by CEQ pursuant to section 1500.11(c) of the CEQ Guidelines.

Traditionally, the FEDERAL REGISTER notice for EIS's received during a given week has been published on the Friday of the following week. However, as indicated last week, the EPA weekly notice will be published in the FEDERAL REGISTER on the second Monday following the given week. However, computation of review periods will not be altered, that is, the 45 day review period for draft EIS's will continue to be computed from the Friday following the given week and the 30 day wait period for final EIS's will be computed from the date of receipt of the EIS by EPA and commenting parties.

The following is a list of environmental impact statements received by the Environmental Protection Agency from September 18, 1978 through September 22, 1978; the date of submission of comments on draft EIS's as computed from September 29, 1978 is November 13, 1978.

Copies of individual statements are available for review from the originating agency. Back copies are also available at 10 cents per page from the Environmental Law Institute, 1346 Connecticut Avenue, Washington, D.C. 20036.

Dated: September 28, 1978.

WILLIAM D. DICKERSON,
Acting Director, Office of Federal Activities.

DEPARTMENT OF AGRICULTURE

FOREST SERVICE

Final

Ozark National Forest Timber Plan, Arkansas, September 18: The proposed action is the implementation of a 10-year management plan for the Ozark National Forest in northwest Arkansas. An estimate 9,140 acres will be site prepared and reforested annually, with the possibility of an additional 2,360 acres being reforested annually. Other annual proposed actions provide for 6,000 acres of noncommercial thinning in hardwood poletimber stands, 2,000 acres of precommercial thinning in young pine stands and 5,500 acres of release treatment (mostly in young pine stands). Shifts in wildlife populations will occur. (USDA-FS-R8-FES-ADMIN-77-07.) Comments made by: USDA, DOT, EPA, COE, DOI and State agencies individuals. (EIS Order No. 81010.)

Klamath Basin Working Circle, Timber Plan, Lake and Klamath Counties, Oreg., September 19: Proposed is a revision of the 10-year timber resource plan for the Klamath Basin Working Circle of the Fremont and Winema National Forests. The working circle is located in Lake and Klamath Counties, south central Oregon. Five alternatives are presently under consideration. The preferred alternative proposes a potential yield of 234 MMBF per year. This is based on the substained yield and even flow concept. Intensive timber management practices are proposed that will enable a greater harvest during the plan period. Roads will be constructed, skid trails opened up, and a general distrubance of portions of the forest floor will occur. Comments made by: USDA, EPA, DOI, State and local agencies. (EIS Order No. 81016.)

SOIL CONSERVATION SERVICE

Draft

Baker River Watershed, Grafton County, N.H., September 20: Proposed is a multiple-purpose dam on the south branch of the Baker River in Grafton County, N.H. The purpose of the dam is flood protection and recreation, and is a continuation of the 1963 Baker River Watershed Project Plan. Five alternatives are considered which include: (1) Nonstructural land treatment, relocation; and other measures; (2) structural measures proposed in the 1963 plan; (3) flood prevention and land treatment only; (4) recreation development and land treatment only, and (5) no project. (USDA-SCS-EIS-WS-(ADM)-78-1-(D)-NH.) (EIS Order No. 81020.)

San Miguelito Subwatershed, Santa Ynez River, Santa Barbara County, Calif., September 22: Proposed is a plan for the San Miguelito Subwatershed as related to the Santa Ynez Flood Prevention Project located in Santa Barbara County, Calif. The project includes: (1) Maintaining existing land treatment measures in the upper watershed, (2) structural measures including the enlarging of an existing debris basin, and the enlarging and lining with concrete and existing 2.7 miles of earthen channel, (3) concrete lining, of an existing 0.2 mile earther dam above the debris basin,and (4) landscaping as right-of-way permits. (EIS Order No. 81035.)

DEPARTMENT OF DEFENSE, ARMY

Contact: George A. Cunney, Jr., Acting Chief, Environmental Office, Office of the Assistant Chief of Engineers, Department of the Army, Room 1E676, Pentagon, Washington, D.C. 20310, 202-694-4269.

Draft

Fort Irwin National Training Center, San Bernardino County, Calif., September 21: Proposed is the establishment of a National Training Center at Fort Irwin located in the high mojave desert, San Bernardino County, Calif. The purpose is to provide simulated fullscale combat situations to support the Army's combined arms tactical unit training and to intergrate similar exercises with the Air Force, Navy, and Marine Corps. The proposed program would involve reopening post facilities, with construction and rehabilitation preceeding operations. Fort Irwin was selected from eleven alternative sites. (EIS Order No. 81023.)

U.S. ARMY CORPS OF ENGINEERS

Contact: Dr. C. Grant Ash, Office of Environmental Policy, Attention: DAEN-CWR-P, Office of the Chief of Engineers, U.S. Army Corps of Engineers, 1000 Independence Avenue SW., Washington, D.C. 20314, 202-693-6795.

Draft

Green Brook Basin, Flood Control Project, Union and Middlesex Counties, N.J., September 18: Proposed is a flood protection plan for the Green Brook Basin which will effect waters in union and Middlesex Counties, N.J. The project consists of levees, floodwalls, channel modifications, concrete flumes, and dry detention reservoirs. A 55-foot high dry detention dam would be located on blue brook and a trapezoidal riprapped channel would be constructed to convey water through the plainfields. Levees and floodwalls would be installed on Green, Bound, Bonygutt, Stoney, and Middle Brooks and the Raritan River. (New York District.) (EIS Order No. 81012.)

Final

Urban Levee Improvement, Oroville Okanogan County, Wash., September 21: Proposed is the improvement to an existing levee system located in Okanogan County, Wash. The plan includes a total of 9,300 feet of embankment to be constructed on the left bank of the Similkameen River at Oroville. The project would provide protection from floods havin a 1 percent chance of occuring in any one year. The levee alignment would follow the river shoreline along approximately 4,000 feet to the river edge and provide 100-year flood protection to 175 acres of land in South Oroville. (Seattle District.) Comments made by: DOI, DOC, USDA, COE, DOE, AHP, EPA, HEW, State and local agencies. (EIS Order No. 81024.)

Draft Supplement

Lucky Peak Modification, Boise River, Boise County, Idaho, September 22: This statement supplements a draft EIS filed in November, 1977. The proposed action is to add hydroelectric power production to the existing Lucky Peak Dam in Boise County, Idaho. This would involve the construction of a side tunnel from the existing outlet tunnel and the construction of a new powerhouse near the outlet. The powerhouse would contain five generating units having a total rated capacity of 75 megawatts. Seven alternatives are considered. (Walla Walla District.) (EIS Order No. 81033.)

Final Supplement

Portsmouth Refinery and Terminal, Permit, Virginia, September 22: This proposal concerns the Hampton Roads Energy Co.'s (Herco) application for COE permit approval to construct an oil refinery complex on the west bank of the Elizabeth River in Portsmouth, Va. This work includes: (1) Construction of a marine terminal, (2) dredgings of tanker and barge mooring areas and access channels, and (3) installation of an oil spill containment system. The purpose of this statement is to consider additional refinery capacity on the eastern seaboard and alternative sites. (Norfolk District.) Comments made by: DOC, DOI, EPA, State agencies. Groups, individuals and businesses. (EIS Order No. 81031.)

DEPARTMENT OF COMMERCE

Contact: Dr. Sidney R. Galler, Assistant Secretary for Environmental Affairs, Department of Commerce, Washington, D.C. 20230, 202-377-4335.

National Oceanic and Atmospheric Administration.

Final

Fishery Management Plan, Atlantic Herring Fishery, September 19: The proposed action is to adopt and implement a Fishery Management Plan (FMP) for the adult sea herring fishery of the Northwest Atlantic under the provisions of the fishery Conservation and Management Act of 1976. The Herring Management Plan developed is based upon the migration and intermixing of three stocks of herring in the fishery conservation zone of the United States. Those stocks are known as the Southwest Nova Scotia, Western Gulf of Maine, and Georges Bank-Southern New England stocks. The main objective of the herring management plan is to rebuild the smallest stock of the three, the Western Gulf of Maine stock which is at critically low levels. Comments made by: Local agencies, businesses and individuals. (EIS Order No. 81013.)

DEPARTMENT OF ENERGY

Contact: Mr. Herb Pennington, Office of NEPA Affairs, Department of Energy, 1200 Pennsylvania Avenue, Room 7119, Washington, D.C. 20461, 202-566-9760.

Draft

Livermore Site, Lawrence Livermore and Sandia Labs, Alameda County, Calif., September 19: Proposed is the Livermore site development plan for the Lawrence Livermore Laboratory and the Sandia laboratories—Livermore (SLL) located in Alamedia County, Calif. The plan provides a guide for the orderly development of the present facilities as growth is experienced and the replacemnt of temporary facilities with permanent ones. Thirteen buildings are proposed for construction in addition to consideration of a new northwest entrance. Alternatives to the proposed plan include: (1) No action (shutdown and decommissioning), (2) total or partial plant relocation, (3) scaling down of some operations, and (4) wider use of alternate technologies. (EIS Order No. 81018.)

ENVIRONMENTAL PROTECTION AGENCY

Contact: Mr. Wallace Stickney, Environmental Protection Agency, Region I, John F. Kennedy Federal Building, Room 2203, Boston, Mass. 02203, 617-223-4635.

Draft

Boston Metro Area Sewerage System, Upgrading, Suffolk County, Mass., September 22: Proposed is the centralized treatment of the wastewaters from the entire Boston metropolitan sewerage district service area, Suffolk County, Mass., at the upgraded and expanded facilities on Deer Island to provide secondary treatment for an average daily flow of 586 mgd. The existing northern and southern interceptor systems will be expanded and relieved to accommodate increased flows and growth within the service area. Three alternatives are considered which include: (1) The Emma plan which provides secondary treatment at Deer and Nut Islands and two advanced WWT plants, (2) no action, and (3) modified no action. (EIS Order No. 81030.)

Contact: Mr. Alexandria Smith, Environmental Protection Agency, Region 10, 1200 6th Avenue, Seattle, Wash. 98101, 206-442-1220.

Final

Lynnwood Wastewater Treatment Facilities, Snohomish County, Wash., September

OCT 3 1978

V 43/192
OCT 3 1978

18: Proposed is the provision of secondary facilities for the existing sanitary sewerage system in the city of Lynnwood, Wash., to replace the existing Lynnwood Treatment Plant at Brown's Bay which affords only primary treatment. The Alderwood Water District will participate in the project through the installation of new gravity interceptors to extend sewer service to the Swamp Creek Basin. All of the communities serviced by the improvement are located in Snohomish County, Wash., however, the proposed Swamp Creek interceptor would discharge to the municipality of Metropolitan Seattle (Metro) in King County for treatment. (Region X) (EPA91019-77-040). Comments made by: AHP, COE, USDA, DOI, State and local agencies. (EIS Order No. 81009.)

DEPARTMENT OF HUD

Contact: Mr. Richard H. Broun, Director, Office of Environmental Quality, Department of Housing and Urban Development, 451 7th Street, SW., Washington, D.C. 20410, 202-755-6308.

Draft

Village Park, Waipahu, Oahu Island, Honolulu County, Hawaii, September 21: Proposed is the issuance of HUD home mortgage insurance for the Village Park subdivision, Waipahu, Oahu Island, Hawaii. The project is located on 316.4 acres and is expected to house an estimated 6,750 people. Development will provide 1,445 single-family detached units, 310 condominium units, 4.5 acres of commercial land, 1 grade school and 2 parks. The balance of the land remains in gulch, easements or unaccessible land. alternative site designs and no project are considered. (HUD-RO9-EIS-78-6D.) (EIS Order No. 81027.)

Final

Cornerstones Subdivision, Harris and Fort Bend Counties, Tex., September 19: The proposed action is for HUD to accept for HUD-FHA home mortgage insurance purposes under section 203 (B) of title II of the National Housing Act of 1934, the proposed Cornerstones subdivision located in the far western part of Harris County and the northeastern part of Fort Bend County, Tex. When completed, the subdivision will contain about 2,047 single-family homes plus recreational facilitis to serve the subdivision. (HUD-RO6-EIS-78-8-F.) Comments made by: EPA, DOD, USDA, AHP, DOT, DOI, State and local agencies. (EIS Order No. 81014.)

Woodbridge Subdivision, Bedford, Tarrant County, Tex., September 19: Proposed is the granting of FHA mortgage insurance to Centennial Homes, Inc. for development of the Woodbridge subdivision located in the city of Bedford, Tarrant County, Tex. The proposed community consists of 132.05 acres where upon 477 single-family units will be erected. The site includes 36 acres which will be developed into a park for recreation use. Proposed plans also entail 28 acres to be devoted to retail purposes. (HUD-RO6-EIS-78-32F.) Comments made by: USDA, COE, DOI, DOE, DOC, GS, State and local agencies, groups. (EIS Order No. 81015.)

SECTION 104(H)

The following are community developments block grant statements prepared and circulated directly by applicants pursuant to section 104(H) of the 1974 Housing and Community Development Act. Copies may be obtained from the office of the appropriate local executive. Copies are not available from HUD.

CBD Redevelopment, Los Angeles, Los Angeles County, Calif., September 22: Proposed is the development of the Los Angeles City central business district, Los Angeles County, Calif. The project intends the rehabilitation of existing deteriorated structures; improvement of the local street system; expansion of park, recreation and public facilities; development of new commercial and industrial facilities; and expansion of low and moderate income, elderly, and other housing in the downtown area. Alternatives include: (1) No project, (2) reduction/elimination of proposed housing development, (3) restriction/elimination of all new commercial developments, and (4) elimination of peripheral parking proposals. (EIS Order No. 81028.)

Pico-Union Redevelopment Project, Los Angeles County, Calif., September 22: This proposal is primarily a rehabilitation/conservation type project, the primary objective of which is to rehabilitate and/or replace existing deteriorated housing for the 227 acre Pico-Union acre, Los Angeles City, Los Angeles County, Calif. related project objectives include the improvement of the local street system, expansion of park and recreational facilities, and development of new commercial and industrial facilities. Alternatives include: (1) No project, (2) total commercial use, (3) total industrial use, (4) total public open space use. (EIS Order No. 81029.)

Final

Non-Metro Discretionary Fund FY-1977, Macon County, Ala., September 18: The proposed action is a request by Macon County, Ala., for community development block grant funds. This statement discusses a proposed project to provide a safe and reliable source of potable water to existing residents along a segment of U.S. Highway 80. The project which is located southwest of the city of Tuskegee, Macon County, Ala., will involve the installation of 22,280 feet of 8-inch water main piping along the highway. The piping will carry water purchased from Tuskegee City and will be placed along the southern side of the highway within the public right-of-way. (EIS Order No. 81011.)

DEPARTMENT OF INTERIOR

Contact: Mr. Bruce Blanchard, Director, Environmental Project Review, Room 4256, Interior Building, Department of the Interior, Washington, D.C. 20240, 202-343-3891.

BUREAU OF LAND MANAGEMENT

Draft

1979 OCS Sale No. 58, Gulf of Mexico, September 20: Proposed is the leasing of 110 tracts (532, 885 acres) of OCS lands in the Gulf of Mexico offshore Texas, Louisiana, Mississippi, and Alabama for the exploration and production of oil and gas. The tracts have water depths ranging from 4m to 801m and are a distance of 5km to 260km from the shore. Four alternatives are considered which include: (1) Holding the sale in a modified form, (2) withdrawing the sale, and (3) delay in the sale. (EIS Order No. 81022.)

Final

Cerbat/Black Mountain Livestock Grazing Program, Mohave County, Ariz., September 21: The proposed action analyzes 26 allotment management plans which propose intensive grazing management for 1,445,652 acres of public land within the Cerbat and Black Mountain planning units within the Kingman Resource Area, Mchave County, Ariz. The proposed action includes: (1) Intensive management of grazing on 1,416,628 acres of public lands, including 635,196 acres of ephemeral range and 70,793 acres of custodial range; (2) custodial management of grazing on 29,024 acres, and; (3) construction of range improvements. (FES 78-21.) Comments made by: AHP, USDA, DOI, EPA, State and local agencies. (EIS Order No. 81026.)

BUREAU OF RECLAMATION

Draft supplement

North Loup/Pick-Sloan Missouri Basin Program Several Counties in Nebraska, September 22: This statement supplements a final EIS filed in September 1972. Proposed is an irrigation system for the North Loup division of the Pick-Sloan Missouri Basin program located in Loup, Garfield, Valley, Greely, Howard, and Nance County, Nebr. This statement provides additional information regarding surface and groundwater quality, geologic stability of damsites, sedimentation upstream of reservoir sites, flora and fauna of reservoir sites and a research alternative to project irrigation development. (DES-78-39.) (EIS Order No. 81032.)

NATIONAL PARK SERVICE

Draft

West Potomac Park and FDR Memorial, District of Columbia, September 18: Proposed is the planning design and construction of the Franklin Delano Rosevelt Memorial, rehabilitation of West Potomac Park south of the Reflecting Pool to include provision of Tourmobile service, parking for visitors' cars and for tour buses between the 14th Street Bridges off Ohio Drive and relocation of all sports facilities. The proposed memorial will have to be approved by the President and the Congress. The project is located in the District of Columbia and will be completed in approximately 5 years. (DES-78-37.) (EIS Order No. 81007.)

Yosemite National Park, General Management Plan Tuolumne, Mariposa, and Madera Counties, Calif., September 21: This action involves a general management plan for Yosemite National Park, within Tuolumne, Mariposa, and Madera Counties, Calif., to guide overall park management and development for approximately 15 years, including specific development concept plans for all developed areas inside the park, proposed additions to the wilderness recommendation for the park and, minor boundary adjustments. There are two purposes for the Yosemite National Park. The first is preservation of the resources that contribute to Yosemite's uniqueness and attractiveness. The second purpose is to make the varied resources of Yosemite available to people for education and recreation. (DES-78-38.) (EIS Order No. 81025.)

STATE DEPARTMENT

Contact: Mr. Cameron Sanders, Office of Environmental Affairs, Department of State, Washington, D.C. 20520, 202-632-9169.

Final

High seas Fisheries, North Pacific, renegotiation, September 20: The proposed action is the adoption of a United States-Canada-Japan protocal to amend the International Convention for the High Seas Fisheries of the North Pacific Ocean (INPFC), with annex and agreed minutes, a United States-Canada-Japan memorandum of understanding on salmon, and a United States-Japan memorandum of understanding on marine mammals. The purpose of the action is to reduce interceptions of North American origin salmon by Japanese fisheries, development of cooperative research on marine mammals, and eliminate the incidental catch of marine mammals in the North Pacific Ocean and the Bering Sea through international agreements. Comments made by: CIA, DOI, CGD, DOT, groups, and individuals. (EIS Order No. 81021.)

DEPARTMENT OF TRANSPORTATION

Contact: Mr. Martin Convisser, Director, Office of Environmental Affairs, U.S. Department of Transportation, 400 Seventh Street SW., Washington, D.C. 20590, 202-426-4357.

Final

South Santa Fe Drive, Florida-Church, Arapahoe and Denver Counties, Colo., September 20: The proposed project consists of the widening of South Santa Fe Drive to a six lane arterial for approximately 5.5 miles. The project would begin at Florida Avenue in the city and county of Denver and terminate at Church Street in Arapahoe County. A left turn lane would be provided throughout the length of the project and sidewalks, curb, and gutter would be provided for a majority of its length. Adverse effects include the displacement of 372 housing units. A 4(f) statement is included concerning Overland Park. (FHWA-CO-EIS-77-01-F.) Comments made by: DOT, USDA, DOI, EPA, HEW, HUD, State, and local agencies. (EIS Order No. 81019.)

Main Street/Penn Central Railroad-Grade Separation, Elkhart County, Ind., September 22: Proposed is the construction of a grade separation in the vicinity of the Main Street (S.R. 15) crossing with the Penn Central Railroad north of the central business district of the city of Goshen, Ind. Consideration has been given to two alternate locations for the proposed separation: The Third Street Overpass, and the Main Street Overpass. For each of the locations the typical cross section is the same for the elevated portions of the improvement, consisting of four lanes separated by a 4-foot median with sidewalks provided on each side. (FHWA-IND-EIS-77-06-F.) Comments made by: DOI, USDA, EPA, FAA, DOT, and State agencies. (EIS Order No. 81034.)

OFFICIAL CORRECTIONS

The following are corrections to the notice of availability for September 11, 1978 through September 15, 1978 which was published in the Monday, September 25, 1978 FEDERAL REGISTER.

U.S. ARMY CORPS OF ENGINEERS

Contact: Dr. C. Grant Ash, Office of Environmental Policy Attn: DAEN-CWR-P, Office of the Chief of Engineers, U.S. Army Corps of Engineers, 1000 Independence Avenue SW., Washington, D.C. 20314, 202-693-6795.

The following final EIS was received by the Office of Federal Activities on September 15, 1978 and inadvertantly omitted from the notice. Therefore the thirty (30) day review period should be calculated from September 15, 1978.

Final

Mayo Electric Generating Plant, Person County, N.C., September 15: The proposed action is the application by Carolina Power & Light Co. for a permit to discharge fill materials into waters of the United States in connection with the proposed 1440 megawatt Mayo Electric Generating Plant, located in Person County, N.C. The action include: (1) Construction of a main reservoir dam and ash pond dam covering approximately 2,800 acres, (2) discharge of ash into waters behind the ash pond dam, and, (3) relocation of a road. (Wilmington District.) Comments made by: DOI, DOC, EPA, State and local agencies groups and individuals. (EIS order No. 81008.)

The following final supplement was incorrectly published as being received on January 12, 1978. The correct filing date for calculation of the thirty (30) day review period is September 12, 1978.

Final Supplement

Kings Island Turning Basin, Enlargement, Chatham County, Ga., September 12: This statement supplements a final EIS filed in June, 1976 to consider alternate sites for the expansion of Kings Island Turning Basin located in the Savannah Harbor, Chatham County, Ga. The studies presented in the report are limited to reaffirming or modifying the authorized improvement of enlarging the basin. There are four alternate sites being considered. (Savannah District.) Comments made by: EPA, DOI, USDA, HEW, State and local agencies groups and businesses. (EIS order No. 80994.)

[67.12-01]

FEDERAL COMMUNICATIONS COMMISSION

RADIO WHEELING, INC., AND JACOBSBURG BIBLE CHURCH, INC.

Memorandum Opinion and Order Designating Applications for Consolidated Hearing on Stated Issues

Adopted: September 22, 1978.

Released: September 28, 1978.

In the matter of applications of Radio Wheeling, Inc., Bethlehem, W. Va. (BC Docket No. 78-311, File No. BPH-9921), Req: 105.5 MHz, channel 288; 3 kW (H&V); 300 feet (H&V) and Jacobsburg Bible Church, Inc., Key, Ohio (BC Docket No. 78-312, File No. BPH-10267), Req: 105.5 MHz, channel 288; 1.35 kW (H&V); 423 feet (H&V) for construction permit.

1. The Commission, by the Chief, Broadcast Bureau, acting pursuant to delegated authority, has before it for consideration the above-captioned applications of Radio Wheeling, Inc. (hereinafter, "RWI") and Jacobsburg Bible Church, Inc. (hereinafter, "JBCI"), which are mutually exclusive in that they both seek channel 288, which is assigned to Moundsville, W. Va. The applicants seek to use the channel at Bethlehem, W. Va., and Key, Ohio, respectively, under section 73.203(b) of the Commission's rules.[1]

2. Information submitted by JBCI indicates that Key, Ohio, is a small rural community consisting of 38 households with a population of 136 people and only one small food and gas outlet. Given these facts, there is in our view a question whether Key qualifies as a "community" within the meaning of the Commission's rules. *North Naples, Florida*, 41 RR 2d 1549 (1977).

3. To finance its proposed operation, JBCI relies in part upon credit from the Harris Corp., an equipment supplier. The company's letter to the applicant, however, does not indicate a firm commitment, but instead states that credit will be available only after an "acceptable credit verification." Hence, an issue will be specified to determine whether funds will be available from this source.

4. Since JBCI proposes religious programing, while RWI proposes general market programing, the relative need for these different types of programing will be considered under the contingent comparative issue. *Ward L. Jones*, FCC 67-82 (1967); *Policy Statement on Comparative Broadcast Hearings*, 1 FCC 2d 393, footnote 9 at 397 (1965).

5. Section 1.580(c) of our rules requires that local notice of the filing of an application be published twice weekly for 2 weeks. JBCI's first public notice, though published in the prescribed manner, omitted certain technical data while its second notice, though correct in content, was published once weekly for 4 weeks due to the newspaper's error. The applicant argues, and we agree, that the two publications together adequately informed the public of the nature of the application, that no indication of intentional misconduct is present and that no injury to the public is apparent under the circumstances. Hence, we find substantial compliance with section 1.580(c) and will not inquire further into this matter.

6. Key, Ohio, is an unincorporated community with no specifically defined political boundaries. JBCI proposes to locate its main studio in its transmitter building which is less than 1 mile from the area identified by the applicant as Key's location. We find,

[1] This section essentially permits applications for class A channels listed in the table of asssignments at unlisted communities within 10 miles of the listed community. Key and Bethlehem are within 10 miles of Moundsville, and are not listed in the table of assignments.

V 43 / 192 OCT 3 78

given the small size of Key and the limited distance involved, that the proposed studio site complies with section 73.210(a)(2) of our rules.

7. Assuming that Key, Ohio, is found to qualify as a "community," the respective proposals, which are for different communities, would serve substantial areas in common. Consequently, in addition to an issue to determine, pursuant to section 307(b) of the Communications Act of 1934, as amended, which of the proposals would better provide a fair, efficient, and equitable distribution of radio service, a contingent comparative issue will be specified.

8. Except as indicated above, the applicants are qualified to construct and operate as proposed. However, because the proposals are mutually exclusive, they must be designated for hearing in a consolidated proceeding.

9. Accordingly, *it is ordered*, That pursuant to section 309(e) of the Communications Act of 1934, as amended, the above-captioned applications are designated for hearing in a consolidated proceeding, at a time and place to be specified in a subsequent order, upon the following issues:

(1) To determine whether Key, Ohio, qualifies as a "community" within the meaning of the Commission's rules.

(2) To determine whether Jacobsburg Bible Church, Inc. can rely on credit from the Harris Corp., and, if not, whether the applicant is financially qualified.

(3) To determine the areas and populations which would receive FM service of 1 mV/m or greater intensity from the respective proposals together with the availability of other primary aural services in such areas.

(4) To determine, in light of section 307(b) of the Communications Act of 1934, as amended, which of the proposals would better provide a fair, efficient, and equitable distribution of radio service.

(5) To determine in the event that it is concluded that a choice between applications should not be based solely on considerations relating to section 307(b), which of the proposals would, on a comparative basis, better serve the public.

(6) To determine, in light of the evidence adduced pursuant to the foregoing issues, which of the above applications should be granted.

10. *It is further ordered*, That to avail themselves of the opportunity to be heard, the applicants herein, pursuant to section 1.221(c) of the Commission's rules, in person or by attorney, shall, within 20 days of the mailing of this order, file with the Commission, in triplicate, a written appearance, stating an intention to appear on the date fixed for the hearing and present evidence on the issues specified in this order.

11. *It is further ordered*, That the applicants herein shall pursuant to section 311(a)(2) of the Communications Act of 1934, as amended, and section 1.594 of the Commission's rules, give notice of the hearing, either individually, or, if feasible and consistent with the rules, jointly, within the time and in the manner prescribed in such rules, and shall advise the Commission of the publication of such notice as required by section 1.594(g) of the rules.

FEDERAL COMMUNICATIONS COMMISSION,
WALLACE E. JOHNSON,
Chief, Broadcast Bureau.

[6730-01]

FEDERAL MARITIME COMMISSION

Agreements Filed

The Federal Maritime Commission hereby gives notice that the following agreements have been filed with the Commission for approval pursuant to section 15 of the Shipping Act, 1916, as amended (39 Stat. 733, 75 Stat. 763, 46 U.S.C. 814).

Interested parties may inspect and obtain a copy of each of the agreements and the justifications offered therefor at the Washington office of the Federal Maritime Commission, 1100 L Street NW., Room 10218; or may inspect the agreements at the field offices located at New York, N.Y.; New Orleans, La.; San Francisco, Calif.; Chicago, Ill.; and San Juan, P.R. Interested parties may submit comments on each agreement, including requests for hearing, to the Secretary, Federal Maritime Commission, Washington, D.C. 20573, on or before October 13, 1978. Comments should include facts and arguments concerning the approval, modification, or disapproval of the proposed agreement. Comments shall discuss with particularity allegations that the agreement is unjustly discriminatory or unfair as between carriers, shippers, exporters, importers, or ports, or between exporters from the United States and their foreign competitors, or operates to the detriment of the commerce of the United States, or is contrary to the public interest, or is in violation of the Act.

A copy of any comments should also be forwarded to the party filing the agreements and the statement should indicate that this has been done.

AGREEMENT NO.: T-3565-1, T-3565-A-1, T-3567 and T-3567-A.

FILING PARTY: Morris R. Garfinkle, Esq., Galland, Kharasch, Calkins & Short, Canal Square, 1054 31st Street NW., Washington, D.C. 20007

SUMMARY: Agreements Nos. T-3565-1 and T-3565-A-1 are between the Puerto Rico Ports Authority (Port) and Sea-Land Service, Inc. (Sea-Land). Agreement No. T-3565-1 modifies the parties' basic agreement granting Sea-Land preferential use of Berths E and F, Puerto Nuevo, together with approximately 300,000 square feet of adjoining apron and cargo-in-transit area.

Agreement No. T-3565-A-1 modifies the parties' basic agreement providing for Sea-Land's lease and exclusive use of certain areas adjacent to the areas preferentially assigned Sea-Land under Agreement No. T-3565.

The purpose of Agreements Nos. T-3565-1 and T-3565-A-1 is to provide that the basic agreements will have an initial term of 5 years, with four 5 year renewal options. Agreements Nos. T-3567 and T-3567-A are between the Port and the Puerto Rico Maritime Shipping Authority (PRMSA).

Agreement No. T-3567 grants PRMSA preferential use of Berths G and H, Puerto Nuevo, together with approximately 300,000 square feet of adjoining apron and cargo-in-transit area.

Agreement No. T-3567-A provides for PRMSA's lease and exclusive use of certain areas adjacent to the areas preferentially assigned PRMSA under Agreement No. T-3567.

The term provisions of Agreements Nos. T-3567 and T-3567-A have been revised to provide that the agreements will have initial terms of 25 years with a 5 year renewal option. When the Agreements Nos. T-3565, T-3565-A, T-3567, and T-3567-A were originally filed on January 27, 1978, they had terms identical to those provided for by Agreements Nos. T-3565-1, T-3565-A-1 and the refised term provisions of Agreements Nos. T-3567 and T-3567-1.

However, when the Commission approved the basic agreements on May 11, 1978, the Commission required as a condition of approval that the 60 the issuance of the Commission's report and order in Dockets Nos. 76-38, *Agreements Relating to the Use of Isla Grande Marine Terminal, San Juan, Puerto Rico*, and 76-41, *Berthing of Seatrain Vessels in San Juan, Puerto Rico*.

Thus the purpose of Agreements Nos. T-3565-1 and the revised term provisions of Agreements Nos. T-3567 and T-3567-A is to restore the term set forth in the basic agreements when they were originally filed.

By order of the Federal Maritime Commission.

Dated: September 28, 1978.

JOSEPH C. POLKING,
Assistant Secretary.

[6730-01]

AGREEMENTS FILED

The Federal Maritime Commission hereby gives notice that the following agreements have been filed with the Commission for approval pursuant to section 15 of the Shipping Act, 1916, as amended (39 Stat. 733, 75 Stat. 763, 46 U.S.C. 814).

Interested parties may inspect and obtain a copy of each of the agreements and the justifications offered therefor at the Washington office of the Federal Maritime Commission, 1100 L Street NW., Room 10218; or may inspect the agreements at the field offices located at New York, N.Y.; New Orleans, La.; San Francisco, Calif.; Chicago, Ill.; and San Juan, P.R. Interested parties may submit comments on each agreement, including requests for hearing, to the Secretary, Federal Maritime Commission, Washington, D.C. 20573, on or before October 23, 1978. Comments should include facts and arguments concerning the approval, modification, or disapproval of the proposed agreement. Comments shall discuss with particularity allegations that the agreement is unjustly discriminatory or unfair as between carriers, shippers, exporters, importers, or ports, or between exporters from the United States and their foreign competitors, or operates to the detriment of the commerce of the United States, or is contrary to the public interest, or is in violation of the Act.

A copy of any comments should also be forwarded to the party filing the agreements and the statement should indicate that this has been done.

Agreement No. 161-31 and 10140-2.

Filing Party: Howard A. Levy, Esq., Suite 727, 17 Battery Place, New York, N.Y. 10004.

Summary: Agreements 161-31 and 10140-2 modify, respectively, the Gulf/United Kingdom Conference and the rate agreement between the Gulf/United Kingdom Conference and Seatrain International S.A. and United States Line, Inc., to (1) cover intermodal shipments, whether moving under through bills of lading or otherwise, and matters relating thereto and (2) provide that the conference and the rate agreement may, reserving the right of independent action, consult, cooperate, and agree with other U.S. conferences having jurisdiction in the establishment, policing, and enforcement of rules, practices, and charges relating to the use, employment, and transport of loaded and unloaded containers outside the gate of member lines ocean terminals at European ports within the ranges covered by the agreements.

Notice of the filing of agreement 161-31 previously appeared in the FEDERAL REGISTER on July 21, 1976 (41 FR 30064) and notice of the filing of agreement 10140-2 previously appeared on July 26, 1976 (41 FR 30724).

Upon advice of the Commission's staff, these agreements were modified and refiled by proponents on September 13, 1977, to (1) further clarify the scope of the agreements as (a) applying from points in the United States to interior points in the United Kingdom; and (b) excluding all water movements transshipped at conference ports which originate at or are destined to ports outside the scope of the agreement; and (2) provide that any agreement entered into with another conference shall not be implemented until filed with and approved by the Federal Maritime Commission.

These changes were for purposes of clarification and resulted in no substantive change in the scope of the agreements as implied and intended in the original filings or the anticompetitive relationships of the parties.

Because of the above changes and the lapse of time since the initial filing of these agreements, interested parties are being afforded a further opportunity to comment before the Commission takes final action.

Agreement No. 93-17.

Filing party: David C. Nolan, Esq., Graham & James, 1 Maritime Plaza, San Francisco, Calif. 94111.

Summary: Agreement No. 93-17, among the member lines of the North Europe-United States Pacific Freight Conference, modifies the basic agreement by: (1) Amending articles 2, 3, and 10 by adding the words "or permanent Chairman" after the word "Secretary," (2) amends article 5 to provide that the conference may enter into arrangements through the Chairman or other duly authorized representative, (3) amends article 9 to provide that until the conference employs a permanent Chairman, the Chairman of each meeting shall be elected at said meeting from the membership, and (4) amends article 12 by the deletion of certain language pertaining to arbitration procedures.

Agreement No. T-1887-1.

Filing party: Ms. Dorothy L. Vecchiarelli, Lawyer's Assistant, Sea-Land Service, Inc., 10 Parsonage Road, P.O. Box 900, Edison, N.J. 08817.

Summary: Agreement No. T-1887-1, between Sea-Land Service, Inc. (Sea-Land) and Philadelphia Port Corp. (PPC), amends the basic agreement between the parties which provides for the 20-year lease of certain terminal property in Philadelphia, Pa., to be used by Sea-Land for the loading and unloading of vessels and for the handling, storing, receipt, and delivery of cargo and containers. The purpose of the modification is to: (1) Redefine the premises which have been reduced as a result of reconstruction and widening of a road; (2) reduce the rent to $169,171 per annum; and (3) make an adjustment to offset the amount of money due PPC for maintenance performed and the refund due Sea-Land as a result of the reduction of the size of the premises.

Agreement No. T-3721.

Filing party: M. Carton Dittman, Jr., Ballard, Spahr, Andrews & Ingersoll, 30 South 17th Street, Philadelphia, Pa. 19103.

Summary: Agreement No. T-3721, between Philadelphia Port Corp. and the National Sugar Refining Co. (NSR), provides for the 20-year lease of certain premises, known as National Sugar Terminal, consisting of a marginal deepwater berth, an oil barge slip berth, cranes, sugar conveyors, and weighing equipment at Pier 45 North in Philadelphia, Pa. The facility is to be used for the loading, discharge, transfer, and storage of cargo moving in waterborne commerce, together with the exclusive right of docking and berthing oceangoing and other vessels and all other uses which NSR may deem necessary for its operations. As compensation, NSR will pay a percentage of the total cost of construction, to be applied as set forth in the agreement, plus any equipment rental or installment payments payable.

Dated: September 27, 1978.

By order of the Federal Maritime Commission.

JOSEPH C. POLKING,
Assistant Secretary.

[Independent Ocean Freight Forwarder License No. 1981]

COM-AIR FREIGHT, INC., D.B.A. COMET AIR & OCEAN FREIGHT FORWARDERS

Order of Revocation

The bond issued in favor of Com-Air Freight, Inc., d.b.a. Comet Air & Ocean Freight Forwarders, 708 South Isis Avenue, Inglewood, Calif. 90301. FMC-1981, was canceled effective August 25, 1978.

By letter dated July 12, 1978, Com-Air Freight, Inc., d.b.a. Comet Air & Ocean Freight Forwarders was advised by the Federal Maritime Commission that Independent Ocean Freight forwarder License No. 1981 would be automatically revoked or suspended unless a valid surety bond was filed with the commission.

Section 44(c), Shipping Act, 1916, provides that no independent ocean freight forwarder license shall remain in force unless a valid surety bond is in effect and on file with the Commission. Rule 510.9 of Federal Maritime Commission General Order 4, further provides that a license will be automatically revoked or suspended for failure of a licensee to maintain a valid bond on file.

Com-Air Freight, Inc., d.b.a. Comet Air & Freight Forwarders has failed to furnish a valid surety bond.

By virtue of authority vested in me by the Federal Maritime Commission as set forth in Manual of Orders, Commission Order No. 201.1 (Revised) section 5.01(d) dated August 8, 1977;

It is ordered, That Independent Ocean Freight Forwarder License No. 1981 be and is hereby revoked effective August 25, 1978.

It is further ordered, That Independent Ocean Freight Forwarder License

V 43 / 192 OCT 3 1978

No. 1981 issued to Com-Air Freight, Inc., d.b.a. Comet Air & Ocean Freight Forwarders be returned to the Commission for cancellation.

It is further ordered, That a copy of this Order be published in the Federal Register and served upon Com-Air Freight, Inc., d.b.a. Comet Air & Ocean Freight Forwarders.

ROBERT G. DREW,
Director, Bureau of Certification and Licensing.

[6730-01]

[Docket No. 78-34]

CONCORDIA INTERNATIONAL FORWARDING CORP.

Order of Investigation and Hearing

Concordia International Forwarding Corp. (Concordia) filed an application with the Commission for a license as an independent ocean freight forwarder. During the course of the Commission's investigation of Concordia, it was disclosed that Concordia appeared to violate section 44(a), Shipping Act, 1916, on 93 or more occasions by engaging in unlicensed forwarding activities, although a warning from the Commission had been sent to Concordia on June 7, 1978, about unlicensed forwarding activities.

Section 44(b) of the Shipping Act, 1916, requires that applicants be found to be fit, willing, and able to properly carry on the business of forwarding and to conform to the provisions of the Shipping Act, 1916, as amended, and the requirements, rules, and regulations of the Commission issued thereunder. Other such applications shall be denied. The applicant's alleged unlicensed ocean freight forwarding reflects upon the managerial responsibility and fitness of the applicant. These violations occurred while the forwarder's application was being processed and after warning in regard to carrying on the business of forwarding without a license.

The conduct of Concordia appears to be in violation of the Shipping Act, 1916, and this conduct, on the part of Concordia and its corporate officers, may result in a lack of the fitness required for licensing as an independent ocean freight forwarder, under section 44 of the Shipping Act, 1916.

Pursuant to section 510.8 of the Commission's General Order 4 (46 CFR 510.8) the Commission, on September 22, 1978, advised Concordia of its intent to deny its application for reasons set out hereinabove. In accordance with General Order 4, an applicant may request a hearing on the intended denial.

By letter dated September 22, 1978, Concordia requested the opportunity to show at an expedited hearing that denial of Concordia's application is unwarranted. In this regard, Concordia has offered to present its direct case, in the form of affidavits and memorandum of law, as early as October 2, 1978.

Now, therefore, *It is ordered,* That pursuant to sections 22 and 44 (46 U.S.C. 821 and 841(b)) of the Shipping Act, 1916, and section 510.8 of the Commission's General Order 4 (46 CFR 510.8) a proceeding is hereby instituted to determine:

1. Whether Concordia International Forwarding has violated section 44(a), Shipping Act, 1916, by engaging in unlicensed forwarding activities;

2. Whether, in light of the evidence adduced pursuant to the foregoing issue, together with any other evidence adduced, Concordia International Forwarding Corp. and its corporate officers, possess the requisite fitness, within the meaning of section 44(b), Shipping Act, 1916, to be licensed as an independent ocean freight forwarder.

It is further ordered, That the proceeding be limited to the submission of memorandums of law and affidavits of fact;

It is further ordered, That Concordia International Forwarding Corp. be designated respondent and that hearing counsel also be a party to this proceeding;

It is further ordered, That any persons other than respondent and hearing counsel who desire to become parties to this proceeding and to participate therein shall file a petition to intervene pursuant to rule 72 of the Commission's rules of practice and procedure (46 CFR 502.72);

It is further ordered, That the following schedule be adhered to:

October 2, 1978—Opening memorandums of law and affidavits of fact from respondent;

October 10, 1978—Petitions to intervene;

October 16, 1978—Memorandums of law and affidavits of fact from hearing counsel and any intervenors;

October 23, 1978—Reply memorandums of law and affidavits of fact from respondent;

October 30, 1978—Requests for discovery, hearing, and/or oral argument;

It is further ordered, That any requests for discovery or evidentiary hearing must be accompanied by a statement setting forth in detail the facts to be proven, their relevance to the issues in this proceeding, and why such data could not be submitted through affidavit;

It is further ordered, That a notice of this order be published in the FEDERAL REGISTER and that a copy thereof be served upon respondent and hearing counsel;

It is further ordered, That all documents submitted by any party of record in this proceeding shall be directed to the Secretary, Federal Maritime Commission, Washington, D.C. 20573, in an original and 15 copies as well as being mailed directly to all parties of record.

By the Commission.

JOSEPH C. POLKING,
Assistant Secretary.

[6730-01]

[Independent Ocean Freight Forwarder License No. 1456]

GERALD SCHWARTZ

Order of Revocation

On September 21, 1978, Gerald Schwartz, 14-88 East 16th Street, Brooklyn, N.Y. 11230, voluntarily surrendered his independent ocean freight forwarder license No. 1456 for revocation.

Therefore, by virtue of authority vested in me by the federal Maritime Commission as set forth in Manual of Orders, Commission order No. 201.1 (revised), section 5.01(c) dated August 8, 1977:

It is ordered, That independent ocean freight forwarder license No. 1456 issued to Gerald Schwartz be and is hereby revoked effective September 21, 1978, without prejudice to reapplication for a license in the future.

It is further ordered, That a copy of this order be published in the FEDERAL REGISTER and served upon Gerald Schwartz.

ROBERT G. DREW,
Director, Bureau of Certification and Licensing.

FEDERAL PREVAILING RATE ADVISORY COMMITTEE

ANNUAL REPORT

Availability

Pursuant to the provisions of section 10(d) of the Federal Advisory Committee Act (Pub. L. 92-463) and Circular A-63, revised, of the Office of Management and Budget notice is hereby given to the availability of the Federal Prevailing Rate Advisory Committee 1977 Annual Report.

The report summarizes the activities and recommendations of the Committee to the U.S. Civil Service Commission in dealing with the Federal prevailing rate systems for craft, trade, and labor employees paid from either

appropriated or nonappropriated funds during calendar year 1977.

Single copies of the report will be furnished without charge. Multiple copies can be furnished at a fair and equitable fee upon written request addressed to the Chairman, Federal Prevailing Rate Advisory Committee, Room 1340, 1900 E Street NW., Washington, D.C. 20415.

The report may be otherwise examined and/or copies at the above office and address between the hours of 8:15 a.m. and 4:45 p.m., Monday through Friday, legal holidays excluded.

Dated: September 27, 1978.

JEROME H. ROSS,
Chairman, Federal Prevailing Rate Advisory Committee.

[6210-01]

FEDERAL RESERVE SYSTEM

FEDERAL OPEN MARKET COMMITTEE

Domestic Policy Directive of August 15, 1978

In accordance with § 271.5 of its rules regarding availability of information, there is set forth below the Committee's domestic policy directive issued at its meeting held on August 15, 1978.[1]

The information reviewed at this meeting suggests that real output of goods and services is growing moderately in the current quarter, although the pace is a little less than the average for the first two quarters of the year. In July retail sales remained at about the advanced level reached in April. Industrial production and nonfarm payroll employment continued to expand at lower rates than in the early spring months. The unemployment rate, which had dropped 0.4 of a percentage point in June, jumped 0.5 of a percentage point in July to 6.2 percent, about the average rate in the first 5 months of the year. Average prices of goods and services have continued to rise rapidly, although producer prices of foods and foodstuffs declined in July. The advance in the index of average hourly earnings has been somewhat faster so far in 1978 than it had been on the average during 1977.

Since mid-July the trade-weighted value of the dollar against major foreign currencies has declined sharply further. The U.S. trade deficit was lower in the second quarter than the very high rate of the first quarter.

Growth in M-1 remained moderate in July. Inflows of the interest-bearing deposits included in M-2 and M-3 picked up, owing to substantial flows into large denomination time deposits at banks and into the new money market certificates at nonbank thrift institutions. Nevertheless, expansion in the broader aggregates also remained moderate in July. Most market interest rates have declined appreciably on balance in recent weeks.

In light of the foregoing developments, it is the policy of the Federal Open Market Committee to foster monetary and financial conditions that will resist inflationary pressures while encouraging continued moderate economic expansion and contributing to a sustainable pattern of international transactions. At its meeting on July 18, 1978, the Committee agreed that these objectives would be furthered by growth of M-1, M-2, and M-3 from the second quarter of 1978 to the second quarter of 1979 at rates within ranges of 4 to 6½ percent, 6½ to 9 percent, and 7½ to 10 percent, respectively. The associated range for bank credit is 8½ to 11½ percent. These ranges are subject to reconsideration at any time as conditions warrant.

In the short run, the Committee seeks to achieve bank reserve and money market conditions that are broadly consistent with the longer run ranges for monetary aggregates cited above, while giving due regard to developing conditions in domestic and international financial markets more generally. Early in the period until the next regular meeting, System open market operations shall be directed at attaining a weekly average Federal funds rate slightly above the current level. Subsequently, operations shall be directed at maintaining the week by average Federal funds rate within the range of 7¾ to 8¼ percent. In deciding on the specific objective for the Federal funds rate the Manager shall be guided mainly by the relationship between the latest estimates of annual rates of growth in the August-September period of M-1 and M-2 and the following ranges of tolerance: 4 to 8 percent for M-1 and 6 to 10 percent for M-2. If, giving approximately equal weight to M-1 and M-2, their rates of growth appear to be significantly above or below the midpoints of the indicated ranges, the objective for the funds rate shall be raised or lowered in an orderly fashion within its range.

If the rates of grwth in the aggregates appear to be above the upper limit or below the lower limit of the indicated ranges at a time when the objective for the funds rate has already been moved to the corresponding limit of its range, the Manager is promptly to notify the Chairman who will then decide whether the situation calls for supplementary instructions from the Committee.

[1] The record of policy actions of the Committee for the meeting of Aug. 15, 1978, is filed as part of the original document. Copies are available on request to the Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

By order of the Federal Open market Committee, September 22, 1978.

MURRAY ALTMANN,
Secretary.

[6210-01]

FIRST MICHIGAN BANK CORP.

Acquisition of Bank

First Michigan Bank Corp., Zeeland, Mich., has applied for the Board's approval under section 3(a)(3) of the Bank Holding Company Act (12 U.S.C. 1842(a)(3)) to acquire 100 percent of the voting shares (less directors' qualifying shares) of the successor by merger to National Lumberman's Bank & Trust Co., Muskegon, Mich. The factors that are considered in acting on the application are set forth in section 3(c) of the Act (12 U.S.C. 1842(c)).

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of Chicago. Any person wishing to comment on the application should submit views in writing to the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, to be received not later than October 26, 1978.

Board of Governors of the Federal Reserve System, September 26, 1978.

GRIFFITH L. GARWOOD,
Deputy Secretary of the Board.

[6210-01]

NCNB CORP.

Proposed Retention of NCNB Mortgage Corp.

NCNB Corp., Charlotte, N.C., has applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.4(b)(2) of the Board's regulation Y (12 CFR 225.4(b)(2)), for permission to retain voting shares of NCNB Mortgage Corp., Charlotte, N.C. Notice of the application was published in newspapers of general circulation in each of the communities served by the offices of NCNB Mortgage Corp.

Applicant states that the proposed subsidiary engages in the activities of originating, selling, and servicing residential and commercial mortgage loans; making construction and development mortgage loans, and performing incidental activities necessary to conduct a mortgage banking business, including the sale, as agent, of credit life, credit accident and sickness insurance to its mortgage customers. Such activities have been specified by the Board in § 225.4(a) of regulation Y as permissible for bank holding companies, subject to Board approval of individual proposals in accordance with the procedures of § 225.4(b).

Interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question should be accompanied by a statement summarizing the evidence the person requesting the hearing proposes to submit or to elicit at the hearing and a statement of the reasons why this matter should not be resolved without a hearing.

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of Richmond.

Any views or requests for hearing should be submitted in writing and received by the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, not later than October 26, 1978.

Board of Governors of the Federal Reserve System, September 26, 1978.

GRIFFITH L. GARWOOD,
Deputy Secretary of the Board.

Food and Drug Administration

[Docket No. 78F-0264]

AMERICAN CYANAMID CO.

Filing of Food Additive Petition

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: American Cyanamid Co., Wayne, N.J. 07470, has filed a petition proposing that the food additive regulations be amended to provide for the safe use of 1,3,5-tris(4-*tert*-butyl-3-hydroxy - 2,6 - dimethylbenzyl) - 1,3,5-triazine-2,4,6-(1H, 3H, 5H)-trione as an antioxidant in olefine polymers.

FOR FURTHER INFORMATION CONTACT:

John J. McAuliffe, Bureau of Foods (HFF-334), Food and Drug Administration, Department of Health, Education, and Welfare, 200 C Street SW., Washington, D.C. 20204, 202-472-5690.

SUPPLEMENATRY INFORMATION: Pursuant ot provisions of the Federal Food, Drug, and Cosmetic Act (sec. 409(b)(5), 72 Stat. 1786 (21 U.S.C. 348(b)(5))), notice is given that a petition (FAP 8B3348) has been filed by American Cyanamid Co., Wayne, N.J. 07470, proposing that § 178.2010 *Antioxidants and/or stabilizers for polymers* (21 CFR 178.2010) be amended to provide for the safe use of 1,3,5-tris(4-*tert*-butyl - 3 - hydroxy - 2,6 - dimethylbenzyl)-1,3,5-triazine-2,4,6-(1H, 3H, 5H)-trione with the limitation for use at levels not to exceed 0.1 percent by weight of olefin polymers complying with § 177.1520 (21 CFR 177.1520) of the food additive regulations.

American Cyanamid Co. has requested an exemption from the requirement of submitting an environmental impact analysis report, and after a review of the statement of exemption, the data required under the environmental impact considerations of § 25.1(g)(2) (21 CFR 25.1(g)(2)), and other relevant material, the agency determined that the proposed use of the additive would not have a significant environmental impact and that an environmental impact statement is not needed. Copies of the statement of exemption may be seen in the office of the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857, between 9 a.m. and 4 p.m., Monday through Friday.

Dated: September 27, 1978.

SANFORD A. MILLER,
Director, Bureau of Foods.

ENDOCRINOLOGIC AND METABOLIC DRUGS ADVISORY COMMITTEE

Renewal

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: Under the Federal Advisory Committee Act of October 6, 1972 (Pub. L. 92-463, 86 Stat. 770-776 (5 U.S.C. App. I)), the Food and Drug Administration announces the renewal of the Endocrinologic and Metabolic Drugs Advisory Committee by the Secretary of Health, Education, and Welfare.

DATE: Authority for this Committee will expire on August 27, 1980, unless the Secretary formally determines that continuance is in the public interest.

FOR FURTHER INFORMATION CONTACT:

Richard L. Schmidt, Committee Management Officer (HFA-27), Food and Drug Administration, Department of Health, Education, and Welfare, 5600 Fishers Lane, Rockville, Md. 20857, 301-443-2765.

Dated: September 26, 1978.

Health Resources Administration

NATIONAL ADVISORY COUNCIL ON HEALTH PROFESSIONS EDUCATION

Meeting

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), announcement is made of the following national advisory body scheduled to meet during the month of November 1978:

Name: National Advisory Council on Health Professions Education.
Date and time: November 6-7, 1978, 8:30 a.m.
Place: Conference Room 7-32, Center Building, 3700 East-West Highway, Hyattsville, Md. 20782. Open for the entire meeting.

Purpose. The Council advises the Secretary concerning the programs authorized by the Health Professions Educational Assistance Act of 1976, including recommendations on contracts, grant applications for construction, capitation, special projects, and financial need. These and other programs are designed to enable the health professions education institutions to meet the Nation's health manpower requirements.

Agenda. Agenda items include the discussion of: (1) Nutrition—prevention update; (2) geriatrics—aging update; (3) health planning update; and (4) special topics reports including 788(d) regulations, status of health manpower in the United States, reports to Congress, evaluation reports, and nutrition report. The Council will also review operating procedures.

The meeting is open to the public for observation and participation. Anyone wishing to obtain a roster of members, minutes of meetings, or other relevant information should contact Mr. Robert L. Belsley, Bureau of Health Manpower, Room 4-22, Center Building, 3700 East-West Highway, Hyattsville, Md. 20782, telephone 301-436-6564.

Agenda items are subject to change as priorities dictate.

Dated: September 26, 1978.

JAMES A. WALSH,
Associate Administrator for Operations and Management.

REPORT OF BIOASSAY OF 4-AMINO-2-NITROPHENOL FOR POSSIBLE CARCINOGENICITY

Availability

4-Amino-2-nitrophenol (CAS 119-34-6) has been tested for cancer-causing activity with rats and mice in the bioassay program, Division of Cancer Cause and Prevention, National Cancer Institute. A report is available to the public.

Summary. A bioassay of 4-amino-2-nitrophenol for possible carcinogenicity was conducted by administering the test chemical in feed to Fischer 344 rats and B6C3F1 mice. Applications of the chemical include use as an ingredient of hair dyes and as an intermediate in the manufacture of dyes.

It is concluded that under the conditions of the bioassay, 4-amino-2-nitrophenol was carcinogenic for male Fischer 344 rats, inducing transitional-cell carcinomas of the urinary bladder; the transitional-cell carcinomas of the urinary bladder observed in three dosed female rats may also have been associated with administration of the 4-amino-2-nitrophenol. The test chemical was not carcinogenic for male or female B6C3F1 mice at the doses tested.

Single copies of the report are available from the Office of Cancer Communications, National Cancer Institute, Building 31, Room 10A21, National Institutes of Health, Bethesda, Md. 20014.

(Catalog of Federal Domestic Assistance Program No. 13.393, Cancer Cause and Prevention Research.)

Dated: August 25, 1978.

LEON M. SCHWARTZ,
Acting Director,
National Institutes of Health.

NATIONAL INSTITUTES OF HEALTH

AVAILABILITY

Report on Bioassay of Dioxathion for Possible Carcinogenicity

Dioxathion (CAS 78-34-2) has been tested for cancer-causing activity with rats and mice in the Bioassay Program, Division of Cancer Cause and Prevention, National Cancer Institute. A report is available to the public.

Summary. A bioassay for possible carcinogenicity of technical-grade dioxathion was conducted using Osborne-Mendel rats and B6C3F1 mice. Applications of the chemical include use as an insecticide. Dioxathion was administered in the feed, at either of two concentrations, to groups of 50 male and 50 female animals of each species.

Under the conditions of this bioassay, dietary administration of dioxathion was not carcinogenic in Osborne-Mendel rats or B6C3F1 mice.

Single copies of the report are available from the Office of Cancer Communications, National Cancer Institute, Building 31, Room 10A21, Na-

[4110-08]

REPORT ON BIOASSAY OF PHENAZOPYRIDINE HYDROCHLORIDE FOR POSSIBLE CARCINOGENICITY

Availability

Phenazopyridine hydrochloride (CAS 136-40-3) has been tested for cancer-causing activity with rats and mice in the Bioassay Program, Division of Cancer Cause and Prevention, National Cancer Institute. A report is available to the public.

Summary. A bioassay of phenazopyridine hydrochloride for possible carcinogenicity was conducted by administering the test chemical in feed to Fischer 344 rats and B6C3F1 mice. Applications of the chemical include use as an analgesic drug.

It is concluded that under the conditions of this bioassay, phenazopyridine hydrochloride was carcinogenic in Fischer 344 rats, inducing adenocarcinomas of the colon in both males and females. Although phenazopyridine hydrochloride was not carcinogenic in male B6C3F1 mice, the chemical was carcinogenic in females, inducing hepatocellular adenomas and carcinomas.

Single copies of the report are available from the Office of Cancer Communications, National Cancer Institute, Building 31, Room 10A21, National Institutes of Health, Bethesda, Md. 20014.

(Catalog of Federal Domestic Assistance Program No. 13.393, Cancer Cause and Prevention Research.)

Dated: September 21, 1978.

DONALD S. FREDRICKSON,
Director, National Institutes of Health.

Office of Education

ADVISORY COMMITTEE ON ACCREDITATION AND INSTITUTIONAL ELIGIBILITY

Public Meeting; Revision

AGENCY: Department of Health, Education, and Welfare, Office of Education.

ACTION: Revision to notice of public meeting.

SUMMARY: Notice is hereby given of revision in the agenda and schedule of the October 3-4, 1978, meeting of the Advisory Committee on Accreditation and Institutional Eligibility. Notice of the meeting was first published in the FEDERAL REGISTER on September 11, 1978, 43 FR 40318-40319, and a revision to the notice was published in the FEDERAL REGISTER on September 20, 1978, 43 FR 42306-42307.

DATES: October 3, 1978, 1 p.m. to 9 p.m., local time, and October 4, 1978, 9 a.m. to 12 noon.

ADDRESS: Dulles Marriott Hotel, Dulles International Airport, Washington, D.C.

FOR FURTHER INFORMATION CONTACT:

John R. Proffitt, Director, Divison of Eligibility and Agency Evaluation, Office of Education, Room 3030, ROB 3, 400 Maryland Avenue SW., Washington, D.C. 20202, 202-245-9873.

The original times (8:30 a.m. to 5 p.m., October 3, and 9 a.m. to 12 noon, October 4) for the meeting are changed to those noted above. The following accrediting agencies, orginally scheduled for review at this meeting, are removed from the agenda:

American Dietetic Association, Committee on Evaluation of Dietetic Education
American Osteopathic Association Council on Education for Public Health
Foundation for Interior Design Education Research, Committee on Accreditation
National Accreditation Association and the American Examining Board of Psychoanalysis, Inc., Education and Accreditation Committee
National Association of Private, Nontraditional Schools and Colleges
National Association of Trade and Technical Schools, Accrediting Commission

The following reviews remain on the agenda:

American Bar Association, Council of the Section of Legal Education and Admissions to the Bar
Brookhaven College, Dallas County Community College District, Farmers Branch, Texas

In addition, the Committee will review the schedule and activities of the Division of Eligibility and Agency Evaluation, and of the Advisory Committee, for fiscal year 1979.

Signed at Washington, D.C., on September 28, 1978.

JOHN R. PROFFITT,
Director, Division of Eligibility and Agency Evaluation, Office of Education.

Public Health Service

PRIORITIES FOR THE DEVELOPMENT OF RECOMMENDED HEALTH STANDARDS IN THE MINING INDUSTRY

Request for Information

AGENCY: National Institute for Occupational Safety and Health (NIOSH), Center for Disease Control, Public Health Service, HEW.

ACTION: Notice of Request for Information.

SUMMARY: This notice solicits information concerning the priority for development of recommended health standards for the mining industry. From a list of specific hazards, six (6) will be selected by NIOSH for development of a recommended standard during fiscal year 1979. Development of a standard for hazards other than those specified will be considered, based upon information provided by the public concerning the extent of exposure, health effects, and known environmental concentrations or levels. Persons wishing to comment on the priority of developing standards should provide information on the criteria used in their determinations.

DATES: Comments concerning this notice should be submitted by (30 days after publication).

ADDRESS: Comments and recommendations should be submitted in writing to: Vernon E. Rose, Director, Division of Criteria Documentation and Standards Development, MHSB No. 79-1, National Institute for Occupational Safety and Health, 5600 Fishers Lane (Room 8A-53), Rockville, Md. 20857.

FOR FURTHER INFORMATION CONTACT:

Mr. B. Thomas Scheib, Chief, Mine Health Standards Branch, DCDSD, NIOSH, 301-443-4614.

SUPPLEMENTARY INFORMATION: Section 101(a) of the Federal Mine Safety and Health Act of 1977 (30 U.S.C. 811(a)) authorizes the National Institute for Occupational Safety and Health to recommend health standards for the protection of life in coal or other mines and to develop criteria in support of its recommended standards. NIOSH is proposing to develop six (6) criteria and recommended standards during fiscal year 1979. The list set out below specifies those hazards from which six (6) may be selected for standards development:

Acetylene, Alkanes, Ammonia, Antimony, Arsenic Ores, Oxides and Sulfides, Asbestos, Beryllium, Cadmium, Carbon Dioxide, Carbon Disulfide, Carbon Monoxide, Chlorine, Chromium, Coal Tar, Cyanide, Ethylene Dibromide, Fluorides, Formaldehyde, Health Examinations for Surface Miners, Hot Environments, Hydrogen Chloride, Hydrogen Fluoride, Hydrogen Sulfide.

Lead Ores, Oxides and Sulfide, Mercury, Methyl Alcohol, Nickel, Nitrates, Nitric Acid, Nitroglycerine, Noise, Oil Mists, Oxides of Nitrogen, Perchloroethylene, Petroleum Solvents, Radium and Radon Daughters, Silica, Sodium Hydroxide, Styrene, Sulfur Dioxide, Sulfuric Acid, Toluene, Trichloroethylene, Tungsten, Vanadium, Zinc Oxide.

Additional hazards will be considered by NIOSH for recommended standards development based upon extent of exposure in the mining industry, severity of the health effects associated with exposure, and data and information on existing environmental concentrations or levels submitted in response to this notice.

Persons wishing to comment on the priority for recommended standards development should describe their reasons for recommending an order of priority for standards development and submit any documentation supporting the basis for selection.

Information which is considered trade secret by those submitting that information will not be accepted by NIOSH. All other information submitted in response to this notice will be available for public inspection at the foregoing address.

Dated: September 26, 1978.

J. MICHAEL LANE,
Acting Director, National Institute for Occupational Safety and Health.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[NM 34538]

NEW MEXICO

Application

SEPTEMBER 25, 1978.

Notice is hereby given that, pursuant to section 28 of the Mineral Leasing Act of 1920 (30 U.S.C. 185), as amended by the Act of November 16, 1973 (87 Stat. 576), Matador Pipelines, Inc., has applied for two 4-inch natural gas pipelines right-or-way across the following lands:

NEW MEXICO PRINCIPAL MERIDIAN, NEW MEXICO

T. 8 S., R. 30 E.,
Sec. 10, N½NE¼.
T. 7 S., R. 31 E.,
Sec. 33, S½SW¼, N½SE¼, and SW¼SE¼;
Sec. 34, NW¼SW¼.
T. 8 S., R. 31 E.,
Sec. 4, lot 3 and SE¼NW¼.

These pipelines will convey natural gas across 2.47 miles of public lands in Chaves County, N. Mex.

The purpose of this notice is to inform the public that the Bureau will be proceeding with consideration of whether the application should be approved, and if so, under what terms and conditions.

Interested persons desiring to express their views should promptly send their name and address to the District Manager, Bureau of Land Management, P.O. Box 1397, Roswell, N. Mex. 88201.

STELLA V. GONZALES,
Acting Chief, Branch of Lands and Minerals Operations.

Heritage Conservation and Recreation Service

NATIONAL REGISTER OF HISTORIC PLACES

Additions, Deletions, and Corrections

By notice in the FEDERAL REGISTER of February 7, 1978, part II, there was published a list of the properties included in the National Register of Historic Places. Further notice is hereby given that certain amendments or revisions in the nature of additions, deletions, or corrections to the previously published list are adopted as set out below.

It is the responsibility of all Federal agencies to take cognizance of the properties included in the National Register as herein amended and revised in accordance with section 106 of the National Historic Preservation Act of 1966, 80 Stat. 16 U.S.C. 470 et seq. (1970 ed.), and the procedures of the Advisory Council on Historic Preservation, 36 CFR Part 800.

RONALD M. GREENBERG,
Acting Keeper of the National Register.

The following list of properties has been added to the National Register of Historic Places since notice was last given in the February 7, 1978, Federal Register. National Historic Landmarks are designated by NHL; properties recorded by the Historic American Buildings Survey are designated by HABS; properties recorded by the Historic American Engineering Record are designated by HAER; properties receiving grants-in-aid for historic preservation are designated by G.

PROPOSED LIVESTOCK GRAZING MANAGEMENT IN THE SANDY AREA, SOUTHWESTERN WYOMING ROCK SPRINGS DISTRICT, WYOMING

Availability of Final Environmental Statement

Pursuant to section 102(2)(c) of the National Environmental Policy Act of 1969, the Bureau of Land Management, U.S. Department of the Interior, has prepared a final environmental statement on proposed domestic livestock grazing management in the Sandy area of southwestern Wyoming, and has made copies of the statement available for public inspection.

The environmental statement considers the impacts that would result from the implementation of the grazing systems in sixteen (16) proposed allotments and thirty-three (33) custodial pastures, providing for livestock grazing management and use of available forage on approximately 1,997,330 acres, including proposed range improvements, and from maintaining management of 970 acres upon which livestock grazing would be excluded. The final statement further analyzes the impacts that would result from the implementation of each of seven (7) alternatives to that proposal.

Copies of the final environmental statement are available for inspection at the following locations:

Single copies of the statement can be obtained from the Team Leader, Sandy Environmental Statement, P.O. Box 1869, Rock Springs, Wyo. 82901; or the State Director (952), Wyoming State Office, Bureau of Land Management, 2515 Warren Avenue, P.O. Box 1828, Cheyenne, Wyo. 82001.

Dated: September 28, 1978.

LARRY E. MEIEROTTO,
Deputy Assistant Secretary of the Interior.

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. 78-4]

STEPHEN J. GREGA, M.D.

Denial of Applications for Registration

On February 9, 1978, the Administrator of the Drug Enforcement Administration (DEA) issued to Stephen J. Grega, M.D. (Respondent) an order to show cause proposing to deny Respondent's applications for registration for reason that on October 17, 1974, in the U.S. District Court for the Western District of Washington, Respondent was convicted of 72 counts of distributing schedule II controlled substances in violation of Title 21, U.S.C. 841(a)(1). These charges involved the prescribing of controlled substances other than for a legitimate medical purpose.

On May 24, 1978, in San Francisco, Calif., a hearing was held on the issues raised by the order to show cause. The Honorable Francis L. Young, administrative law judge, presided.

On August 4, 1978, the administrative law judge pursuant to 21 CFR 1316.65, transmitted to the Administrator the record of these proceedings together with his report containing recommended findings of fact and conclusions of law. After reviewing this material the Administrator hereby issues his final order in this proceeding.

The administrative law judge found that Respondent was convicted of 72 counts charging felony violations relating to controlled substances as well as 6 counts charging civil violations. The administrative law judge also found that Respondent had sold approximately 72 prescriptions for 6,160 dosage units of Ritalin and Desoxyn, schedule II controlled substances to three individuals for other than a legitimate medical purpose. In fact, from 1968 to the time of his conviction, Respondent had provided amphetamines to one of the individuals to "serve as a sparkplug for her independent writing."

The Administrative law judge further stated:

> The purpose of the registration provisions of the Controlled Substances Act of 1970 is to prevent diversion of legitimately produced substances to illegitimate uses. The preponderance of the evidence, in this record clearly shows that, as recently as August 1973, Respondent was an agent of just such diversion due, in large measure, to certain emotional and characterological disorders which were still affecting him in October 1974.
>
> The record is devoid of any direct evidence to the effect that Respondent is now no longer susceptible to the influence of those disorders.
>
> The preponderance of the evidence in this record indicates that the stage may well be set for a repeat of the events of the first half of 1973—Respondent is being importuned by belligerent persons seeking prescriptions; at least one of his long-term patients, for whom he allegedly prescribed in the past, is again coming to him for treatment. There is no direct evidence that Respondent's inner problems and conflicts which previously figured in his illegal activities have been resolved or significantly ameliorated.

The administrative law judge concluded that there is a lawful basis for denial of Respondents's applications for DEA registration as a practitioner. Having reviewed the record of these proceedings in its entirety, and pursuant to 21 CFR 1316.66, the Administrator adopts the administrative law judge's findings of fact and conclusions of law.

Accordingly, under the authority vested in the Attorney General by section 304 of the Controlled Substances Act, 21 U.S.C. 824, and redelegated to the Administrator of the Drug Enforcement Administration, it is ordered that Respondent's applications for registration under the Controlled Substances Act be denied, effective immediately.

Dated: September 25, 1978.

PETER B. BENSINGER,
Administrator.

DEPARTMENT OF LABOR

Employment and Training Administration

FEDERAL COMMITTEE ON APPRENTICESHIP

Public Meetings

Pursuant to section 10(a) of the Federal Advisory Committee Act (Pub. L. 92-463; 5 U.S.C. App. 1) of October 6, 1972, notice is hereby given that the Federal Committee on Apprenticeship will conduct the following open meetings at the Department of Labor Building, 200 Constitution Avenue NW., Washington, D.C.:

(A) FCA SUBCOMMITTEE ON EQUAL APPRENTICESHIP OPPORTUNITY

Date: October 18, 1978.
Time: 9 to 11 a.m.
Place: Room N-5437(A), New Department of Labor.

(B) FCA SUBCOMMITTEE ON GOALS OF THE FCA

Date: October 18, 1978.
Time: 11 a.m. to 12 noon.
Place: Room N-5437(B), New Department of Labor.

(C) FCA SUBCOMMITTEE ON RESEARCH.

Date: October 18, 1978.
Time: 1:30 to 3:30 a.m.
Place: Room N-5437(C), New Department of Labor.

The Federal Committee on Apprenticeship will hold a full open meeting on Thursday, October 19 form 9 a.m. to 4:30 p.m.; Friday, October 20, 1978, form 9 a.m. to 12 noon in Room N-4437(A-B-C-D), Department of Labor Building.

The agenda for the meeting on October 19 will include:

1. Swearing in new member.
2. Opening remarks; report of meeting with the Secretary of Labor.
3. Apprenticeship in Europe.
4. Urban League experience with mobile units in apprenticeship outreach programs.
5. Report of FCA Subcommittee on Research:
   a. Report on project to test the feasibility of developing data on nonregistered apprentices by occupation and industry and by State using two ongoing statistical programs.
   b. Briefing on evaluation on national industry apprenticeships promotion program.

V 43 / 192 OCT 3 1978 UMI

c. Status report on clearinghouse of apprenticeship information project.

The agenda for the meeting on October 20 will include:

1. Report of FCA Subcommittee on Goals of the FCA:
a. Toledo Bend recommendations on apprenticeship.
2. Report of FCA Subcommittee on Equal Apprenticeship Opportunity:
a. Discussion of recommended evaluation of national women's apprenticeship program under current new initiatives as proposed by the Secretary of Labor.
b. Discussion of the status of minorities in apprenticeship reflecting the new language of 29 CFR 30: Equal Employment Opportunity in Apprenticeship and Training.

Agenda is subject to change due to time constraints and priority items which may come before the Committee between the time of this publication and the scheduled date of the FCA meeting.

Members of the public are invited to attend the proceedings. Any member of the public who wishes to file written data, views, or arguments pertaining to the agenda may do so by furnishing it to the executive secretary at any time prior to the meeting. Thirty copies are needed for the members and for the inclusion in the minutes of the meeting.

Any member of the public who wishes to speak at this meeting should so indicate in a written statement, also the nature of the intended presentation and amount of time needed. The chairperson will announce at the beginning of the meeting the extent to which time will permit the granting of such requests.

Communications to the executive secretary should be addressed as follows:

Mrs. M. M. Winters, Bureau of Apprenticeship and Training, ETA, U.S. Department, 601 D Street, NW. (Room 5434), Washington, D.C. 20213.

Signed at Washington, D.C., this 28th day of September 1978.

ERNEST G. GREEN,
Assistant Secretary for Employment and Training Administration.

Mine Safety and Health Administration

[Docket No. M-78-42]

M.S.W. COAL CO.

Petition for Modification of Application of Mandatory Safety Standard

Notice is hereby given that M.S.W. Coal Co., Spring Glen, Pa., 17978, has filed a petition to modify the application of 30 CFR 75.301 (air quantity), to its No. 2 slope mine, located in Schuykill County, Pa., in accordance with section 101(c) of the Federal Mine Safety and Health Act of 1977, Pub. L. 95-164.

The substance of petitioner's statement is as follows:

(1) The air sample analysis history reveals that harmful quantities of methane are nonexistent in petitioner's mine.

(2) Ignition, explosion, and mine fire history are all nonexistent at the mine, nor is there a history of harmful quantities of carbon dioxide and other noxious or poisonous gases.

(3) Mine dust sampling programs have revealed extremely low concentrations of respirable dust.

(4) Extremely high velocities in small cross sectional areas of airways and manways required in friable anthracite veins for control purposes, present very dangerous flying object hazards to miners and cause extremely uncomfortable damp and cold conditions in the mine. This makes it difficult to keep miners on the job.

(5) The safety of the workers will not be diminished by the lessening of the air quantity.

REQUEST FOR COMMENTS

Persons interested in the petition may furnish written comments on or before November 2, 1978. Comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, 4015 Wilson Boulevard, Arlington, Va. 22203. Copies of the petition are available for inspection at that address.

Date: September 21, 1978.

ROBERT B. LAGATHER,
Assistant Secretary for Mine Safety and Health.

Office of the Secretary

[TA-W-3573]

BANCROFT CAP CO., CABOT, ARK.

Determinations Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974, the Department of Labor herein presents the results of TA-W-3573: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on May 4, 1978, in response to a worker petition received on April 19, 1978, which was filed by the United Hatters, Cap & Millinery Workers International Union on behalf of workers and former workers producing military headwear at the Cabot, Ark., plant of Bancroft Cap Co. During the investigation it was determined that the plant also produces duffelbags.

The notice of investigation was published in the FEDERAL REGISTER on May 23, 1978 (43 FR 22087-22088). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of Bancroft Cap Co., the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance each of the group eligibility requirements of section 222 of the Act must be met. With respect to workers producing military headwear, without regard to whether any of the other criteria have been met, the following criterion has not been met:

That increases of imports of articles like or directly competitive with articles produced by the firm or appropriate subdivision have contributed importantly to the separations, or threats thereof, and to the absolute decline in sales or production.

Approximately 95 percent of the military headwear produced by Bancroft are sold directly to the U.S. Government. There are no imports of military headwear.

With respect to workers producing duffelbags all the group eligibility requirements of section 222 of the Act have been met.

Imports of soft-side luggage, which includes duffelbags, increased absolutely and relative to domestic production in 1977 compared to 1976 and increased absolutely in the first quarter of 1978 compared to the same period of 1977.

Bancroft Caps imports duffelbags. Most of the duffelbags sold by Bancroft Cap are produced by an exclusive contractor in Mexico.

CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increases of imports like or directly competitive with duffelbags produced at the Cabot, Ark., plant of Bancroft Cap Co. contributed importantly to the decline in production of that product and to the total or partial separations of the workers at that plant. In accordance with the provisions of the Act, I make the following certification:

All workers engaged in the production of duffelbags at the Cabot, Ark., plant of Bancroft Cap Co. who became totally or partially separated from employment on or after September 2, 1977, are eligible to apply for

adjustment assistance under title II, chapter 2 of the Trade Act of 1974.

I further determine that all workers engaged in the production of military headwear at the Cabot, Ark., plant of Bancroft Cap Co. are denied eligibility to apply for adjustment assistance under title II, chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 28th day of September 1978.

HARRY J. GILMAN,
Acting Director, Office of Foreign Economic Research.

[FR Doc. 78-27899 Filed 10-2-78; 8:45 am]

[TA-W-3744]

BROWN SHOE CO., PIEDMONT, MO.

Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974, the Department of Labor herein presents the results of TA-W-3744: Investigation regarding certificate of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on May 23, 1978, in respone to a worker petition received on May 18, 1978, which was filed by three workers and the by the United Shoe Workers of America on behalf of workers and former workers producing shoe components for men's, women's, and children's shoes at the Piedmont, Mo., plant of the Brown Shoe Co.

The notice of investigation was published in the FEDERAL REGISTER on June 6, 1978 (43 FR 24633-24634). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of Brown Shoe Co., the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Act must be met. Without regard to whether any of the other criteria have been met, the following criterion has not been met:

That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated.

The Department's investigation revealed that average employment of production workers at the Piedmont, Mo., plant of Brown Shoe Co. increased from 1975 to 1976, from 1976 to 1977 and in the first quarter of 1978 compared to the same period of 1977.

Average weekly hours remained relatively unchanged during the same periods of comparison.

CONCLUSION

After careful review I determine that all workers of the Piedmont, Mo., plant of the Brown Shoe Co. are denied eligibility to apply for trade adjustment assistance under title II, chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 28th day of September 1978.

HARRY J. GILMAN,
Acting Director, Office of Foreign Economic Research.

[TA-W-3956]

F/V PETREL, NORTH TRURO, MASS.

Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974, the Department of Labor herein presents the results of TA-W-3956: Investigation regarding certification of eligibility to apply for worker adjustment assitance as prescribed in section 222 of the Act.

The investigation was initiated on July 6, 1978, in response to a worker petition received on July 5, 1978, which was filed on behalf of fishermen and former fishermen catching ground and flatfish for the F/V *Petrel*, North Truro, Mass.

The notice of investigation was published in the FEDERAL REGISTR on July 18, 1978 (43 FR 30927-30928). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of the F/V *Petrel*, the U.S. Department of Commerce, the U.S. International Trade Commission, industry anlysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met.

Without regard to whether any of the other criteria have been met, the following criterion has not been met.

That sales or production, or both, of the firm or subdivision have decreased absolutely.

The F/V *Petrel* primarily catches ground and flatfish. Sales by the F/V *Petrel* increased in the fourth quarter of 1977 compared to the fourth quarter of 1976 and in the first 6 months of 1978 compared to the first 6 months of 1977.

CONCLUSION

After careful review of the facts obtained in the investigation, I determine that fishermen of the F/V *Petrel*, North Truro, Mass., are denied eligibility to apply for adjustment assistance under title II, chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 28th day of September 1978.

HARRY J. GILMAN,
Acting Director, Office of Foreign Economic Research.

[TA-W-3363]

FULTON CLOTHES CO., INC., PHILADELPHIA, PA.

Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974, the Department of Labor herein presents the result of TA-W-3363: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on March 20, 1978, in response to a worker petition received on February 21, 1978, which was filed by the Amalgamated Clothing & Textile Workers Union on behalf of workers and former workers producing men's and women's tailored clothing at Fulton Clothes Co., Inc., Philadelphia, Pa.

The notice of investigation was published in the FEDERAL REGISTER on April 17, 1978 (43 FR 14776-14777). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of Fulton Clothes Co., Inc., its customers, the U.S. Department of Commerce, the U.S. International Trade Commission, the National Cotton Council, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met. Without regard to whether any of the other criteria have been met, the following criterion has not been met:

That increases of imports of articles like or directly competitive with articles produced by the firm or appropriate subdivi-

V 43 / 192

sion have contributed importantly to the separations, or threats thereof, and to the absolute decline in sales or production.

Ninety-five percent of Fulton's business is comprised of contract work for a single manufacturer of women's tailored clothing. This manufacturer's sales increased during 1977 compared to 1976 and during the first quarter of 1978 compared to the first quarter of 1977. This manufacturer does not import any women's tailored clothing.

CONCLUSION

After careful review, I determine that workers of Fulton Clothes Co., Inc., Philadelphia, Pa., are denied eligibility to apply for adjustment assistance under title II, chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 28th day of September 1978.

[4510-28]

[TA-W-3591]

HIGH FASHION, INC., PATERSON, N.J.

Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974, the Department of Labor herein presents the results of TA-W-3591: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on May 8, 1978, in response to a worker petition received on April 28, 1978, which was filed by the International Ladies' Garment Workers' Union on behalf of workers and former workers producing ladies' coats, raincoats, and blazers at High Fashion, Inc., Paterson, N.J. The investigation revealed that High Fashion, Inc., did not produce raincoats or blazers in 1976, 1977, or 1978.

The notice of investigation was published in the FEDERAL REGISTER on May 26, 1978 (43 FR 22793). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of High Fashion, Inc., its customers (manufacturers), the U.S. Department of Commerce, the U.S. International Trade Commission, the National Cotton Council of America, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Act must be met. It is concluded that all of the requirements have been met.

U.S. imports of women's, misses', and children's coats and jackets increased from 2,252 thousand dozen in 1976 to 2,723 thousand dozen in 1977. Imports declined from 590 thousand dozen in the first quarter of 1977 to 572 thousand dozen in the first quarter of 1978. The ratio of imports to domestic production increased from 48.3 percent in 1976 to 54.9 percent in 1977.

The Department conducted a survey of the principal manufacturers for which High Fashion, Inc., worked in 1976 and 1977. Manufacturers that accounted for a majority of sales in 1976 reduced purchases from High Fashion, Inc., and increased purchases of imported ladies' coats in 1977 compared to 1976. Manufacturers that accounted for a majority of sales in 1977 reduced purchases from High Fashion, Inc., in the first 5 months of 1978 compared to the like period of 1977. The same manufacturers increased purchases of imports in the first half of 1978 compared to the like period of 1977.

CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increased imports of articles like or directly competitive with the ladies' coats produced at High Fashion, Inc., Paterson, N.J., contributed importantly to the decline in sales and to the separation of workers at that plant. In accordance with the provisions of the Act, I make the following certification:

All workers of High Fashion, Inc., Paterson, N.J., who became totally or partially separated from employment on or after March 28, 1977, are eligible to apply for adjustment assistance under title II, chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 28th day of September 1978.

HARRY J. GILMAN,
Acting Director, Office of Foreign Economic Research.

[4510-28]

Office of the Secretary

[TA-W-3753 and TA-W-3892 through TA-W-3904]

ROCHESTER BUTTON CO.

Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

Rochester Button Co.: TA-W-3753, Rochester, N.Y.; 3892, Akron, N.Y.; 3893, Wellsville, N.Y.; 3894, South Boston, Va.; 3895, McKenney, Va.; 3896, Kenbridge, Va.; 3897, 1290 Avenue of the Americas New York, N.Y.; 3898, 519 Eighth Avenue New York, N.Y.; 3899, Atlanta, Ga.; 3900, Pikesville, Md.; 3901, Charlotte, N.C.; 3902, Wheaton, Ill.; 3903, Los Angeles, Calif.; 3904,* Bala-Cynwyd, Pa.

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-3753 and TA-W-3892 through TA-W-3904: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on June 22, 1978 (May 23, 1978, for TA-W-3753) in response to a worker petition received on June 22, 1978 (May 15, 1978 for TA-W-3753) which was filed on behalf of workers and former workers producing and marketing buttons at the locations listed above of the Rochester Button Co.

The notice of investigation was published in the FEDERAL REGISTER on July 7, 1978 (43 FR 29365), on June 6, 1978 (43 FR 24633), for TA-W-3753. No public hearing was requested, and none was held.

The FEDERAL REGISTER inadvertently stated that the South Boston facility is in Massachusetts. The facility is in South Boston, Va., as stated in the petition.

The information upon which the determination was made was obtained principally from officials of the Rochester Button Co., its customers, the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met. The investigation has revealed that all of the requirements have been met.

The Rochester Button Co.'s integrated finished button production and marketing operation consists of: Three finished button facilities (one each in Rochester, N.Y., McKenney, Va., and Kenbridge, Va.); three raw material (button blank) facilities (one each in Akron, N.Y., Wellsville, N.Y., and South Boston, Va.); two warehousing facilities and sales offices (one each in New York, N.Y., and Los Angeles, Calif.); and six additional sales offices (one each in New York, N.Y., Atlanta, Ga., Pikesville, Md., Charlotte, N.C., Wheaton, Ill., and Bala-Cynwyd, Pa.).

Imports of finished buttons increased from 4,212 thousand gross in 1976 to 7,227 thousand gross in 1977.

A survey by the Department of customers of the Rochester Button Co., who decreased their purchases of finished buttons from the company in 1977 compared to 1976 revealed that many customers had increased their purchases of finished buttons from foreign suppliers or had increased their purchases of finished buttons manufactured offshore during that same period of time.

CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increases in imports of articles like or directly competitive with buttons produced and marketed at locations of the Rochester Button Co., listed in the appendix, contributed importantly to the decline in sales or production and to the total or partial separations of workers at those locations. In accordance with the provisions of the Act, I make the following certification:

All workers of the Rochester Button Co., at locations listed in the appendix engaged in employment related to the production or marketing of buttons who became totally or partially separated from employment on or after the respective petition impact dates listed in the attached appendix are eligible to apply for adjustment assistance under title II, chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 22d day of September 1978.

JAMES F. TAYLOR,
Director, Office of Management, Administration and Planning.

[TA-W-3513]

THERMATOMIC CARBON CO., STERLINGTON, LA.

Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974, the Department of Labor herein presents the results of TA-W-3513: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on April 13, 1978, in response to a worker petition received on April 5, 1978, which was filed by the Oil, Chemical & Atomic Workers International Union on behalf of workers and former workers producing thermal grade carbon blacks at Thermatomic Carbon Co., Sterlington, La.

The notice of investigation was published in the FEDERAL REGISTER on April 25, 1978 (43 FR 17552). No public hearing was requested and none was held.

A certification applicable to the petitioning group of workers was issued on February 22, 1976 (TA-W-384). The certification remained in effect until February 22, 1978.

The information upon which the determination was made was obtained principally from officials of Thermatomic Carbon Co., the U.S. Department of Commerce, the U.S. Department of Interior, the U.S. International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance each of the group eligibility requirements of section 222 of the Act must be met. It is concluded that all of the requirements have been met.

U.S. imports of carbon blacks increased in each year from 1973 when imports were 8,669,000 pounds, to 1976, when imports were 44,121,000 pounds. Imports declined to 32,203,000 pounds in 1977, only slightly below the 1975 level of 33,034,000 pounds. The ratio of imports to domestic production increased from 1.2 percent 1975 to 1.46 percent in 1976 and then fell to 0.93 percent in 1977. The increase in imports from 1973 to 1976 is attributable to increased domestic prices for raw materials used in producing carbon black. Canada is a principal supplier of carbon black to the United States.

The previous certification (TA-W-384) was based on evidence that Thermatomic's major customer had decreased purchases from the subject firm from 1974 to 1975 and increased purchases of imported carbon black from a Canadian subsidiary of Thermatomic's parent firm. This customer attributed the substitution of Canadian carbon black for Thermatomic's carbon black to the cheaper price of imports resulting from the lower costs of raw materials, especially natural gas, and lower labor costs.

In November 1977, Thermatomic closed the Sterlington, La., plant, and retained a small number of production workers for a limited time in order to ship remaining inventories. The company's decision to close the plant was based on rising prices for natural gas, a principal raw material in the thermatomic process. At the same time, company imports increased. Company imports of carbon black increased from 1976 to 1977 and in the first quarter of 1978 compared to the first quarter of 1977. Machinery and material scheduled for use at Thermatomic Carbon Co. in Sterlington, La., is being shipped to the Canadian subsidiary.

CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increased imports of articles like or directly competitive with thermal carbon black produced at Thermatomic Carbon Co., Sterlington, La., have contributed importantly to the decline in sales and production and to the separation of workers at that firm. In accordance with the provisions of the Act, I make the following certification:

All workers of Thermatomic Carbon Co., Sterlington, La., who became totally or partially separated from employment on or after February 22, 1978, are certified eligible to apply for adjustment assistance under title II, chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 28th day of September 1978.

HARRY J. GILMAN,
Acting Director, Office of Foreign Economic Research.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

[Prohibited Transaction Exemption 78-14]

EMPLOYEE BENEFIT PLANS

Exemption From the Prohibitions Respecting a Transaction Involving Murray Financial Corp. Profit-Sharing Plan for Employees and Participating Affiliates

AGENCIES: Department of Labor and Department of the Treasury/Internal Revenue Service.

ACTION: Grant of individual exemption.

* Petition 3904 is expanded to include workers at the Rochester Button Co. sales office in Boston, Mass.

OCT 3 1978

V 43 / 192 OCT 3 78

SUMMARY: This exemption enables the Murray Financial Corp. profit-sharing plan for employees and participating affiliates (the Plan) to sell a parcel of real property to Murray Properties Co. (the Subsidiary), a wholly owned subsidiary of Murray Financial Corp. (the Employer).

FOR FURTHER INFORMATION CONTACT:

Robert N. Sandler, Office of Regulatory Standards and Exceptions, Pension and Welfare Benefit Programs, Room C-4526, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, D.C. 20216, telephone 202-523-8882. (This is not a toll-free number.)

SUPPLEMENTARY INFORMATION: On June 13, 1978, notice was published in the FEDERAL REGISTER (43 FR 25492) of the pendency before the Department of Labor and the Internal Revenue Service (the Agencies) of an exemption from the provisions of sections 406(a)(1), 406(b)(1), and 406(b)(2) of the Employee Retirement Income Security Act of 1974 (the Act) and from the taxes imposed by section 4975 (a) and (b) of the Internal Revenue Code of 1954 (the Code) by reason of section 4975(c)(1) (A) through (E) of the Code, for a transaction described in an application filed on behalf of the Employer.

The notice set forth a summary of the facts and representations contained in the application for exemption and referred interested persons to the application for a complete statement of the facts and representations. The application has been available for public inspection at the Agencies in Washington, D.C. The notice also invited interested persons to submit comments on the requested exemption to the Department of Labor (the Department). In addition, the notice stated that any interested person might submit a written request that a hearing be held relating to the requested exemption.

No public comments or requests for a hearing were received by the Department.

GENERAL INFORMATION

The attention of interested persons is directed to the following:

(1) The fact that a transaction is the subject of an exemption under section 408(a) of the Act and section 4975(c)(2) of the Code does not relieve a fiduciary or other party in interest or disqualified person from certain other provisions of the Act and the Code, including any prohibited transaction provisions to which the exemption does not apply and the general fiduciary responsibility provisions of section 404 of the Act which require, among other things, that a fiduciary discharge his duties respecting the plan solely in the interests of the participants and beneficiaries of the plan and in a prudent fashion in accordance with section 404(a)(1)(B) of the Act; nor does it affect the requirement of section 401(a) of the Code that the plan must operate for the exclusive benefit of the employees of the employer maintaining the plan and their beneficiaries;

(2) This exemption does not extend to transactions prohibited under section 406(b)(3) of the Act, and section 4975(c)(1)(F) of the Code;

(3) This exemption is supplemental to, and not in derogation of, any other provisions of the Act and the Code, including statutory or administrative exemptions and transitional rules. Furthermore, the fact that a transaction is subject to an administrative or statutory exemption or transitional rule is not dispositive of whether the transaction is in fact a prohibited transaction; and

(4) This document does not meet the Treasury Department's criteria for significant regulations set forth in paragraph 8 of the proposed Treasury directive appearing in the FEDERAL REGISTER for Wednesday, May 24, 1978 (43 FR 22319).

EXEMPTION

In accordance with section 408(a) of the Act and section 4975(c)(2) of the Code, the procedures set forth in ERISA Proc. 75-1 (40 FR 18471, April 28, 1975) and Rev. Proc. 75-26, 1975-1 CB 722, and based upon the entire record, the Agencies make the following determinations:

(i) The exemption is administratively feasible;

(ii) It is in the interests of the Plan and of the participants and beneficiaries; and

(iii) It is protective of the rights of participants and beneficiaries of the Plan.

Accordingly, the following exemption is hereby granted under the authority of section 408(a) of the Act and section 4975(c)(2) of the Code and in accordance with the procedures set forth in ERISA Proc. 75-1 and Rev. Proc. 75-26.

The restrictions of sections 406(a)(1), 406(b)(1) and 406(b)(2) of the Act and the taxes imposed by section 4975 (a) and (b) of the Code by reason of section 4975(c)(1) (A) through (E) of the Code shall not apply to the sale of a parcel of real property known as site 30 by the Plan to the Subsidiary, for $18,900, provided that this amount is not less than the fair market value of the property.

The availability of this exemption is subject to the express conditions that the material facts and representations contained in the application are true and complete and that the application accurately describes all material terms of the transaction consummated pursuant to the exemption.

Signed at Washington, D.C. this 26th day of September, 1978.

IAN D. LANOFF,
Administrator of Pension and Welfare Benefit Programs, Labor-Management Services Administration, Department of Labor.

FRED J. OCKS,
Director, Employee Plans Division, Internal Revenue Service.

NATIONAL SCIENCE FOUNDATION

ADVISORY COMMITTEE FOR ATMOSPHERIC SCIENCES

Meeting

In accordance with the Federal Advisory Committee Act, Pub. L. 92-463, the National Science Foundation announces the following meeting:

Name: Advisory Committee for Atmospheric Sciences.
Date: October 19, 20, and 21, 1978.
Time: 9 a.m.-5 p.m.
Place: Room 643, National Science Foundation, 1800 G Street NW., Washington, D.C. 20550.
Type of meeting: Open.
Contact person: Dr. Alan J. Grobecker, Division Director, Division of Atmospheric Sciences, Room 644, National Science Foundation, Washington, D.C. 20550, telephone 202-634-1490.
Summary minutes: May be obtained from the Committee Management Coordinator, Division of Financial and Administrative Management, Room 248, National Science Foundation, Washington, D.C. 20550.
Purpose of committee: The Advisory Committee for Atmospheric Sciences provides advice, recommendations, and oversight concerning support for research and research-related activities in the atmospheric sciences area.
Agenda:

OCTOBER 19, 1978

9 a.m.—Review principal issues of NCAR review and discussion of recommendations, if any, on these issues.

OCTOBER 20, 1978

9 a.m.—Discussion of NSF/ATM report: "Report on NSF Atmospheric Sciences Division Activities."

OCTOBER 21, 1978

9 a.m.—Report preparation of committee.

12 noon—Adjourn.

M. REBECCA WINKLER,
Committee Management Coordinator.

SEPTEMBER 28, 1978.

[7555-01]

ADVISORY COMMITTEE FOR BEHAVORIAL AND NEURAL SCIENCES, SUBCOMMITTEE ON ANTHROPOLOGY

Meeting

In accordance with the Federal Advisory Committee Act, as amended, Pub. L. 92-463, the National Science Foundation announces the following meeting:

Name: Subcommittee on Anthropology of the Advisory Committee for Behavorial and Neural Sciences.
Date and Time: October 19 and 20, 1978, 9 a.m.-6 p.m.
Place: National Science Foundation, 1800 G Street NW., Washington, D.C. 20550, Room 712A.
Type of meeting: Closed.
Contact person: Dr. John Yellen, Program Director, Anthropology, Room 320, National Science Foundation, Washington, D.C. 20550, telephone 202-632-4208.
Purpose of Subcommittee: To provide advice and recommendations concerning support for anthropology (physical anthropology and archaeology).
Agenda: To review and evaluate proposals as part of the selected process for awards.
Reason for closing: The proposals being reviewed include information of a proprietary or confidential nature, including technical information concerning individuals associated with the proposals. These matters are within exemptions (4) and (6) of 5 U.S.C. 552b(c), Government in the Sunshine Act.
Authority to close meeting: This determination was made by the Committee Management Officer pursuant to provisions of section 10(d) of Pub. L. 92-463. The Committee Management Officer was delegated the authority to make such determinations by the Acting Director, NSF, on February 18, 1977.

M. REBECCA WINKLER,
Committee Management Coordinator.

PHYSICALLY HANDICAPPED IN SCIENCE PROGRAM

Procedure for Proposal Submission

The National Science Foundation (NSF) plans in fiscal year 1979 to make a small number of awards for projects to: (1) Identify and provide information on the problems of the physically handicapped in becoming scientists and ways to overcome these problems, and (2) to develop student science training models directly involving handicapped students at the secondary and college levels.

Three types of projects will be supported: (1) Science education models which directly involve groups of handicapped students, (2) workshops, and (3) experimental modification and adaptation of existing science courses which have been modified for handicapped students. Proposals may request up to a maximum of $50,000 for each project. During fiscal year 1978 available funds permitted the support of 12 projects at a cost of $491,690. Funding for fiscal year 1979 is expected to remain at approximately the same level.

Draft guidelines for the preparation and submission of proposals for fiscal year 1979 may be requested directly from the Physically Handicapped in Science Program, Directorate for Science Education, National Science Foundation, Washington, D.C. 20550. The closing date for submission of proposals to the physically handicapped in science program is December 15, 1978. Questions may be directed to Dr. Robert Rehwoldt, 202-282-7150.

M. REBECCA WINKLER,
Committee Management Coordinator.

[8025-01]

SMALL BUSINESS ADMINISTRATION

[Proposed License No. 02/02-0355]

EUROPEAN DEVELOPMENT CAPITAL CORP.

Application for a License To Operate as a Small Business Investment Company

Notice is hereby given that an application has been filed with the Small Business Administration pursuant to § 107.102 of the regulations governing small business investment companies (CFR 107.102 (1978)), under the name of European Development Corp., 30 East 42d Street, New York, N.Y. 10017, for a license to operate as a small business investment company, under the provisions of the Small Business Investment Act of 1958, as amended (act), and the rules and regulations promulgated thereunder.

The proposed officers, directors, and stockholders are as follows:

Name and title

Bob Meijer, 3 Wilkelminapark, Utrecht, Holland, chairman, director, 66.7 percent.
Harvey J. Wertheim, 9 Rawlings Drive, Melville, N.Y. 11746, president, treasurer, director.
Rainer N. Greeven, 200 East 71 Street, New York, N.Y., secretary, director.
Elizabeth Wehner, 630 West 246th Street, Riverdale, N.Y. 10471, assistant secretary, assistant treasurer.
Pieter Sanders, Burg. Knappertlaan, Schiedam, The Netherlands, shareholder, 16.65 percent.
Jelle Gerben Koldijk, Lindestraat 10, 8266 BG Kampen, The Netherlands, shareholder, 16.65 percent.
Matthias A. Laquer, 65 Laan Van Clingendall, The Hague, Holland, director.
John H. French II, 151 East 72 Street, New York, N.Y. 10023, director.

The applicant proposes to commence operations with a capitalization of $300,000 derived from the sale of 60 shares of common stock. Bob Meijer is the owner of 66.7 percent (40 shares), Pieter Sanders 16.65 percent (10 shares), and Jelle Gerben Koldijk 16.65 percent (10 shares).

The applicant will conduct its operations in the New York area with the intention of making investments throughout the United States and its territories and possessions as may from time to time be approved by SBA as its operating territory. Applicant plans to participate in various types of financing for small businesses and may include straight equity, straight debt, convertible debt, convertible preferred shares and debt with warrants or shares attached. Applicant will also enter into a management advisory contract with Research & Science Investors, Inc. (RASI), 30 East 42d Street, New York, N.Y. 10017. RASI also serves as adviser to two other licensed SBIC's—Van Rietschoten Capital Corp. and Bohlen Capital Corp.

Matters involved in SBA's consideration of the application include the general business reputation of the owner and management, and the probability of successful operations of the new company, in accordance with the act and regulations.

Notice is further given that any person may, not later than October 18, 1978, submit to SBA, in writing, relevant comments on the proposed licensing of this company. Any such communications should be addressed to: Deputy Associate Administrator for Investment, Small Business Administration, 1441 L Street NW., Washington, D.C 20416.

(Catalog of Federal Domestic Assistance Program No. 59.011, Small Business Investment Companies.)

Dated: September 22, 1978.

PETER F. MCNEISH,
Deputy Associate Administrator for Investment.

[FR Doc. 78-27855 Filed 10-2-78; 8:45 am]

[8025-01]

[License No. 09/09-0203]

IMPERIAL VENTURES, INC.

Issuance of Small Business Investment Company License

On December 7, 1977, a notice of application for a license as a small business investment company was published in the FEDERAL REGISTER (vol. 42, No. 235) stating that an application had been filed with the Small Business Administration pursuant to § 107.102 of the regulations governing small business investment companies (13 CFR 107.102(1977)), for a license to operate as a small business investment company by Imperial Ventures, Inc., 9920 South Los Cienega Boulevard, Inglewood, Calif 90301.

The notice published on Imperial Ventures, Inc. stated that the investment policy of the applicant is to provide working capital to operative builders by either making loans and/or purchasing equity securities. Subsequently, the applicant restated its application to become a diversified SBIC.

Interested parties were given until the close of business on December 29, 1977, to submit their comments. No comments were received.

Notice is hereby given that pursuant to section 301(c) of the Small Business Investment Act of 1958, as amended, after having considered the application and all other pertinent information and facts with regard thereto, SBA issued license No. 09/09-0203 to Imperial Ventures, Inc. on August 31, 1978.

(Catalog of Federal Domestic Assistance Program No. 59.011, Small Business Investment Companies.)

Dated: September 22, 1978.

PETER F. MCNEISH,
Deputy Associate Administrator for Investment.

[8025-01]

[Proposed License No. 02/02-0354]

INTERNATIONAL FILM INVESTORS, L. P.

Application for a License To Operate as a Small Business Investment Company

An application for a license to operate as a small business investment company under the Small Business Investment Act of 1958, as amended (Act) (15 U.S.C. 661 et seq.), has been filed with the Small Business Administration pursuant to section 107.102 (1978) by International Film Investors, L. P. (IFI), One Lincoln Plaza, New York, N.Y. 10023.

IFIC has 200 shares of authorized class a common stock all of which are owned by E. F. Hutton & Co., Inc. and 800 shares of class B common stock.

Private capital in the amount of $13,520,000 will be raised through the sale of units of limited partnership interest in IFI at $10,000 per unit in a private placement in a "best efforts" offering.

The applicant has been selected to participate in SBA's movie pilot program subject to meeting all licensing requirements. The applicant was organized to specialize in the financing of the production and distribution of motion pictures. (Classified respectively under the Standard Industrial Classification Manual prepared by the Office of Management and Budget as Industry Nos. 7813, 7814, 7823 and 7824.) For statement of general policy concerning motion picture specialist-licensees, see 42 FR 60729, November 29, 1977, and 43 FR 21439, May 18, 1978.

The limited partnership will have three general partners: International Film Investors Corp. (IFIC), Josiah H. Child, Jr., and John D. Eberts.

The principal officers, directors, and stockholders of IFIC, the managing partner, are as follows:

Name and title

Josiah H. Child, Jr., 11 Lime Street, Boston, Mass. 02108, president, treasurer director; 45 percent class B.
John D. Eberts, 107 Oakwood Court, London W 14, England, executive vice president, director; 30 percent class B.
Paul Bagley, One Battery Park Plaza, New York, N.Y. 10005, director.
Sidney Finger, 875 Fifth Avenue, New York, N.Y. 10021, director.
Herbert Hauser, 25 West 43d Street, New York, N.Y. 10036, director.
Howard G. Minsky, 540 Madison Avenue, New York, N.Y. 10022, director.
Fumio Suzuki, 2-14-3, Chiyoda-ku, Tokyo, Japan, director.
James R. Velde, 838 Lake House Drive, North Palm Beach, Fla. 33408, director.
E. F. Hutton & Co., 100 percent of outstanding class A; 25 percent of outstanding class B.

Matters involved in SBA's consideration of the application, in view of the particular circumstances involved, include (1) the general business reputation and character of the proposed general partners, (2) the reasonable prospects for successful operation of the new SBIC under the management of IFIC (including adequate profitability and financial soundness), in accordance with the Act and regulations, and (3) whether the proposed licensing of the IFI, L. P., would be in furtherance of the purposes of the Act.

Notice is hereby given that any person may, not later than October 18, 1978, submit to SBA, in writing, comments on the proposed SBIC to: Deputy Associate Administrator for Investment, Small Business Administration, 1441 L Street NW., Washington, D.C. 20416.

A copy of this notice will be published in a newspaper of general circulation in New York, N.Y.

(Catalog of Federal Domestic Assistance Program No. 59.011, Small Business Investment Companies.)

Dated: September 27, 1978.

PETER F. MCNEISH,
Deputy Associate Administrator for Investment.

[8025-01]

[Application No. 04/04-5156]

VERDE CAPITAL CORP.

Application for a License To Operate as a Small Business Investment Company

An application for a license to operate as a small business investment company under section 301(d) of the Small Business Investment Act of 1958, as amended (Act) (15 U.S.C. 661 et seq.) has been filed by Verde Capital Corp. (applicant) with the small Business Administration (SBA) pursuant to 13 CFR 107.102 (1978).

The officers and directors are as follows:

Steven J. Green, 8802 Arvida Drive, Coral Gables, Fla. 33134, chairman of the board, assistant secretary and director.

Jerome C. Berlin, 10901 Southwest 93d Court, Miami, Fla. 33176, president, treasurer, and director.

The applicant will maintain an office at 201 Alhambra Circle, Coral Gables, Fla., 33134, and will begin operations with paid-in capital and paid-in surplus of $505,000 derived from the sale of 505 shares of common stock at $1,000 per share to Steven J. Green.

As a small business investment company under section 301(d) of the Act, the applicant has been organized and chartered solely for the purpose of performing the functions and conducting the activities contemplated under the Act, as amended, from time to time, and will provide assistance solely to small business concerns which will contribute to a well-balanced national economy by facilitating ownership in such concerns by persons whose participation in the free enterprise system is hampered because of social or economic disadvantages.

Matters involved in SBA's consideration of the applicant include the general business reputation and character of the proposed owner and management and the probability of successful operations of the applicant under this management, including adequate profitably and financial soundness, in accordance with the Act and SBA rules and regulations.

Any person may, not later than 15 days from the date of publication of this notice, submit to SBA written comments on the proposed applicant. Any such communication should be addressed to the Deputy Associate Administrator for Investment, 1441 L Street NW., Washington, D.C. 20416.

A copy of this notice shall be published in a newspaper of general circulation in Coral Gables, Fla.

(Catalog of Federal Domestic Assistance Program No. 59.011, Small Business Investment Companies.)

Dated: September 25, 1978.

PETER F. MCNEISH,
Deputy Associate Administrator for Investment.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

[Delegation Order No. 4 (Rev. 6)]

ASSISTANT COMMISSIONER, INTERNAL SECURITY DIVISION ET AL.

Delegation of authority

AGENCY: Internal Revenue Service, Treasury.

ACTION: Delegation of Authority.

SUMMARY: Reference to Regional (Examination), Conferees and Chief of Examination Branch has been deleted.

EFFECTIVE DATE: October 1, 1978.

FOR FURTHER INFORMATION CONTACT:

Bernard L. Meehan, 1111 Constitution Avenue NW., Room 2505, Washington, D.C. 20224, 202-566-6849 (not toll free).

This document does not meet the criteria for significant regulations set forth in paragraph 8 of the proposed Treasury directive appearing in the FEDERAL REGISTER for Wednesday May 24, 1978.

JOHN L. WEDICK, JR.,
Director, Examination Division.

Subject: Authority to issue summonses, to administer oaths and certify, and to perform other functions

Issued: October 1, 1978.

1. (a) The authorities granted to the Commissioner of Internal Revenue by 26 CFR 301.7602-1(b), 301.7603-1, 301.7604-1, and 301.7605-1(a) to issue summonses; to set the time and place for appearance; to serve summonses; to take testimony under oath of the person summoned; to receive and examine books, papers, records, or other data produced in compliance with the summons; and to enforce summonses, are delegated to the officers and employees of the Internal Revenue Service specified in paragraphs 1(b), 1(c), and 1(d) of this order and subject to the limitations stated in paragraphs 1(b), 1(c), 1(d), and 6 of this order.

(b) The authorities to issue summonses and to perform the other functions related thereto specified in paragraph 1(a) of this order, are delegated to all District Directors, the Director of International Operations, and the following officers and employees, provided that the authority to issue a summons in which the proper name or names of the taxpayer or taxpayers is not identified because unknown or unidentifiable (hereinafter called a "John Doe" summons) may be exercised only by said officers and employees and by them only after obtaining preissuance legal review by Regional Counsel or the Chief Counsel in the case of Inspection and International Operations.

(1) Inspection: Assistant Commissioner and Director, Internal Security Division.

(2) District Criminal Investigation: Chief of Division.

(3) International Operations: Chiefs of Divisions.

(4) District Collection Activity: Chief of Division.

(5) District Examination: Chief of Division.

(6) District Employee Plans and Exempt Organizations: Chief of Division.

(c) The authorities to issue summonses except "John Doe" summonses, and to perform other functions related thereto specified in paragraph 1(a) of this order, are delegated to the following officers and employees:

(1) Inspection: Regional Inspectors and Assistant Regional Inspectors (Internal Security) and Chief, Investigations Branch.

(2) District Criminal Investigation: Assistant Chief of Division; Chiefs of Branches; and Group Managers.

(3) International Operations: Assistant Director; Chiefs of Branches; Case Managers; and Group Managers.

(4) District Collection Activity: Assistant Chief of Division; Chiefs of Field Branches and Office Branches; Chiefs, Special Procedures Staffs and Groups; and Group Managers.

(5) District Examination: Chiefs of Examination Branches; Case Managers; and Group Managers.

(6) District Employee Plans and Exempt Organizations: Group Managers.

(d) The authority to issue summonses except "John Doe" summonses and to perform the other functions related thereto specified in paragraph 1(a) of this order is delegated to the following officers and employees except that in the instance of a summons to a third-party witness, the issuing officers' case manager, group manager, or any supervisory official above that level, has in advance personally authorized the issuance of the summons. Such authorization shall be manifested by the signature of the authorizing officer on the face of the original and all copies of the summons or by a statement on the face of the original and all copies of the summons, signed by the issuing officer, that he/she had prior authorization to issue said summons and stating the name and title of the authorizing official and the date of authorization.

(1) International Operations: Internal Revenue Agents; Attorneys, Estate Tax; Estate Tax Examiners; Special Agents; Revenue Service and Assistant Revenue Service Representatives; Tax Auditors; and Revenue Officers, GS-9 and above.

(2) District Criminal Investigation: Special Agents.

(3) District Collection: Revenue Officers, GS-9 and above.

(4) District Examination: Internal Revenues Agents; Tax Auditors; Attorneys, Estate Tax; and Estate Tax Examiners.

(5) District Employee Plans and Exempt Organizations: Internal Revenue Agents; Tax Law Specialists; and Tax Auditors.

(e) Each of the officers and employees referred to in paragraphs 1(b), 1(c), and 1(d) of this order may serve a summons whether it is issued by him/her or another official. 2. Each of the officers and employees referred to in paragraphs 1(b), 1(c), and 1(d) of this order authorized to issue summons, is delegated the authority under 26 CFR 301.7602-1(b) to designate any other officer or employee of the Internal Revenue Service referred to in paragraph 4(b) of this order, as the individual before whom a person summoned pursuant to section 7602 of the Internal Revenue Code shall appear. Any such other officer or employee of the Internal Revenue Service when so designated in a summons is authorized to take testimony under oath of the person summoned and to receive and examine books, papers, records, or other data produced in compliance with the summons.

3. Internal Security Inspectors are delegated the authority under 26 CFR 301.7603-1 to serve summonses issued in accordance with this order by any of the officers and employees of the Inspection Service referred to in paragraphs 1(b) (1) and 1(c) (1) of this order even though Internal Security Inspectors do not have the authority to issue summonses.

4. (a) The authorities granted to the Commissioner of Internal Revenue by 26 CFR 301.7602-1(a), and 301.7605-1(a) to examine books, papers, records, or other data, to take testimony under oath and to set the time and place of examination are delegated to the officers and employees of the Internal Revenue Service specified in paragraphs 4(b), 4(c), and 4(d) of this order and subject to the limitations stated in paragraphs 4(c) and 6 of this order.

(b) General designations:

(1) Inspection: Assistant Commissioner; Director, Internal Security Division; Director, Internal Audit Division; Regional In-

V 43/192 OCT 3 78

spectors; Internal Auditors; and Internal Security Inspectors.

(2) District Criminal Investigation: Chief and Assistant Chief of Division; Chiefs of Branches; Group Managers; and Special Agents.

(3) International Operations: Director; Assistant Director; Chief of Divisions and Branches; Special Agents; Case Managers; Group Managers; Internal Revenue Agents; Attorneys, Estate Tax; Estate Tax Examiners; Revenue Service and Assistant Revenue Service Representatives; Tax Auditors; and Revenue Officers.

(4) District Collection Activity: Chief and Assistant Chief of Division; Chiefs of Field Branches and Office Branches; Chiefs, Special Procedures Staffs; Group Managers; and Revenue Officers.

(5) District Examination: Chief of Division; Chiefs of Examination Branches; Case Managers; Group Mangers; Internal Revenue Agents; Tax Auditors; Attorneys, Estate Tax; and Estate Tax Examiners.

(6) District Employee Plans and Exempt Organizations: Chief of Division; Chief, Examination Branch; Chief, Technical Staff; Group Managers; Internal Revenue Agents; Tax Law Specialists; and Tax Auditors.

(7) Service Center: Chief, Examination Division; Chief, Criminal Investigation Staff; Revenue Agents; Tax Auditors; Tax Examiners in the Correspondence Examination Branch; and Special Agents.

(c) District Directors, Service Center Directors, Regional Inspectors, the Chief of Investigation Branch, and the Director of International Operations may redelegate the authority under 4(a) of this order to aides or trainees, respectively, for the positions of revenue agent, tax auditor, tax examiner in the service center Correspondence Examination Branch, tax law specialists, revenue officer, internal auditor, internal security inspector, and special agent, provided that each such aide or trainee shall exercise said authority only under the direct supervision, respectively, as applicable of a revenue agent, tax auditor, tax examiner in the service center Correspondence Examination Branch, tax law specialist, revenue officer, special agent, internal auditor or internal security inspector.

(d) District Directors may redelegate the authority under 4(a) of this order to Revenue Representatives and Office Collection Representatives.

5. Under the authority granted to the Commissioner of Internal Revenue by 26 CFR 301.7622-1, the officers and employees of the Internal Revenue Service referred to in paragraphs 1(b), 1(c), 1(d), and 4(b) and 4(c) of this order are designated to administer oaths and affirmations and to certify to such papers as may be necessary under the internal revenue laws and regulations except that the authority to certify shall not be construed as applying to those papers or documents the certification of which is authorized by separate order or directive. Revenue Representatives and Office Collection Representatives referred to in paragraph 4(d) of this order are not designated to administer oaths or to perform the other functions mentioned in this paragraph.

6. The authority delegated herein may not be redelegated except as provided in paragraphs 4(c) and 4(d).

7. This order supersedes Delegation Order No. 4 (Rev. 5), issued July 2, 1978.

WILLIAM E. WILLIAMS,
Acting Commissioner.

DEPARTMENT OF LABOR

Pension and Welfare Benefit Programs

[Application No. D-817]

EMPLOYEE BENEFIT PLANS

Notice of Proposed Exemption Relating to a Transaction Involving the Allen and O'Hara Employees' Profit-Sharing Trust

AGENCIES: Department of the Treasury/Internal Revenue Service, Department of Labor.

ACTION: Notice of proposed exemption.

SUMMARY: This document contains a notice of pendency before the Internal Revenue Service and the Department of Labor (the Agencies) of a proposed exemption from certain taxes imposed by the Internal Revenue Code of 1954 (the Code) and from the prohibited transactions restrictions of the Employee Retirement Income Security Act of 1974 (the Act). The proposed exemption would exempt the purchase by Allen & O'Hara, Inc. (the Employer) of an office building owned by a corporation which is wholly owned by the Allen and O'Hara Employees' Profit-Sharing Trust (the Trust). the proposed exemption, if granted, would affect participants and beneficiaries of the Trust and the Employer.

DATE: Written comments and requests for a public hearing must be received by the Internal Revenue Service on or before October 30, 1978.

ADDRESS: All written comments and all requests for a hearing (at least six copies) should be addressed to the Internal Revenue Service, 1111 Constitution Avenue NW., Washington, D.C. 20224, Attention: E:EP:PT:1 (D-817). The application for exemption and the comments received will be available for public inspection at the Internal Revenue Service National Office reading room, 1111 Constitution Avenue NW., Washington, D.C. 20224, and in the Public Documents Room of Pension and Welfare Benefit Programs, U.S. Department of Labor, Room N-4677, 200 Constitution Avenue NW., Washington, D.C. 20216.

FOR FURTHER INFORMATION CONTACT:

Timothy S. Smith of the Prohibited Transactions Staff of the Employee Plans division, Internal Revenue Service, 202-566-6761. This is not a toll-free number.

SUPPLIMENTARY INFORMATION: Notice is hereby given of the pendency before the Agencies of an application for exemption from the taxes imposed by section 4975 (a) and (b) of the Code, by reason of section 4975(c)(1)(A) through (E) of the Code, and from the restrictions of section 406(a), 406(b)(1), and 406(b)(2) of the Act. The proposed exemption was requested in an application filed by the Employer pursuant to section 4975(c)(2) of the Code and section 408(a) of the Act, and in accordance with procedures set forth in Rev. Proc. 75-26, 1975-1 C.B. 722, and ERISA Procedure 75-1 (40 FR 18471, April 28, 1975).

SUMMARY OF FACTS AND REPRESENTATIONS

The application contains facts and representations with regard to the proposed exemption which are summarized below. Interested persons are referred to the application and supporting documents on file with the Agencies for the complete representations of the applicants.

1. The Allen and O'Hara Employees' Profit-Sharing Plan (the Plan) was terminated as of October 29, 1976, and the Trust was frozen. The Trustees were directed to convert all of the assets into cash after which distribution would be made to the 31 participants in the Plan.

2. The Trustees of the Plan are Robert A. Elder, Pat J. Jansen, Leyton L. Wright, and Paul O. Bower, all of whom are also officers and/or directors of the Employer, and Joe A. Hohman, who is an employee of the Employer. None of the Trustees are stockholders of the Employer.

3. The Trust owns 100 percent of the shares of North Little Rock Professional Building, Inc. (the Corporation) and has an open account of approximately $136,000 due from the Corporation, representing cash advances made by the Trust to the Corporation during periods of negative cash flow. The Corporation owns and operates an office building located at 18th and Maple Streets, North Little Rock, Ark. Since October 29, 1976, the Trustees have been engaged in converting the assets owned by the Trust into cash, but they have not been able to find a buyer for the stock of the Corporation or for the property it owns.

4. At the time the Directors of the Employer adopted the resolution to terminate the Plan, a resolution was adopted directing the Employer to purchase certain investments of the Plan, including its interest in the Corporation, at the fair market value, to be determined by an independent appraisal, if the Trustees were not able to convert these investments to cash

by June 30, 1977, and if an exemption from the prohibited transactions rules could be obtained from the Department of Labor and the Internal Revenue Service.

5. An appraisal prepared by Ferstl Enterprises, Little Rock, Arkansas, of the physical property of the Corporation (real property and an office building located at 18th and Maple Streets, North Little Rock, Ark.), dated January 25, 1977, states that the fair market value of that property was $400,000. At that time the State of Arkansas leased approximately 75 percent of the office building. The lease was due to expire on June 30, 1977, but the State had given indications that it intended to renew the lease for an indefinite period. Subsequent to January 25, 1977, the State informed the management of the office building that it would not renew the lease when it expired on June 30, 1977, but would go on a month-to-month basis until such time as its new quarters were ready for occupancy, which was estimated to be the last quarter of 1977. An updated appraisal based on the changed circumstances by Ferstl Enterprises, dated May 15, 1977, placed a fair market value of $375,000 on the real property and office building.

6. The real property and office building was listed for sale under an exclusive listing with Hathaway-Moore and Associates, Inc., for 6 months from December 1, 1976, until June 1, 1977. This broker contacted other brokers for interested buyers. Subsequest attempts to sell the property were made by the Employer and through other brokers. On February 9, 1978, an offer was made to purchase the property for $350,000, of which $150,000 would be payable at 8 percent interest over a period of 10 years in equal monthly installments.

7. In a contingent contract, dated November 30, 1977, the Employer agreed to purchase the North Little Rock Professional Building from the Corporation for a total price of $375,000. Under this contract the Employer will assume and agree to pay two loans: The first loan, payable to Aetna Life Insurance Co., dated May 14, 1964, evidenced by a deed of trust and with a principal balance as of January 31, 1978, of approximately $155,994.14; the second, payable to Theresa K. Barnett, evidenced by a Vendors Lien retained in a warranty deed executed December 31, 1963 and assumed on October 15, 1968, and with a principal balance as of January 31, 1978, of approximately $3,780.95. The balance of the purchase price will be paid in cash at closing.

8. Applicants assert that the transaction for which exemption is requested is in the interests of plan participants and protective of the participants' rights because:

(a) If the property of the Corporation and its stock were not converted to cash, but rather the stock and account payable of the Corporation were distributed instead, the 31 participants would not be in a position to effectively supervise the operation of the office building and adequately protect their interests. The participants would realize little, if any, income from this investment for many years and the value of the participants' shares might in time be substantially reduced; and

(b) Many Plan participants who will want to roll over their distribution from the Plan into individual retirement accounts, annuities, or retirement bonds would find this very difficult to accomplish if the stock of, and account due from, the Corporation were distributed to the participants because section 402(a)(5)(C) of the Code provides that property other than cash received in a plan termination distribution must first be transferred to a rollover account. Few, if any, trustees administering individual retirement accounts would be willing to accept minority interests in, and portions of an account payable from, an enterprise such as the Corporation as part of a trust fund.

9. The Employer, which is in the construction, development and management of real estate business, intends to continue efforts to sell the real property and office building.

NOTICE TO INTERESTED PERSONS

All participants in the Plan, the Trustees of the Trust and the members of the Board of Directors of the Employer will be notified by a letter which will contain a copy of this notice of proposed exemption as published in the FEDERAL REGISTER and which will advise these persons of their rights to comment and/or to request a hearing within the period of time specified in the notice. Notification will be given no later than 5 days after the notice is published in the FEDERAL REGISTER.

GENERAL INFORMATION

The attention of interested persons is directed to the following:

(1) The fact that a transaction is the subject of an exemption under section 4975(c)(2) of the Code and section 408(a) of the Act does not relieve a fiduciary or other party in interest or disqualified person with respect to the plan to which the exemption is applicable from certain other provisions of the Code and the Act, including any prohibited transaction provisions to which the exemption does not apply and the general fiduciary responsibility provisions of section 404 of the Act, which, among other things, require a fiduciary to discharge his duties respecting the plan solely in the interests of the plan's participants and beneficiaries and in a prudent fashion in accordance with section 404(a)(1)(B) of the Act; nor does it affect the requirement of section 401(a) of the Code that the plan must operate for the exclusive benefit of the employees of the employer maintaining the plan and their beneficiaries;

(2) The proposed exemption, if granted, will not extend to transactions prohibited under section 4975(c)(1)(F) of the Code and section 406(b)(3) of the Act;

(3) Before an exemption may be granted under section 4975(c)(2) of the Code and section 408(a) of the Act, the Agencies must find that the exemption is administratively feasible, in the interests of the plan and of its participants and beneficiaries, and protective of the rights of the participants and beneficiaries of the plan; and

(4) The proposed exemption, if granted, will be supplemental to, and not in derogation of, any other provisions of the Code and Act, including statutory or administrative exemptions and transitional rules. Futhermore, the fact that a transaction is subject to an administrative or statutory exemption is not dispositive of whether the transaction is in fact a prohibited transaction.

(5) This document does not meet the criteria for significant regulations set forth in paragraph 8 of the proposed Treasury directive appearing in the FEDERAL REGISTER for Wednesday, May 24, 1978 (43 FR 22319).

WRITTEN COMMENTS AND HEARING REQUEST

All interested persons are invited to submit written comments or requests for a hearing on the pending exemption to the address and within the time period set forth above. All comments will be made a part of the record. Comments and requests for a hearing should state the reasons for the writers interest in the proposed exemption. Comments received will be available for public inspection with the application for exemption at the address set forth above.

PROPOSED EXEMPTION

Based upon the representations set forth in the application, the Agencies are considering granting the requested exemption under the authority of section 4975(c)(2) of the Code and section 408(a) of the act and in accordance with the procedures set forth in Rev. Proc. 75-26 and ERISA Procedure 75-1. If the exemption is granted, the tsxes imposed by section 4975 (a) and (b) of the Code, by reason of section 4975(c)(1) (A) Through (E) of the

V 43 / 192

Code, and the restrictions of sections 406(a) and section 406(b)(1) and 406(b)(2) of the act shall not apply to the sale of the North Little Rock Professional Building from the Corporation to the Employer for $375,000 if the sale price is not less than the fair market value of the property. The pending exemption, if granted, will be subject to the express conditions that the material facts and representations contained in the application are true and complete, and that the application accurately describes all material terms of the transaction to be consummated pursuant to the exemption.

Signed at Washington, D.C., this 26th day of September 1978.

FRED J. OCHS,
Director, Employee Plans Division, Internal Revenue Service.

IAN D. LANOFF,
Administrator for Pension and Welfare Benefit Programs, Labor-Management Services Administration, U.S. Department of Labor.

[Prohibited Transaction Exemption 78-16]

EMPLOYEE BENEFIT PLANS

Exemption From the Prohibitions Respecting a Transaction Involving the McDonald's Corp. Saving and Profit-Sharing Trust

AGENCIES: Department of the Treasury/Internal Revenue Service and Department of Labor.

ACTION: Grant of individual exemption.

SUMMARY: This exemption enables the McDonald's Corp. Savings and Profit-Sharing Trust (the Trust) to sell certain Trust assets to Franchise Realty Interstate Corp. (FRIC), a subsidiary of McDonald's Corp. (the Employer).

FOR FURTHER INFORMATION CONTACT:

Timothy Smith, Prohibited Transactions Staff, Employee Plans Divsion, Internal Revenue Service, 1111 Constitution Avenue NW., Washington, D.C. 20224, Attention: E:EP:PT:1, 202-566-6761. (This is not a toll-free number.)

SUPPLEMENTARY INFORMATION: On June 30, 1978, notice was published in the FEDERAL REGISTER (43 FR 28599) of the pendency before the Internal Revenue Service and the Department of Labor (the Agencies) of an exemption form the taxes imposed by section 4975 (a) and (b) of the Internal Revenue Code of 1954 (the Code) by reason of section 4975 (c)(1) (A) through (E) of the Code and from the provisions of section 406(a) and section 406 (b)(1) and (b)(2) of the Employee Retirement Income Security Act of 1974 (the Act) for a transaction described in the application submitted by the Employer. The notice set forth a summary of facts and representations contained in the application for exemption and referred interested persons to the application for a complete statement of the facts and representations. The application has been available for public inspection at the Agencies in Washington, D.C. The notice also invited interested persons to submit comments on the requested exemption to the Internal Revenue Service (the Service). In addition, the notice stated that any interested person might submit a written request that a hearing be held relating to this exemption. No public comments and no requests for a hearing were received by the Service.

GENERAL INFORMATION

The attention of interested persons is directed to the following:

(1) The fact that a transaction is the subject of an exemption granted under section 4975(c)(2) of the Code and section 408(a) of the Act does not relieve a fiduciary or party in interest or disqualified person with respect to a plan to which the exemption is applicable from certain other provisions of the Code and the Act. These provisions include any prohibited transaction provisions to which the exemption does not apply and the general fiduciary responsibility provisions of section 404 of the Act, which, among other things, require a fiduciary to discharge his duties respecting the plan solely in the interest of the participants and beneficiaries of the plan and in a prudent fashion in accordance with subsection (a)(1)(B) of section 404 of the Act, nor does the fact the transaction is the subject of an exemption affect the requirement of section 401(a) of the Code that a plan must operate for the exclusive benefit of the employees of the employer maintaining the plan and their beneficiaries.

(2) This exemption does not extend to transactions prohibited under section 4975(c)(1)(F) of the Code and section 406(b)(3) of the Act.

(3) This exemption is supplemental to, and not in derogation of, any other provisions of the Code and the Act, including statutory or administrative exemptions and transitional rules. Furthermore, the fact that a transaction is subject to an administrative or statutory exemption or transitional rule is not dispositive of whether the transaction is, in fact, a prohibited transaction.

(4) This document does not meet the criteria for significant regulations set forth in paragraph 8 of the proposed Treasury directive appearing in the FEDERAL REGISTER for Wednesday, May 24, 1978 (43 FR 22319).

EXEMPTION

In accordance with section 4975(c)(2) of the Code and section 408(a) of the Act and the procedures set forth in Rev. Proc. 75-26, 1975-1 C.B. 722, and ERISA Procedure 75-1 (40 FR 18471, April 28, 1975), and based upon the entire record, the Agencies make the following determinations:

(a) The exemption is administratively feasible;

(b) It is in the interest of the plan and of the participants and beneficiaries; and

(c) It is protective of the rights of participants and beneficiaries of the plan.

Accordingly, the following exemption is hereby granted under the authority of section 4975(c)(2) of the Code and section 408 (a) of the Act and in accordance with the procedures set forth in Rev. Proc. 75-26 and ERISA Procedure 75-1.

The taxes imposed by section 4975(a) and (b) of the Code by reason by section 4975(c)(1), (A) through (E) of the Code and the restrictions of sections 406(a)(1), 406(b)(1) and 406(b)(2) of the Act shall not apply to a transaction involving the sale of the Trust's one-third interest in a general partnership known as Interstate Investments to FRIC for $176,300, in cash, provided that the sale price is not less than the value of the partnership interest to the Employer or a subsidiary of the Employer and provided further that such value is not less than the fair market value of the partnership interest.

The availability of this exemption is subject to the express conditions that the material facts and representations contained in the application are true and complete and that the application accurately describes all material terms of the transaction to be consummated pursuant to the exemption.

Signed at Washington, D.C., this 26th day of September 1978.

FRED J. OCHS,
Director, Employee Plans Division, Internal Revenue Service.

IAN D. LANOFF,
Administrator, Pension and Welfare Benefit Programs, Labor-Management Services Administration, U.S. Department of Labor.

[Prohibited Transaction Exemption 78-15]

EMPLOYEE BENEFIT PLANS

Exemption From the Prohibitions Respecting a Transaction Involving the Macklanburg-Duncan Co. Pension Trust

AGENCIES: Department of the Treasury/Internal Revenue Service and Department of Labor.

ACTION: Grant of individual exemption.

SUMMARY: This exemption enables the Macklanburg-Duncan Co. Pension Trust (the Trust) to lease a portion of certain real property to a subsidiary of the Macklanburg-Duncan Co. (the Employer) and to sell certain real property to the Employer.

FOR FURTHER INFORMATION CONTACT:

Timothy Smith of the Prohibited Transactions Staff of the Employee Plans Division, Internal Revenue Service, 1111 Constitution Avenue NW., Washington, D.C. 20224, Attention: E:EP:PT:1, 202-566-6761. This is not a toll-free number.

SUPPLEMENTARY INFORMATION: On April 21, 1978, notice was published in the FEDERAL REGISTER (43 FR 17091) of the pendency before the Internal Revenue Service and the Department of Labor (the Agencies) of an exemption from the taxes imposed by section 4975 (a) and (b) of the Internal Revenue Code of 1954 (the Code) by reason of section 4975(c)(1)(A) through (E) of the Code and from the provisions of section 406(a)(1), 406(b)(1), and 406(b)(2) of the Employee Retirement Income Security Act of 1974 (the Act), for a transaction described in an application submitted by the Employer and the trustees of the Trust. The notice set forth a summary of the facts and representations contained in the application for exemption and referred interested persons to the application for a complete statement of the facts and representations. The application has been available for public inspection at the Agencies in Washington, D.C. The notice also invited interested persons to submit comments on the requested exemption to the Internal Revenue Service (the Service). In addition, the notice stated that any interested person might submit a written request that a hearing be held relating to this exemption. No public comments and no requests for a hearing were received by the Service. However, on the basis of an additional representation supplied by the applicants, the exemption for the leasing of the property to which the exemption relates has been extended for a period of 120 days after the final grant of the exemption in order to permit the Trust to dispose of the property in an orderly fashion.

GENERAL INFORMATION

The attention of interested persons is directed to the following:

(1) The fact that a transaction is the subject of an exemption granted under section 4975(c)(2) of the Code and section 408(a) of the Act does not relieve a fiduciary or party in interest or disqualified person with respect to a plan to which the exemption is applicable from certain other provisions of the Code and the Act. These provisions include any prohibited transaction provisions to which the exemption does not apply and the general fiduciary responsibility provisions of section 404 of the Act, which among other things require a fiduciary to discharge his duties respecting the plan solely in the interests of the participants and beneficiaries of the plan and in a prudent fashion in accordance with subsection (a)(1)(B) of section 404 of the Act, nor does the fact the transaction is the subject of an exemption affect the requirement of section 401(a) of the Code that a plan must operate for the exclusive benefit of the employees of the employer maintaining the plan and their beneficiaries.

(2) This exemption does not extend to transactions prohibited under section 4975(c)(1)(F) of the Code and section 406(b)(3) of the Act.

(3) This exemption is supplemental to, and not in derogation of, any other provisions of the Code and the Act, including statutory or administrative exemptions and transitional rules. Furthermore, the fact that a transaction is subject to an administrative or statutory exemption or transitional rule is not dispositive of whether the transaction is in fact a prohibited transaction.

(4) This document does not meet the criteria for significant regulations set forth in paragraph 8 of the proposed Treasury directive appearing in the FEDERAL REGISTER for Wednesday, May 24, 1978 (43 FR 22319).

EXEMPTION

In accordance with section 4975(c)(2) of the Act and the procedures set forth in Rev. Proc. 75-26, 1975-1 C.B. 722, and ERISA Proc. 75-1 (40 FR 18471, Apr. 28, 1975), and based upon the entire record, the Agencies make the following determinations:

(a) The exemption is administratively feasible;

(b) It is in the interests of the Plan and of the participants and beneficiaries; and

(c) It is protective of the rights of participants and beneficiaries of the Plan.

Accordingly, the following exemption is hereby granted under the authority of section 4975(c)(2) of the Code and section 408(a) of the Act and in accordance with the procedures set forth in Rev. Proc. 75-26 and ERISA Proc. 75-1.

The taxes imposed by section 4975 (a) and (b) of the Code by Reason of section 4975(c)(1) (A) through (E) of the Code and the restrictions of section 406(a)(1), 406(b)(1), and 406(b)(2) of the Act shall not apply to transactions involving: (1) The leasing of the south portion of certain real property located at 4411 to 4431 North Santa Fe, Oklahoma City, Okla., by the Trust to American Level Manufacturing Co., a subsidiary of the Employer, for a period ending not more than 120 days after the date of this exemption, provided the rental payments were not less than the fair market rental value for that portion of the property, and (2) the sale of the entire property by the Trust to the Employer for $365,000 cash, provided that this amount is not less than the fair market value of the property.

The availability of this exemption is subject to the express conditions that the material facts and representations contained in the application are true and complete and that the application accurately describes all material terms of the transaction consummated pursuant to the exemption.

Signed at Washington, D.C., this 26th day of September 1978.

IAN D. LANOFF,
Administrator for Pension and Welfare Benefit Programs, Labor-Management Services Administration, U.S. Department of Labor.

FRED J. OCHS,
Director, Employee Plans Division, Internal Revenue Service.

LIST OF COUNTRIES REQUIRING COOPERATION WITH AN INTERNATIONAL BOYCOTT

In order to comply with the mandate of section 999(a)(3) of the Internal Revenue Code of 1954, the Department of the Treasury is publishing a current list of countries which may require participation in, or cooperation with, an international boycott (within the meaning of section 999(b)(3) of the Internal Revenue Code of 1954). This list is the same as the list published in the July 3, 1978, FEDERAL REGISTER.

On the basis of the best information currently available to the Department of the Treasury, the following coun-

V 4 3 / 1 9 2
0 C 3 7 8

tries may require participation in, or cooperation with, an international boycott (within the meaning of section 999(b)(3) of the Internal Revenue Code of 1954).

Bahrain; Egypt; Iraq; Jordan; Kuwait; Lebanon, Libya; Oman; Qatar; Saudi Arabia; Syria; United Arab Emirates; Yemen Arab Republic; and Yemen, Peoples Democratic Republic of.

Dated: September 29, 1978.

DONALD C. LUBICK,
Assistant Secretary (Tax Policy).

Office of the Secretary

TREASURY SMALL BUSINESS ADVISORY COMMITTEE

Meeting

Pursuant to the Federal Advisory Committee Act, Pub. L. 92-263, notice is hereby given that a meeting of the Treasury Small Business Advisory Committee will be held on October 19 and 20, 1978, in room 4121 of the Main Treasury Building, 15th and Pennsylvania Avenue NW., Washington, D.C.

On Thursday, October 19, the Committee will meet as a whole from 10 a.m., in room 4121. Following this meeting, the Subcommittees on Capital Formation, Tax Policy, and Tax Administration will meet from 11 a.m. to 12:30 p.m., and from 2 to 5:30 p.m., in rooms 4426, 4125 of the Main Treasury Building, and room 3313 of the Internal Revenue Service Building, 1111 Constitution Avenue NW., Washington, D.C., respectively. The Committee as a whole will reconvene in room 4121 on Friday, October 20, at 9:30 a.m., and will meet until approximately 12:30 p.m.

The Committee was formed to provide a means of communication between the small business community and Treasury officials on numerous economic issues, including capital formation, tax policy, tax administration, and governmental regulations. The Capital Formation Subcommittee will address issues relating to the National Development Bank proposed by the President, equity formation by venture capital concerns and industrial innovation by small businesses; the Tax Policy Subcommittee will focus on small business mergers into mutual funds, depreciation relief, the effect of ERISA on small business and current tax legislation; and the Tax Administration Subcommittee agenda will include IRS business workshop pilot projects, ERISA, audit and appeal procedures and the use of LIFO by small businesses.

The meeting will be open to the public. A limited number of seats will be available on a first come, first serve basis. In order to facilitate admittance, persons interested in attending are asked to call 566-2857 so that confirmation of space and access procedures can be provided.

Interested persons may file a written statement with the Committee before, during or after the meeting. The Chairman will, as time permits, entertain oral comments from members of the public attending the meeting. Persons interested in making oral statements are asked to call 566-2857 before 5 p.m. on October 18.

Minutes of the meeting will be available on request from the Treasury Small Business Advisory Committee 30 days after the meeting.

Inquiries may be directed to David W. Heleniak, Executive Assistant to the Deputy Secretary, Department of the Treasury, Main Treasury Building, Room 3413, 15th and Pennsylvania Avenue NW., Washington, D.C. 20220, telephone 202-566-2857.

Dated: September 27, 1978.

ROBERT CARSWELL,
Deputy Secretary.

INTERSTATE COMMERCE COMMISSION

[Notice No. 721]

ASSIGNMENT OF HEARINGS

SEPTEMBER 28, 1978.

Cases assigned for hearing, postponement, cancellation, or oral argument appear below and will be published only once. This list contains prospective assignments only and does not include cases previously assigned hearing dates. The hearings will be on the issues as presently reflected in the official docket of the Commission. An attempt will be made to publish notices of cancellation of hearings as promptly as possible, but interested parties should take appropriate steps to insure that they are notified of cancellation or postponements of hearings in which they are interested.

MC 143236 (Sub-16F), White Tiger Transportation, Inc., now being assigned November 13, 1978 (1 day), at New York, NY, in a hearing room to be later designated.
MC 51146 (Sub-599F), Schneider Transport, Inc., now being assigned November 14, 1978 (1 day), at New York, NY, in a hearing room to be later designated.
MC 119789 (Sub-463F), Caravan Refrigerated Cargo, Inc., now being assigned November 15, 1978 (1 day), at New York, NY, in a hearing room to be later designated.
MC 125701 (Sub-6F), Cayuga Bulk Service, Inc., now being assigned November 16, 1978 (2 days), at New York, NY, in a hearing room to be later designated.
MC 143884 (Sub-2), Personalized Agent Service, Inc., now assigned November 1, 1978, at Atlanta, GA, is posponed indefinitely.
MC 114632 (Sub-158F), Apple Lines, Inc., application dismissed.
MC 56679 (Sub-102), Brown Transportation Corp., now being assigned for hearing on January 15, 1979 (2 weeks), at Atlanta, GA, and continued to February 19, 1979 (2 weeks), at Charlotte, NC, March 19, 1979 (2 weeks), at New York City, NY, April 16, 1979 (2 weeks), at Chicago, IL, and May 21, 1979, at Washington, DC, in hearing rooms to be later designated.
MC 105782 (Sub-9F), Hughes Refrigerated Express, Inc., now being assigned for hearing on December 5, 1978 (9 days), at Orlando, FL, in a hearing room to be later designated.
MC 1977 (Sub-28F), Northwest Transport Service, Inc., now being assigned for hearing on January 9, 1978 (14 days), at Denver, CO, in a hearing room to be later designated.

H. G. HOMME, JR.,
Acting Secretary.

[7035-01]

[Decisions Volume No. 34]

DECISION-NOTICE

Decided: September 22, 1978.

The following applications are governed by special rule 247 of the Commission's rules of practice (49 CFR § 1100.247). These rules provide, among other things, that a protest to the granting of an application must be filed with the Commission within 30 days after the date notice of the application is published in the FEDERAL REGISTER. Failure to file a protest, within 30 days, will be considered as a waiver of opposition to the application. A protest under these rules should comply with rule 247(e)(3) of the rules of practice which requires that it set forth specifically the grounds upon which it is made, contain a detailed statement of protestant's interest in the proceeding, (as specifically noted below), and shall specify with particularity the facts, matters, and things relied upon, but shall not include issues or allegations phrased generally. A protestant should include a copy of the specific portions of its authority which protestant believes to be in conflict with that sought in the application, and describe in detail the method—whether by joinder, interline, or other means—by which protestant would use such authority to provide all or part of the service proposed. Protests not in reasonable compliance with the requirements of the rules may be rejected. The original and one copy of the protest shall be filed with the Commission, and a copy shall be served concurrently upon applicant's representative, or upon applicant if no representative is named. If the protest includes a request for oral hearing, such request shall meet the requirements of section 247(e)(4) of the special rules and shall include the certification required in that section.

Section 247(f) provides, in part, that an applicant which does not intend timely to prosecute its application shall promptly request that it be dismissed, and that failure to prosecute an application under the procedures of the Commission will result in its dismissal.

Further processing steps will be by Commission notice, decision, or letter which will be served on each party of record. Broadening amendments will not be accepted after the date of this publication.

Any authority granted may reflect administratively acceptable restrictive amendments to the service proposed below. Some of the applications may have been modified to conform to the Commission's policy of simplifying grants of operating authority.

We find: With the exceptions of those applications involving duly noted problems (e.g., unresolved common control, unresolved fitness questions, and jurisdictional problems) we find, preliminarily, that each common carrier applicant has demonstrated that its proposed service is required by the public convenience and necessity, and that each contract carrier applicant qualifies as a contract carrier and its proposed contract carrier service will be consistent with the public interest and the national transportation policy. Each applicant is fit, willing, and able properly to perform the service proposed and to conform to the requirements of the Interstate Commerce Act and the Commission's regulations. This decision is not a major Federal action significantly affecting the quality of the human environment.

It is ordered: In the absence of legally sufficient protests, filed within 30 days of publication of this decision-notice (or, if the application later becomes unopposed), appropriate authority will be issued to each applicant (except those with duly noted problems) upon compliance with certain requirements which will be set forth in a notification of effectiveness of this decision-notice. To the extent that the authority sought below may duplicate an applicant's existing authority, such duplication shall not be construed as conferring more than a single operating right.

By the Commission, Review Board No. 1, Members Carleton, Joyce, and Jones.

H. G. HOMME, JR.,
Acting Secretary.

MC 1335 (Sub-1F), filed August 17, 1978. Applicant: MOTEK TRANSPORT, INC., a NJ corporation, 345 Main Street, Harleysville, PA 19438. Representative: D. L. Cain (same address as applicant). To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Sugar* (except in bulk) from Philadelphia, PA, to points in NY. (Hearing site: Philadelphia, PA.)

MC 20824 (Sub-36F), filed July 24, 1978. Applicant: COMMERCIAL MOTOR FREIGHT, INC., OF INDIANA, 2141 South High School Road, Indianapolis, IN 46241. Representative: Alki E. Scopelitis, 1301 Merchants Plaza, Indianapolis, IN 46204. [Notice No. 178]

MOTOR CARRIER TEMPORARY AUTHORITY APPLICATIONS

SEPTEMBER 25, 1978.

The following are notices of filing of applications for temporary authority under section 210a(a) of the Interstate Commerce Act provided for under the provisions of 49 CFR 1131.3. These rules provide that an original and six (6) copies of protests to an application may be filed with the field official named in the FEDERAL REGISTER publication no later than the 15th calendar day after the date the notice of the filing of the application is published in the FEDERAL REGISTER. One copy of the protest must be served on the applicant, or its authorized representative, if any, and the protestant must certify that such service has been made. The protest must identify the operating authority upon which it is predicated, specifying the "MC" docket and "Sub" number and quoting the particular portion of authority upon which it relies. Also, the protestant shall specify the service it can and will provide and the amount and type of equipment it will make available for use in connection with the service contemplated by the TA application. The weight accorded a protest shall be governed by the completeness and pertinence of protestant's information.

Except as otherwise specifically noted, each applicant states that there will be no significant effect on the quality of the human environment resulting from approval of its application.

A copy of the application is on file, and can be examined at the Office of the Secretary, Interstate Commerce Commission, Washington, D.C., and also in the ICC field office to which protests are to be transmitted.

MOTOR CARRIERS OF PROPERTY

MC 48958 (Sub-155TA), filed July 31, 1978. Applicant: ILLINOIS-CALIFORNIA EXPRESS, INC., 510 East 51st Avenue, P.O. Box 16404, Denver, CO 80216. Representative: Lee E. [Notice No. 179]

MOTOR CARRIER TEMPORARY AUTHORITY APPLICATIONS

SEPTEMBER 25, 1978.

The following are notices of filing of applications for temporary authority under section 210a(a) of the Interstate Commerce Act provided for under the provisions of 49 CFR 1131.3. These rules provide that an original and six (6) copies of protests to an application may be filed with the field official named in the FEDERAL REGISTER publication no later than the 15th calendar day after the date the notice of the filing of the application is published in the FEDERAL REGISTER. One copy of the protest must be served on the applicant, or its authorized representative, if any, and the protestant must certify that such service has been made. The protest must identify the operating authority upon which it is predicated, specifying the "MC" docket and "Sub" number and quoting the particular portion of authority upon which it relies. Also, the protestant shall specify the service it can and will provide and the amount and type of equipment it will make available for use in connection with the service contemplated by the TA application. The weight accorded a protest shall be governed by the completeness and pertinence of the protestant's information.

Except as otherwise specifically noted, each applicant states that there will be no significant effect on the quality of the human environment resulting from approval of its application.

A copy of the application is on file, and can be examined at the Office of the Secretary, Interstate Commerce Commission, Washington, D.C., and also in the ICC field office to which protests are to be transmitted.

MOTOR CARRIERS OF PROPERTY

MC 57591 (Sub-20TA), filed June 16, 1978, and published in the FEDERAL REGISTER issue of August 17, 1978, and republished as corrected this issue. Applicant: EVANS DELIVERY COMPANY, INC., P.O. Box 268, Pottsville, PA 17901. Representative: Joseph F. Hoary, 121 South Main Street, Taylor, PA 18517. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *General commodities* (except household goods, commodities in bulk, commodities requiring special equipment or handling, classes A and B explosives), from Cranford and Hillside, NJ to York, PA, for 180 days. Supporting shippers: Bristol Myers Products, 225 Long Avenue, Hillside, NJ 07207; Boyle Midway, Division of American Home Products Corp., Manager, Traffic and Distribution, 685 Third Ave., New York, NY 10017. Send protests to: Paul J. Kenworthy, District Supervisor, Interstate Commerce Commission, Bureau of Operations, 314 U.S. Post Office Building, Scranton, PA 18503. The purpose of this republication is to show Cranford in lieu of Crawford; and to add to the supporting shippers, as previously published.

MC 113908 (Sub-447TA), filed August 1, 1978. Applicant: ERICKSON TRANSPORT, INC., P.O. Box 3180 G.S.S., 2105 East Dale St., Springfield, MO 65804. Representative: B. B. Whitehead, P.O. Box 3180 G.S.S., 2105 East Dale Street, Springfield, MO 65804. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Wines, in bulk*, from points in CA to Tampa, FL, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Fruit Wines of Florida, Tampa, FL. Send protests to: District Supervisor John V. Barry, Room 600, 911 Walnut, Kansas City, MO 64106.

MC 114552 (Sub-17TA), filed August 1, 1978. Applicant: SENN TRUCKING CO., a SC corporation, P.O. Box Drawer 220, Newberry, SC 29108. Representative: Frank A. Graham, Jr., 707 Security Federal Bldg., Columbia, SC 29201. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Roofing and building materials and materials used in the installation and application of such commodities* (except commodities in bulk), from Charleston Heights, SC, to points in FL for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Bird & Son, Inc., Washington Street, East Walpole, MA 02032. Send protests to: E. E. Strotheid, District Supervisor, ICC, room 302, 1400 Building, 1400 Pickens Street, Columbia, SC 29201.

MC 116510 (Sub-3TA), filed July 20, 1978. Applicant: KEENAN TRANSIT CO., 3600 North Avenue, Melrose Park, IL 60161. Representative: David I. Harfield, 39 South LaSalle Street, Chicago, IL 60603. Authority sought to operate as a *contract carrier*, by motor vehicle, over irregular routes, transporting: (1) *Steel wire and steel rods* from Bensenville, IL, to Indianapolis, New Castle, and Fort Wayne, IN; Dowagiac and Livonia, MI; St. Louis, MO; and Cleveland, OH; and (2) *materials, equipment, and supplies* used in the manufacture and distribution of steel wire and steel rods from Livonia, MI, and New Castle, IN, to Bensenville, IL, under a bilateral written contract with Nelsen Wire Co., for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Nelsen Wire Co., 1060 East Irving Park Road, Bensenville, IL 60106. Send protests to: Lois M. Stahl, Transportation Assistant, Interstate Commerce Commission, Bureau of Operations, 219 South Dearborn Street, Room 1386, Chicago, IL 60604.

MC 123023 (Sub-7TA), filed July 5, 1978, and published in the FEDERAL REGISTER issue of August 30, 1978, and republished as corrected this issue. Applicant: DIPIETRO TRUCKING CO., 2201 Sixth Avenue Street, Seattle, WA 98134. Representative: George H. Hart, 1100 IBM Building, Seattle, WA 98101. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Bananas*, from Long Beach, San Pedro, and Wilmington, CA, to points in WA, for 180 days. Supporting shippers: There are approximately five statements of support attached to the application which may be examined at the Interstate Commerce Commission in Washington, DC, or copies thereof which may be examined at the field office named below. Send protests to: Hugh H. Chaffee, District Supervisor, Bureau of Operations, Interstate Commerce Commission, 858 Federal Building, Seattle, WA 98174. The purpose of this republication is to show CA in origin, in lieu of GA, as previously published.

MC 123054 (Sub-19TA), filed June 30, 1978, and published in the FEDERAL REGISTER issue of August 30, 1978, and republished as corrected this issue. Applicant: R & H Corp., 295 Grand Avenue, P.O. Box 469, Clarion, PA 16214. Representative: William J. Lavelle, Attorney-at-Law, Wick, Vuono & Lavelle, 2310 Grant Building, Pittsburgh, PA 15219. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Glass containers and closures therefor, and fiberboard boxes*, (1) from points in Clarion County, PA, to points in PA; (2) from the borough of Marienville, Forest County, and the borough of Parker, Armstrong County, PA, to points in PA; (3) from DuBois, PA, to points in NY and NJ, for 180 days. Supporting shippers: Owens-Illinois, Inc., Manager of Transportation, Glass Container Division, P.O. Box 1035, Toledo, OH 43666; Glass Containers Corp., Manager, Rate Analysis and Research, P.O. Box 4118, 535 North Gilbert Avenue, Fullerton, CA 92634. Send protests to: John J. England, District Supervisor, Bureau of Operations, Interstate Commerce Commission, 2111 Federal Building, 1000 Liberty Avenue, Pittsburgh, PA 15222. The purpose of this republication is to change applicant's address to Clarion, PA; to change the territorial description to read from points in Clarion County, PA; and to add to supporting shippers, as previously published.

MC 124813 (Sub-188TA), filed August 1, 1978. Applicant: UMTHUN TRUCKING CO., an IA corporation, 910 P.O. Box 166, South Jackson Street, Eagle Grove, IA 50533. Representative: William L. Fairbank, 1980 Financial Center, Des Moines, IA 50309. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Lime* from the facilities of Linwood Stone Products Co., Inc., at or near Davenport, IA, to points in MN on and south of U.S. Hwy 12 and points in WI for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Linwood Stone Products Co., Inc., Rural Road 2, Davenport, IA 52804. Send protests to: Herbert W. Allen, District Supervisor, Bureau of Operations, Interstate Commerce Commission, 518 Federal Building, Des Moines, IA 50309.

MC 129387 (Sub-72TA), filed August 1, 1978. Applicant: PAYNE TRANSPORTATION, INC., a SD corporation, P.O. Box 1271, Huron, SD 57350. Representative: Doug W. Sinclair, P.O. Box 1271, Huron, SD 57350. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Ralston Purina Co., Checkerboard Square, St. Louis, MO 63188. Send protests to: Herbert W. Allen, District Supervisor, Bureau of Operations, Interstate Commerce Commission, 518 Federal Building, Des Moines, IA 50309.

MC 144326 (Sub-3TA), filed August 1, 1978. Applicant: RICHARDSON TRUCKING, INC., 330 East 8th Street, P.O. Box 967, Greeley, CO 80631. Representative: William Fred Cantonwine, 330 East 8th Street, P.O. Box 967, Greeley, CO 80631. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Waterbed bedding and related advertising material* from Lake Havasu City, AZ, to Greeley, CO for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Bruce Carlisle, d.b.a. NCF Distributing, 2015 Second Avenue, Unit M, Greeley, CO 80631. Send protests to: District Supervisor Roger L. Buchanan, Interstate Commerce Commission, 492 U.S. Customs House, 721 19th Street, Denver, CO 80202.

MC 145161 TA, filed July 31, 1978. Applicant: COMPUTERIZED TRAFFIC SERVICE INC., d.b.a. FREIGHT EXPEDITORS, 131 Richmond Street, El Segundo, CA 90245. Representative: Robert Anderson, 131 Richmond Street, El Segundo, CA 90245. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Air cargo* (general commodities), between Los Angeles, Palm Springs, and San Francisco, CA, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Bird International Sales Corp., Mark 7, Palm Springs, CA 92262. Send protests to: Irene Carlos, Transportation Assistant, Interstate Commerce Commission, Room 1321, Federal Building, 300 North Los Angeles Street, Los Angeles, CA 90012.

MC 145168 (Sub-1TA), filed August 3, 1978. Applicant: JAMES H. BRACKEEN, d.b.a. BRACKEEN TRUCKING, 7427 Eccles, Dallas, TX 75227. Representative: Thomas L. Cook, Hightower, Alexander & Cook, 136 Wynnewood Professional Building, Dallas, TX 75224. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Motorcycles*, (1) from Baton Rouge, LA, to Houston, La Marque, Rosenburg, and Galveston, TX; (2) from Dallas, TX, to Houston, Austin, and San Marcos, TX, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating autority. Supporting shippers: There are approximately 11 statements of support attached to the application which may be examined at the Interstate Commerce Commission in Washington, DC, or copies thereof which may be examined at the field office named below. Send protests to: Opal M. Jones, Transportation Assistant, Interstate Commerce Commission, 1100 Commerce Street, Room 13C12, Dallas, TX 75242.

MC 145186TA, filed August 1, 1978. Applicant: GERALD E. EIDAM, SR. (Individual), d.b.a. SINGLE TOWING, P.O. Box 9057, Salem, OR 97305. Representative: Gerald E. Eidam, Sr., 4095 Milton Street NE., Salem, OR 97303. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Travel trailers* by towaway method from Portland, McMinnville, Mount Angel, Pendleton, and Junction City, OR, to points in CA, ID, MT, NV, and WA; from Boise and Caldwell, ID, to points in OR, CA, NV, MT, WA, UT, AZ, and CO; from Woodland, CA, to points in OR, WA, MT, ID, UT, and AZ, for 180 days. Supporting shippers: There are approximately 9 statements of support attached to the application which may be examined at the Interstate Commerce Commission in Washington, DC, or copies thereof which may be examined at the field office named below. Send protests to: District Supervisor, A. E. Odoms, Bureau of Operations, Interstate Commerce Commission, 114 Pioneer Courthouse, 555 Southwest Yamhill Street, Portland, OR 97204.

MC 145197TA, filed July 27, 1978. Applicant: GATIEN TRANSPORT, INC., St. Bernard de Lacole BP 326, Lacolle, PQ, Canada. Representative: S. Arnold Smith, Craftsbury, VT 05826. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *General commodities*, except commodities in bulk, those of unusual value, class A and B explosives, household goods as defined by the Commission, and commodities requiring special equipment. The authority requested herein is restricted against the transportation of any package or article weighing more than 50 pounds or exceeding 108 inches in length and girth combined, and each package or article shall be considered as a separate and distinct shipment. Between the site of the U.S. Customs House at or near Chaplain, NY, on the one hand, and, on the other, the port of entry on the United States-Canada Boundary Line located at or near Champlain, NY, for 180 days. Supporting shippers: There

V 43 / 192 OCT 3 1978

are approximately 13 statements of support attached to the application which may be examined at the Interstate Commerce Commission in Washington, DC, or copies thereof which may be examined at the field office named below. Send protests to: David A. Demers, District Supervisor, Interstate Commerce Commission, P.O. Box 548, 87 State Street, Montpelier, VT 05602.

By the Commission.

H. G. HOMME, Jr.,
Acting Secretary.

[Ex Parte No. MC-64; General Temporary Order No. 15]

TEMPORARY AUTHORITY APPLICATIONS

Flexible Processing Methods

Decided: September 27, 1978.

There is an emergency resulting from work stoppages affecting a large number of the Nation's rail carriers which are unable to transport passengers and property.

There exists an immediate and urgent need for motor carrier service to supplement temporarily the transportation facilities of the Nation for the movement of passengers and property.

To meet this need the Commission will provide a more flexible method for the processing of applications for temporary authority to render the required motor service.

It is ordered: Pursuant to section 210a(a) of the Interstate Commerce Act (49 U.S.C. 310a(a)), all persons who shall apply to any regional operations director, assistant regional operations director, district supervisor, or their designees, of the Commission's Bureau of Operations are granted temporary authority to transport passengers or property in interstate or foreign commerce, by motor vehicle for a period of not more than 60 days to the extent and scope that any of the above designated officials certify that there is an immediate and urgent need for service.

Special procedures to expedite the filing and processing of these applications will be used.

This grant of temporary authority is conditioned upon compliance with applicable requirements concerning tariff and schedule publications, evidence of security for the protection of the public, and designation of agents for service of process, and further conditioned upon such tariffs and schedules quoting rates, fares, and charges no lower than those of existing rail, water, or motor carriers in the territory in which the operations are to be authorized.

Service performed under temporary authority granted pursuant to this order shall in no way constitute evidence or a showing warranting future issuance of a certificate of public convenience and necessity or permit, as provided in section 207(a) of the Act (49 U.S.C. 307(a)) and section 209(b) of the Act (49 U.S.C. 309(b)).

Temporary authority granted pursuant to this order shall expire as of the first midnight after the issuance of an order by this Commission revoking General Temporary Order No. 15 except as to passengers or property, the transportation of which began prior to that time.

This order shall become effective September 27, 1978.

Notice of this order shall be given to motor carriers, rail carriers, other parties of interest, and to the general public by depositing a copy thereof in the Office of the Secretary of the Commission, Washington, D.C., and by filing a copy thereof with the Director, Office of the Federal Register.

By the Commission, Chairman O'Neil, Vice Chairman Christian, Commissioners Brown, Stafford, Gresham, and Clapp.

NANCY L. WILSON,
Acting Secretary.

FEDERAL DEPOSIT INSURANCE CORPORATION.

NOTICE OF CHANGES IN SUBJECT MATTER OF AGENCY MEETING

Pursuant to the provisions of subsection (e)(2) of the "Government in the Sunshine Act" (5 U.S.C. 552b(e)(2)), notice is hereby given that at its open meetng held at 10 a.m. on September 28, 1978, the Corporation's Board of Directors voted on motion of Acting Chairman John G. Heimann, seconded by Director William M. Isaac (Appointive), to withdraw the following items from considertion:

Memorandum and resolution proposing the final adoption of a new part 345 of the Corporation's rules and regulations, to be entitled "Community Reinvestment."

Memorandum and resolution proposing the publication for comment of amendments to part 303 of the Corporation's rules and regulations to delegate the Board's authority to approve requests, pursuant to section 19 of the Federal Deposit Insurance Act, for the Corporation's consent to service of persons convicted of offenses involving dishonesty or a breach of trust as directors, officers, or employees of insured banks.

Memorandum and resolution proposing the publication for comment of amendments to parts 303, 304, and 328 of the Corporation's rules and regulations to revise the Corporation's procedures relating to remote service facilities.

The Board further determined, by the same vote, that no earlier notice of the changes in the subject matter of the meeting was practicable.

Dated: September 28, 1978.

FEDERAL DEPOSIT INSURANCE CORPORATION,
ALLAN R. MILLER,
Executive Secretary.

2

FEDERAL DEPOSIT INSURANCE CORPORATION.

TIME AND DATE: 3 p.m., October 5, 1978.

PLACE: Board Room, 6th Floor, FDIC Building, 550 17th Street NW., Washington, D.C.

STATUS: Open.

MATTERS TO BE CONSIDERED:

Disposition of minutes of previous meetings.

Request for a report on the competitive factors involved in a proposed merger:

Request by the Comptroller of the Currency for a report on the competitive factors involved in the proposed merger of Wilbur National Bank, Oneonta, N.Y., with the National Bank of Delaware County, Walton, Walton, N.Y.

Recommendations with respect to payment for legal services rendered and expenses incurred in connection with receivership and liquidation activities:

Venable, Baetjer & Howard, Baltimore, Md., in connection with the liquidation of assets acquired by the Corporation from Farmers Bank of the State of Deleware, Dover, Del.

Lemle, Kelleher, Kohlmeyer & Matthews, New Orleans, La., in connection with the liquidation of Republic National Bank of Lousiana, New Orleans, La.

Parsons, Canzona, Blair & Warren, Red Bank, N.J., in connection with the liquidation of Bank of Bloomfield, Bloomfield, N.J.

Strasburger & Price, Dallas, Tex., in connection with the liquidation of the Hamilton National Bank of Chattanooga, Chattanooga, Tenn.

Recommendations with respect to the amendment of Corporation rules and regulations:

Resolution proposing the final adoption of a new part 345 of the Corporation's rules and regulations, to be entitled "Community Reinvestment."

Resolution proposing the final adoption of amendments to part 303 of the Corporation's rules and regulations, entitled "Applications, Requests, and Submittals," to adopt certain minimum procedures in connection with the processing of applications subject to the provisions of the Community Reinvestment Act of 1977.

Resolution proposing the publication for comment of amendments to parts 303, 304, and 328 of the Corporation's rules and regulations to revise the Corporation's procedures relating to remote service facilities.

Memorandum and resolution proposing the final adoption of amendments to part 335 of the Corporation's rules and regulations, entitled "Securities of Insured State Nonmember Banks," in order to bring that part into substantial similarity with comparable regulations of the Securities and Exchange Commission.

Memorandum and resolution proposing additional delegations of authority from the Board of Directors to the Committee on Liquidations, Loans and Purchases of Assets (Case No. 43,673).

Memorandum proposing the purchase of new computer equipment.

Reports of committees and officers:

Minutes of the actions approved by the Committee on Liquidations, Loans and Purchases of Assets pursuant to authority delegated by the Board of Directors.

Report of the Executive Secretary regarding his transmittal of "no significant effect" competitive factor reports.

Reports of the Director of the Division of Bank Supervision with respect to applications or requests approved by him and the various Regional Directors pursuant to authority delegated by the Board of Directors.

Reports of security transactions authorized by the Acting Chairman.

CONTACT PERSON FOR MORE INFORMATION:

Alan R. Miller, Executive Secretary, 202-389-4446.

3

FEDERAL DEPOSIT INSURANCE CORPORATION.

TIME AND DATE: 3:30 p.m., October 5, 1978.

PLACE: Board Room, 6th floor, FDIC Building, 550 17th Street NW., Washington, D.C.

STATUS: Closed.

MATTERS TO BE CONSIDERED:

Applications for Federal deposit insurance:

Bank of St. Francisville, a proposed new bank to be located at 108 East Commerce Street, St. Francisville, La., for Federal deposit insurance.

Tecumseh Bank, a proposed new bank to be located at 1213 Gordon Cooper Drive, Tecumseh, Okla., for Federal deposit insurance.

Bank of Lubeck, a proposed new bank to be located at State Highway 2, Lubeck (P.O. Parkersburg), W. Va., for Federal deposit insurance.

Application for consent to merge and establish branches:

Peoples Bank & Trust Co., Rocky Mount, N.C. an insured State nonmember bank, for consent to merge under its charter and title with the Cumberland Bank, Fayetteville, N.C., also an insured State nonmember bank, and for consent

V 43 / 192 OCT 3 1978 UMI

to establish the Cumberland Bank's main office and four branch offices as branches of the resulting bank.

Application for consent to acquire assets, assume liabilities, and establish branches:

First Peoples Bank of New Jersey, Haddon Township (P.O. Westmont), N.J., an insured State nonmember bank, for consent to acquire the assets of and assume the liability to pay deposits made in the Mainland Bank, Linwood, N.J., also an insured State nonmember bank, and for consent to establish the five offices of the Mainland Bank as branches of First Peoples Bank of New Jersey.

Recommendations regarding liquidation of a bank's assets acquired by the Corporation in its capacity as receiver, liquidator or liquidating agent of those assets:

Case No. 43,661-SR—Chatham Bank of Chicago, Chicago, Ill.

Case No. 43,662-L—Franklin National Bank, New York, N.Y.

Resolution proposing the publication for comment of amendments to parts 303, 304, and 328 of the Corporation's rules and regulations to revise the Corporation's procedures relating to remote service facilities.

Memorandum and resolution proposing the final adoption of amendments to part 335 of the Corporation's rules and regulations, entitled "Securities of Insured State Nonmember Banks," in order to bring that part into substantial similarity with comparable regulations of the Securities and Exchange Commission.

Memorandum and resolution proposing additional delegations of authority from the Board of Directors to the Committee on Liquidations, Loans and Purchases of Assets (Case No. 43,673).

Memorandum proposing the purchase of new computer equipment.

Memorandum regarding the Corporation's participation n the proposed "Minority Bank Development Program."

Reports of committees and officers:

Minutes of the actions approved by the Committee on Liquidations, Loans and Purchases of Assets pursuant to authority delegated by the Board of Directors.

Report of the Executive Secretary regarding his transmittal of "no significant effect" competitive factor reports.

Reports of the Director of the Division of Bank Supervision with respect to applications or requests approved by him and the various Regional Directors pursuant to authority delegated by the Board of Directors.

Reports of security transactions authorized by the Acting Chairman.

Title 42—Public Health

CHAPTER I—PUBLIC HEALTH SERVICE, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

PART 124—MEDICAL FACILITY CONSTRUCTION AND MODERNIZATION

Standards of Construction and Equipment for Hospital and Medical Facilities

AGENCY: Public Health Service, HEW.

ACTION: Final rules.

SUMMARY: These rules establish the general standards of construction, modernization, and equipment for medical facilities assisted under title XVI of the Public Health Service Act. The standards themselves are contained in HEW publication (HRA) 78-14012, "Minimum Requirements of Construction and Equipment for Hospital and Medical Facilities," which is incorporated by reference in these rules.

EFFECTIVE DATE: October 3, 1978.

ADDRESS: Copies of the document containing the standards, HEW Publication (HRA) 78-14012, "Minimum Requirements of Construction and Equipment for Hospital and Medical Facilities," may be obtained from the Acting Director, Division of Resources Development, Room 6-41, Center Building, 3700 East-West Highway, Hyattsville, Md. 20782.

FOR FURTHER INFORMATION CONTACT:

Colin C. Rorrie, Jr., Ph. D., Acting Director, Bureau of Health Planning and Resources Development, Room 6-22, Center Building, 3700 East-West Highway, Hyattsville, Md. 20782, 301-436-6850.

SUPPLEMENTARY INFORMATION: On October 28, 1977, a notice of proposed rulemaking was published in the FEDERAL REGISTER (42 FR 56916) to propose rules implementing the requirement of section 1602(2) of the Public Health Service Act ("the Act"), 42 U.S.C. 300o-1(2), that the Secretary of Health, Education, and Welfare prescribe by regulations "general standards of construction, modernization, and equipment" for facilities assisted under title XVI of the Act.

The notice proposed revision of the standards contained in the document entitled, "Minimum Requirements of Construction and Equipment for Hospital and Medical Facilities," DHEW publication No. (HRA) 76-4000. This revision of the standards is the latest in a series of manuals developed to provide reasonable standards for the construction and modernization of hospitals and medical facilities. The current revision incorporates changes and additions reflecting the present state of the art and community needs.

Interested person were afforded the opportunity to submit written comments concerning the proposed regulations. A number of comments were received concerning the changes proposed. In considering these comments, the Secretary has endeavored to emphasize performance needs and to restrict this document to the appropriate minimum requirements while leaving maximum opportunity for innovation. Many suggestions made which were not accepted on this basis to become part of the minimum requirements nevertheless are very appropriate for guide materials and will be retained for possible inclusion in future publications.

Several of the comments called attention to additional requirements imposed by certain States, indicating that some areas have particular problems that may indicate a need for unique regulations. The Secretary recognizes the rights of States to impose further restrictions but has limited these minimum requirements to those which, insofar as possible, are applicable to the Nation as a whole.

A few comments indicated a fear that these construction requirements would be applied to existing facilities built in accordance with previously established standards. The Secretary has attempted to clarify that, while conformance with these minimums is desirable for all facilities, they are regulatory only for those portions of existing and new facilities that are assisted under title XVI of the Act.

Several comments indicated a concern that these minimums would be considered maximums. The Secretary stresses that these standards are indeed minimums; however, he recognizes that for higher levels of care it may be appropriate that the standards established herein be exceeded. The Secretary feels this is consistent with current efforts to contain costs in the hospital sector by not prescribing more expensive structural requirements unless there is a clear indication that such requirements will have a medical benefit. Consequently, these standards do not prescribe the provision of services for communities based on population or expected needs. Rather, the standards establish minimum construction requirements if a facility elects to provide such services.

Several comments were received recommending that energy conservation measures be addressed more specifically. Accordingly, the final regulations place greater emphasis on conservation. The standards have been clarified to permit use of variable air volume and load shedding systems in many areas of hospitals and medical facilities. In addition, there are provisions for the reduction of ventilation rates during periods of nonuse. Additional editorial clarifications have been made to encourage energy conservation and good design while maintaining considerations for life cycle operating costs and acceptable levels of patient care.

Some suggestions for energy conservation measures were rejected because of the potential deleterious effect upon patient care. The Department has attempted to avoid making any changes in the standards which might reduce operating costs at the expense of quality care.

Some comments suggested that the standards be more restrictive concerning insulation required, design temperatures, fenestration and siting, as well as limitations on the use of plastics, water, etc. However, the Secretary has decided to give the maximum flexibility possible in areas where there is no consensus as to the best approach to a design problem. He is concerned that overly restrictive standards in the absence of clear evidence in support of such standards will inhibit innovation and possibly reduce optimal care.

A number of suggestions resulted in additional emphasis on the need for maximum accessibility to facilities by the handicapped. Several comments raised specific objections to ambiguities in the referenced standards, American National Standards Institute (ANSI) 117.1, and called attention to items considered impractical, expensive, and if enforced literally, of dubious benefit. However, inclusion of this reference is required because of regulations enforced by other agencies. The ANSI standards are in the process of being revised, and the Department anticipates that this will result in a more precise specification of accessibility. It should be noted, however, that reference to the present Office of Facilities Engineering Guide Manual has been deleted since it in effect is an elaboration of the present ANSI 117.1 requirements. Revisions of the ANSI standards will be distributed as policy and/or guide material become available.

Several comments indicated a misunderstanding of the wording and intent of the sections covering nurseries and pediatrics. Accordingly, the standards for nurseries and pediatric services have been revised to distinguish between special care nurseries and intensive care units for infants (for which no standards are included). References to isolation type bassinets have been

deleted since most of these provide protection of the contained infant only. The maximum capacity of the nursery has been established at 16 regardless of the bassinet type. In addition, the requirement has been clarified that a single large work area may serve any number of individual nurseries on the condition that direct access to each nursery is provided and there is isolation from public or other hospital activities.

One comment requested that the requirements specify that design must be such that the pediatrician could examine the infant in its crib within the nursery.

However, the Secretary has chosen to leave the requirements as flexible as possible so as not to interfere with any techniques and procedures that are clinically acceptable.

Another comment urged that wood be accepted as noncombustible when treated with appropriate chemicals. The Secretary recognizes the advantages of wood construction for many facilities. However, the regulations implementing titles XVIII and XIX of the Social Security Act make reference to National Fire Protection Association (NFPA) Code 101 and, for the sake of consistency, the Secretary has decided that these requirements should be in agreement with those of NFPA 101, including the definition of noncombustibility.

The suggestion was made that all hospitals contain sprinkler systems, regardless of construction. The Secretary recognizes the value of sprinklers and notes that they are specifically required in hazardous areas but feels that the past record clearly supports the present position of requiring sprinklers throughout only in certain types of facilities.

Several comments were concerned about flame spread tests required for finishes, particularly for carpets. The NPRM proposed requiring the Steiner tunnel test (ASTM E-84).

However, this was questioned because that procedure requires that the sample be installed inverted on the ceiling of the test chamber. Recently, a radiant panel test has been developed testing carpet in its natural position on the floor. It was suggested that the radiant panel test be utilized in lieu of the Steiner tunnel test and that it be required only for carpet in corridors. All other carpet would be subject to the so-called pill test (passage of which is required for all carpet available on the market by regulations of the Consumer Product Safety Commission).

On the basis of tests and research conducted by the National Bureau of Standards (NBS), Department of Commerce, the Secretary has determined that utilization of the radiant panel test in corridors and means of egress will provide an adequate degree of safety. Inasmuch as this test is in the process of being recognized by the National Fire Protection Association (NFPA) and by the American Society for Testing and Material (ASTM) and is being required by other components of the Department, the Secretary has accepted the suggestion. Therefore, reference to the ASTM E-84 test has been deleted and NFPA 253-1978 (flooring radiant panel test) with a required minimum value of 0.45 watt/cm² has been substituted in its place.

Miscellaneous comments resulted in assorted changes in a variety of other areas: incinerator installations may in certain situations be in boiler room areas; cloth towels may be used in handwashing facilities in lieu of paper towels under certain circumstances; provisions are made for the scavenging of waste anesthetizing gases; the maximum water temperature for handwashing facilities is revised; tubs and or/sitz baths for post partum patients are allowed; smoke and fan controls for ventilation systems are required under certain conditions; and a requirement for the testing of medical gas systems is added to minimize potential errors.

Accordingly, 42 CFR Part 124 is amended as set forth below.

NOTE.—The Department of Health, Education, and Welfare has determined that this document does not contain a major proposal requiring preparation of an inflation statement required under Executive Order 11821 and OMB Circular A-107.

Dated: May 2, 1978.

JULIUS B. RICHMOND,
Assistant Secretary for Health.

Approved: September 25, 1978.

HALE CHAMPION,
Acting Secretary.

Subpart C of 42 CFR Part 124 is added, to read as follows:

Subpart C—Standards of Construction, Modernization, and Equipment

Sec.
124.200 Applicability.
124.201 General requirements.
124.202 Conformity to State and local requirements.
124.203 Equipment.

AUTHORITY: Sec. 215 of the Public Health Service Act, 58 Stat. 690 as amended (42 U.S.C. 216); sec. 1602(2) of the Public Health Service Act, 88 Stat. 2258 (42 U.S.C. 300o-1(2)).

§ 124.200 Applicability.

The provisions of this subpart apply to all applications for construction, modernization, or conversion assistance under this part.

§ 124.201 General requirements.

Plans and specifications for each project submitted to the Secretary of Health, Education, and Welfare shall be prepared in accordance with "Minimum Requirements of Construction and Equipment for Hospital and Medical Facilities" (DHEW Publication No. (HRA) 78-14012), which is hereby incorporated by reference and deemed published herein. This document is available to interested persons upon request to the Division of Resources Development, Bureau of Health Planning and Resources Development, Health Resources Administration, Department of Health, Education, and Welfare or to the Department's regional offices as listed in 45 CFR 5.31. The Secretary may approve plans and specifications which contain deviations from the requirements prescribed in DHEW publication No. (HRA) 78-14012 if he is satisfied that the purposes of the requirements have been fulfilled.

NOTE.—Incorporation by reference provision approved by the Director of the FEDERAL REGISTER on May 8, 1978, and is on file in the FEDERAL REGISTER library.

§ 124.202 Conformity to State and local requirements.

The design and construction covered by the plans and specifications must conform to the applicable State and local laws, codes, and ordinances and to the approved State medical facilities plan. The plans and specifications must be complete and adequate for contract purposes and, except for projects assisted under section 1625 of the Act, have the approval and recommendation of the State health planning and development agency designated under section 1521 of the Act.

§ 124.203 Equipment.

Equipment shall be provided in the kind and to the extent necessary for the proper functioning of the facility as planned.

AID TO FAMILIES WITH DEPENDENT CHILDREN (AFDC); TITLE IV–A OF THE SOCIAL SECURITY ACT

Good Cause for Refusing To Cooperate

V 43 / 192 OCT 3 78

[4110-07]

Title 45—Public Welfare

CHAPTER II—OFFICE OF FAMILY ASSISTANCE (ASSISTANCE PROGRAMS), DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

PART 232—SPECIAL PROVISIONS APPLICABLE TO TITLE IV-A OF THE SOCIAL SECURITY ACT

Good Cause for Refusing To Cooperate

AGENCY: Social Security Administration, HEW.

ACTION: Final regulation.

SUMMARY: On January 16, 1978 (43 FR 2170), the Department published a final regulation specifying standards under which State and local welfare agencies shall determine whether an applicant or recipient of aid to families with dependent children (AFDC) has good cause for refusing to cooperate in establishing paternity and securing child support.

These regulations replace those standards with new standards which more clearly reflect the Department's intent and make other changes in response to public comments.

EFFECTIVE DATE: These regulations become effective on December 4, 1978. Any State may implement these provisions sooner at its discretion.

FOR FURTHER INFORMATION CONTACT:

Steve Henigson, telephone 202-472-4510.

SUPPLEMENTARY INFORMATION:

Background

Section 208 of Pub. L. 94-88, enacted August 1, 1975, requires the Secretary to promulgate standards under which State and local welfare agencies shall determine whether an applicant or recipient of aid to families with dependent children (AFDC) has good cause for refusing to cooperate in establishing paternity and securing child support.

After a notice of proposed rulemaking (published August 13, 1976; 41 FR 34299) the Department adopted a final good cause regulation on January 16, 1978 (43 FR 2170); effective March 17, 1978. The preamble that accompanied that regulation fully explained its purpose and basis. That preamble, together with today's publication, should be consulted for a complete understanding of the following regulations.

Public Participation

The January 16, 1978, regulations solicited further public comment on the regulation for 90 days after the effective date. The Department believed the additional comment period was advisable because the NPRM was controversial and because additional comments would allow the Department to evaluate the effectiveness of the regulation and make necessary amendments. The Department received over 80 comments during the comment period. They were almost equally divided between State and local IV-D agencies and district attorneys on one hand and legal services and other advocate groups on the other.

In addition, in an effort to insure the broadest possible public participation in the process of evaluating the effect of the regulation, the Department held a public hearing on May 5, 1978. (Announced in the FEDERAL REGISTER Apr. 13, 1978; 43 FR 15457.) Twenty-one individuals testified at the hearing, representing State and local welfare and child support enforcement agencies, district attorneys, legal services organizations, children's advocate groups, psychiatric professional associations, and others. In addition, 29 written statements were submitted to become part of the hearing record. The hearing participants represented approximately the same mix of interests as the written comments.

Generally, the State or local agencies and district attorneys criticized the regulation as placing unreasonable burdens on the child support enforcement program; both in terms of administrative effort and by creating a "loophole" which would permit unjustified non-cooperation. The legal services and other advocate groups generally were supportive of the regulation or indicated a belief that it did not go far enough to insure that harm to the child or caretaker does not result from the child support enforcement process.

After reviewing all of the comments and the hearing record, the Department believes that some major regulatory changes are warranted. Those changes are discussed below. Other amendments have been made to insure that the Department's intent is clearly expressed. Among those are clarifications which were adopted after the regulation became effective and previously appeared in a program instruction issued by the Department (SSA-AT-78-13 (OFA) and OCSE-AT-78-8, both dated Apr. 5, 1978; notice published in the FEDERAL REGISTER on Apr. 13, 1978; 34 FR 15424). These clarifications responded to questions raised by some State agencies and Members of Congress.

In addition several changes have been made to make the regulations more easily readable. The regulation has been reformatted from one long section 45 CFR 232.13 to several shorter ones. The regulations now appear at 45 CFR 232.40 through 232.49.

Recognition of the Benefits of Establishing Paternity

Several commenters criticized the regulations for not requiring applicants and recipients and State and local agencies to weigh the benefits a child derives from establishing paternity at some time in the process of deciding a good cause claim. In the preamble to the prior regulations, the Department interpreted section 402(a)(26) of the Social Security Act, which conditions AFDC benefits on cooperation in paternity and child support enforcement proceedings, as implementation of the Congressional assumption that establishing paternity and securing support is in the best interest of the child.

Included among the potential benefits the child may derive from having paternity legally established are the right to inheritance and the possibility of social security, veterans or other government benefits. In addition the child benefits directly if the support payments obtained are greater than the AFDC grant. The Department concluded that Congress intended the good cause exception to excuse cooperation only in those relatively few cases in which the benefit of establishing paternity was outweighed by the harm that could result from an applicant's participation in those proceedings. The Department agrees that the benefits derived from establishing paternity are relevant to the child's best interest.

Thus, the Department has amended the regulations to expressly recognize the benefits of establishing paternity. Section 232.40(b)(2)(i)(A) now requires that the notice advising applicants and recipients of the availability of the good cause exception also advise them of the potential benefits a child may derive from establishing paternity and securing support. This change should assure that applicants and recipients will consider the benefits to be derived from cooperation prior to requesting the good cause exception.

Notice Requirements

Under the prior regulations, State and local agencies had to provide all applicants and recipients with a detailed notice prior to requiring them to cooperate under § 232.12. The Department thought that a detailed, complete notice would not only insure that applicants and recipients were fully informed of their right to claim good cause but also discourage applicants and recipients from asserting good cause claims in inappropriate cases. Due to the complexity of the notice provision the Department published a model notice which States could adopt for their own use. States that use the HEW model could be sure that their notice would be in conformity with the regulation.

Both hearing witnesses and letter writers objected to the model notice. When criticized from both the applicant's and State and local agencies' points of view, the notice was said to be too complex. Many thought that the detailed information included would be needed only by those applicants or recipients who actually intended to claim good cause, and that a simple, brief statement explaining the availability of the exception would suffice as a standard notice. Several witnesses stressed that applicants are already overwhelmed by the forms they receive during intake procedures and, at that time, could not possibly comprehend the information contained in the proposed notice. When criticized from an administrative point of view, the 3-page notice was thought to be too expensive to print in large quantities and too bulky to add to the applicant's or recipient's case file. In response to this criticism, the Department has amended the regulation that provided the requirements for good cause notices. Section 232.40(b) offers States the option of using either a two part or single combined notice form.

Under the first option, the State must issue an initial notice to all applicants and recipients who have been requested to cooperate in paternity or child support enforcement proceedings. This first notice must: advise the individual of the benefits a child may derive from establishing paternity (see the preceding discussion of those benefits); state that an unexcused refusal to cooperate will result in loss of AFDC eligibility for the caretaker relative; state that the individual has the right to claim good cause for refusing to cooperate; and inform the individual that additional information on the good cause exception is available upon request or following a good cause claim. The additional information is contained in the second notice, which will be provided "promptly," without the applicant or recipient having to reschedule a followup appointment or endure unnecessary delays. The second notice must explain: what circumstances will support a good cause finding; how to corroborate good cause; and, as applicable under the State plan, whether or not the child support enforcement agency will attempt to establish paternity and collect support without the caretaker's cooperation after a finding of good cause.

Under the latter option, States may elect to use a single combined notice form. These States must provide all appropriate applicants and recipients with one notice that contains all of the information required on each of the two notices described above.

The notice requirement has also been amended to clarify the notification procedure. The notice must be in writing and a copy must be furnished to the applicant or recipient. The new § 232.40(b)(1) also requires that the applicant or recipient and the caseworker acknowledge that the applicant or recipient received the notice. A copy of the notice, signed and dated by both the applicant or recipient and the case worker will be placed in the case record. The Department has revised its model notice to conform with these amendments. Appendix A to this regulation is a model 2-part notice which meets the requirements of § 232.40(b)(2).

Emotional Harm

Many commenters discussed whether AFDC applicants and recipients should be exempted from the cooperation requirement when cooperation potentially could cause emotional harm to either the caretaker relative or the child. The groups favoring emotional harm as a basis for granting the good cause exception included the American Academy of Child Psychiatry, the Center on Social Welfare Policy and Law, the Child Welfare League of America, the Children's Defense Fund, and numerous legal services organizations. The groups that opposed either the recognition of emotional harm as a basis for finding good cause or the emotional standard announced in the prior regulation included various State departments of social services and district attorneys.

Those who supported the Department's recognition of potential emotional harm as a basis for finding good cause offered examples of situations in which the emotional harm exception would prevent people from facing the choice of either subjecting themselves and their children to harm or losing their welfare benefits. However, in the majority of the cases described, cooperation threatened to result in physical as well as emotional harm. A number of the examples given were accounts of women who had been abused by their husbands and were threatened with similar or worse treatment if they either named the father or tried to collect child support from him. In several cases, women had spent years escaping from the fathers of their children, and said they would do without AFDC benefits rather than allow these men to learn their whereabouts. In a few of the cases cited, the father did not know that a child had been born, and the mother feared violent consequences were the father to learn of the child's existence through a paternity or support action. The Department believes that these types of cases are more properly evaluated in terms of potential physical harm because the alleged emotional harm essentially results from fear of physical harm.

Other factual situations presented did provide less hybrid examples of potential emotional harm. Several of these cases involved mothers who feared that a meeting between father and child would have a deleterious psychological effect on the child. This fear was aroused by various factors, including the character of the father (e.g., drug addict, criminal, or psychotic); the child's acceptance of a stepfather; and prior traumas the father had caused the child.

Those opposed to finding good cause on the basis of potential emotional harm expressed objections that ranged from strenuous to mild. Several argued that, because emotional harm is experienced subjectively, a genuine claim of emotional harm would be difficult to impossible to identify, and that cooperation would be excused in many unmeritorious cases, including cases in which the mother is in collusion with the father. While some who raised this point concluded that emotional harm should be eliminated as a basis for finding good cause, others concluded that the Department should amend the emotional harm regulations in order to minimize the danger of abuse. A second objection commenters raised was that the regulatory scheme required agency personnel to make difficult psychological evaluations that could only be properly made by mental health professionals.

In response to the former criticism, the Department always intended to limit good cause findings to cases in which cooperation would result in a serious and identifiable emotional problem. To further clarify its original intention, the Department has added a new subsection to the regulation, § 232.42(b), which defines "emotional harm." This definition accomplishes several goals. First, it specifies that "emotional harm" must be serious. Second, the definition minimizes the risk of excusing cooperation in unmeritorious claims by requiring the emotional impairment to be demonstrable and to have the observable consequence of substantially impairing the individual's functioning. However, the definition does not, as some commenters requested, require that the emotional harm be "lasting." Serious emotional harm is itself a strict good cause standard, and the Department wants to avoid the implication of an additional durational test which would have precluded serious impairments that were not likely to continue indefinitely.

V 4 3 / 1 9 2

As to the involvement of mental health professionals, the Department does not believe that its regulations should require a consultation with a mental health professional in every case. The regulation leaves referral to a mental health professional to the State's discretion.

Section 232.40(c)(1) now requires an applicant or recipient who claims good cause to specify the basis of the claim, provide corroboration of the good cause circumstance, and, if requested, assist in an investigation of the claim. In accordance with the scheme set out in this regulation, the Department views emotional harm cases as falling into three classes.

The first class includes the upper threshold of cases in which applicants or recipients who claim good cause on the basis of emotional harm are able to clearly corroborate that claim. These individuals would typically provide the State or local agency with medical records or other documentation of a current emotional condition that would obviously be aggravated by the required cooperation. The Department thinks that the State agencies should not have to incur the expense and inconvenience of arranging additional agency-funded psychiatric consultations in these cases.

The second class of cases includes the lower threshold of clearly unmeritorious claims. In these cases, the circumstance presented by the applicant or recipient, even if true, would not meet the regulatory test for emotional harm. Again, the Department feels that psychiatric consultations would be unnecessary in these cases.

The third class of cases includes the middle ground cases in which, with the currently available information, the State or local agency is unable to determine whether or not good cause exists. The Department agrees that proper assessment of these claims may necessitate sending the claimant to a mental health professional (e.g., psychiatrist, psychologist, or psychiatric social worker) for an evaluation and report. The resulting medical record could then be used by the State or local agency in making the good cause determination. In this group of cases, the applicant or recipient still has the burden of providing corroborative evidence under § 232.40(c)(1), and a good cause determination could be conditioned on her submission to the required evaluations. A mental health evaluation may be available to the good cause claimant through the medicaid or social services programs. If it is necessary for the State to obtain the evaluation, the costs incurred by the State will be subject to Federal financial participation at the regular title IV-A rate.

The revised regulation retains the requirement that, in making good cause determinations based on emotional harm, the agency must consider several special factors. (The requirement is now at § 232.42(c).) This requirement is not intended to necessitate referral to a mental health professional. As discussed above, in cases at either end of the spectrum, the agency will be able to determine whether or not good cause exists, including a consideration of the relevant special factors listed at § 232.42(c), without resorting to outside referral.

Finally, commenters criticized the reference to "emotional upset" in the former § 232.13(g)(1)(iii). That requirement is now at § 232.42(c)(3), and the word "upset" has been deleted and replaced by the word "impairment."

Proof of Good Cause

Commenters criticized several aspects of the prior regulatory scheme for substantiating good cause claims. State, county, and city welfare agencies criticized the regulations for imposing unreasonably burdensome duties on them. More specifically, they opposed both their responsibility to help applicants and recipients gather evidence of good cause and their responsibility to conduct good cause investigations. District attorneys criticized the regulations for failing to specify that, despite agency assistance in substantiating their claims, applicants and recipients have the burden of proving a good cause circumstance. Legal aid, welfare rights, and other advocate groups criticized the regulations for not compelling State and local agencies to accept the only form of evidence that most battered wives would be able to present, i.e., sworn statements from themselves or some party with knowledge of the beatings. Some commenters objected to the regulation's exclusive list of documentary evidence that could support an uninvestigated good cause finding, arguing that the list was too restrictive. Other commenters argued that only the last item on the list of acceptable documentary evidence, which allowed HEW to establish additional forms of acceptable evidence through "appropriate issuances," should be deleted.

In an attempt to accommodate the legitimate concerns of as many commenters as possible, the Department has revamped the regulatory provisions on evidence. The previous requirement of an agency investigation in every case in which a claimant did not produce a specific form of documentary evidence is now abandoned. The new regulation specifies that an applicant or recipient has the burden of establishing the existence of good cause and makes agency investigation discretionary with the State.

The regulation at § 232.40(c)(1) clearly sets forth the good cause claimant's burden of establishing the existence of a good cause circumstance that meets the test of the regulation. First, the claimant is required to specify the circumstance which she believes provides sufficient good cause to excuse her from the cooperation requirement. Second, the claimant must, with one very limited exception discussed below, provide corroboration of the good cause circumstance. Finally, the claimant must, upon request, provide sufficient information to permit the agency to investigate the good cause claim. The requested information may include the absent father's name and address, if known. If the claimant does not satisfy this requirement, the regulation provides that the agency will determine that good cause does not exist.

The above rule has an important exception (§ 232.43(f)) under which the State or local agency can find good cause based on the anticipation of physical harm even though the applicant or recipient has not provided corroborative evidence, if such corroborative evidence is not available. The Department added this exception to the corroboration requirement in response to a point raised by several representatives of battered women, that battered women are often too afraid or too ashamed to tell anyone about the beatings they have received and that, therefore, they would not be able to corroborate their valid good cause claims. The Department was cognizant of the need to draw this exception narrowly. Consequently § 232.43(f) requires State or local agencies making a determination of good cause under the exception to note in the case record that the claim is credible without corroborative evidence and that such evidence is not available.

The claimant has the burden of establishing her credibility as well as explaining why no evidence is available. The regulation also requires the State to conduct an investigation of this limited class of claim. While such an investigation may not necessarily establish the good cause circumstance, it should verify the credibility of the claimant. After conducting its investigation, the Agency will be permitted to make a finding that good cause exists, but such finding is not effective until reviewed and approved by supervisory personnel of the title IV-A agency.

In all but the very few cases that fall within the § 232.43(f) exception, then, applicants and recipients must corroborate their good cause claims. When corroboration is required, the good cause claimant must provide that corroborative evidence within 20 days from the day the claim was made. The

regulation at § 232.43(b) permits the agency to grant an exception in those unusual cases where the claimant can not obtain the required evidence within 20 days. This exception must be approved by supervisory personnel.

The regulation (§ 232.43(d)) also specifically authorizes, but does not require, the agency after reviewing the claimant's corroboration, to request that additional corroborative evidence be provided. Until this additional evidence is submitted, the good cause claimant would not have met the corroboration requirement imposed by § 232.40(c)(1)(ii). Since aid can not begin until all documents are submitted, the Department was concerned that the claimant be notified promptly and specifically of the additional corroboration needed and has included a requirement for such notification in the regulation.

The regulation also clarifies the agency's duty to help the applicant gather evidence. The prior regulation simply required State and local agencies, upon request to "assist the applicant or recipient in obtaining the required evidence." This language evoked fears that agencies would have to conduct a "fishing expedition" every time an applicant or recipient requested them to do so. The new regulation (§ 232.43(e)) expressly limits the agency's responsibility to granting reasonable assistance by advising applicants and recipients how to obtain documents and by undertaking reasonable efforts to obtain any specific documents the applicant or recipient is not reasonably able to obtain on her own. These changes conform with recommendations from commenting State agencies, yet still assure that claims will not be denied because applicants or recipients do not understand how to obtain available documents or because institutions refuse to locate records for members of the public.

The State or local agency's method of reviewing the claim has also undergone several changes in the new regulations. First, the agency is no longer required to accept any of the several specified documents as exclusive forms of evidence in an uninvestigated good cause claim. Instead the new § 232.43(c) lists the five forms of documentary evidence named in the prior regulation as examples of the types of evidence the agency should consider. This change is responsive to complaints that the list of evidence in the prior regulation was too restrictive and inflexible.

Additionally, the Department has made two changes in the list of documents itself. It has deleted the provision which allowed HEW to announce by appropriate issuances acceptable forms of evidence. The Department has also expanded the list so that it now recognizes sworn statements from individuals other than the applicant or recipient with knowledge of the facts upon which the applicant's or recipient's good cause claim is based. This expansion is responsive to assertions by legal aid societies that many AFDC applicants and recipients would not often contact the official sources recognized in the other categories of evidence if they had been beaten or experienced some other abuse that would be relevant to a good cause claim. The Department is requiring these statements to be sworn in order to minimize the risk of fraud. Under § 232.43(e), the agency will provide the applicant or recipient with assistance in obtaining sworn statements.

The Department's recognition of sworn statements as evidence of good cause does not imply that an applicant or recipient can corroborate her good cause claim with her own sworn statement. States may, at their option, require good cause claimants to assert the basis of their claims on their AFDC applications, which are signed under penalty of perjury. States may also accept an affidavit from the caretaker relative as part of the good cause investigation or determination process. However, sworn statements obtained through either method would not satisfy the corroboration requirement of § 232.40(c).

Once the proper corroborative evidence has been submitted, § 232.43(a) now requires the State or local agency to examine the evidence and determine whether it verifies the good cause claim. To make a final determination that good cause exists the agency must be satisfied that the claim meets the stringent test of these regulations. For example, if a claimant submits a mental health prognosis, to find good cause, the agency must be satisfied that the potential emotional harm is serious.

Pursuant to § 232.43(g), the agency may, at its discretion, either decide the claim on the basis of the corroborative evidence plus the claimant's statements or may conduct an investigation of the claim. The Department has made agency investigations discretionary in order to simplify the process of deciding good cause claims. The nature and scope of the investigation is also left to agency discretion.

The new regulation, like the prior regulation, conditions a good cause finding on the applicant's or recipient's proof that cooperation is "reasonably anticipated to result in" physical or emotional harm. The Department developed this burden of proof in response to the criticism that the NPRM standard of "likely to result in" implied an unintended technical burden of proof. Although some commenters were dissatisfied with "reasonably anticipated to result," and suggested alternatives (such as "proves beyond a reasonable doubt," and "shows by clear and convincing proof"), the Department rejected these alternatives. The Department finds "reasonably anticipated to result in" a sufficiently stringent test.

In the cases of applicants and recipients who believe they can substantiate their good cause claim without the State or local agency contacting the putative or absent parent, the regulations provide alternate remedies, if the agency refuses to find good cause without this contact. The applicant or recipient can, as before, present additional evidence that would eliminate the need for the contact or withdraw the application for assistance. The regulation is now clear that recipients may have the AFDC case closed. (See § 232.43(h)(2) (i) and (ii).) In addition, the claimant can also have the claim denied (§ 232.43(h)(2)(iii)). Under 45 CFR 205.10 this remedy, denial of the claim, gives the claimant the right to a review of the good cause decision.

The regulations require the State to record in the AFDC case, record the final determination that good cause does or does not exist (§ 232.41(b)). Some State AFDC agencies complained that this requirement was overly burdensome in that it requires that the case record reflect the agency's findings and basis for the determination. This provision parallels the requirement at 45 CFR 206.10(a)(8) that each decision regarding AFDC eligibility or ineligibility be supported by facts in the applicant's or recipient's case record. The Department believes such documentation is necessary to permit adequate review of good cause determinations.

In summary, the changes in the regulations are intended to limit the administrative burden of deciding good cause claims by making investigations discretionary in all cases rather than mandatory in some cases and by requiring all but excepted applicants and recipients to corroborate their good cause claims. The regulations are also designed to mitigate applicants' and recipients' burden of corroboration by recognizing sworn statements (other than from the applicant or recipient) as a form of corroborative evidence and by including provisions designed to accommodate the one limited category of uncorroborable claims.

Privacy and Confidentiality Issues

Commenters were concerned that the proposed good cause procedures posed two threats to the privacy of applicants and recipients. Some foresaw that the IV-D agency might gain access to the evidence gathered and submitted in support of a successful

OCT 3 1978

V 4 3 / 1 9 2

0 C 3 7 8 LIMI

good cause claim. Others were troubled by the possibility that, as a result of agency attempts to verify the good cause claim, the absent parent or putative father might learn of the applicant's or recipient's whereabouts, which could be the very result that the good cause claim is intended to prevent.

In response to the first concern, section 402(a)(9) of the Social Security Act requires each State plan under title IV-A of the Social Security Act to provide safeguards restricting the use of disclosure of information concerning applicants or recipients to "purposes directly connected with * * * the plan or program of the State under (among others) part * * * D of this title." Regulations at 45 CFR 205.50 which implement the statutory safeguards require that restrictions on improper uses or disclosures of information must be enacted through State statutes which impose legal sanctions on violators. 45 CFR 302.18 makes the same safeguards applicable to information contained in title IV-D case records. These safeguards should allay fears that IV-D agencies will gain access to the evidence supporting a good cause claim and then use the information for a purpose not directly connected with the IV-D program, e.g., conducting totally State funded paternity or child support enforcement proceedings. Thus, even though the evidence supporting a successful good cause claim may be revealed to the IV-D agency pursuant to § 232.44, IV-D would only be able to use the evidence in a paternity or child support enforcement proceeding conducted pursuant to § 232.49. That regulation conditions the initiation of paternity or support enforcement proceedings following a finding that good cause exists on a IV-A agency determination that the proceedings would not cause harm to the child or caretaker relative if conducted without their participation. The regulation further requires that, if IV-A approves paternity or support proceedings, the applicant or recipient be notified of the IV-A decision and given an opportunity to withdraw her application or have the case closed. This IV-A review followed by a notice giving the applicant or recipient an opportunity to withdraw her application, or have the case closed should sufficiently protect applicants and recipients from harmful consequences of any IV-D activities that postdate a finding of good cause.

The second concern raised, that the putative father or absent parent will learn the whereabouts of applicants and recipients as a result of the agency's good cause investigation, focuses on the discretion of agency personnel. While the Department cannot assure that all good cause investigations will be free of administrative error, the Department is sensitive to the problem raised and does intend to issue instructional materials designed to minimize this risk.

Deadlines on Good Cause Determinations

The new regulations now require the State agency to establish a time frame of 45 days or less for reaching good cause determinations. The allowable time period starts to run when the applicant or recipient makes a good cause claim. Section 232.41(c) also allows the State or local agency to take longer than this time limit in cases in which the agency would have great difficulty gathering the information required to verify the claim or where the claimant has not provided corroboration promptly. The regulation requires proper documentation of the case record whenever this exception is invoked.

This deadline was added because the Department, like several commenters, felt that some time frame for deciding good cause claims was desirable in order to prevent lax enforcement of the cooperation requirement. Although commenters who opposed the inclusion of a deadline were concerned that a deadline would encourage arbitrary denials in cases that required unusually time consuming verification, the Department believes that the exception to the time limits is sufficiently flexible to avert this danger.

The Department adopted 45 days as a reasonable time limit. It coincides with the 45 day maximum time period a state plan may allow for making initial AFDC eligibility determinations. This time standard is also consistent with commenters' estimates of how long reaching a good cause determination would take. The department believes that, since the regulation will allow additional time in those cases in which it is difficult to obtain necessary information, § 232.41(c) has maintained sufficient flexibility to avoid rushed decisions.

Additionally, the Department would like to emphasize that § 232.41(c) is not intended to defeat the policy of § 232.46, which prohibits State or local agencies from denying, delaying or discontinuing assistance pending a good cause. determination. Thus, if the State or local agency determines that an applicant who has claimed good cause and complied with the requirement of § 232.40(c) is otherwise eligible for AFDC, aid will begin immediately, even though the time period in which the agency must decide the good cause claim has not yet elapsed.

Periodic Review

The prior regulation required periodic review of determinations that good cause exists not less frequently than at each required redetermination of AFDC eligibility. Several State and local agencies commented that the periodic review requirement was unnecessary and overly burdensome. They argued that in many cases in which good cause is found the circumstances which provide a basis for the determination will not change and the review would be a futile exercise.

In response to this argument the Department has modified the periodic review requirement (45 CFR 232.47) to indicate that review is only necessary when the original good-cause determination was based on a circumstance that is subject to change.

This regulation establishes the minimum review requirement. The States may, of course, conduct more frequent reviews. In addition, the Department does not intend that the State or local agency must make a complete good-cause determination for every review. The agency need only examine the cases subject to change and follow-up on those cases where a change in circumstances has occurred.

Reviews of good-cause determinations made under the old regulation which are conducted after the effective date of these new good-cause regulations must be made under the new good-cause standards at the next redetermination. If the old good-cause determination does not meet the test of the new regulation the good-cause finding will be rescinded.

Data

In its announcement of the May 5 hearing, the Department requested testimony addressing, among other things, how the current regulation was working. The Department had hoped to receive date with which it could assess whether the regulation was, as some commenters had feared, causing unjustified good-cause findings and diminishing the effectiveness of the child support enforcement program. While no statistical data were presented the majority of commenters expressed the opinion that there would be few good-cause claims and the exception would rarely come into play. A few commenters presented the opposite view that while valid good-cause exception should be few, good cause would be claimed and determinations would have to be made in a great number of AFDC cases.

These regulations retain the requirement that the State keep records of activities under the good-cause exception. Using these data, the Department will carefully monitor the effects of these regulations.

Enforcement Without the Caretaker's Cooperation

Section 232.49, formerly § 232.13(m), permits IV-D agencies to proceed to establish paternity or enforce support without the participation of the child or caretaker relative, if the IV-A agency determines that, although good cause is present, enforcement could be accomplished without risk of harm. Most commenters thought that the regulation envisioned a nearly impossible situation. They believed that absent fathers would not readily distinguish between support enforce-proceedings brought with the mother's cooperation and those brought without her cooperation is just as likely to result in harm, enforcement without her cooperation. Therefore, if the mother's cooperation is likely to result in the same harm. In response to this criticism, the Department has made this provision of the regulation a State plan option.. The State can elect to make a second determination as to whether or not IV-D activities can proceed without the caretaker's cooperation after every determination that good cause exists; or the State can elect to avoid, in all cases, the second determination and halt all IV-D activities once good cause is found. The Department did not delete the provision because it feels that the provision serves the legitimate purpose of assuring that the good-cause exception causes the least possible interference with IV-D activities.

The Department does not think that the regulation poses any immediate threat that would outweigh its benefit. On the other hand, the Department does not feel justified in making the provision mandatory on the States. The Department does not anticipate that the provision will be utilized in a sufficient number of cases to warrant imposing a potentially burdensome administrative requirement on the States.

Eligibility Pending a Good-Cause Determination

Numerous comments addressed the question of whether applicants who are otherwise eligible for AFDC should receive financial assistance during the period in which their good-cause claims are pending. The majority strongly supported paying benefits during this period.

The few who opposed the payment of benefits pending the good-cause determination based their position on section 402(a)(26) of the Social Security Act. They argued that section 402(a)(26) conditions AFDC eligibility on either cooperating in paternity and child support enforcement proceedings or being "found" to have good cause for refusing to cooperate. Applicants and recipients who have claimed good cause but have not yet been found by the State or local agency to have good cause, they asserted, could not satisfy either of these eligibility conditions.

The Department was not persuaded by this argument and has decided to maintain the policy of not denying, delaying, or discontinuing AFDC payments to otherwise eligible individuals who have furnished the evidence and the information required to support a good-cause claim.

AFDC recipients are by definition needy, and suspending or denying aid pending a good-cause determination could impose such hardships that individuals eligible for good-cause exception may be deterred from making a claim, fearing even a temporary loss or delay of benefits. It is the Department's position that once an applicant or recipient has corroborated a good-cause claim, sanctions for noncooperation cannot be imposed until the State or local agency actually denies the good-cause claim. The Department believes that the revised regulations minimize the potential for abuse and the possible costs attributable to payments on claims that are eventually denied. In situations where good cause is claimed at time of initial AFDC application, a finding of eligibility for the mother or other caretaker relative cannot be made until the applicant has provided corroboration of the good-cause claim.

The States will have an incentive to raise the cooperation issue during the initial application process and then promptly determine whether or not good cause exists before the question of eligibility is decided and thereby avoid starting AFDC payments for caretaker relatives who are ineligible due to nonexcused refusal to cooperate.

The Department's position is consistent with the legislative history of the good-cause exception. The congressional intent was that the support enforcement process not cause harm to the same children it was attempting to help through establishing paternity and securing support. The Department believes that a policy that would deny or delay aid pending a good-cause determination would result in needless hardship to many children and would be inconsistent with congressional intent.

Federal Financial Participation in Good-Cause Investigations and Determinations

Several commenters again suggested that good-cause investigations and determinations should receive the higher rate of Federal financial participation available for title IV-D activities. The Department has not changed its opinion that good-cause investigations and decisions are by statute title IV-A activities. Consequently, the Department does not have the discretionary authority to provide Federal financial participation for these activities at the rate available for title IV-A activities.

Effective Date

Today these regulations were submitted to Congress and to the Senate Committee on Finance and the House Committee on Ways and Means for their review. These regulations will become effective on December 4, 1978. States are free to implement them sooner, if they so desire.

45 CFR Part 232 is amended by amending § 232.12 and by revising the content of § 232.13 and redesignating it as §§ 232.40 through 232.49.

1. The introductory text of paragraph (a) in 45 CFR 232.12 is amended to read as follows:

§ 232.12 Cooperation in obtaining support.

The State plan must meet all requirements of this section.

(a) The plan shall provide that as a condition of eligibility for assistance, each applicant for or recipient of AFDC will be required to cooperate (unless good cause for refusing to do so is determined to exist in accordance with §§ 232.40 through 232.49 of this chapter) with the State in:

* * * * * * *

2. The content of 45 CFR 232.13 is revised and redesignated as § 232.40 through 232.49 which are added to Part 232 to read as set forth below; § 232.13 is vacated and reserved. The table of contents for Part 232 now reads as set forth below.

Sec.

232.1 Scope.
232.2. Child support program; State plan requirements.
232.10 Furnishing of social security numbers.
232.11 Assignment of rights to support.
232.12 Cooperation in obtaining support.
232.13 [Reserved]
232.20 Treatment of child support collections made in the Child Support Enforcement Program as income and resources in the Title IV-A Program.
232.30 Cost allocation; joint staff and service staff.
232.40 Claiming good cause for refusing to cooperate.
232.41 Determination of good cause for refusal to cooperate.
232.42 Good cause circumstances.
232.43 Proof of good cause claim.
232.44 Participation by the State IV-D agency.
232.45 Notice to the IV-D agency.
232.46 Granting or continuation of assistance.
232.47 Periodic review of good cause determination.
232.48 Record keeping in good cause.
232.49 Enforcement without the caretaker's cooperation.

Appendix A—Model Two-Part Good-Cause Notice

V 4 3 / 1 9 2
0 C 3 7 8

§ 232.40 Claiming good cause for refusing to cooperate.

(a) *Opportunity to claim good cause.* The plan shall provide that an applicant for, or recipient of, AFDC will have the opportunity to claim good cause for refusing to cooperate as required by § 232.12.

(b) *Notice to applicant or recipient.* (1) The plan shall provide that: (i) Prior to requiring cooperation under § 232.12, the State or local agency will notify the applicant or recipient of the right to claim good cause as an exception to the cooperation requirement and of all the requirements applicable to a good cause determination;

(ii) The notice will be in writing, with a copy furnished to the applicant or recipient; and

(iii) The applicant or recipient and the caseworker will acknowledge that the applicant or recipient received the notice by signing and dating a copy of the notice, which will be placed in the case record.

(2) The notice may be in two parts. If the State elects a two part notice:

(i) The first notice shall: (A) Advise the applicant or recipient of the potential benefits the child may derive from the establishment of paternity and securing support;

(B) Advise the applicant or recipient that by law, cooperation in establishing paternity and securing support is a condition of eligibility for AFDC;

(C) Advise the applicant or recipient of the sanction provided by § 232.12 for refusal to cooperate without good cause;

(D) Advise the applicant or recipient that good cause for refusal to cooperate may be claimed; and that if the State or local agency determines, in accordance with this section, that there is good cause, the applicant or recipient will be excused from the cooperation requirement; and

(E) Advise the applicant or recipient that upon request, or following a claim of good cause, the agency will provide further notice with additional details concerning good cause.

(ii) The second notice, which will be provided promptly upon request of the applicant or recipient or following a claim of good cause, shall:

(A) Indicate that the applicant or recipient must provide corroborative evidence of a good cause circumstance (as specified in § 232.43 (b) and (f)) and must, when requested, furnish sufficient information to permit the State or local agency to investigate the circumstances;

(B) Inform the applicant or recipient that upon request, the State or local agency will provide reasonable assistance in obtaining the corroborative evidence;

(C) Inform the applicant or recipient that on the basis of the corroborative evidence supplied and the agency's investigation if necessary, the State or local agency will determine whether cooperation would be against the best interests of the child for whom support would be sought;

(D) List the circumstances (as specified in § 232.42) under which cooperation may be determined to be against the best interests of the child;

(E) Inform the applicant or recipient that the State Child Support Enforcement agency may review the State or local agency's findings and basis for a good cause determination and may participate in any hearings concerning the issue of good cause; and

(F) As applicable, (see § 232.49) inform the applicant or recipient that either: The State Child Support Enforcement agency will not attempt to establish paternity and collect support in those cases where the applicant or recipient is determined to have good cause for refusing to cooperate; or the State Child Support Enforcement agency may attempt to establish paternity and collect support in those cases where the State or local agency determines that this can be done without risk to the applicant or recipient if done with out their participation.

(3) The State or local agency may, at its option, provide a single combined notice that contains all of the elements in paragraphs (b) (2) (i) and (ii) of this section.

(4) Appendix A to this Part 232 is a suggested two part notice format that meets the requirements of this section.

(c) *Requirements upon applicant or recipient.* (1) The plan shall provide that an applicant for, or recipient of, AFDC who refuses to cooperate and who claims to have good cause for refusing to cooperate has the burden of establishing the existence of a good cause circumstance. Such applicant or recipient will be required to:

(i) Specify the circumstances (see § 232.42) that the applicant or recipient believes provide sufficient good cause for not cooperating.

(ii) Corroborate the good cause circumstances in accordance with § 232.43; and

(iii) If requested, provide sufficient information (such as the putative father or absent parent's name and address, if known) to permit an investigation pursuant to § 232.43(g).

(2) The plan shall provide that if the requirements of paragraph (c)(1) of this section are not met, the State or local agency shall on that basis determine that good cause does not exist.

§ 232.41 Determination of good cause for refusal to cooperate.

The plan shall provide that:

(a) For each applicant for or recipient of AFDC who claims to have good cause, the State or local agency will determine, in accordance with §§ 232.40, 232.42 and 232.43, whether good cause exists.

(b) The State or local agency's final determination that good cause does, or does not exist will:

(1) Be in writing;

(2) Contain the agency's findings and basis for determination; and

(3) Be entered into the AFDC case record.

(c) The State or local agency's determination of whether or not good cause exists will be made within a State established time standard that does not exceed 45 days from the day the good cause claim is made. The State or local agency may exceed this time standard only where the case record documents that the agency needs additional time because the information required to verify the claim cannot be obtained within the time standard or that the claimant did not provide corroborative evidence within the period required by § 232.43(b).

(d) If the State or local agency determines that good cause does not exist:

(1) The applicant or recipient will be so notified and afforded an opportunity to cooperate, withdraw the application for assistance, or have the case closed; and

(2) Continued refusal to cooperate will result in imposition of the sanction provided by § 232.12.

§ 232.42 Good cause circumstances.

(a) *Circumstances under which cooperation may be "against the best interests of the child."* The plan shall provide that the State or local agency will determine that cooperation in establishing paternity and securing support is against the best interests of the child only if:

(1) The applicant's or recipient's cooperation in establishing paternity or securing support is reasonably anticipated to result in:

(i) Physical harm to the child for whom support is to be sought;

(ii) Emotional harm to the child for whom support is to be sought;

(iii) Physical harm to the parent or caretaker relative with whom the child is living which reduces such person's capacity to care for the child adequately;

(iv) Emotional harm to the parent or caretaker relative with whom the child is living, of such nature or degree that it reduces such person's capacity to care for the child adequately; or

(2) At least one of the following circumstances exists, and the State or local agency believes that because of the existence of that circumstance, in the particular case, proceeding to establish paternity or secure support would be detrimental to the child for whom support would be sought.

(i) The child for whom support is sought was conceived as a result of incest or forcible rape;

(ii) Legal proceedings for the adoption of the child are pending before a court of competent jurisdiction; or

(iii) The applicant or recipient is currently being assisted by a public or licensed private social agency to resolve the issue of whether to keep the child or relinquish him for adoption, and the discussions have not gone on for more than 3 months.

(b) *Physical Harm and Emotional Harm defined.* Physical harm and emotional harm must be of a serious nature in order to justify a finding of good cause under paragraph (a)(1) of this section. A finding of good cause for emotional harm may only be based upon a demonstration of an emotional impairment that substantially affects the individual's functioning.

(c) *Special considerations related to emotional harm.* The plan shall provide that, for every good cause determination which is based in whole or part upon the anticipation of emotional harm to the child, the parent or the caretaker relative, as provided for in paragraphs (a)(1) (ii) and (iv) of this section, the State or local agency will consider the following:

(1) The present emotional state of the individual subject to emotional harm;

(2) The emotional health history of the individual subject to emotional harm;

(3) Intensity and probable duration of the emotional impairment;

(4) The degree of cooperation to be required; and

(5) The extent of involvement of the child in the paternity establishment or support enforcement activity to be undertaken.

§ 232.43 Proof of good-cause claim.

The plan shall provide that:

(a) The State or local agency will make a good-cause determination based on the corroborative evidence supplied by the applicant or recipient only after it has examined the evidence and found that it actually verifies the good-cause claim.

(b) The applicant or recipient who claims good cause must provide corroborative evidence within 20 days from the day the claim was made. In exceptional cases where the State or local agency determines the applicant or recipient requires additional time because of the difficulty of obtaining the corroborative evidence, the agency shall allow a reasonable additional period of time upon approval by supervisory personnel.

(c) A good-cause claim may be corroborated with the following types of evidence:

(1) Birth certificates or medical or law enforcement records which indicate that the child was conceived as the result of incest or forcible rape;

(2) Court documents or other records which indicate that legal proceedings for adoption are pending before a court of competent jurisdiction;

(3) Court, medical, criminal, child protective services, social sevices, psychological, or law enforcement records which indicate that the putative father or absent parent might inflict physical or emotional harm on the child or caretaker relative;

(4) Medical records which indicate emotional health history and present emotional health status of the caretaker relative or the child for whom support would be sought; or, written statements from a mental health professional indicating a diagnosis or prognosis concerning the emotional health of the caretaker relative or the child for whom support would be sought;

(5) A written statement from a public or licensed private social agency that the applicant or recipient is being assisted by the agency to resolve the issue of whether to keep the child or relinquish him for adoption; and

(6) Sworn statements from individuals other than the applicant or recipient with knowledge of the circumstances which provide the basis for the good-cause claim.

(d) If after examining the corroborative evidence submitted by the applicant or recipient, the State or local agency wishes to request additional corroborative evidence which is needed to permit a good-cause determination, the agency will:

(1) Promptly notify the applicant or recipient that additional corroborative evidence is needed; and

(2) Specify the type of document which is needed.

(e) Upon request, the State or local agency will:

(1) Advise the applicant or recipient how to obtain the necessary documents; and

(2) Make a reasonable effort to obtain any specific documents which the applicant or recipient is not reasonably able to obtain without assistance.

(f) Where a claim is based on the applicant's or recipient's anticipation of physical harm as specified and defined in § 232.42 (a) and (b), and corroborative evidence is not submitted in support of the claim:

(1) The State or local agency will investigate the good-cause claim when the agency believes that:

(i) The claim is credible without corroborative evidence; and

(ii) Corroborative evidence is not available.

(2) Good cause will be found if the claimant's statement and the investigation which is conducted satisfies the agency that the applicant or recipient has good cause for refusing to cooperate.

(3) A determination that good cause exists will be reviewed and approved or disapproved by supervisory personnel and the agency's findings will be recorded in the case record.

(g) The State or local agency may further verify the good-cause claim if the applicant's or recipient's statement of the claim required by § 232.40(c)(1)(i), together with the corroborative evidence do not provide sufficient basis for making a determination. When the State or local agency determines that it is necessary, the agency may conduct an investigation of good-cause claims to determine that good cause does or does not exist.

(h) If it conducts an investigation of a good-cause claim, the State or local agency will:

(1) Contact the absent parent or putative father from whom support would be sought if such contact is determined to be necessary to establish the good-cause claim; and

(2) Prior to making such necessary contact, notify the applicant or recipient to enable the applicant or recipient to:

(i) Present additional corroborative evidence or information so that contact with the parent or putative father becomes unnecessary;

(ii) Withdraw the application for assistancse or have the case closed; or

(iii) have the good-cause claim denied.

§ 232.44 Participation by the State IV-D Agency.

The plan shall provide that:

(a) Prior to making a final determination of good cause for refusing to cooperate, the State or local agency will:

(1) Afford the IV-D agency the opportunity to review and comment on the findings and basis for the proposed determination; and

(2) Consider any recommendation from the IV-D agency.

(b) The State or local agency will give the IV-D agency the opportunity to participate in any hearing (under § 205.10 of this chapter) that results from an applicant's or recipient's appeal of any agency action under §§ 232.40 through 232.49.

§ 232.45 Notice to the IV-D Agency.

The plan shall provide that:

(a) If the notice, required by § 235.70 of this chapter, has previously been

V 4 3 / 1 9 2

0 C 3 7 8

provided to the IV-D agency, the State or local agency will promptly report to the IV-D agency that good cause has been claimed;

(b) The State or local agency will promptly report to the IV-D agency all cases in which it has determined that there is good cause for refusal to cooperate and if applicable, its determination whether or not child support enforcement may proceed without the participation of the caretaker relative; and

(c) The State and local agency will promptly report to the IV-D agency all cases in which it has determined that there is not good cause for refusal to cooperate.

§ 232.46 Granting or continuation of assistance.

The plan shall provide that the State or local agency will not deny, delay, or discontinue assistance pending a determination of good cause for refusal to cooperate if the applicant or recipient has complied with the requirements of §§ 232.40(c) and 232.43 to furnish corroborative evidence and information.

§ 232.47 Periodic review of good cause determination.

The plan shall provide that the State or local agency will:

(a) Periodically review, not less frequently than at each redetermination of eligibility required by § 206.10(a)(9) of this chapter, those cases in which the agency has determined that good cause exists based on a circumstance that is subject to change; and

(b) If it determines that circumstances have changed such that good cause no longer exists, it will rescind its findings and proceed to enforce the requirements of § 232.12 of this chapter.

§ 232.48 Record keeping in good cause.

The plan shall provide that the State will maintain records of the activities under this section that will make it possible to submit to the Department, upon request, data concerning:

(a) The total number of cases in which the applicant or recipient claimed to have good cause for refusing to cooperate;

(b) The number of cases in which the claim was made without corroborative evidence under the provisions of § 232.43(f);

(c) The total number of cases in which the applicant or recipient was found to have good cause for refusing to cooperate;

(d) The number of cases in which the applicant or recipient was found to have good cause for refusing to cooperate without corroborative evidence under the provisions of § 232.43(f);

(e) The number of cases in which the applicant or recipient was fund to have good cause for refusing to cooperate based solely on an examination of the corroborative evidence supplied by the applicant or recipient with no investigation;

(f) The number of cases where good cause was claimed by an applicant prior to receiving AFDC and the final determination that good cause did not exist was made after the applicant was determined to be eligible for AFDC;

(g) The number of cases in which the applicant or recipient was found to have good cause for refusing to cooperate but there was a determination pursuant to § 232.49 that child support enforcement may proceed without the participation of the caretaker relative; and

(h) For those cases in which good cause was found, which of the circumstances specified in § 232.42 was found to exist.

§ 232.49 Enforcement without the caretaker's cooperation.

The State plan may provide that:

(a) If the State or local agency makes a determination that good cause exists it will also make a determination of whether or not child support enforcement could proceed without risk of harm to the child or caretaker relative if the enforcement or collection activities did not involve their participation;

(b) This determination will be in writing, contain the agency's findings and basis for determination, and be entered into the AFDC case record;

(c) If the IV-A agency excuses cooperation but determines that the IV-D agency may proceed to establish paternity or enforce support, it will notify the applicant or recipient to enable such individual to withdraw their application for assistance or have the case closed; and

(d) Prior to making a determination under this paragraph, the State or local agency will afford the IV-D agency an opportunity to review and comment on the findings and basis for the proposed determination and consider any recommendation from the IV-D agency.

APPENDIX A—MODEL TWO-PART GOOD CAUSE NOTICE

This suggested two-part notice format meets the notice requirements of § 232.40(b)(2). The first notice should be provided prior to requiring the applicant's or recipient's cooperation. The second notice should be promptly provided if the applicant or recipient so requests or following a claim of good cause. Receipt of the notice will be acknowledged by the applicant's or recipient's and the worker's signatures. The signed copy should be placed in the AFDC case record with one copy retained by the applicant or recipient.

Before being used by a State this model should be adapted by substituting the appropriate agencies' names.

NOTICE OF REQUIREMENT TO COOPERATE AND RIGHT TO CLAIM GOOD CAUSE FOR REFUSAL TO COOPERATE IN CHILD SUPPORT ENFORCEMENT

BENEFITS OF CHILD SUPPORT ENFORCEMENT

Your cooperation in the child support enforcement process may be of value to you and your child because it might result in the following benefits:

- Finding the absent parent;
- Legally establishing your child's paternity;
- The possibility that support payments might be higher than your welfare grant; and
- The possibility that you and your children may obtain rights to future social security, veterans, or other government benefits.

WHAT IS MEANT BY COOPERATION?

The law requires you to cooperate with the welfare and child support agencies to get any support owed to you and any of the children for whom you want AFDC, unless you have good cause for not cooperating.

In cooperating with the welfare or child support agency, you may be asked to do one or more of the following things:

- Name the parent of any child applying for or receiving AFDC, and give information you have to help find the parent;
- Help determine legally who the father is if your child was born out of wedlock;
- Give help to obtain money owed to you or the children receiving AFDC; and
- Pay to the State any money which is given directly to you by the absent parent (you will continue to get your full AFDC grant from the State).

You may be required to come to the welfare office, child support office, or court to sign papers or give necessary information.

WHAT IS MEANT BY GOOD CAUSE?

You may have good cause not to cooperate in the State's efforts to collect child support. You may be excused from cooperating if you believe that cooperation would not be in the best interest of your child, and if you can provide evidence to support this claim.

IF YOU DO NOT COOPERATE AND YOU DO NOT HAVE GOOD CAUSE

- You will be ineligible for AFDC.
- Your children will still be eligible for AFDC for their own needs. Your children's grant will go to another person, called a "protective payee."

HOW AND WHEN YOU MAY CLAIM GOOD CAUSE

- If you want to claim good cause, you must tell a worker that you think you have good cause. You can do this at any time you believe you have good cause not to cooperate.
- If you claim "good cause" you must be given another notice. This second notice will explain the circumstances under which the Welfare Agency may find good cause, and the type of evidence or other information the Welfare Agency needs to decide your claim. You may also ask for this second notice to help you decide whether or not to claim good cause.

I have read this notice concerning my right to claim good cause for refusing to cooperate.

(Date)

I have provided the applicant/recipient with a copy of this notice.

.....
(Signature of Worker)

.....
(Date)

SECOND NOTICE OF RIGHT TO CLAIM GOOD CAUSE FOR REFUSAL TO COOPERATE IN CHILD SUPPORT ENFORCEMENT

GOOD CAUSE CIRCUMSTANCES

You may claim to have good cause for refusing to cooperate if you believe that such cooperation would not be in the best interests of your child. The following are circumstances under which the Welfare Agency may determine that you have good cause for refusing to cooperate:

- Cooperation is anticipated to result in serious physical or emotional harm to the child;
- Cooperation is anticipated to result in physical or emotional harm to you which is so serious it reduces your ability to care for the child adequately;
- The child was born after forcible rape or incest;
- Court proceedings are going on for adoption of the child; or
- You are working with an agency helping you to decide whether to place the child for adoption.

PROVING GOOD CAUSE

It is your responsibility to;

- Provide the Welfare Agency with the evidence needed to determine whether you have good cause for refusing to cooperate (If your reason for claiming good cause is your fear of physical harm and it is impossible to obtain evidence, the Welfare Agency may still be able to make a good cause determination after an investigation of your claim.)
- Give the necessary evidence to the agency within 20 days after claiming good cause. The Welfare Agency will give you more time only if it determines that more than 20 days are required because of the difficulty in obtaining the evidence.

The Welfare Agency may:

- Decide your claim based on the evidence which you give to the agency, or
- Decide to conduct an investigation to further verify your claim. If the Welfare Agency decides an investigation is needed, you may be required to give information, such as the absent parent's name and address, to help the investigation. The agency will not contact the absent parent without first telling you.

NOTE.—If you are an applicant for assistance, you will not receive your share of the grant until you have given the agency the evidence needed to support your claim, and, if requested, the information needed to permit an investigation of your claim.

EXAMPLES OF ACCEPTABLE EVIDENCE

The following are examples of acceptable kinds of evidence the Welfare Agency can use in determining if good cause exists.

If you need help in getting a copy of any of the documents, ask the Welfare Agency. The Welfare Agency will give you reasonable assistance which is needed to help you obtain the necessary documents to support your claim.

- Birth certificates, or medical or law enforcement records, which indicate that the child was conceived as the result of incest or forcible rape;
- Court documents or other records which indicate that legal proceedings for adoption are pending in court;
- Court, medical, criminal, child protective services, social services, psychological, or law enforcement records which indicate that the alleged or absent father might inflict physical or emotional harm on you or the child;
- Medical records which indicate emotional health history and present health status of you or the child for whom support would be sought; or written statements from a mental health professional indicating a diagnosis or prognosis concerning the emotional health of you or the child;
- A written statement from a public or private agency confirming that you are being assisted in resolving the issue of whether to keep or give up the child for adoption; and
- Sworn statements from individuals, including friends, neighbors, clergymen, social workers, and medical professionals who might have knowledge of the circumstances providing the basis of your good cause claim.

CHILD SUPPORT AGENCY PARTICIPATION AND ENFORCEMENT

The Child Support Enforcement Agency may review the Welfare Agency's findings and the basis for a good cause determination in your case. If you request a hearing regarding this issue of good cause for refusing to cooperate, the Child Support Enforcement Agency may participate in that hearing.

The Notice must include one of the following statements, as applicable depending on the State plan option chosen. See § 232.49.

Option 1

If you are found to have good cause for not cooperating, the Child Support Enforcement Agency may attempt to establish paternity or collect support only if the Welfare Agency determines that this can be done without risk to you or your child. This will not be done without first telling you.

Option 2

If you are found to have good cause for not cooperating, the Child Support Enforcement Agency will not attempt to establish paternity or collect support.

I have read this notice concerning my right to claim good cause for refusing to cooperate.

CHAPTER III—OFFICE OF CHILD SUPPORT ENFORCEMENT (CHILD SUPPORT ENFORCEMENT PROGRAM), DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

PART 302—STATE PLAN REQUIREMENTS

Good Cause for Refusing to Cooperate

AGENCY: Office of Child Support Enforcement, HEW.

ACTION: Final rule.

SUMMARY: This amendment to the Child Support Enforcement Program (title IV-D) State plan requirement to establish paternity and secure support merely changes the cross-reference to the title IV-A good cause regulations. New final good cause regulations in 45 CFR chapter II were published today also in this Part III of the FEDERAL REGISTER.

EFFECTIVE DATE: This amendment becomes effective on December 4, 1978, or upon implementation of 45 CFR 232.40 through 232.49, whichever is earlier. (See FR Doc 78-27933 also published in this Part III of the FEDERAL REGISTER.)

FOR FURTHER INFORMATION CONTACT:

Steve Henigson, telephone 202-472-4510.

SUPPLEMENTARY INFORMATION: On January 16, 1978 (43 FR 2178) the Department published a final regulation providing that the agency that administers the State's Child Support

V 43 / 192

Enforcement Program (IV-D agency) will not attempt to establish paternity or collect support in any case in which a determination has been made by the State or local welfare agency (IV-A agency) that an applicant or recipient of Aid to Families with Dependent Children (AFDC) has good cause for refusing to cooperate in establishing paternity and securing support. Also on January 16, 1978 (43 FR 2170) the Department published a regulation which specified the standards under which the IV-A agency would determine whether an AFDC applicant or recipient has good cause for refusing to cooperate. Today the Department adopted new title IV-A good cause standards effective on December 4, 1978 (published also in this Part III of the FEDERAL REGISTER.) This amendment conforms the cross reference in the title IV-D regulation to those new title IV-A regulations.

PUBLIC PARTICIPATION

The January 16, 1978, good cause regulations, both title IV-D and title IV-A, solicited additional public comments for 90 days after the effective date. In addition the Department held a public hearing on the good cause regulations. For details concerning this public input please refer to the companion IV-A regulations. The major concerns were with the IV-A good cause standards and the IV-D regulation was only incidentally involved. A discussion of the comments germane to this regulation follow.

SUSPENSION OF ENFORCEMENT PENDING THE GOOD CAUSE DETERMINATION

The regulation provides at § 302.31(b)(2) that the title IV-D agency, upon receiving notice from the IV-A agency that an applicant or recipient has claimed good cause, shall suspend all activities to establish or secure child support until notified of a final good cause determination. Several comments suggested that this policy was violative of section 454(4) of the Social Security Act which they argue permits the State IV-D agency to proceed to establish paternity and secure support until the IV-A agency makes a final determination that good cause exists. Such an interpretation, however, ignores the express purpose of the good cause exception which is to protect the child in those instances where establishing paternity or securing support would harm the child. Permitting the IV-D agency to develop the evidence necessary to show paternity or allowing it to take the steps necessary to obtain support even though the good cause investigation has not been completed could result in the very harm to the child or mother which the legislative history clearly shows Congress intended to prevent. The Department believes that this regulation restraining the IV-D agency pending a good cause determination is the most reasonable method by which to effect the Congressional intent of protecting the interests of the child while the good cause determination is being made. Accordingly, no change has been made in this aspect of the regulation.

EFFECTIVE DATE

This amendment will become effective on December 4, 1978, or upon implementation of the companion title IV-A regulations published today, whichever is earlier. (See FR Doc. 78-27933 also published in this Part III of the FEDERAL REGISTER.)

45 CFR Chapter III, Part 302 is amended by revising § 302.31 to read as follows:

§ 302.31 Establishing and paternity securing support.

The State plan shall provide that:

(a) The IV-D agency will undertake:

(1) In the case of a child born out of wedlock with respect to whom an assignment under § 232.11 of this title is effective, to establish the paternity of such child; and

(2) In the case of any child with respect to whom such assignment is effective, to secure support for such child from any person who is legally liable for such support, utilizing reciprocal arrangements adopted with other States when appropriate; and

(b)(1) The IV-D agency will not undertake to establish paternity or secure child support in any case for which it has received notice from the IV-A agency that there has been a finding of good cause under §§ 232.40 through 232.49 of this title except as provided in paragraph (c) of this section.

(2) Upon receiving notice from the IV-A agency that an applicant or recipient has claimed good cause, the IV-D agency will suspend all activities to establish paternity or secure child support until notified of a final determination by the IV-A agency.

(c) The IV-D agency will not undertake to establish paternity or secure child support if there has been a finding of good cause pursuant to §§ 232.40 through 232.49 of this title unless there has been a determination by the State or local IV-A agency that child support enforcement may proceed without the participation of the caretaker relative. If there has been such a determination, the IV-D agency will undertake to establish paternity or secure child support but may not involve the caretaker relative in such undertaking.

(Sec. 1102, 49 Stat. 647 (42 U.S.C. 1302))

(Catalogue of Federal Domestic Assistance Program No. 13679, Child Support Enforcement Program)

NOTE.—The Office of Child Support Enforcement has determined that this document does not require preparation of a regulatory analysis as required by Executive Order 12044.

Dated: September 27, 1978.

DON WORTMAN,
Acting Director, Office of Child Support Enforcement.

Dated: September 28, 1978.

JOSEPH A. CALIFANO, JR.,
Secretary.

DEPARTMENT OF AGRICULTURE

Forest Service

ROADLESS AREA REVIEW AND EVALUATION (RARE II)

Amendment to Inventory List

V 43 / 192
OCT 3 1978

[3410-11]

DEPARTMENT OF AGRICULTURE

Forest Service

ROADLESS AREA REVIEW AND EVALUATION (RARE II)

Amendment to Inventory List

Notice is hereby given of amendment to the inventory of roadless and undeveloped areas within the National Forests and Grasslands, as published in the FEDERAL REGISTER, Friday, November 18, 1977, pages 59690-59715, and amended Tuesday, February 14, 1978, pages 6291-6292 and Thursday, June 8, 1978, pages 24876-24881.

The inventory is subject to adjustments from time to time as corrected data become available, as areas are modified or areas are added or deleted from the list. The inventory adjustments in this amendment are being made for several reasons. There are 32 areas which have a change in acreage either as a result of recalculation or to correct a typographical error in a previously published figure. Twenty areas have had a boundary adjustment promarily to delete private land, and 25 areas have been added to the inventory as a result of public comment. Land allocations made through the Forest Service land management planning process have resulted in deleting 28 areas, while 13 areas were deleted because the Administration has endorsed wilderness for them or due to congressional action on the Endangered American Wilderness Act. Three areas have been consolidated, two areas allocated by previous land management plans have implementation delayed, and two miscellaneous typographical errors have been corrected.

State: Alabama:
Tongass National Forest:
Add 335.0, Deep Lake, 8,067 acres
Add 723.0, Heckman, 6,955 acres
Add 525.0, Deer Island, 9,988 acres
Change 525.0, Sunny, to 526.0
(To correct errors and omissions in previously published notice.)
State: Arkansas:
Ozark-St. Francis National Forest:
Change 8001, Richland Creek Addition, to 10,143 acres
Change 8072, Gee Creek to 7,948 acres
Change 8073, Hurricane Creek, to 17,742 acres
Change 8076, East Fork, to 23,677 acres
Change 8079, Clifty Canyon, to 2,051 acres
(Reflects recalculation of acreage)
Change 8002, Leatherwood, to 17,138 acres
Change 8003, Buffalo Addition, to 1,504 acres
Change 8070, Indian Creek, to 7,836 acres
Change 8078, Devil's Canyon, to 1,819 acres
(Reflects changes to exclude private land)

Change 8071, Dismal Creek, to 9,812 acres
Change 8074, Pedestal Rocks, to 21,604 acres
Change 8075, Penhook, to 6,579 acres
(Reflects recalculation of acreage and changes to exclude private land.)
State: California:
Angeles National Forest:
Add 5,012, Arroyo Seco, 5,000 acres
(To add area found to meet invenory criteria.)
State: Colorado:
Routt National Forest and Arapaho-Roosevelt National Forest:
Areas L2ACG, 2353, and 2134 are now combined and indentified as area 2361, St. Louis Peak, 37,230 gross acres
(The purpose of this change is to combine contiguous roadless areas.)
Routt National Forest:
Change 2097, Sugarloaf DE, to 48,543 acres
Change 2098, Nipple Creek DD, to 62,100 acres
Change 2099, Elkhorn Mountain DC, to 15,240 acres
(Adds area found to meet inventory criteria.)
State: Georgia:
Chattahoochee-Oconee National Forest:
Change 8025, South Nantahalas, to 19,670 acres
Change 8027, Blood Mountain, to 10,275 acres
Change 8028, Raven Cliff, to 15,850 acres
Change 8029, Chattahoochee River, to 23,050 acres
Change 8031, Ellicott Rock Extension, to 4,000 acres
Change 8142, Mountain Town, to 6,835 acres
Change 8143, Rich Mountain, to 16,880 acres
Change 8144, Mill Creek, to 7,045 acres
Change 8147, Rabum Bald, to 16,005 acres
Change 8149, Wolf Pen, to 7,850 acres
Change 8221, Licklog, to 8,100 acres
Change 8223, Buzzard Knob, to 6,440 acres
Change 8225, Anna Ruby, to 3,000 acres
(Reflects changes to exclude private land.)
State: Idaho:
Caribou National Forest:
Delete 4163, Schmid Peak, 10,920 acres
Delete 4164, Dry Ridge, 27,640 acres
Delete 4165, Huckleberry Basin, 30,650 acres
Delete 4166, Sage Creek, 17,850 acres
Delete 4167, Meade Peak, 43,520 acres
Delete 4170, Red Mountain, 13,800 acres
(To drop areas allocated to nonwilderness by the Diamond Creek Land Management Plan.)
Clearwater National Forest:
Change 1303, Siwash, to 9,300 acres
Change 1305, Moose Mountain, to 19,800 acres
Change 1306, Big Horn Weitas, to 237,500 acres
Change 1309, Wilderness Border, to 12,000 acres
Change 1312, Eldorado Creek, to 11,000 acres
(Reflects recalculation of acreage.)
Idaho Panhandle National Forest:
Change 1125, Selkirks, to 105,170 acres
Change 1126, Kootenai Peak, to 7,250 acres
Change 1127, White Mountain, to 9,910 acres
Change 1131, East Cathedral Peak, to 20,870 acres
Change 1133, Tepee Cr., to 5,100 acres
Change 1134, Spy Glass, to 6,510 acres
Change 1135, Skitwish Ridge, to 6,330 acres
Change 1302, Meadow Creek-Upper North to 6,100 acres
Change 1661, Buckhorn Ridge, to 3,500 acres
(Reflects recalculation of acreage.)
Change 1981, Salmo Priest, to 19,540 acres
(Acreage recalculation and corrects error in acreage assigned between Idaho and Washington.)
Payette National Forest:
Change 4455, Lick Creek, to 136,366 acres
(Reflects recalculation of acreage.)
Nezperce National Forest:
Change 1921, Gospel Hump, to 56,780 acres
(Reflects allocation of portion of area to wilderness through Endangered American Wilderness Act.)
Targhee National Forest:
Delete 4603, Raynolds Pass, 6,250 acres
Delete 4604, Two Top, 11,790 acres
Delete 4605, Headwaters Buffalo River, 3,640 acres
Delete 4606, Warm River North, 8,300 acres
Delete 4607, Warm River South, 32,710 acres
Delete 4608, Warm River East, 8,120 acres
Delete 4609, Snake River, 8,830 acres
(To drop areas allocated to nonwilderness by the Island Park Land Management Plan.)
Change 4962, Mount Jefferson, to 6,700 acres
(Reflects portion of area allocated to nonwilderness by the Island Park Land Management Plan.)
State: Montana:
Deerlodge National Forest:
Add 1425, North Carp, 8,320 acres
Add 1426, Upper East Fork, 7,750 acres
(Areas returned to inventory for further evaluation through the RARE II process.)
Flathead National Forest:
Change 1485, Bear-Marshl-Scapegt-Swan to 205,620 acres
(Reflects Administration endorsed Great Bear Wilderness proposal.)
Gallatin National Forest:
Change 1549, Madison, to 230,120 acres
(Reflects recalculation of acreage.)
Helena National Forest:
Delete 1613, Hedges Mountain, 23,000 acres
Delete 1614, Hellgate Gulch, 22,200 acres
Delete 1615, Cayuse Mountain, 26,300 acres
(To drop areas allocated to nonwilderness in the Magpie-Confederate Land Management Plan.)
Idaho Panhandle National Forest:
Change 1661, Buckhorn Ridge, to 2,000 acres
Change 1662, Scotchman Peaks, to 12,680 acres
Change 1663, Northwest Peak, to 5,670 acres
(Reflects recalculation of acreage.)
Lewis and Clark National Forest:

Change 1485, Bear-Marshl-Scapegt-Swan to 325,100 acres
(Reflects Administration endorsed Great Bear Wilderness proposal.)
State: New Mexico:
Cibola National Forest:
Add 3009, Canadian River, 4,025 acres
(Corrects error which showed Canadian River under Santa Fe National Forest.)
Santa Fe National Forest:
Delete 3009, Canadian River, 4,025 acres
Carson National Forest:
Change 3999, Osier Mesa, to 3,100 acres
(Corrects error in previously published acreage.)
State: Oregon:
Mt. Hood National Forest:
Change 6093, Mt. Hood Additions, to 11,600 acres
(Reflects passage of the Endangered American Wilderness Act enlarging the Mt. Hood wilderness.)
Change 6098, Bull of the Woods, to 34,300 acres
(Corrects error in previously published acreage.)
Add 6101, Mt. Jefferson WSA, 1,100 acres
(To include area found to meet inventory criteria.)
Siskiyou National Forest:
Change 6172, Male Creek, to 250 acres
Change 6173, Rogue, to 7,100 acres
Change 6176, North Kalmiopsis, to 113,478 acres
Change 6181, Fall Creek, 11,314 acres
Delete 6182, South Kalmiopsis, 37,628 acres
Add 6709, South Kalmiopsis, 111,315 acres
(Above changes reflect enlargement of the Kalmiopsis Wilderness as a result of the Endangered American Wilderness Act and combining 6182, 6181, and 6709 into 6709.)
Umatilla National Forest:
Add 6563, Bear Canyon, 3,363 acres
Add 6564, Cross Canyon, 2,868 acres
Add 6565, W-T Three, 3138 acres
(Additions as a result of creation of the Wenaha-Tucannon Wilderness under the Endangered American Wilderness Act.)
Umpqua National Forest:
Change 6130, Rogue Umpqua Djvide, to 48,735 acres
(Add area found to meet inventory criteria.)
Wallowa Whitman National Forest:
Delete 6275, Upper Grande Ronde, 15,290 acres
Delete 6277, Mt. Emily, 10,700 acres
Delete 6276, Beaver Creek, 22,976 acres
Delete 6278, Castle Ridge, 9,065 acres
Delete 6280, Little Creek, 2,080 acres
Delete 6281, Upper Catherine Creek, 15,420 acres
(To drop areas allocated to nonwilderness in the Grande Ronde Land Management Plan.)
Add 6602, Sheep Divide, 7,110 acres
(Area added to provide for consistent treatment of roadless area within Hill's Canyon NRA.)
Willlamette National Forest:
Change 6098, Bull of the Woods, to 25,000 acres
(To consider additional area identified in the Oregon Omnibus Wilderness Bill.)
Add 6929, Middle Santiam, 24,580 acres
(To consider an area previously endorsed as part of the Endangered American Wilderness legislation but dropped by Congress prior to passage.)
State: South dakota:
Nebraska National Forest:
Change 2010, Red Shirt, to 16,480 acres
(Adds area found to meet inventory criteria.)
Change 2011, Cheyenne river, to 8,090 acres
(Corrects typographical error in previously published acreage.)
State: Tennessee:
Cherokee National Forest:
Change 8036, Jennings Creek, 19,884 acres
(Includes additional area found to meet inventory criteria.)
Add 8280, Flint Mill Gap, 7,183 acres
(Adds area found to meet inventory criteria.)
State: Utah:
Fishlake National Forest:
Add 4426, Musinia Peak, 7,000 acres
(To add acreage contiguous to inventoried area 4426 on Manti-LaSal National Forest, making the total acreage of 4426 11,200 acres.)
Manti-LaSal National Forest:
Change 4424, White Mountain, to 27,700 acres
(Includes additional area found to meet inventory criteria.)
State: Virginia:
George Washington National Forest:
Add 8175, Southern Massanutten, 11,800 acres
(Adds area found to meet inventory criteria.)
State: Washington:
Colville National Forest:
Change 6981, Salmo Priest, to 46,380 acres
(Corrects error in previously published acreage.)
Okanogan National Forest:
Add 6015, Hungry ridge, 13,990 acres
Add 6016, Black Canyon, 13,600 acres
Add 6017, South Ridge, 6,200 acres
Add 6018, Granite Mountain, 41,780 acres
Add 6019, Tiffany, 25,000 acres
Add 6025, Pasayten Rim, 15,410 acres
Add 6026, Liberty Bell, 112,430 acres
Add 6027, Sawtooth, 230,900 acres
(Additions to the inventory of roadless areas contained in the remanded Twisp-Winthrop-Conconully Land Management Plan.)
Change 6023, Long Draw, to 8,600 acres
Change 6024, Long Swamp, to 102,330 acres
(Changes reflect additional acreage as a result of the remanded Twisp-Winthrop-Conconully Land Management Plan.)
Gifford Pinchot National Forest:
Delete 6066, Pompey, 24,140 acres
Delete 6067, blue Lake, 10,780 acres
Delete 6068, Amoeba, 73,500 acres
(To drop from the inventory areas allocated to nonwilderness by the Upper Cispus and Lone Tree Land Management Plans.)
Idaho Panhandle National Forest:
Change 1121, Little Grass Mtn., to 4,000 acres
Change 1982, grassy top, to 13,980 acres
(Reflects recalculation of acreage.)
Change 1981, Salmo Priest, to 9,440 acres
(Acreage recalculation and corrects error in acreage assignment between Washington and Idaho.)
State: Wyoming:
Bridger-Teton National Forest:
Delete 4115, Bacon Ridge, 5,290 acres
Delete 4902, seven Lakes, 65,010 acres
(To drop from the inventory areas allocated to nonwilderness in the Union Pass Land Management Plan.)
Medicine Bow National Forest:
Change 2087, Huston Park, to 33, 020 acres
(Reflects allocation of portion of area to nonwilderness in the Huston Park Land Management Plan.)
Add 2099, Elkhorn Mountain DC, 3,720 acres
(To add area found to meet inventory criteria.)

Dated: September 25, 1978.

JOHN R. MCGUIRE,
Chief, Forest service.

Title 50—Wildlife and Fisheries

CHAPTER I—U.S. FISH AND WILDLIFE SERVICE, DEPARTMENT OF THE INTERIOR

Part 17—Endangered and Threatened Wildlife and Plants

Determination of Critical Habitat for Leatherback Sea Turtle; Correction

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Correction.

SUMMARY: In the September 26, 1978, FEDERAL REGISTER (43 FR 43688-43689), the Service published its final determination of critical habitat for the leatherback sea turtle (*Dermochelys coriacea*). In that document, the map accompanying the word description of critical habitat was inadvertently omitted. This correction adds that map to this final determination.

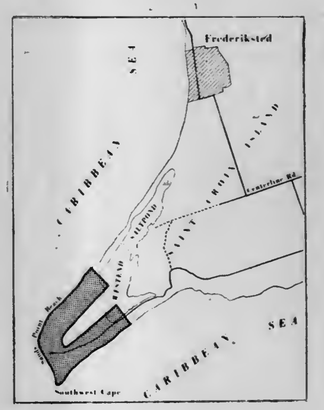
DATES: This rule becomes effective on October 26, 1978.

FOR FURTHER INFORMATION CONTACT:

Mr. Keith M. Schreiner, Associate Director—Federal Assistance, Fish and Wildlife Service, U.S. Department of the Interior, Washington, D.C. 20240, 202-343-4646.

The regulations promulgation section of the final determination of critical habitat for the leatherback sea turtle, as originally published in the FEDERAL REGISTER of September 26, 1978 (43 FR 43688-43689), should appear as follows:

REGULATION PROMULGATION



Accordingly, 50 CFR 17.95(c) is amended by adding Critical Habitat of the leatherback sea turtle after that of the giant anole as follows:

(c) *Reptiles.* * * *

LEATHERBACK SEA TURTLE

(*Dermochelys coriacea*)

U.S. Virgin Islands. A strip of land 0.2-mile wide (from mean high tide island) at Sandy Point Beach on the western end of the island of St. Croix beginning at the Southwest Cape to the south and running 1.2 miles northwest and then northeast along the western and northern shoreline, and from the Southwest Cape 0.7 mile east along the southern shoreline.

Critical Habitat for the Leatherback Sea Turtle

Dated: September 28, 1978.

ROBERT S. COOK,
Acting Director,
Fish and Wildlife Service.

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

OCCUPATIONAL EXPOSURE TO ACRYLONITRILE (VINYL CYANIDE)

Final Standard

V 43 / 192

[4510-26]

Title 29—Labor

CHAPTER XVII—OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION, DEPARTMENT OF LABOR

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Occupational Exposure to Acrylonitrile (Vinyl Cyanide)

AGENCY: Occupational Safety and Health Administration, Department of Labor.

ACTION: Final standard.

SUMMARY: By this final standard, the Occupational Safety and Health Administration (OSHA) sets the permissible limit of occupational exposure to acrylonitrile (AN) (also known as vinyl cyanide) at 2 parts acrylonitrile per million parts of air (2 ppm), as an 8-hour time-weighted average concentration (TWA), with a ceiling level of 10 ppm for any 15-minute period during the 8-hour day. In addition, the standard establishes an action level of 1 ppm as an 8-hour time-weighted average. The basis for this standard is OSHA's determination that laboratory and epidemiological data indicate that exposure to AN presents a cancer hazard to workers. Provision is also made for specific exemptions from the standard for the processing, handling, and use of acrylic and modacrylic fibers, ABS/SAN resins, nitrile barrier resins, and nitrile rubbers, when these materials are in the form of finished polymers, and certain other materials containing and/or made from AN. This standard is intended to minimize the potential for cancer among employees exposed to AN in the workplace. Employees protected by this standard work principally in the chemical and plastics industries. The standard requires that employee exposures be controlled to within the permissible exposure limits by engineering and work practices, supplemented by respiratory and other protective equipment in limited situations. The standard also requires the measurement of employee exposure, employee training, medical surveillance, and recordkeeping. The 2 ppm limit has been set because it will provide significant employee protection and is the lowest level feasible for most employers affected by the standard. The final standard supersedes the emergency temporary standard, which was issued on January 17, 1978.

EFFECTIVE DATE: This standard will become effective November 2, 1978. Startup dates: Installation of engineering controls shall be completed by November 2, 1980. Training programs shall be instituted by January 2, 1979. All other requirements of the standard shall be effective November 2, 1978.

SUPPLEMENTARY INFORMATION:

I. Background

Physical Properties, Manufacture, and Use of Acrylonitrile

Acrylonitrile ($CH_2=CHCN$; CAS #000107131) (AN) is a widely used chemical intermediate in the manufacture of acrylic fibers, synthetic rubbers, and plastics. Its use in the manufacture of a number of acrylic fibers and copolymer resins accounts for most of the 1.5 billion pounds of AN produced annually in the United States. AN is a clear, colorless (when pure), or yellowish liquid with a characteristic odor at relatively high concentrations and a molecular weight of 53.06. It is very reactive and polymerizes violently in the presence of strong bases. Pure AN is subject to self-polymerization with rapid pressure development (the commercial product is inhibited and not subject to this reaction). AN is a volatile (vapor pressure 83 mm Hg at 68° F), flammable liquid with a flash point of 30° F (open cup), is easily ignited and may release cyanide gases when burned, especially where the supply of oxygen is limited. Its vapors are heavier than air, and when diffused over a considerable range of concentrations in air (3–17 percent by volume), are highly explosive. Synonyms for AN include acrylon, carbacryl, cyanoethylene, fumigrain, 2-propenenitrile, VCN, ventox, and vinyl cyanide.

AN is produced almost exclusively by the ammoxidation of propylene in the presence of a catalyst. Current producers of AN in the United States are American Cyanamid, duPont, Monsanto, and Vistron (SOHIO).

The major use of AN is in the production of acrylic and modacrylic fibers by copolymerization with other monomers such as methyl acrylate, methyl methacrylate, styrene, vinyl acetate, vinyl bromide, vinyl chloride, or vinylidene chloride, individually or in combination. Acrylic fibers are, by definition of the Federal Trade Commission, fibers composed of at least 85 percent (by weight) acrylonitrile units. Fibers composed of at least 35 percent but less than 85 percent acrylonitrile units are referred to as "modacrylic fibers." AN-based synthetic fibers are used in the manufacture of apparel, carpeting, blankets, draperies, and upholstery. Major producers of acrylic and modacrylic fibers include American Cyanamid Co., Dow Badische Co., E. I. du Pont de Nemours & Co., Tennessee Eastman Co., and Monsanto Co. In 1976, acrylic and modacrylic fiber production comprised 50 percent of the total AN consumption in the United States.

The manufacture of acrylic fibers involves four basic steps. First, the acrylonitrile must be polymerized; second, the polymer must be dissolved in a solvent to form a viscous solution which can be forced through a spinnerette (spinning head); third, the polymer must be spun into fiber; and, fourth, the fibers must be processed, crimped, cut, dried, and baled. The production of acrylic fibers is done by either wet-spinning or dry-spinning. Both methods require that the polymer be dissolved or suspended in a suitable solvent. The solvent used may vary from company to company.

The dissolved or suspended polymer is extruded through the spinnerette, or spinning head, which is a metal plate with thousands of tiny holes in it. The polymer is extruded through the holes in the spinnerette and coagulated to form the fibers. The solvent and excess, or residual AN monomer are then removed from the fibers. In dry-spinning, the solvent is removed by hot gases. In wet-spinning, on the other hand, the fibers are extruded into another liquid bath, which serves to remove the solvent. For both types of spinning, the resulting fibers must be stretched to increase their strength, and then crimped to provide the desired texture and facilitate processing on textile machinery. Where the wet spinning process is used, the fibers are drawn from the coagulation bath through various warm water baths to remove any remaining solvent before they are drawn through the hot water stretching bath. It is during this stage of the wet-spinning process, between the coagulation bath and the hot water stretch, that potential employee exposure to acrylonitrile is greatest, since residual (i.e., unreacted) AN monomer which remains in the fiber is being driven off along with the solvent.

Residual AN levels for all finished acrylic fibers are usually well below 20 parts per million by weight, and the fibers do not readily release their residual AN. The polymer structures

from which acrylic fibers are produced contain acrylonitrile links in the form of a long coil. In the dry, cool state, these structures are dense or tightly coiled. At the glass transition temperature (i.e., the temperature at which the molecular structure opens up; approximately 180° C dry and approximately 80° C in water) the polymer uncoils, allowing the release of anything being held in that coil (e.g., residual monomer or water). Since the fiber has a great affinity for water and water tends to extract the residual AN, removal of residual AN at the wet glass-transition temperature is fairly complete. As the fibers are normally washed at this temperature during processing, little residual AN remains in the final product. Because polymers such as acrylic fibers, which contain long sequences of AN units, tend to cyclize (i.e., form chains of six-sided rings) at temperatures above 250° C instead of reverting to their component monomers, little, if any, acrylonitrile exposure results from decomposition of the fibers.

Other major uses of AN include the manufacture of resins, plastics, nitrile elastomers (rubbers and latexes), and polymer polyols as well as in the production of other chemicals, such as adiponitrile and acrylamide.

Acrylonitrile-based resins and plastics are produced from three monomers, acrylonitrile, butadiene, and styrene, and have a wide range of uses. They can be processed in many different ways into a variety of fabricated products. In the manufacture of ABS resins, butadiene and styrene are first copolymerized to form a "spine" or base polymer. Styrene and acrylonitrile chains are then grafted onto this base polymer. In a separate operation, acrylonitrile and styrene are copolymerized to form a resin, and this resin is then mixed with the grafted polymer to produce a latex. The latex is then flocculated (formed into clumps), filtered, washed, and dried.

Potential exposure to acrylonitrile occurs at many points during the ABS resin manufacturing process. This operation involves the conveyance of AN monomer from storage tanks to various process areas and necessarily includes many valves, gaskets, pipes, sampling points, and other areas where AN may be released, either from leaks in the equipment or from the opening of the system, as during sampling. In addition, the blending, flocculation, and drying areas are potential areas of exposure, because the mechanical and heat processing of the polymer latex causes residual AN in the polymer to be released. Since suspension and solution polymerization processes involving latex or slurry usually result in relatively high levels of residual AN, the processing of the polymer can result in a substantial release of AN.

The manufacture of nitrile rubber from acrylonitrile and butadiene also involves the processing of latex and slurry, and therefore, includes similar areas of potential exposure to AN monomer. In addition, the polymerization process for the production of nitrile rubber results in higher employee exposures (both actual and potential), since the polymerization process is not complete when the contents of the reactor, called the "charge," are transferred to the blowdown tank. The latex, therefore, contains a considerable amount of residual monomer when it is moved from the blowdown tank to the distillation tank for "steam-stripping" to remove residual monomer. Even after stripping, the latex contains enough AN monomer to cause high exposures in the processing areas, and subsequently in the washing and drying areas.

Besides the major uses discussed above, AN is also used in the manufacture of latexes for use in paints, adhesives, and industrial coatings, as well as in the manufacture of chemical intermediates for dyes and other products.

It is estimated that 5,130 employees are currently exposed to acrylonitrile; of these 1,050 are in AN production, 1,250 in acrylic fiber production, 850 in nitrile elastomer manufacture, 1,900 in ABS/SAN resin manufacture, and 80 in polyol production (Ex. 15).

II. Pertinent Legal Authority

The primary purpose of the Act is to assure, so far as possible, safe and healthful working conditions for every working man and woman. One means prescribed by Congress to achieve this goal is the authority vested in the Secretary of Labor to set mandatory safety and health standards.

Occupational safety and health standards provide notice of the requisite conduct or exposure level and provide a basis for assuring the existence of safe and healthful workplaces. The Act provides that:

> The Secretary, in promulgating standards dealing with toxic materials or harmful physical agents under this subsection, shall set the standard which most adequately assures, to the extent feasible, on the basis of the best available evidence, that no employee will suffer material impairment of health or functional capacity even if such employee has regular exposure to the hazard dealt with by such a standard for the period of his working life. Development of standards under this subsection shall be based upon research, demonstrations, experiments, and such other information as may be appropriate. In addition to the attainment of the highest degree of health and safety protection for the employee, other considerations shall be the latest available scientific data in the field, the feasibility of the standards, and experience gained under this and other health and safety laws (Section 6(b)(5)).

Sections 2(b) (5) and (6), 20, 21, and 24 of the Act reflect Congress recognition that conclusive medical or scientific evidence, including causative factors, epidemiological studies or dose-response data, may not exist for many toxic materials or harmful physical agents. Nevertheless, standards cannot be postponed because definitive medical or scientific evidence is not currently available. Indeed, standards need only be supported by the best available evidence. The legislative history makes it clear that "it is not intended that the Secretary be paralyzed by debate surrounding diverse medical opinion." House Committee on Education and Labor, Report No. 91-1291, 91st Cong., 2d session, p. 18 (1970). This congressional judgment is supported by the courts which have reviewed standards promulgated under the Act. In sustaining the standard for occupational exposure to vinyl chloride (29 CFR 1910.1017), the U.S. Court of Appeals for the Second Circuit stated that "it remains the duty of the Secretary to act to protect the working man, and to act even in circumstances where existing methodology or research is deficient." *Society of the Plastics Industry, Inc.* v. *Occupational Safety and Health Administration*, 509 F. 2d 1301 (2d Cir., 1975), cert. denied, 421 U.S. 992 (1975).

A similar rationale was applied by the U.S. Court of Appeals for the District of Columbia Circuit in reviewing the standard for occupational exposure to asbestos (29 CFR 1910.1001). The Court stated that:

> Some of the questions involved in the promulgation of these standards are on the frontiers of scientific knowledge, and consequently as to them insufficient data is presently available to make a fully informed factual determination. Decision-making must in that circumstance depend to a greater extent upon policy judgments and less upon purely factual judgments.

Industrial Union Department, AFL-CIO v. *Hodgson*, 499 F. 2d 467, 474 (C.A.D.C. 1974).

In setting standards, the Secretary is expressly required to consider the feasibility of the proposed standards. Senate Committee on Labor and Public Welfare, S. Rept. No. 91-1282, 91st Cong., 2d sess., p. 58 (1970). Nevertheless, considerations of technological feasibility are not limited to devices already developed and in use. Standards may require improvements in existing technologies or require the development of new technology. *Society of the Plastics Industry, Inc.* v. *Occupational Safety and Health Administration, supra*, at 1309; *American Iron and Steel Institute* v. *OSHA*, No. 76-2358 (3d Cir., 3/28/78).

OCT 3 1978

V 4 3 / 1 9 2

0 C 3 7 8

Where appropriate, the standards are required to include provisions for labels or other forms of warning to apprise employees of hazards, suitable protective equipment, control procedures, monitoring and measuring of employee exposure, employee access to the results of monitoring, and appropriate medical examinations. Moreover, where a standard prescribes medical examinations or other tests, they must be made available at no cost to the employees (Section 6(b)(7)). Standards may also prescribe recordkeeping requirements where necessary or appropriate for enforcement of the Act or for developing information regarding occupational accidents and illnesses (Section 8(c)).

III. HISTORY OF THE REGULATION

Prior to the issuance of the Emergency Temporary Standard (ETS) in 1978, occupational exposure to AN was limited by OSHA to an 8-hour time-weighted average of 20 ppm (or approximately 45 mg/m³) as was found in table Z-1 of 29 CFR 1910.1000. The 20 ppm standard was not based on the carcinogenicity of AN, but was based on its high acute toxicity and its similarity to hydrogen cyanide.

In March 1977, the Manufacturing Chemists Association (MCA) informed OSHA of the interim results after 1 year of a planned 2-year study being conducted by Dow Chemical Co.'s laboratories on the chronic toxicity of ingestion of acrylonitrile by rats. Sacrifices of some of the animals after 1 year showed the development of various tumors, including central nervous system (CNS) and ear canal tumors, among the treated animals, but not among the controls. The tumors were found in animals exposed to 100 and 300 ppm, respectively, in their drinking water. Later reports from MCA, in April 1977, indicated that similar tumors had been found in the lowest exposure group in the test, 35 ppm, and that findings after 1 year of a continuing 2-year study of inhalation of AN by rats noted "comparable" CNS tumors in animals inhaling 80 ppm AN.

In May 1977, E. I. du Pont de Nemours & Co., Inc. (du Pont) informed OSHA of the preliminary results of an epidemiological study demonstrating an excess of cancer among workers exposed to acrylonitrile in a du Pont textile fibers plant in Camden, S.C. Although du Pont stressed the preliminary nature of these findings, the company did state that when considered in light of the recent animal tests, "[they] raise serious suspicion that it [acrylonitrile] may be a human carcinogen."

On June 29, 1977, OSHA published a request for information on acrylonitrile in the FEDERAL REGISTER (42 FR 33043) and again on July 5, 1977 (42 FR 34326). In this document, OSHA discussed the new information that had been received from MCA and du Pont, and requested specific information on various issues relating to occupational exposure to AN. Interested persons were requested to furnish information by July 29, 1977.

OSHA received 25 replies to the request for information, many of which contained considerable data and technical details on the manufacture and use of acrylonitrile, areas of potential employee exposure, and other relevant material.

Shortly after OSHA's request for information appeared in the FEDERAL REGISTER, on July 1, 1977, the National Institute of Occupational Safety and Health (NIOSH), issued a "Current Intelligence Bulletin" on acrylonitrile, outlining the information received from MCA and du Pont, discussing the other toxic effects of AN exposure, and recommending interim industrial hygiene practices to be implemented in the workplace to help reduce occupational exposure to acrylonitrile.

On September 29, 1977, NIOSH provided recommendations for a revised standard for AN. A permissible exposure level of 4 ppm AN in air as determined by a 4-hour sample collected at a rate of 0.2 liter/minute was suggested. This recommendation was based on what NIOSH considered to be the analytical limits of the air measurement technique at that time.

A NIOSH communication dated December 7, 1977 said that

> (a)lthough the preliminary results of the du Pont epidemiologic study are inconclusive by themselves, • • • when viewed in light of the preliminary rat data the conclusion with regard to acrylonitrile is clear—the chemical must be viewed as a proven animal carcinogen and suspect human carcinogen. To do otherwise would be to place the health of exposed workers in jeopardy until more conclusive evidence ultimately surfaces.

On January 17, 1978, after a review of the available data, OSHA issued an emergency temporary standard (ETS) for occupational exposure to acrylonitrile (43 FR 2586). As discussed more fully in the preamble to the ETS, the emergency standard was based upon the Assistant Secretary's determination that exposure to AN posed a grave danger to humans. The ETS established permissible exposure limits of 2 ppm as an 8-hour time weighted average, with a ceiling limit of 10 ppm as averaged over any 15-minute period during the 8-hour workshift. The ETS allowed considerable flexibility in control techniques, permitting the employer to implement any practicable combination of engineering, work practices, and respiratory protective devices during the 6-month effective period of the ETS.

In the same issue of the FEDERAL REGISTER, OSHA published a proposed permanent standard for occupational exposure to AN (43 FR 2608). The proposal contained additional provisions which OSHA believed to be more appropriate to a permanent regulation than those presented in the ETS. In addition, the proposal set forth three alternative sets of permissible exposure limits for consideration: 2 ppm TWA with a 10 ppm ceiling; 1 ppm TWA with a 5 ppm ceiling; and 0.2 ppm TWA with a 1 ppm ceiling. A period for receipt of written comments was established, to extend through February 21, 1978, to consider the proposed permanent standard.

In the preamble to the proposal, OSHA requested public comments, information, and evidence on all issues raised in the proposal.

On February 24, 1978 (43 FR 7669), OSHA published a notice of availability of an economic and technological impact assessment which had been prepared for the Agency by Enviro Control, Inc., of Rockville, Md. (ECI). As noted in the preamble to the proposal, this assessment was developed in accordance with Executive Orders 11821 (39 FR 41501) and 11949 (42 FR 1017). The ECI document examined the three alternative sets of exposure limits contained in the proposed standard. The comment period was extended to March 21, 1978, for the receipt of written comments solely on the ECI report. In addition, participants at the hearing were given additional time to submit their testimony and documentary evidence on that report.

The informal rulemaking hearing was convened by Administrative Law Judge Randolph Mason on March 21, 1978, pursuant to notice and section 6(b)(3) of the Act (29 U.S.C. 655(b)(3)). The hearing lasted through April 4, 1978. Post-hearing submissions of data requested by parties at the hearing were received through April 19, 1978. Post-hearing comments and briefs were received through May 19, 1978.

The entire record, including over 160 exhibits and approximately 1,300 transcript pages and errata, was certified by the presiding administrative law judge on August 18, 1978, in accordance with 29 CFR 1911.17. Copies of materials in the record, as well as an index of the record, may be obtained from the OSHA Docket Office, Room S6212, U.S. Department of Labor, 3d Street and Constitution Avenue NW., Washington, D.C. 20210.

The final standard on occupational exposure to acrylonitrile is based on a full consideration of the entire record of this proceeding, including materials discussed or relied on in the ETS and proposal, the record of the informal

hearing, and all written comments and exhibits received.

IV. HEALTH EFFECTS OF EXPOSURE TO ACRYLONITRILE

Information regarding the acute toxic effects of acrylonitrile (AN) on both animals and humans is extensive, and was discussed at length in the preamble to OSHA's Emergency Temporary Standard (ETS) for AN and will not be repeated here (42 FR 2586). While the toxic effects of AN have long been recognized, data demonstrating its carcinogenicity have only recently become available.

CARCINOGENICITY

Cancer is one of society's most dreaded diseases. It is generally an irreversible process whereby abnormal cells may invade and/or destroy surrounding tissue and if left untreated, culminates in the death of such tissue and ultimately in the death of the organism. Although progress has been made in the early detection of cancer, and in some cases its effective "cure", much remains to be learned about the mechanism of cancer induction and the various causative factors involved in carcinogenesis. However, in recent years research has demonstrated that exposure to certain chemicals in the environment and the workplace is among the important causes of cancer.

While cancer manifests itself in a variety of forms, certain characteristics are generally common to occupational cancer. One of these is the long latent period between initiation of the carcinogenic response and clinically visible evidence of the disease. Another characteristic is that once the initial carcinogenic events have been triggered, the disease continues to progress even in the absence of continued exposure.

Based upon a careful review of evidence contained in the record, OSHA concludes that acrylonitrile poses a carcinogenic risk to workers. This conclusion is derived from the results of experimental studies which have shown excess incidences of tumor formation in AN-exposed animals and is supplemented by indications of a cancer excess among workers exposed to AN. Moreover, AN has also been shown to be capable of inducing mutations (permanent, transmissible changes in the genetic material), an effect which has been observed for other cancer-causing chemicals.

OSHA's determination as to the carcinogenicity of AN is supported by the findings of other governmental agencies and scientific organizations. Based on the results of industry-sponsored animal studies, the National Cancer Institute's carcinogenicity testing program has "recognized acrylonitrile as carcinogenic to experimental animals and has discontinued its plans to further test the compound as a potential carcinogen" (Ex. 21).

The International Agency for Cancer Research (IARC) of the World Health Organization has recently stated in a draft report:

> • • • the data [from interim animal studies] indicate that acrylonitrile is carcinogenic to rats, producing tumours of the forestomach, brain and Zymbal glands. Acrylonitrile is also embryotoxic, teratogenic [causes fetal malformations], and mutagenic [causes mutations] (Ex. 23).

The IARC went on to say:

> • • • combined evidence from human and experimental data, plus that of the positive mutagenic activity of acrylonitrile, indicate that while confirmatory evidence from experimental animals and humans is desirable, acrylonitrile should be regarded as if it were carcinogenic to humans (Ex. 23).

In testimony prepared for this rulemaking, the National Institute for Occupational Safety and Health (NIOSH) concluded:

> AN has been shown to be a chemical carcinogen on the basis of animal experiments. The interim results which we have reviewed are significant (Ex. 42).

NIOSH also stated:

> The results from the experimental animal studies have been reinforced by the du Pont mortality study of workers exposed to AN • • • Though incomplete, the results strongly suggest that AN is carcinogenic in man (Ex. 42).

The Food and Drug Administration (FDA), in banning the use of plastic containers made with acrylonitrile concluded that:

> • • • acrylonitrile is a frank teratogen in the rat, a tumorigen [an agent capable of causing tumors] and probale [sic] carcinogen in the rat, a possible carcinogen in man and a mutagen in several test systems (Ex. 6:(174)).

Finally, several industry participants also submitted statements to the record regarding the carcinogenicity of AN. Monsanto stated that:

> • • • it is prudent to reduce the TLV [threshold limit value] since it has been established that AN is an experimental carcinogen" (Ex. 11:(27)).

Du Pont, in referring to the preliminary results of their epidemiologic study, said:

> • • • these findings, when considered together with the results of the animal tests which were reported previously, raise a serious suspicion that it may be a human carcinogen (Ex. 14:(71)).

The determination that AN is a cancer-causing chemical was the basis for OSHA's issuance of the ETS for AN early this year. The evidence on which this finding was based included the results of experimental animal studies and human epidemiology. This evidence was the focus of much testimony during the subsequent public hearing for this rulemaking. The major scientific issues raised relevant to this subject are summarized below.

1. *Evidence in animals.* The use of animal data as a predictor of human response to environmental carcinogens is widely accepted in the scientific community (cf. Tr. 565; 614; Exs. 5:(14–22); 40; 42; 98; 109; 110). OSHA has relied upon experimental evidence in this manner in several previous rulemakings on carcinogens. Available animal data on acrylonitrile clearly indicates the potential for carcinogenic effects in humans.

In March 1977 the Dow Chemical Co. laboratories informed OSHA of the results after 12 months of a 2-year rat ingestion study of acrylonitrile (Ex. 5:(3)). This investigation (hereafter referred to as the "Drinking Water" study), sponsored by the Manufacturing Chemists Association (MCA), was designed to assess the chronic toxicity and potential carcinogenicity of AN. This report showed an increased incidence of tumors of the stomach, central nervous system (CNS) and Zymbal gland of the ear canal in rats receiving 100 and 300 ppm acrylonitrile in their drinking water and sacrificed after 12 months. A letter from MCA dated April 11, 1977 supplemented this information with notice of a subsequent report from Dow which stated:

> • • • at the 12-month interim sacrifice on 10 rats per sex per dose level gross and microscopic pathologic changes of a tumorous nature were detected with greater frequency in the 100 and 300 ppm AN groups compared to the 35 ppm AN and control groups; and tumors in the stomach, central nervous system (CNS) and Zymbal gland of the ear canal region were found with increased frequency in rats ingesting 100 or 300 ppm AN and were considered treatment-related (Ex. 5:(1)).

It was noted that on April 7, the investigator had reported that the same type of CNS tumors as seen in the groups of rats receiving doses of 100 and 300 ppm had been found in two rats at 35 ppm, the lowest ingestion level under test (Ex. 5:(1)).

The CNS tumors seen at all test levels of this study were microglioma, primarily of the brain and one of the spinal cord.

In his review of the results of this study, Dr. Cipriano Cueto, Jr., an eminent toxicologist and scientist who is currently Acting Chief of the Toxicology Branch of the Carcinogenesis Testing Program in the Division of Cancer Cause and Prevention at the National Cancer Institute (NCI) and Chairman of both NCI's Experimental Design Group and Data Evaluation Group, said:

> The study is appropriately designed to determine the potential carcinogenicity of

V 4 3 / 1 9 2

acrylonitrile (AN) as well as to assess other possible chronic toxic effects of the compound in rats (Ex. 21).

Dr. Cueto noted that the results of histopathologic examination of tissues of the sacrificed animals indicate that a trend of specific tumor induction appears to already be developing, and added:

The presence and incidence of microgliomas, although not statistically significant at this time, are considered, because of their rare spontaneous occurrence, as biologically highly important in implicating acrylonitrile as carcinogenic to Sprague-Dawley rats of both sexes.

The incidence of squamous cell papillomas observed in the stomach of both female and male rats receiving acrylonitrile are statistically significant as compared to controls. Further support of the possible tumorigenic effect of acrylonitrile is the fact that those lesions also are spontaneously rare in rats.

Based on the findings described above, the National Cancer Institute, Carcinogenesis Testing Program has recognized acrylonitrile as carcinogenic to experimental animals and has discontinued its plans to further test the compound as a potential carcinogen (Ex. 21; Tr. 213; 258-261).

During testimony at OSHA's hearing, Dr. Cueto stated that the MCA 12-month interim data had appeared at approximately the time that the NCI had been involved in conducting its prechronic studies as a precursor to the then-proposed long-term chronic studies on acrylonitrile, the purpose of which was to assay for its carcinogenic potential. After an evaluation of the MCA data, the decision was made to discontinue those studies (Ex. 21; Tr. 213-214). Dr. Cueto said that this decision had been made because the NCI considered the MCA studies to be well-designed for the purposes of cardinogen bioassay and had already shown the substance to be a carcinogen on the basis of the interim test results as reported after 1 year (Tr. 258-261). Asked if it was the normal policy of the National Cancer Institute to draw conclusions on carcinogenicity based on interim results from animal bioassays, Ceuto responded: "• • • Yes, we do make these evaluations on shorter terms" (Tr. 260-261). When asked if he would have continued the MCA studies after 1 year if he had been running them, to see what the final results were, he replied that he, too, would have continued the tests, but added:

• • • That doesn't mean that the data after 12 months was not [sic] the type of data that I would sit on. And that's exactly what they did also, they didn't sit on it. And the reason they didn't sit on it is because they know that that's important data, in terms of risk (Tr. 262).

Dr. Cueto went on to say that the International Agency for Cancer Research (IARC) of the World Health Organization, during their most recent meeting in Lyons, France, had evaluated the same and other data available to them relevant to the issue of AN carcinogenicity, and had supported the NCI finding (Tr. 213). In their draft report, the IARC stated:

Acrylonitrile was tested in rats by oral administration and inhalation exposure. Although full results of the study were not available, the data indicated that acrylonitrile is carcinogenic to rats, producing tumors of the forestomach, brain, and zymbal glands. Acrylonitrile is also embryotoxic, teratogenic, and mutagenic (Tr. 213; Exs. 23; 24).

Another 2-year study sponsored by MCA and being conducted by Dow involves the inhalation exposure of rats to acrylonitrile. In this study, an unreported number of male and female rats have been exposed to 0, 20, and 80 ppm acrylonitrile for 6 hours per day, 5 days per week (Ex. 5:(1)). After the first year of the study, 13 rats per sex, per dose level were sacrificed, and the following preliminary results were reported by MCA:

(1) Microscopic evaluation of tissues from these rats exposed to 80 ppm AN for 1 year revealed the presence of tumors in the CNS of three animals;

(2) These (CNS) tumors are comparable to those reported in the ingestion study;

(3) Upon gross examination of the other rats from the 2-year inhalation study, an increased incidence of ear canal tumors and mammary region masses was detected at the 80 ppm AN level;

(4) In the animals exposed to 20 ppm AN there was an apparent increase in the subcutaneous masses of the mammary region; and

(5) No ear canal or CNS tumors were observed at this (20 ppm) dose level (Ex. 5:(1)).

In a more recent letter to the Assistant Secretary dated February 22, 1978, notification was given by MCA of the termination of this 2-year inhalation study and their receipt of a report from Dow giving information on this study. In this report Dow stated that:

Exposures of Sprague-Dawley rats to 80 or 20 ppm acrylonitrile were terminated on January 18, 1978.

Findings available to date from this study include:

(a) The preliminary findings of the tumors from gross pathologic examination of all animals, and;

(b) The microscopic pathologic findings in the central nervous system of a majority of the animals exposed to acrylonitrile. Microscopic examination of central nervous system tissue from control animals has not as yet been completed (Ex. 14:(64)).

Although all of the data had not yet been accumulated, Dow noted that:

Based on the gross pathologic examination of the rats exposed to 80 ppm acrylonitrile, there was an increase in the incidence of tumors of the ear canal gland in males and females, of the gastrointestinal tract in males and in the subcutaneous mammary region in females. Preliminary results of the microscopic examination of the central nervous system tissue from the rats exposed to 80 ppm confirmed the presence of brain tumors previously reported.

In addition, Dow stated:

Based on the gross pathologic examination of rats exposed to 20 ppm acrylonitrile there was an increase in the incidence of subcutaneous mammary region tumors in the female rats. Microscopic examination of the central nervous system tissue from the rats exposed to 20 ppm has revealed a higher incidence of brain tumors when compared to historic control data (Ex. 14:(64)).

In their evaluation of this information, Dow said:

Interpretation of data from this study must await the complete evaluation of the findings of the microscopic examination of all tissues from the control and acrylonitrile exposed animals (EX. 14:(64)).

Dr. Robert Squire, a pathologist/oncologist, who was formerly Associate Chief of the Experimental Pathology Branch and head of its Tumor Pathology Section in the carcinogenesis program as well as former Acting Director of the NCI carcinogen bioassay program, also reviewed the MCA data on acrylonitrile. In his prepared testimony, Dr. Squire stated that:

The conclusions can clearly be drawn that acrylonitrile is carcinogenic under the conditions of this experiment. There is definite indication that malignant neoplasms of the central nervous system were induced at all dose levels by the oral route and at the 80 ppm level in the inhalation study. Benign gastric neoplasms, and preneoplastic epithelial alterations in the stomach are also clearly treatment related.

Although the malignant ear neoplasms and the mammary neoplasms occurred with low incidence in the initial report of interim observations, their numbers still exceeded that in the controls, and that expected according to historic observations. A tentative conclusion must be that these are also treatment related.

Statistical analysis is less than conclusive when dealing with small numbers of animals and preliminary observations, and in fact, not essential when interpreting the significance of these unusual findings (Ex. 28).

Most importantly, Dr. Squire stated that since the time his statement had been submitted he had had the opportunity to examine selected slides from the drinking water study, and had found that the tumors seen had been qualitatively distinctly different from those seen in control rats of any strain. He commented that this evidence was almost as compelling as the numbers that were seen (Tr. 542).

Three other board certified pathologists, Drs. David Groth, Choudari Kommineni, and Ralph Yodaiken, all currently with NIOSH, also examined the rat-tissue sections prepared by Dow and reviewed the results of the MCA studies. Their reports were transmitted to OSHA in a NIOSH memorandum dated December 7, 1977. In his report, Dr. Yodaiken stated:

Despite the small number of animals (10 per group) examined thus far, the results are both statistically and biologically significant. Acrylonitrile appears to be responsible for malignant change occurring in the central nervous system; the ceruminous glands of the ear canal, far in excess of any spontaneous tumor incidence; and possibly for the early appearance of mammary gland tumors. The papillomata of the stomach must be considered both directly related to the ingestion of the acrylonitrile and premalignant (Ex. 5:(13)).

In their report, Drs. Groth and Kommineni conclude that "acrylonitrile is a carcinogen in rats" (Ex. 5:(13)).

Several industry participants contend that the MCA data constitute interim data which are "too incomplete to form the basis for any conclusion" and that "the complete analysis of results should be forthcoming within the near future" (Exs. 146; 148; 155). While MCA has indicated that this data will eventually be made available, there has been no clear indication as to when this data can be expected to be fully analyzed and reported. In this regard it must be noted that at the public hearing, Mr. Grover Wrenn, Director of Health Standards Programs for OSHA stated:

We have had for some time an indication of the projected time frames of the Dow study being done for MCA. It is my understanding that the periods of exposure are done, the pathology is being performed, and I think it is reasonable to anticipate that the reports will be available during the period of this rulemaking, although I don't have an indication of a precise report date (Tr. 36).

At the hearing, Dr. Kenneth Burgess, of the styrene plastics division of Dow Chemical, was asked if he could provide any information on the status of the final results of the MCA study. Dr. Burgess replied that while he had not been involved with that study in the last 6 months, he did know that the animals had been sacrificed some time in January and work had begun on the pathology. Dr. Burgess noted that "• • • it is a very long and tedious process".

All I can say is that I am sure they are very diligently pursuing it. As to time, I am not even sure that Dr. Gehring or Dr. Norris would be able to give us the exact time. It will be, I am sure, some months (Tr. 911).

Vistron noted later that they had been advised that there would be no additional interim report of the MCA findings, that all the animals had been sacrificed and that the "final results will be out sometime this summer" (Tr. 1096).

As no testimony was presented by MCA at the hearing and since no industry witness was available to specifically address this issue, OSHA made a formal request at the hearing that industry make an effort to obtain that data (Tr. 1054). OSHA made further inquiry into the availability of this data informally with MCA subsequent to the hearing. This, too, yielded no additional information. As of this writing, no final report has been received by OSHA.

Although the results of the longer term portion of these studies are clearly of interest and importance, the interim data cannot be ignored. Several highly qualified scientists of wide experience in oncology, pathology, toxicology and cancer research have reviewed the results of MCA's interim report of their drinking water study and have stated that this data is itself of great significance, particularly in the context of all other available data. Furthermore, as previously noted, these scientists have concluded, as have some industry participants, that AN is a carcinogen.

Dr. Squire stated during testimony, that while he has been generally opposed to analysis of interim observations in animal experiments, he has found that:

• • • Observations in this study are well out of line with expected observations even after a lifetime, much less at 1 year of age, and in my view they provide very convincing evidence of the carcinogenic effect (Tr. 543).

This point was discussed in greater detail by Dr. Squire in his prehearing statement:

Interim or preliminary data is not customarily considered appropriate for carcinogenic evaluation, since the more common tumors which occur with variable incidence in test animals may produce false positive trends which are not supported by final observations.

However, particularly in the case of brain and stomach tumors of this type, immediate concern is warranted by the interim observations. These are rare tumors which do not occur in any rat strain at any age at incidences comparable to those observed in this experiment. Experience in laboratory animal oncology, plus the recent observations of additional tumors in remaining treated animals indicates that the evidence for carcinogenic effect will undoubtedly become more conclusive as the experiments progress (Ex. 28).

Industry has questioned the finding of biological (rather than statistical) significance of the MCA data based on the rare occurrence of the tumors seen (Ex. 146). During testimony, Dr. Squire said that spontaneous tumors of the brain and stomach are rare in all strains of rats at any age, having a spontaneous incidence of 1 percent or less (cf. Exs. 21; 35; 42; 45-51; Trs. 226-237; 541; 551-553; 562). Dr. Squire noted that:

• • • The power of the statistical test is very small when dealing with animal groups of this size." • • There are other statistical tools for looking at this type of data (Tr. 541-542).

Statistical analysis supportive of this point was submitted to the record by Dr. Cueto. He determined what the probability was that the observation of a heretofore "rare" tumor was, in actuality, due to chance. Dr. Cueto said that as regards a rare tumor (i.e., one which appears at a site which does not very commonly respond to chemicals, does not have a history of a significant incidence of spontaneous tumors, and therefore, cannot be adequately supported by the most usually relied upon statistical analyses), "one must narrow the focus" and use more finely adapted calculations which can show whether this rare tumor was likely to be due to chance or to other causes. He said that such calculation had shown that the incidence of CNS tumors in the males (2 animals with tumors out of 10 examined in the drinking water study) at the 100 parts per million concentration gave a P value of 0.0003, "• • • a very small probability (3 in 10,000) that this is due only to chance" (Tr. 236-239; Ex. 23).

Other significant research into the carcinogenicity of AN includes studies recently reported in a European journal (Ex. 13). This work was conducted by Professor Cesare Maltoni, a noted research scientist currently with the Institute of Oncology and Tumor Centre in Bologne, Italy. The project, supported by the European Study Group for AN, includes experiments designed to study the long-term effects of AN on rats. Two studies designed to test the chronic effects of AN are discussed: One is an inhalation study, while the other involves the administration of AN by gavage (stomach tube).

In the inhalation study, 30 Sprague-Dawley rats of each sex were grouped according to treatment and exposed to either 0, 5, 10, 20, or 40 ppm of AN, 4 hours a day, 5 days a week for 52 weeks. The rats then went without treatment until their natural deaths, at which time complete autopsy was performed on all animals. Several tumor types were observed in this experiment. Those reported with greatest frequency were mammary tumors, Zymbal gland carcinomas, forestomach papillomas, and acanthomas (squamous cell carcinomas), encephalic (brain) tumors, skin carcinomas, and uterine carcinomas.

Dr. Harry Plotnick, a toxicologist and research pharmacologist testifying for NIOSH, also commented on the interim data from MCA. During testimony, he noted that the interim sacrifice protocol used by Dow in the drinking water study was a valid experimental design to look at the course of development of tumorogenesis (Tr. 690). He said that a study of this sort should be run for 18 months

OCT 3 1978

V 4 3 / 1 9 2

0 C 3 7 8

or longer for completeness but that "if significant results arise before that time they still are significant no matter how long the study runs" (Tr. 691). This point is addressed further in a paper published in 1977 by Drs. Saffiotti and Pagé of the carcinogenesis program at the National Cancer Institute in which they state the policy of the Institute on the issue of timing and extent of reporting carcinogenesis bioassays. Drs. Saffiotti and Page state that:

> Delaying public notification of highly suspicious findings until a final, detailed report is published, may delay preventive actions that could protect exposed populations from unnecessary risks (Ex. 110).

OSHA agrees, and has therefore determined that despite their interim and preliminary nature, these data in conjunction with all other available data present clear and convincing evidence of the carcinogenicity of acrylonitrile.

Dr. Maltoni noted that the 3 encephalic tumors observed in this study were found in the animals treated at the highest doses (40 and 20 ppm).

In the gavage study, only one dose (5 mg/kg body weight) was administered to the AN-treated animals. Acrylonitrile in olive oil was given to 40 Sprague-Dawley rats of each sex and administed by stomach tube at the rate of once each day, 3 days/week for 52 weeks. Another groups of rats, consisting of 82 females and 77 males, was given olive oil alone by the same route, and in the same quantity. These animals served as the controls and numbered twice as many as the treated groups. There were no completely untreated controls in this study.

The tumor types reported for the gavage study were the same as those reported for the inhalation study, although 2 additional types of brain tumors and no uterine carcinomas were reported in the gavage study.

Dr. Maltoni noted that the incidence of tumors in the control animals in this study was "surprisingly high". In an attempt to determine whether or not this incidence of spontaneous tumors was within the expected range for this tumor type, Dr. Maltoni subsequently examined the histological data of 403 comparable control rats of uncorrelated experiments. He found 13 CNS tumors of spontaneous incidence in this group, a rate of 3 percent. While the 3 percent rate of spontaneous CNS tumors seen in Maltoni's historical controls coincides with the incidence of all types of encephalic tumors in his contemporary control animals in the gavage study, only 0.9 percent of his historical controls were gliomas, the type of CNS tumor generally considered to be treatment-related (Tr. 592). This compares to an incidence of 2 percent gliomas in the contemporary control animals in this study. (It is interesting to note that, though not statistically analyzed, the latency period of 33 weeks before tumor incidence in the single treated animal which developed a glioma is approximately one-third the 93-week latency observed in the three control animals which developed gliomatous tumors, indicating the possibility that the dose here was responsible for a decrease in the latency period.) Industry has claimed that this "partially undercuts" the MCA studies (Ex. 155). Dr. Maltoni nevertheless concludes, based on all the results observed under the experimental conditions used in these studies, that AN has shown a "borderline oncogenic [tumor-inducing] effect". He further states that:

> At present our data do not make definitive evaluations possible. On the other hand, they point to the need of further investigations on the long-term effects of AN (Exs. 13; 65).

Dr. Cueto noted in his testimony that this "borderline oncogenic effect" which Dr. Maltoni reports, was detected using only a minimally sensitive test. Cueto said that the number of dose levels Maltoni tested in the gavage study (only one dose level was used), the use of some very low doses (5 ppm and 10 ppm in the inhalation study), the low frequency of dosing (4 hours/day for 5 days/week in the inhalation study and only 3 single daily doses/week in the gavage study) and the short duration of AN administration relative to the total duration of the experiment in these experiments greatly reduced their sensitivity (Tr. 263, 265). Dr. Cueto added that:

> • • • Dr. Maltoni's data can be used in terms of supporting the fact that one is beginning to see a chemically related effect. He has found effects at certain sites which others have found in a drinking water study • • • [and] in another inhalation study. It's all beginning to come together (Tr. 264).

Dr. Cueto reiterated that these CNS tumors are rare, stating that:

> • • • I am relying on the fact that all of the studies that I have looked at that have indicated central nervous system [tumors] and one involves • • • over 7,000 animals, did not find but a matter of about one percent tumors, which means that the probability of picking from a very small sample and finding central nervous [system tumors] is very low • • • because it is a very uncommon tumor (Tr. 232-233).

In his paper, Dr. Maltoni states that "to our knowledge, there is no systematic research on the spontaneous incidence of central nervous system tumors in experimental rodents" (Ex. 13). In referring to this statement, Dr. Squire said that while "• • • that may be true in the European community, it certainly is not true in the United States" (Tr. 588). In addition to the reasons mentioned by Dr. Cueto, Dr. Squire thought that the results of Maltoni's experiments were not contrary to the MCA studies for several other reasons. He said that of the types of brain tumors observed in the controls in Maltoni's gavage study, the gliomas (the type generally considered to be treatment-related) showed a 2 percent incidence in the controls after 2 years. Comparing this to an incidence of gliomas ranging from 10 percent to 40 percent in the MCA study after just 1 year, he said further emphasizes the importance of the MCA's findings:

> • • • one cannot dismiss the decreased latency [shown] by one year vs. two years and an increased incidence averaging about 20 percent vs. an incidence of 2 percent (Tr. 592).

Dr. Plotnick noted during the hearing that Dr. Maltoni had concluded from his studies of AN that there was a suggestion of carcinogenicity. Plotnick said that this determination was made despite the poor design of these tests as a bioassay for a carcinogen. He, too, pointed to the short exposure times in both tests, the noncontinuous exposure regimen in the gavage study, and the total duration of the test of only 52 weeks followed by a period of nontreatment for an additional 52 (or more) weeks, noting that normally, carcinogen bioassays are run for 18 months or longer. (Tr. 682-683). While the experimental design of these studies significantly reduces their sensitivity and limits their usefulness in addressing the issue of AN's carcinogenicity, OSHA finds that the Maltoni studies, when viewed in the context of the Dow reports, provide additional supportive evidence of the ability of AN to induce cancer in animals.

Industry has further objected to the use of historical control data to support statements regarding the rare spontaneous incidence of the brain and stomach tumors reported. Vistron noted that "comparison to control groups in the MCA studies yielded statistical significance for only one tumor—the benign papilloma", arguing that "• • • [i]t is not scientifically legitimate to attribute significance to the other tumors by comparison to spontaneous tumor incidence [i.e. historical controls]" (Ex. 146). Dr. Cueto stated during testimony, however, that when observing the incidence of tumors, comparisons must be made with historical data to establish a baseline for determining what the expected results would be in the control animals. The purpose of such comparison he said, was to determine whether the controls were indeed responding as controls and to thereby check the accuracy of the results to be certain the experiment was conducted properly (Tr. 232; 234-235).

Vistron has argued that while Dr. Squire noted a spontaneous tumor incidence for central nervous system tumors of less than 1 percent, Dr. Maltoni had reported a 3 percent spontaneous incidence of CNS tumors in his controls (Ex. 146). Dr. Maltoni, however, noted in his paper that he thought the 3 percent incidence of spontaneous CNS tumors seen in the control animals in his gavage study was "surprisingly" high and used historical controls in a manner similar to that discussed by Dr. Cueto. Maltoni had, therefore, checked the historical spontaneous incidence of the tumors at his own laboratory and had found an historical spontaneous incidence of 3 percent for all CNS tumors and 0.9 percent for glioma (Ex. 13). (Interestingly, Dow also compared the incidence of brain tumors they had found in animals exposed to 20 ppm AN (inhalation) to historical control data (Ex. 14:(64)).)

It is apparent that in the evaluation of experimental test results, historical data is necessary to establish the context in which such results are viewed. This is accomplished either indirectly, by virtue of the investigator's own past experience, or directly, by literature search. The use of historical data relative to the studies in question in this proceeding is clearly valid.

Industry participants, noting the benign nature of the stomach tumors seen at increased incidences in the AN treatment groups in both the Dow and Maltoni studies, have questioned the extrapolation of these findings to human health risk. Vistron has stated that "malignant tumors in humans do not arise from benign tumors; instead they arise de novo" (Ex. 146). This, however, is a matter of speculation. While experimental animals can be serially sacrificed and routinely checked for the development of tumors which can thus be traced from the benign to the malignant, human cancers are frequently first diagnosed when they are, in fact, already malignant. It is impossible to know, in many cases, whether that malignancy had an otherwise innocuous and benign beginning or arose "de novo". This is illustrated by Dr. Woodward's statement at the hearing that:

> In man at least, it is apparent and unfortunate that a cerebral hemisphere gliomatus tumor, and this is the common site for gliomatos tumors, may obtain considerable size before any symptomatology or [clinical] findings occur (Tr. 1089).

Dr. Yodaiken testified that polyps of the gall bladder, stomach, colon, and larynx are all precancerous lesions in man, and that in animals, papillomas are known to be followed by the development of malignant squamous cell cancer when the skin is painted with a carcinogen. He concluded that "• • • [p]apillomas under experimental and under human conditions do in fact tend to become malignant in certain circumstances" (Tr. 1085).

Dr. Squire observed that although the stomach tumors seen in the drinking water study were lesions of hyperkeratosis and benign papillomas, these are characteristic of the early response of the stomach to carcinogens, occurring with very low spontaneous incidence in this organ, and are clearly treatment-related (Tr. 542). As noted earlier, the three pathologists from NIOSH, who also examined the slides from the drinking water study, concluded, as Dr. Squire did, that the stomach papillomas must be considered premalignant lesions.

In questioning the validity of extrapolating animal data to humans, industry argues further that "the forestomach of the rodent has no anatomical counterpart in man" (Ex. 92). It is important to note that carcinogens are not necessarily organ-specific (chloroform for example, induces hepatic carcinoma in mice and kidney carcinoma in rats and benzidine, which causes hepatic carcinoma in rats, induces bladder carcinoma in man). In particular, AN has, in fact, been shown to attack a variety of primary sites in animals with a similar lack of site-specificity being implicated in man (Exs. 5:(1); 5:(5); 5:(13); 42). Furthermore, the malignancy here relates to the cellular composition of the affected organ rather than to the structural configuration of the organ. The stomach papilloma under discussion occurred in the non-glandular portion of the stomach (in the squamous epithelium) which is, in fact, the same as the epithelium of the esophagus in man (Tr. 1086). (In this regard, it is interesting to note that a 6-month oral toxicity study using dogs resulted in early lesions of esophageal tissue in those animals administered 300 or 200 ppm AN in their drinking water (Ex. 11:(12A)).

These points aside, the matter of benign tumors as precancerous lesions in man is not what is at issue here. The argument raised by industry participants must be separated into its two component parts. The first facet of the argument deals with the significance of benign tumors in experimental animals in determining the carcinogenicity of certain substances. While there is some debate as to the significance of benign tumors which may arise in humans, the stomach papillomas in question in the animal studies are "tumorigenic lesions • • • of significant concern, as they are the kind that generally tend to be precancerous" (Ex. 6:(175 at G/86)). The second facet of industry's argument relates to whether a finding of animal carcinogenicity can be reliably extrapolated to human risk. In his testimony, Dr. Squire stated that:

> I think we can say that all animal carcinogens, unless there is evidence to the contrary, must be considered as potential carcinogens in some humans • • • [q]ualitatively one can say that unless one has specific evidence to the contrary, that we have to assume it is potentially a carcinogen in another animal or species (Tr. 565).

Several chronic and subacute studies have been cited by Monsanto as evidence that a "no-effect" level of more than 2 mg/kg/day (approximately 20 ppm) exists for exposure to AN (Ex. 11:(27)). As discussed below, this statement is not supported by the evidence cited. Among the reports on which Monsanto bases its contention is a study conducted in the late 1950's by Svirbely and Floyd in which AN was administered to CFW rats in their drinking water over a two-year period. The authors reported no significant pronounced effects in the organs and bone marrow smears of these animals (Ex. 5:(25)). Monsanto has claimed that this report indicates a no-effect level of 50 ppm for exposure to AN (Ex. 11:(27)). Because, to our knowledge, the data for these studies has never been fully reported, an assessment of the results is unreliable at best, and in light of recent findings by Dow/MCA, no such conclusion can be validly drawn from this report.

Monsanto has further claimed that an early chronic toxicity study conducted in 1947 at the George Washington University by Tullar established a "no-effect" level of 33 ppm in rats (Ex. 11:(27)). Although this 2-year feeding study was not specifically designed to investigate the potential carcinogenicity of AN, four of the test rats developed tumor-like growths. No such growths were found in the control animals, nor were any similar growths found in the approximately 400 other rats from the same stock or even in the breeding stock from which these animals were taken. In this regard, the FDA has suggested that the Tullar study "adds significance to recent findings of AN's tumorogenicity" (Ex. 6:(174)).

In arguing for the existence of a "no-effect" level for AN, Monsanto also references the findings of two 1975 Dow studies (as distinct from the chronic studies conducted by Dow and described in detail earlier in this document) in which AN was administered in the drinking water of experimental animals for relatively short periods of time.

One is a 90-day drinking water study in which concentrations of 500, 210, 85, 35 or 0 ppm AN were incorporated in the drinking water of male and female rats (Ex. 11:(12B)).

V 4 3 / 1 9 2

0 C 3 7 8

In the second study 4 male and 4 female beagle dogs/dose were given drinking water containing 100, 200 and 300 ppm of AN daily for 6 months (Ex. 11:(12A)).

Neither of these 2 Dow studies was designed to assess the long-term chronic toxicity of AN. To claim a general no-effect level on the basis of short-term exposures such as these, particularly when dealing with a substance which has been shown to produce cancer in animals, and to claim further that these are specifically "chronic animal tests for carcinogenicity," is scientifically unsound (Ex. 11:(27)).

In their final discussion of the toxicology data presented, Monsanto concedes that:

> Some of the toxicology studies discussed earlier do not have a direct bearing on the question of whether or not AN produces a tumorigenic or carcinogenic response in animals. They are cited to illustrate that the toxicology of AN has been studied in considerable detail (Ex. 11:(27)).

It must be clarified here that while the acute, short-term toxic effects of AN may have been studied extensively, research into the chronic effects of this substance has been very limited. It is for this very reason, particularly when it is noted that long-term effects of exposure to AN appear to be affecting the very systems in which effects have been noted in these acute toxicity tests, that the long-term results become increasingly important. As more data is accumulated, the need to minimize human exposure to AN becomes more apparent. The establishment of a so-called "safe level" of human exposure to AN is not possible when serious effects are being reported at increasingly lower dosage levels.

The manufacturers also point to Maltoni's research on AN as suggesting a no-effect level of approximately 2 mg/kg/day (Exs. 11:(27); 148) OSHA has discussed Maltoni's work at length earlier in this document. For reasons already stated and in light of the short exposure times, the non-continuous exposure regimen (in the Gavage study) and the short duration of the tests, OSHA views these studies as wholly insufficient to determine a no-effect level for AN.

During his testimony, Dr. Cueto addressed the issue of no-effect levels, or thresholds. He said that thresholds cannot be said to be established by merely noting the lack of a response. He said:

> • • • there [are] many ways you don't get a response. One of the ways is to have too few animals • • • The sensitivity of a test depends primarily on the number of animals that you use (Tr. 249).

He also stated:

> I think there are thresholds for every end point • • • the difficulty is in establishing them • • • [and] whatever the endpoint we are talking about, the thresholds may be different. So consequently the problem is that [while] thresholds do exist, establishing them is difficult; if you establish them, they are probably not meaningful in the real world (Tr. 239-240).

Dr. Edward Sowinski, Industrial Toxicologist for the Chemical Division of Uniroyal, Inc., similarly stated, during testimony that

> At this time, there is no scientific evidence available from either the MCA studies or duPont's epidemiology studies which indicate a safe level of exposure to acrylonitrile. A safe level may exist but there is presently insufficient data to identify such a level (Tr. 978).

Even if such no-effect levels for exposure to carcinogens could be established for animals, the validity of extrapolating such levels to man or even from one carcinogen to another for the same species would be highly questionable, at best.

The Assistant Secretary has addressed the issue of safe levels in previous rulemakings and has determined that based on the best available scientific evidence, no safe level for exposure to a carcinogen can be established at present (cf. Carcinogens, 39 FR 3758; Vinyl Chloride, 39 FR 35892; Coke Oven Emissions, 41 FR 46742; Arsenic, 43 FR 19584).

Another argument raised in support of the concept of a safe level for exposure to AN is based on the results of experiments concerning the metabolism of AN (Exs. 11:(12I); 2:(11A)). While OSHA recognizes that biological systems may utilize alternative metabolic pathways differentially in response to a variety of conditions, the results of the metabolic studies on AN which have been submitted to the record cannot be interpreted as evidence of a threshold for the carcinogenic effects of AN. The potentially wide variation in the metabolic response over time, along with the long latency periods associated with the carcinogenic response and the lack of definitive knowledge regarding many of the mechanisms of action involved in this response, make any conclusions regarding the metabolism of AN as based on short-term exposures, of questionable value when applied to the results obtained from chronic exposures. More importantly, the mechanism by which AN induces cancer is unknown; AN itself could be the active agent responsible for the transformation of normal cells into cancerous ones, or intermediates along known (or as yet unknown) alternative pathways may be involved.

The complexity of carcinogenesis, including the long latency period involved and the multitude of conditions relating to individual sensitivities to carcinogens make it difficult at this point in time, to demonstrate that exposure to any specified quantity of AN is safe. Because these uncertainties remain unresolved, and in view of OSHA's obligation to protect workers, we must conclude that no safe level for exposure to AN can be said to exist at this time.

2. *Evidence in Humans.* In May 1977, E. I. du Pont de Nemours and Co., Inc. (du Pont) made available to OSHA the preliminary results of an epidemiologic study of du Pont workers at the company's textile fibers plant in Camden, S.C. (Ex. 5:(5)). The study indicated excess cancer incidence and cancer mortality as compared with company and national experience.

The study cohort consisted of 1343 male employees who were determined to have had potential for exposure to AN at some time during the years 1950 to 1967. The morbidity or mortality status through 1975 was reported for 854 employees who began working in the polymerization area of the plant between 1950 and 1967 and who were still actively employed by, or had retired from, the company. Four hundred eighty-nine employees, or 36 percent of the defined study cohort, were workers who had either been laid off or had quit employment with the company, and whose vital status was unknown (du Pont is currently attempting to trace these employees) (Exs. 5:(5); 102).

One of the most striking observations of this report was that among the 470 male employees who had begun working in the polymerization area of the plant between 1950 and 1955 and who were either still actively employed by, or had retired from the company, there was an observed incidence of 16 cancer cases among the active employees, as compared with an expected number of 5.8 (based on company rates) or 6.9 (based on national rates). The differences between observed and expected cases were statistically significant. The data presented show a higher frequency of lung and intestinal cancer. However, as du Pont noted, these tumor types alone are not entirely responsible for the significant excess of cancer seen in the cohort. In addition, all cases of cancer found were reported to have occurred among those employees who were first exposed to AN between 1950 and 1952.

Du Pont also reported that mortality data for this group (i.e. those first exposed between 1950 and 1952) showed 8 cancer deaths, as opposed to 4.0 (company rates) or 5.1 (national rates for white males in 1970) expected. These differences were also statistically significant.

The report did not include information as to the levels to which employees were exposed, and no directed correlation between specific levels of exposure and the increased incidence of cancer in this cohort was reported. Because little or no data is available on employee exposures to AN during this early period, du Pont attempted to group the potential exposure severities at their Camden plant by job classification. This classification was described as having been based on the recollections of a committee of management personnel who had been present at the Camden plant during the 1950-52 period and who purportedly had intimate knowledge of the worksite and employees. As no past monitoring data was available on which to base them, these ratings were completely subjective, and du Pont noted that:

> • • • it is quite possible for careful employees to have "low" exposure though assigned to "high" jobs and careless employees to have "high" exposures though assigned to "low" jobs (Ex. 102).

In fact, it is interesting to note that the listing of exposure information as related to the severity code used (where "severity 3" is the classification with the least potential for exposure for AN), shows that a "sizable number of persons with only level 3 severity of exposure developed cancer" (Ex. 5:(5)).

Due to the lack of objective sampling data and the subjective nature of the alternative methods used for estimating these exposures, any dose-response relationship which might be defined for this cohort remains largely a matter of speculation and cannot be accurately derived from the available human data. In any case, even if such a relationship were to be demonstrated, this would not necessarily establish the level which actually induced the cancers observed.

In their analysis of the du Pont report, NIOSH has stated:

> It is interesting to note that, in addition to these two specific sites (lung and intestine) cancer of eight additional sites (prostate, lymphosarcoma, Hodgkins, (penis), thyroid, nasopharynx, bladder, and pancreas) occurred among the workers in this cohort. As pointed out by the investigator, this nonspecificity of tumor site is reflected in animal studies in which acrylonitrile was ingested or inhaled.
>
> Interpretation of these results is severely limited by two major factors:
>
> (1) The vital status of a large proportion (36 percent) of the cohort has not yet been determined, and
>
> (2) Complete work histories have not been obtained to provide information on exposure to substances other than acrylonitrile.

Despite these limitations which others have also noted in this proceeding, NIOSH concludes that:

> • • • the excess of lung cancer and cancer of the large intestine in both the morbidity and mortality analysis is clearly suggestive of a cancer problem among acrylonitrile workers (Ex. 5:(13)).

NIOSH and others have further suggested the possibility that exposure of the du Pont employees to other toxic, and perhaps carcinogenic materials may contribute to the observed cancer excess, however, du Pont has stated that: "• • • the issue of other exposures in addition to acrylonitrile was considered at the time the epidemiologic study was done" (Exs. 5:(13); 118).

The possibility that these workers were exposed to asbestos has been noted by several participants as an important factor to consider in view of the almost universal use of this substance in chemical plants (Exs. 92; 93; 106). NIOSH addresses this point in their posthearing comment, noting that:

> • • • asbestos is not mentioned on this (du Pont's) list of (other) exposures (common to the cohort); nor did Camden plant personnel address-asbestos as a common exposure for this cohort when questioned about any other carcinogenic compounds during a NIOSH walk-through survey conducted March 2, 1978. Furthermore, the study reported no cases of asbestosis among the cohort members (Ex. 141).

It must also be noted here that exposure to asbestos would be expected to have been the same for all workers in the plant including those who were not exposed to AN. If asbestos were responsible for the lung cancers seen in this cohort, one would expect to find a comparable excess of cancers in workers who were not in the AN cohort, as well. Such an excess was not reported by du Pont.

Du Pont's preliminary report did not include smoking histories of the cohort, but a followup report contained information on the smoking histories of eight persons in the cohort who had died of lung cancer. Six of these were in the 20-year latency group and two were not (Ex. 102). One industry participant has claimed that "smoking is the most likely cause of the excess lung cancers at the du Pont plant" (Ex. 146). While this is certainly possible, it is purely conjectural, as there is presently no information on the smoking histories of those workers in similar exposure categories and jobs who did not contract lung cancer. Proper evaluation of the effect of smoking on the incidence of lung cancer in this study must include the smoking histories of all members of the cohort.

The other exposures reported by du Pont to have been common to the cohort include methyl acrylate and dimethylformamide (DMF). No data addressing the carcinogenic potential of methyl acrylate was submitted to the record and du Pont has noted that while DMF is a toxic chemical, their research, as well as a thorough review of the literature on this substance (including NIOSH data) indicates that DMF is neither a mutagen nor a carcinogen (Ex. 106, 108, 93). OSHA concludes, on the basis of information submitted by du Pont, that exposure to these chemicals does not provide sufficient evidence to alter the finding of the carcinogenic potential of AN as indicated by the excess cancers seen in this cohort.

OSHA recognizes that in this, as in all epidemiologic studies, exposures to other chemicals must be carefully assessed. The complexities of carcinogenesis are such that the possibility always exists that other substances may have in some way contributed to the development of cancer in the exposed individuals. The multitude of known factors, as well as the many remaining unknown aspects of the carcinogenic response, must all be considered in the interpretation of such studies. It is for this reason that animal bioassays and other laboratory research play an important role in the evaluation of human data, and that conclusions as to the carcinogenicity of a compound must be based on the record as a whole.

Another issue relevant to interpretation of the du Pont study was raised by Dr. Lamm, on behalf of both Vistron and Borg-Warner. Dr. Lamm has taken note of the deficit of cancer cases observed in that portion of the du Pont cohort exposed to AN "within the 20 years following initial exposure" (Exs. 97; 129). In addressing this point, NIOSH has stated that:

> • • • at least three possible factors could have contributed to this situation:
>
> (1) The "healthy worker effect" whereby the population under study is biased toward excluding workers who are sick or otherwise unable to work;
>
> (2) The recognition of the long latency period (20 to 40 years) required between initial exposure to a carcinogen and consequent clinically evident cancer in the worker;
>
> (3) The fact that the vital status of one-third (484) of the population is still not available. All of these factors probably contributed to seeing less cancer in those workers with fewer than 20 years of latency (Ex. 141).

In addition, Dr. Lamm makes note of the fact that the author of the du Pont study has suggested that:

> • • • reanalysis of the data to consider incidence potential only during time of du Pont employment may alleviate this anomaly (i.e. the observed deficit of cancer cases) (Ex. 129).

While this deficit in cancers observed in the group whose exposure began after 1953 is certainly of interest, the excess of cancers seen in workers who do exceed the 20-year latency must nevertheless be viewed as a serious indication of an increased risk of cancer for those exposed to acryloni-

V 43 / 192 OCT 3 78

trile. Du Pont's epidemiologist has stated that:

> Based on these preliminary findings, it can be concluded that persons exposed to AN at the textile fibers plant in Camden, S.C., are at greater risk of developing cancer, as compared with company, national, and regional experience (Ex. 5:(5)).

OSHA recognizes that due to its preliminary nature, and the inherent uncertainties generally associated with retrospective epidemiologic investigations, the du Pont study contains several unanswered questions. However, the Agency has carefully assessed this study and has concluded that the results presented support the finding of carcinogenicity for AN as observed in the animal studies described above.

Another epidemiologic study has been more recently submitted to the record by the United Rubber, Cork, Linoleum & Plastic Workers of America (URW). This study, done for the B. F. Goodrich Co. and the URW by Dr. Monson, of the Harvard School of Public Health, is a retrospective epidemiologic study of cancer morbidity and mortality among B. F. Goodrich workers, including some with acrylonitrile exposure (Exs. 67; 163). The results of this study showed that among white male union members who had at some time worked in an AN polymerization area and/or an area in which polymerized AN was used, there was a slight overall excess of malignant neoplasms, although fewer deaths from all causes were observed as compared to those expected. An excess of lung cancers (7 observed/4.4 expected deaths), genitourinary cancers (2 observed/1.6 expected deaths and 6 observed/3.1 expected incidences), and Hodgkin's disease (2 observed/0.3 expected deaths) are reported, although data supportive of these findings are not clearly presented. No excess of intestinal cancers was said to have been observed in this cohort.

In concluding his report, Dr. Monson states:

> Given the excess occurrence (of cancers) in these departments, and in spite of the difficulty in determing the reason for the excess, prudence is called for with respect to current conditions. To the extent that men currently working in these departments are exposed to AN and other chemicals, exposure should be reduced (Ex. 163).

While there are differences between the tumor sites seen in Monson's study as compared to the du Pont report, the incidence of a wide variety of primary tumor sites observed in both studies is itself suggestive of some commonality, particularly in view of the animal data in which a similar systemic carcinogenic response was observed. However, the Monson cohort was known to have been exposed to many substances other than AN which are themselves implicated in the development of excess cancers of various sites.

Because of the preponderance of other exposures among the members of this cohort, and because the excess cancers seen cannot be adequately correlated with AN exposure in this cohort, it is OSHA's conclusion that the Monson study, in its present form, adds little to the evaluation of AN as a carcinogen in humans.

3. *Mutagenicity.* Chemicals which cause mutations in bacteria have been shown to be generally capable of causing cancer in experimental animals, and chemicals which are carcinogenic to animals are also generally regarded as potential human carcinogens (Ex. 109; 5:(14)–5:(22)).

The detection of carcinogens through mutagenicity testing has been shown to be 85 to 90 percent accurate in the *Salmonella typhimurium* assay as described by Joyce McCann et al. (Exs. 5:(14); 5:(15)). These authors have shown that the *Salmonella*/microsome mutagenicity test has been sufficiently developed and validated to be used as a rapid screening method for the detection of mutagens as animal carcinogens and as a complement to long-term animal testing for the detection of potential human carcinogens (Ex. 5:(14)). Another assay procedure with *S. cerevisae* has been shown to be about 60 percent accurate in the detection of those carcinogens which increase the rate of mitotic recombination (Ex. 5:(16)). Although these test systems are not 100 percent accurate and neither a positive nor a negative response absolutely proves a chemical to be hazardous or nonhazardous to humans, the use of both assay procedures significantly enhances the probability of detecting potentially hazardous chemicals.

Several researchers, employing a variety of methods, have investigated the mutagenic potential of acrylonitrile. Because it is both highly toxic and highly volatile, special precautions have been shown to be necessary when designing experiments to assay for the mutagenicity of AN. When this has been done, test results have consistently shown AN to be mutagenic.

Highly reproducible and statistically significant positive results were reported by Venitt, Bushell, and Osborne when, by modifying their technique, they were able to test for the mutagenicity of AN at levels which minimized the toxic effects of this chemical. Importantly, the authors demonstrated that the toxic effect on the mutation rate was dose-dependent. Previous tests for mutagenicity at levels 20 to 40 times that used in these tests, while reproducible and statistically significant, were characterized only as "weak" and "reliably demonstrable only within a narrow range of doses." At lower doses the toxic effects were minimized (Ex. 5:(19)). By utilizing an exposure chamber to reduce the evaporation of AN and to facilitate the control of the exposure atmosphere, Milvy and Wolff reported that AN produced mutations in three separate tester strains of *Salmonella typhimurium* at low atmospheric concentrations with exposures as low as 57 ppm resulting in mutagenic effects (Ex. 5:(17)).

More confirmatory evidence of the mutgenicity of AN was provided by Venitt et al. in experiments utilizing a factor described by McCann et al. which increases microbial sensitivity to the mutagenic effects of chemicals and was thought by the authors to be likely to enhance the mutagenic effects of AN. As expected, AN was more mutagenic in this system (Ex. 5:(19); 5:(22)).

Industry participants have pointed to evidence of negative findings regarding the mutagenicity of AN (cf. Ex. 11:(27)). Two studies done on six different strains of *Salmonella* which used neither the fluctuation test nor the exposure chamber methods showed no activity at all (Exs. 5:(16); 5:(24)). A NIOSH memorandum dated December 9, 1977, from Dr. Taylor to the NIOSH mutagenicity task force members which was submitted to the OSHA hearing record by Vistron (Ex. 137), noted that acrylonitrile was one of several substances previously considered positive and subsequently found negative for mutagenic acitivity in the Ames test as carried out on four tester strains of *Salmonella typhimurium*. This is not surprising in view of the variability of test results seen in tests in which the toxicity and volatility of AN are not adequately controlled for.

The wide variation of test results reported in the area of mutagenicity would appear to be closely related to the differences in the laboratory methods used and to the high volatility and toxicity of AN. Available evidence indicates that the tests which gave negative results were done under experimental conditions which made no adjustments for these factors. Without repetition under appropriately controlled conditions, these experiments cannot be considered as evidence that AN is non-mutagenic.

The manufacturers have stated that there is no evidence supportive of a connection between human health and bacterial mutagenicity, and that "attempts to indict AN as a carcinogen on the basis of mutagenicity, test results are tenuous at best" (Exs. 11:(27); 11:(18); 11:(13); 146). However, the FDA, in their initial decision regarding acrylonitrile copolymers, said:

> The present data raises certain implications of adverse effects of acrylonitrile. The

> microbial system screening for animal carcinogenicity has produced several clear, highly reproducible positive findings, with negative results occurring only when a technique meant to overcome the problems of toxicity or volatility of AN was not utilized. In this situation, with the same number of studies finding positive results as those finding negative results, it would be improper to discount the positive findings. This view results in a strong implication of acrylonitrile being a carcinogen in higher animal systems (Ex. 6:(173)).

This view was upheld in the FDA's final decision on this matter and OSHA concurs (Ex. 6:(174)). The statistically significant and reproducible positive results in microbial studies appropriately designed to minimize the effects of AN's volatility and toxicity cannot be discounted, and must be viewed as suggestive of a carcinogenic effect in animals. OSHA recognizes that such evidence, in and of itself, cannot be regarded as definitive proof of the carcinogenic nature of AN. However, OSHA must view these data in light of the high percentage of accuracy associated with predicting animal carcinogenicity by such tests, and as a part of the entire record, which to date has continued to support the finding that AN is an animal carcinogen.

4. *Teratogenicity.* The effects of acrylonitrile ingested by pregnant rats, on embryonal and fetal development have also been recently studied in an attempt to further define the extent to which AN can affect biological systems.

In an evaluation of the teratologic effects of AN, Murray, et al. reported fetal malformations as well as evidence of embrytoxicity (Ex. 5:(4)). Doses of 0, 10, 25 and 65 mg AN/kg/day were given to pregnant Sprague-Dawley rats by gavage on days 6–15 of gestation. The highest dose-level was significantly maternally toxic and produced increases in a variety of malformations among the fetuses in addition to evidence of embryotoxicity. The next lowest dose, 25 mg AN/kg/day, produced less maternal toxicity and a low incidence of the same signs of embryotoxicity and fetal malformations. Despite the short exposure period, this dose resulted in erosion, ulceration and a thickening of the nonglandular epithelium of the stomach in the dams (Exs. 5:(25); 28). No evidence of maternal toxicity or effects on the developing embryos or fetuses was apparent at the lowest dose of AN administered (10 mg AN/kg/day). The possibility that maternal toxicity was the sole cause of the malformations seen in this study is discounted by the authors.

In reproduction studies of a series of nitriles, including AN, Svirbely and Floyd gave groups of Holtzman strain Sprague-Dawley rats 10, 100 and 500 ppm of the individual nitriles in their drinking water (Ex. 5:(25)). Data from two first-generation litters showed decreases in the indices of fertility, gestation and viability in the group given the highest dose of AN. Growth retardation was also seen in the offspring of this high-dose group and, in addition, a progressive muscular weakness in hind limbs of the females at the 500 ppm dose developed unexpectedly 16–19 weeks after the weaning of the second litter. (While this study was to be continued through three generations, the data for the succeeding two generations were not made available.)

Monsanto has noted that it is conducting a 3-generation reproduction study involving rats receiving 100 and 500 ppm of AN in their drinking water "to determine whether the paralysis described earlier [in the Svirbely and Floyd study] was reproducible" (Ex. 11:(27)). Monsanto stated that "(f)emales held for 20 weeks after casting of their scond litters have not shown signs of hind leg paralysis" (Ex. 11:(27)). Valid comparison of these studies is not possible at this time, however, since neither the strain of rat nor the test protocol used by Monsanto was reported.

OSHA concludes that based on available data, AN is teratogenic in the rat. Available experimental evidence neither establishes a level of safety nor allows for the adequate determination of a safe level for human exposure. In his evaluation of this data, Dr. Yodaiken of NIOSH, has drawn attention to the "possibility that intrauterine insults to the developing embryo may only manifest clinically in the offspring long after birth" (Ex. 42). In light of the carcinogenic effects of AN, any "safe" levels which might be proposed for the teratogenic effects of AN would, in any case, be irrelevant, since it is OSHA's view that current scientific knowledge precludes the establishment of safe levels for all carcinogens, including AN.

In fact, the FDA has reached a similar conclusion in its deliberations involving acrylonitrile:

> It appears from an evaluation of the testimony and evidence presented in this proceeding that a finding of safety for AN at this time would be premature and unwarranted, particularly in view of the severe irreversible effects which have been potentially attributed to AN. This is so, despite the fact that such a determination might well have been possible were the adverse effects of AN limited to acute toxicity (Ex. 6:(173)).

Based on the above and on the record as a whole, OSHA concludes that acrylonitrile poses a carcinogenic risk to workers and that, in the absence of a demonstrated safe level, employee exposure should be reduced to the lowest level feasible.

V. Permissible Exposure Limit

The final standard establishes a permissible exposure limit (PEL) of 2 parts per million (ppm) averaged over an 8-hour period. This represents the lowest level which OSHA believes is generally feasible. In determining the appropriate PEL, OSHA relies on the record of the proceeding and on policy considerations which lead the Agency to conclude that in dealing with a carcinogen or other toxic substances for which no safe level of exposure has been demonstrated, the permissible exposure limit must be set at the lowest level feasible. Such a determination is, in our judgment, justified by the nature of the hazard being dealt with, and by the intent of the Act.

The Assistant Secretary has determined that acrylonitrile is a proven animal carcinogen and that it must be regulated as a human carcinogen. No data is available to demonstrate the existence of a "safe" level of exposure to acrylonitrile. In the absence of a demonstrated safe level, and because of the irreversibility and long latency period for cancer, OSHA must conclude that, for regulatory purposes, no safe level exists. An erroneous determination that a threshold does, in fact, exist would lead to an irreversible and fatal illness. This would be inconsistent with OSHA's statutory responsibility to set a level which will assure that no employee will suffer material impairment of health.

This statutory responsibility also mandates that the level that is set must be feasible. The record indicates that even the most totally enclosed processes have the potential for leaks and spills of AN, and that certain polymerization processes are not amenable to total enclosure. Industry has recognized, and the record clearly reflects, that 2 ppm is the lowest level which generally can be achieved primarily by use of engineering and work practice controls in most polymerization operations and other areas in which AN is used.

OSHA recognizes that the setting of a permissible exposure limit for AN involves a careful balancing of the relevant factors noted above. OSHA has determined that 2 ppm is the exposure limit which most adequately assures, to the extent feasible, that employees exposed to AN will be protected. It is incontrovertible that a PEL of 2 ppm can be achieved almost entirely through engineering and work practice controls in the large majority of AN operations, ranging from the manufacturing of the monomer through polymerization. As was recognized in the preamble to the proposal, however, there are certain operations which, by their very nature, will require the use of respirators. Such operations, which include the cleaning of prefloc

V 4 3 / 1 9 2

0 C 3 7 8

from the interior of reactors and certain other maintenance and cleanup activities, do not generally involve exposures for the full 8-hour workshift. It is apparent that activities of this nature would necessitate respirator usage in any event, due to the often unknown concentrations of AN that are involved.

The scientific and policy determinations underlying the regulation of AN as a carcinogen were discussed at length in the preamble to the ETS and were the subject of considerable comment in the course of this rulemaking as previously discussed. These determinations are consistent with other OSHA regulatory actions for carcinogens which have been taken after considerable scientific debate. For example, see the preambles to OSHA's carcinogen standard, applicable to 14 selected substances, 29 CFR 1910.1003-1910.1016 (39 FR 3758) aff'd, *Synthetic Organic Chemical Manufacturers Assn.* v. *Brennan*, 503 F. 2d 1155 (3d Cir., 1974) and 506 F. 2d 385 (3d Cir., 1974); the vinyl chloride standard, 29 CFR 1910.1017 (39 FR 35892), aff'd, *The Society of the Plastics Industry* v. *OSHA*, 509 F. 2d 1301 (2d Cir., 1975), cert. den., 421 U.S. 992 (1975); the coke ovens emissions proposal (40 FR 32268 (1975)) and final standard, 29 CFR 1910.1029 (41 FR 46742 (1976)), aff'd, *American Iron and Steel Institute* v. *OSHA*, No. 76-2358 (3d Cir., 3/28/78); the DBCP emergency temporary standard, 29 CFR 1910.1044 (42 FR 45536 (1977)), and final standard (43 FR 11514 (1978)), and the inorganic arsenic standard, 29 CFR 1910.1018 (43 FR 19584 (1978)). See also OSHA's proposed generic cancer policy, which was published in the FEDERAL REGISTER on October 4, 1977 (42 FR 54148).

The preamble to the proposal discussed three alternative PEL's which were being considered as the "lowest level feasible": 2 ppm, 1 ppm, and 0.2 ppm. The basis for the choice of 2 ppm in the ETS was the general agreement among industry personnel that 2 ppm could be met in virtually all facilities through a combination of engineering controls, work practices, and respirators. Whereas the ETS permitted any practicable combination of these control methods to be used during the 6-month period of the ETS, it was necessary to determine what level could be reached in most operations through engineering and work practices alone for purposes of the permanent standard. Several companies have indicated in written comments, and others have noted in their testimony, that they have either reached 2 ppm or expect to reach 2 ppm within several months in most of their operations through engineering controls (Ex. 11:(14); 11:(25); 92).

The exposure limits in this standard are based upon what can be achieved by the affected industries taken as a whole, using available technology or technology looming on today's horizon. The alternatives to this approach have been considered in the context of the AN rulemaking. As will be discussed, there is considerable variability among AN manufacturing and processing facilities as to their capabilities of reducing AN exposures. The differences between operations primarily involve the methods of processing AN and its various polymers, the types of materials being produced, and the physical properties of both the monomer and polymers during processing.

Difficulties which may arise for individual operations or processes in particular plants will be considered at the compliance level, which is specifically oriented to consider problems at individual locations.

The feasibility determination as to 2 ppm standard is based upon analysis of the affected industries taken as a whole. One alternative to this course might have been to establish the lowest feasible level for each AN facility on a case-by-case basis. This approach would be extremely difficult to implement. It would strain limited agency manpower resources and restrict the Agency's efforts to deal with important health areas other than AN.

Another regulatory approach, not far removed from a plant-by-plant approach, would involve setting different permissible exposure limits for each respective sector of the AN industry. The rationale for this alternative would involve a recognition that some sectors are capable of reaching lower exposure limits than are others. Although this alternative has some merit, OSHA has decided not to implement it for the AN standard for several reasons. First, as the ECI report makes clear, the AN industry encompasses a relatively small number of companies and plants. Establishment of different exposure limits within such a small industry would result in a standard which was almost on a plant-by-plant basis. Second, the administrative difficulties of compliance with such a fragmented standard would be great, particularly for those companies having facilities in more than one industry sector. Third, the Agency itself would have serious problems in administering and enforcing a standard of this type. The AN industry is already well-defined, and further splitting of the industry for the purposes of setting different exposure limits would not be in line with efficient and protective regulation of occupational exposure to AN.

A third approach, one which was at least hinted at by industry questioning at the hearing, would be to base the determination of feasibility on a worst case basis, that is, those situations where the PEL is most difficult to meet. This alternative is also unacceptable. It would allow most workers to be exposed to exposure levels much higher than could generally be achieved through engineering and work practices throughout the industry. These workers would thus be subjected to an increased risk of cancer due to their added exposure to AN.

A fourth alternative would be the converse of the third alternative, basing the lowest level feasible on what could be achieved by the most advanced facility with the least extensive exposure problems. This approach would undoubtedly require widespread full-time respirator usage by most employees, since the majority of plants could not achieve such a low limit for most employees. Because of problems inherent in respirator usage (see section on respiratory protection), this alternative is not acceptable over the long run, although in given circumstances respirators may be necessary to provide health protection.

OSHA has determined that in regulating occupational exposure to AN, as has been the case in other standards, the PEL should be set at the lowest level achievable through engineering controls and work practices in the majority of locations, using available technology or technology looming on today's horizon. This approach is intended to provide maximum protection without excessively heavy respirator use.

OSHA has determined that 2 ppm is the lowest level feasible for the AN industry as a whole. This determination is based upon available engineering controls and those controls which can be adopted from other uses or which can reasonably be expected to be developed.

Not surprisingly, the AN industry has itself looked to vinyl chloride (VC or VCM) control technology as a primary source for the control of AN in the workplace. The production processes for the two monomers, as well as for many of their respective polymer products, are strikingly similar. In addition, AN users and producers, in developing plans to lower employee exposures to AN during the past year, have shown the ability to select appropriate control measures to apply at critical emission points of their production facilities. Many of these controls were developed from the vinyl chloride "arsenal," but as the NIOSH-ECI report makes clear, there is nothing novel or unique about their application for AN (Ex. 141). The data submitted by the industry itself makes clear that the companies are both aware of most of the VC technology

and capable of making it work in their facilities (Ex. 92; 86).

It is highly significant that the AN industry has itself clearly recognized vinyl chloride technology as the logical point of reference for engineering controls. Schroy of Monsanto, testifying for the Society of the Plastics Industry (SPI), concluded that a 2 ppm standard was technically feasible based primarily on the control technologies from the vinyl chloride industry, (Tr. 798):

> I believe • • • that the technology which has been developed for VCM has to be converted because of the difference in physical properties to AN technology. That is in a judgment a minimal amount • • • The conversion of the VCM technology would be minimal to the AN, yes, at the two ppm (Tr. 805).

A reliance on "transferred" vinyl chloride technology for control of AN reflects a phenomenon which arises often in the context of the control of toxic substances by engineering means. In the case of acrylonitrile, until early 1977, there was never either an incentive or a perceived need to reduce exposures to the one to two ppm range. Indeed, the previous standard of 20 ppm had been achieved almost universally in all operations involving AN. Further control of AN was not a primary engineering concern. However, with the development of the evidence of AN's carcinogenicity, it became necessary to examine methods of control which could be used for a material which had been thought to be "satisfactorily controlled." The obvious place to look, as the companies themselves have done, was to the technology developed for control of another monomer, vinyl chloride.

As OSHA recognizes, there are clear differences between AN and VC which make it impossible to apply unmodified VC technology to all processes using AN. However, these differences do not, as some would argue, render the technology totally non-transferable. The record reflects countless areas of production and use of AN in which VC technology has been both explored and implemented. Still other areas display sufficient similarity of machinery, process, or source of monomer release to make the application of VC control worthwhile in the AN context. Even companies with little or no background in vinyl chloride control have been able to apply VC engineering advances to their operations involving AN (cf. Ex. 92).

It has also been contended that even if control technology is implemented, the employer will not be able to determine whether the operation will meet the PEL until after installation. This is the case, it should be noted, with practically all engineering controls, whether they be for containing a carcinogen or for controlling any other workplace contaminant. There can be, at best, a reasonable expectation that any type of control will accomplish a set reduction in exposure. With few exceptions, such a reasonable expectation has been established for the AN industry to reach a 2 ppm PEL for most operations, through readily available or readily adaptable technology (Exs. 11:(27); 88; 89; 92).

The need for adaptation and modification of VC technology has been discussed at length by several witnesses at the hearing, as well as by NIOSH and Enviro Control (ECI), in documents submitted to the record. However, it must be recognized that the very existence of this technology is a giant step forward in controlling AN.

On the basis of the data on the record, OSHA agrees with NIOSH's statement as to the current state of engineering technology for control of AN:

> The technology either exists or can reasonably be developed to meet the proposed 2 ppm standard in most processes most of the time through engineering controls.
>
> The technology does not exist to retrofit most existing AN processes to meet the proposed 0.2 ppm standard through engineering controls.
>
> No one, either in industry or Government, knows the precise extent to which compliance with the proposed 1 ppm standard is possible through the use of engineering controls. With the noted exceptions of polymer stripping, there is no information to suggest that acrylonitrile would be more difficult to control than vinyl chloride. However, control of vinyl chloride at 1 ppm is a difficult engineering challenge, and should not be taken lightly. The use of respiratory protection is still required on occasion in all vinyl chloride plants (Ex. 141).

The feasibility of a 2 ppm standard has been clearly acknowledged by the primary users and manufacturers of AN and AN-based materials, both in their written submissions and in their testimony at the hearing. Coverage of the final standard runs almost exclusively to these companies, which represent the largest chemical, plastics, and rubber manufacturers in this country.

In his statement at the hearing, Harding of SPI said:

> Industry will • • • request that the permitted exposure level be set at 2 ppm, with an action level of 1 ppm both on an 8-hour TWA, and a 15 minute ceiling limit of 10 ppm. This level is regarded by the industry as technologically and economically "feasible" (Ex. 72).

Chappelear of Monsanto, after a description of the ABS/SAN process and comparison with PVC, concluded that:

> Attainment of the 2 ppm PEL/10 ppm ceiling is feasible given sufficient time and significant expenditure of money. Technology to fully achieve lower levels is not defined for the total industry (Ex. 74).

Davis of Goodyear stated that, on the basis of an internal Goodyear study on nitrile elastomer manufacturing,

> It has been determined that compliance with a 2 ppm permissible exposure limit can be achieved through implementation of available technology. While it can be achieved, compliance will be costly. It is generally considered to be technologically and economically feasible for Goodyear's facilities using AN (Ex. 89).

Burgess of Dow Chemical noted that most of our plants are already in the two to one (ppm) range. That, of course is on a TWA basis. On an excursion basis we are still having some problems and are meeting some excursion situations by the use of respirators (Tr. 899-900).

du Pont has determined that:

> With the exception of maintenance work, emergencies, and a few identifiable operations where it is necessary to augment engineering controls by personal respiratory protection, it is feasible to control employee exposure to 2 ppm 8-hour TWA and 10 ppm 15 minute ceiling. This is done principally by the use of exhaust ventilation, improved process containment and changes in job procedures (Ex. 11:(14)).

Vistron noted that in mid-1977, they had begun an engineering plan to lower employee exposures to 2 ppm or lower (Ex. 92). When asked why they had looked at 2 ppm specifically, Brinkley of Vistron responded:

> We believe[d] that 2 parts per million was probably a workable number and it was feasible; and being realists, we also believe[d] that we would have to reduce the current exposures (Tr. 1124).

Engineering modifications specified in Vistron's 2 ppm engineering plan were expected to be completed by September 1978 (Ex. 92).

Ceiling Limit. The final standard provides for a ceiling limit of 10 ppm as averaged over any 15-minute period during the workshift. The ceiling supplements the TWA exposure limit by restricting the number and extent of short-term higher exposures to AN which are permitted within the TWA.

Under a time-weighted average limit alone, an employee could potentially be exposed to brief periods of extremely high exposures to AN without exceeding the TWA. The high acute toxicity of AN, combined with the unknown chronic effects of short term high exposures to AN, make the inclusion of a ceiling limit a prudent action.

OSHA recognizes that the controls necessary to reach the 2 ppm TWA will, of necessity, reduce the number and extent of excursions above the ceiling limit. This is particularly true where an employee's TWA does not involve 8 continuous hours of low level exposure, but rather, shorter periods of higher levels of exposure. There are many such exposure situations in the AN industry. OSHA believes that any additional compliance burden imposed

V 4 3 / 1 9 2

by the ceiling limit will be mitigated by the acknowledged need to limit excursions in meeting the TWA.

Monsanto has contended that there should be no ceiling limit in the final standard, because ceilings are primarily designed to protect against acute exposure and not chronic toxicity (Ex. 156). However, OSHA has determined that the nature of exposure patterns in the industry, the many points of potential release of AN in the workplace, and the potential for high short-term exposures make a limitation of excursions within the TWA necessary to protect employees.

VI. Exemptions

Because of the presence of residual acrylonitrile monomer in virtually all AN-based polymers, it has been necessary to consider the potential for exposure of employees who process acrylic fibers, ABS resins, and other materials into finished parts and products.

The low level of residual AN in acrylic fibers, once they are crimped and cut, as well as the degree to which the AN is bound up in the polymer, makes the handling of acrylic fibers an unlikely source of acrylonitrile exposure. In order to release the residual AN from the dried fibers, it is necessary to heat them to their glass-transition temperatures, which would discolor and spoil the product. In addition, even if such temperatures were to be reached, the low amounts of residual AN which are present in the fibers (less than 20 ppm, from data submitted to the record) would not be expected to result in significant AN exposures.

Where the intermediate product is a polymer latex or solution, as with polymer polyols, there is a possibility of AN exposure of employees involved in the processing of that product into a final product. For example, where the product is processed by heat or pressure, as is done in polyurethane foam fabrication, residual AN monomer in the polymer may be driven off. If the stripping of monomer from the polymer before it is packaged for further processing is incomplete, there may be sufficient monomer left in the polymer to result in substantial exposures of employees handling it in subsequent processing operations.

The wide use of ABS resins in plastics manufacture provides a major potential source of employee exposure to AN. ABS resins are extremely versatile polymers, and they may be processed into finished products by almost any of the generally recognized thermoplastic conversion processes, such as injection molding, extrusion, and other basic thermoforming techniques. ABS plastics can also be mechanically formed into products by blow-molding or cold stamping of sheet plastic for example.

Besides being used alone to make fabricated products, ABS resins can be combined with other resins, such as PVC in various ratios, to produce products with wide-ranging qualities and capabilities.

Thermoplastic processing of ABS resins involves heating or melting of the polymer, followed by injection into a mold, extrusion of ABS into sheet or pipe, thermoforming of extruded ABS sheet plastic into products, or comparable processes. The processing of finished ABS resins into fabricated products does not appear to constitute a significant source of AN exposure.

Due to the nature of the polymer chains and grafts in ABS plastics, when they are heated to temperatures well in excess of their melting points, the polymers tend to revert to their component monomers or "depolymerize." This phenomenon would likely occur only because of an accident or abnormal situation, such as the overheating of an extrusion head. The available data indicates, however, that the resulting potential for employee exposure to released AN is remote (Ex. 156).

In the proposal, OSHA recognized that the potential for exposure to AN in the workplace extended to a multitude of workplaces, including many small fabricators, extruders, and other downstream processors of materials containing or made from AN. It was felt that extending the AN standard that far would be burdensome to both industry and OSHA, and would not be reasonable in light of the degree of exposure involved. Therefore, the proposed standard contained three alternative conditions by which a processor, user, or handler of PAN could be exempted from the standard. The concept of exemption for downstream employers was widely supported by witnesses appearing at the hearing. The exemption provisions themselves were the subject of considerable discussion as to scope of coverage and the clarity of the language.

Although there was no number included in the proposal, OSHA proposed that one condition for exemption be based upon a given level of residual AN in a given polymer. It was hoped that industry would be able to supply data to correlate the amount of residual AN with the air concentrations of AN which would result when the polymer was processed. This hope was only partially fulfilled. Several companies did supply data on release of residual AN during processing, but there was no way to establish a definite correlation between residual AN content and release of that AN into the workplace. Recommendations for "permissible" amounts of residual AN ranged from 20 ppm to 1,500 ppm and above (Exs. 151; 152; 156; 160). It became clear that the wide range of polymers made from AN varied greatly as to their propensity to release their residual AN during processing. Therefore, OSHA determined that it would not be appropriate to include an exemption provision in the final standard based solely on residual AN content.

Although little information was available at the time of the proposal concerning levels of AN in processing operations, various companies have since supplied test data for the record during the course of this rulemaking. This data has enabled OSHA to make determinations on the extent and scope of the exemptions from the AN standard.

The available test data indicates that there is no way, at present, to determine the extent of release of AN from PAN solely on the basis of residual monomer content. A number of other factors are involved, such as the method of processing, and the temperatures, and pressures applied to the polymer during processing. Although, as expected, polymers with high concentrations of residual AN (over 1,000 ppm) generally result in higher air levels when processed, there is no consistent relationship that can be established.

OSHA believes, nonetheless, that the available data in the record do support an exemption from the standard for all handling, use, and processing of finished ABS, SAN, and nitrile barrier resins. Testing conducted by Monsanto on resins containing as much as 1,000 to 2,000 ppm residual AN indicates that the processing of these materials results in 8-hour TWA exposures well below 1 ppm (Ex. 156). Similar testing by Dow has resulted in consistent findings (Ex. 160). Data submitted by Vistron at the hearing also showed extremely low air concentrations during processing of nitrile barrier resins (Ex. 92).

The downstream monitoring data available in the record also justifies exemption from the standard for ABS, SAN, and nitrile barrier resins. The results of air sampling performed in the workplaces of extruders and other processors of ABS/SAN plastic materials clearly show air concentrations of AN to be well below 1 ppm (Exs. 156; 135; Tr. 855).

Dow Chemical reports that they have continued their monitoring of ABS/SAN fabricators and have not yet found 8-hour TWA exposures above 0.2 ppm (Ex. 160). They also note a study by the State of Michigan which reports no detectable AN in an ABS fabrication facility (0.1 limit of detection) (cf. Tr. 892-894; Ex. 160).

The Society of the Plastics Industry (SPI) reports that they have gathered data showing exposures ranging from "none detectable" to just less than 0.2 ppm in polymer processing operations (Ex. 148). Although SPI did not supply the actual data, their findings are consistent with the other data available in the record.

OSHA has determined that the exposures in ABS/SAN fabricating and processing operations are sufficiently low to justify their total exemption from the standard. The AN exposures in these operations, as reflected in the data supplied to the record, are well below 1 ppm even for resins with residual AN levels as high as 1,500–2,000 ppm. Therefore, we find that there is no need to limit the general fabrication exemption for these materials by tying it to a specific residual AN limit.

Nitrile rubber is, essentially, the same material as the rubber phase encountered in ABS resin manufacturing. The materials produced in nitrile rubber manufacturing will usually be in one of three forms: latex (liquid), bale, or slab (both solid). The difficulty involved in handling latexes is discussed at length elsewhere in this section. Insofar as bale and slab rubber are concerned, however, there is nothing to indicate that the handling of these dried materials in the form of finished polymers should present any greater potential for AN exposure than finished resins or plastics. Therefore, solid nitrile rubber is included in the list of exempted materials in paragraph (a)(2)(i) of the standard.

There is considerable data in the record to indicate that acrylic fibers, after they are dried, no longer pose a significant risk of AN exposure. The comments and testimony of fiber manufactures show that residual AN levels in acrylic and modacrylic fibers are extremely low, and that the potential for release of the residual AN is remote (Exs. 11:(14); 149; 11:(27)). This was recognized by OSHA in the preamble to the ETS (43 FR at 2588), and it was assumed at the time that the exemption provisions of paragraph (a)(2)(i) would cover fibers. However, the objective data requirement in the proposal has caused great concern for users of the fibers.

In particular, apparel manufacturers stated that it was unclear who had to maintain the records of objective data to support the exemption (Ex. 11:(24)). In their view, since they were using a "product made from PAN," albeit three steps removed from the manufacture of the fibers, the standard would require them to keep records. OSHA agrees that such a requirement would not be reasonable and has clarified the standard accordingly. A specific exemption is included in the standard for acrylic fibers as finished polymers (after the drying stage of the manufacturing process).

The most difficult area to deal with in the context of exemption from the standard is the processing, handling, and use of latexes and other liquid mixtures. It is clear in the record that "latex" is a very broad term which can refer to the polymer at several stages of manufacturing. The "latex" which carries the highest potential for AN exposures in the workplace is the so-called "polymer intermediate" latex. This latex is essentially an active part of the polymerization process, and is a major source of exposures in the manufacture of ABS and SAN resins and nitrile elastomers, regardless of manufacturing process used. It is undisputed that this polymer intermediate, which releases AN monomer throughout its movement through the process, must be regulated by the AN standard.

There are also latexes which are the final products of the polymerization process. These latexes, which are basically solid polymer dissolved or suspended in water or other solvent, may or may not present a serious AN exposure potential. Union Carbide submitted valuable data on its latex products, which are used in paints, adhesives, and textile coatings (Ex. 151).

At the hearing Dr. Burgess of Dow stated that, on the basis of tests of latex containing 20 ppm residual AN, latex in general should be exempted from the AN standard (Tr. 895). However, he was unable to discuss the release of AN by latexes containing higher concentrations of residual AN than those tested by Dow (Tr. 901). The Union Carbide material submitted as posthearing data shows a wide range of airborne concentrations of AN during the formulation and use of paints, industrial coatings, and adhesives made from acrylic latexes (Ex. 151). Union Carbide's conclusions as to exemptions of those latexes and products varied greatly with residual AN content as well as the use(s) of such products and latexes.

It is our view that the kind of data supplied by Dr. Burgess would represent the necessary "objective data" to support exemptions for the materials tested by Dow, on an individual performance basis. Similarly, the data supplied by Union Carbide on their latex products which all contain less than 10 ppm residual AN, exemplifies the type of data which could support an exemption.

It is notable, however, the Union Carbide tested latexes containing far higher residual AN levels than do the company's products. Ironically, then, whereas the data would support exemption of Union Carbide's latex products, they also show why "latex" as such cannot be granted a wholesale exemption, or an exemption based solely on residual content, from the standard.

The Union Carbide data graphically illustrate why there can be no general exemption for all AN-based latexes similar to the one included for ABS/SAN resins and for acrylic fibers. The data reveal both a greater potential for the release of residual AN by latexes and a greater likelihood of higher concentrations of AN in the workplace air as a result. As Union Carbide has pointed out, the effects of ventilation are crucial to the reduction of AN levels during the use of AN-based latex. In addition, products formulated from latexes take many forms, and contain varying concentrations of materials.

There are no data to indicate that the residual concentrations of AN in the Union Carbide latexes are typical of all acrylic latexes in either amount or propensity for release. Similarly, the formulator of paints and other materials utilizing the latex may produce widely divergent potential exposures by varying the latex content of his products. Other than the Union Carbide submission, there is little data available for OSHA to use to compare the many available latexes and latex products in these particulars.

We anticipate that most latex producers will be capable of providing data to support exemption of their products under paragraph (a)(2)(ii) of the standard. However, it is not possible for OSHA at this time, to establish a broad brush exemption for all latex, based solely upon the Union Carbide submission. As with all other products made from or containing AN, latexes and other liquid mixtures can be exempted from the requirements of the standard under the performance language in (a)(2)(i).

Indeed, Wheeler, in his cover letter to the new data, recognized this likelihood:

> Union Carbide Corp. believes that the scope and application of the Proposed Permanent Standard be limited through exemption of users and formulators from the Standard where objective data indicates there is minimal effect on employee safety. We also recognize the difficulties in making such an exemption apply to all forms and compositions of polyacrylonitrile. We, therefore, strongly recommend that the statement • • • ((a)(2)(i) of the Proposed Standard) be retained, the standard to provide for unknown applications and future technological changes. Such statement should be in addition to any specific exemption or exemptions OSHA wishes to grant (Ex. 151).

In order for OSHA to exempt latex as such from the final standard, it would be necessary to set residual AN limits for each category of latex usage. As the Union Carbide data makes clear, the many intermediate and end uses of latexes would render this an

OCT 3 1978 UMI

V 4 3 / 1 9 2

impossible task from an administrative and enforcement standpoint. It is far more useful, in our view, to treat the latex problem through a performance requirement and not through setting detailed specifications for residual content.

The difficulties encountered in granting a general exemption for latexes also arise in the context of polymer polyols, and, presumedly, other liquid mixtures. In brief, although many polymer polyols would be expected to qualify for exemption under the performance requirements of (a)(2)(ii), it is not possible to exempt all such materials based upon the data available to us. Union Carbide has provided data on processing and use of polymer polyols which indicate that most of these materials will not release airborne concentrations of AN above 1 ppm under expected conditions of use, processing, and handling (Ex. 152). However, the data do not indicate a clear correlation between residual AN content and resulting air concentrations. Further, the data indicate that certain polyols will, in fact, release AN well above 1 ppm. As is the case with latexes, we are confident that most polymer polyols will be able to meet the provisions for exemption under the performance requirements in (a)(2)(ii).

The exemption provisions are intended to relieve all employers who use, process, or handle the materials listed in paragraph (a)(2)(i) from obligations under the standard. The exemption applies, further, to products fabricated from these materials.

With regard to our discussion of "latexes," it is noted that certain types of latex are no more than finely divided solid polymer suspended in water. "Such a latex on air drying releases no measurable acrylonitrile" (Ex. 11:(13)). It is clear that if the solid polymer would be exempt under paragraph (a)(2)(i), then a latex made from that solid polymer would be exempt, as well.

The second basis for exemption included in the proposal would have set an arbitrary limit of residual AN for exemption of AN-based materials from the standard. As has been discussed in great detail, the exemption provisions as revised render such an arbitrary limitation unnecessary. In addition, there has not been any clear correlation established between residual AN content and air concentrations during processing.

The third basis for exemption, as proposed, provided that if materials made from PAN other than latexes and other liquid mixtures, were not heated or melted, such materials would be exempted from the standard. Several parties to the proceeding have suggested changes to this section SPI, in particular, has recommended that the "heated or melted" language be clarified in terms of temperature, specifically 170° F. This temperature, as was discussed at the hearing, represents the boiling point of AN (Ex. 148, Tr. 754). We recognize that processing operations which involve heating and/or melting of polymer generally require temperatures well in excess of 170° F. Therefore, we believe that 170° F is a reasonable upper bound for exempting the handling of AN-based solid materials. This change has been incorporated into the final standard.

The data in the record, however, clearly indicates that certain latexes and liquid mixtures will release their residual AN when they are processed at room temperature, such as during the application of industrial coatings, paints, and adhesives (Ex. 151; 152). As noted earlier, the standard provides that latexes and other liquids made from or containing AN can still be exempted from the AN standard under the performance language in (a)(2)(ii), though they are not included within paragraph (a)(2)(i) or (a)(2)(iii).

The "heating or melting" provision of the proposal was primarily designed to permit exemption of the transportation, handling, and mechanical processing (stamping, etc.) of solid plastics, resins, rubbers, and other materials containing or made from AN. In addition to the materials to be exempted specifically by paragraph(a)(2)(i), there may be other materials developed in the future from AN for which the "heating or melting" provisions might be appropriate. Therefore, with the one change noted above, the third basis for exemption from the proposal is carried forward to the final standard as paragraph (a)(2)(iii). Solid materials are exempted from the standard, if they will not be heated above 170° F, because there is no data to indicate that residual AN in these materials is either released in significant amounts or absorbed through the skin from solid resins, plastics, or rubbers.

The proposed performance exemption, which required that a material not "release AN resulting in air concentrations exceeding 1 ppm", has caused considerable confusion. What is meant by this capabiliy of release is an 8-hour TWA of 1 ppm, rather than an instantaneous release. Were this to be an "instantaneous release," it would be doubtful whether many polymers would be able to meet this requirement, particularly in the headspace of storage tanks and drums. In addition, OSHA's primary concern is the employee's potential exposure during the workshift. This concern is more directly reflected by an 8-hour TWA exposure potential. The standard has been amended to include the 8-hour time frame for AN release in the performance exemption, paragraph (a)(2)(ii).

It should be noted that materials which qualify for exemption from the standard are exempted from the entire standard, including the protective clothing, labeling, and training provisions. The only obligation of an employer operating under the exemption is to maintain the records of the objective data which serve as the basis for the exemption.

Under the ETS, many persons expressed concern about the showing that was required for the "performance exemption" provided in paragraph (a)(2)(i). In particular, they wanted to know how far away from the material did the measurements of "release" have to be taken, and what conditions represented the "expected conditions of handling, processing, and use which would cause the greatest possible release." Some of the manufacturers were uncertain as to whether they could provide adequate data along these lines due to the wide variability of downstream workplaces and processing conditions.

By including a performance-based exemption provision, OSHA has incorporated a broad, flexible means for an employer to be relieved of obligations under the standard. If a downstream employer can show that his processing operations are within the parameters which the manufacturer used in his testing, he can rely on that testing data for exemption from the standard. Conversely, if the testing conditions used are less stringent than those encountered by the employer, that employer cannot rely upon data from that testing to support his exemption.

In this regard, there is no need for specifying that measurements of air concentrations be taken at a certain distance form the test material. OSHA recognizes that employee exposure conditions can vary greatly between plants, even though they may be using the same materials. All that the standard requires is for the tester to specify the conditions of the testing, such as the temperature of heating, time of heating, distance of sampling probe from the surface of the material being tested, and the like. The duty is on the employer relying upon that data to show that his operating and exposure conditions are within the conditions of the testing.

Perhaps the most variable aspect of downstream operations is the amount of ventilation present in the individual plant. In most cases, the higher the rate of ventilation in the workplace, the lower the potential for AN exposure.

A manufacturer of a material made from AN cannot anticipate all possible

workplace conditions to be encountered in the further processing of his material. However, in developing data on the release of AN from his material, he can provide useful data by performing his testing on a worst-case basis, without any ventilation to dilute the AN emissions. By doing so, and by specifying the other parameters of his testing procedure, the manufacturer can demonstrate the propensity of his materials to release their AN. A downstream employer who receives data from this testing must then analyze his workplace conditions to determine if he can reasonably rely upon that data for exemption from the standard. If testing without ventilation demonstrated for example, that at 6 inches from the material surface, release of AN was nondetectable, that data would support exemption of virtually any conceivable downstream operation involving that material. Therefore, testing without ventilation would serve as a starting point, and might itself generate enough data to provide exemption for numerous processors.

It must be emphasized that the exemption provisions apply only in situations where an employee's AN exposure potential is limited to release from exempted materials. In order to claim exemption from the standard, the employer is required to demonstrate that all of the AN-based materials to which an employee is exposed are exempted under paragraph (a)(2). When an employee is exposed to both exempted materials and nonexempted materials, as would occur in many polymerization facilities, the employer would be obligated to take action to protect the employee from exposure to AN, as provided in the standard.

"PAN." A major issue in this rulemaking has involved whether "PAN," or polyacrylonitrile itself, should be considered a source of AN exposure under the AN standard. As noted in the exemption section in detail, the data submitted at the hearing and in posthearing comments indicate clearly that most PAN does not release its residual AN easily, and that where release does occur, the resulting air concentrations are well below the action level.

The major source of AN in the monomer and polymer manufacturing processes, other than liquid AN itself, is the material passing through the polymerization process. This partially polymerized material, referred to as polymer intermediate, contains considerable residual AN, which it continues to release throughout polymerization. As the data in the record makes clear, once this material completes the polymerization process and is dried, both its residual AN levels and its propensity to release airborne concentrations of AN are extremely low. This refers to resins and rubbers as well as acrylic fibers. Because, as a general matter, "PAN" per se is not the problem, there is no need to explicitly refer to PAN anywhere in the standard. Rather, the term "liquid AN" has been defined, for the purposes of the standard, to refer to both the liquid monomer and the polymer intermediate in the polymerization process.

It should be noted that some PAN materials may, nonetheless, be subject to the standard if they are not specifically exempted in (a)(2)(i) or if they do not meet the performance conditions spelled out in (a)(2) (ii) or (iii). OSHA has determined that the standard should provide for either inclusion or exemption of new and different products made from AN or containing AN which may be developed in the future.

In the final standard, OSHA attempts to remove many of the ambiguities and uncertainties which arose under the ETS. One of these areas involves the prohibition against skin and eye contact with "liquid AN and PAN." There is no data to indicate that skin contact with finished polymers, whether they be resins, latexes, or fibers, will result in skin absorption of AN. Even during the processing of those polymers which may release their residual AN above the action level as airborne concentrations, OSHA is not aware of any skin absorption problem. However, it is likewise clear that the handling of AN itself, as well as polymer intermediates produced during the polymerization process, does carry with it a significant skin exposure potential. OSHA believes that it is necessary to guard against any skin or eye contact with these liquid monomeric and intermediate polymeric materials, and has clarified the standard to reflect this point.

The terms "liquid AN and PAN" led to some confusion under the ETS in the context of skin exposure. There was considerable concern that the standard prohibited any skin contact with solid PAN, such as resins and rubbers, since the term "PAN" did not appear to be qualified by the term "liquid." The skin contact prohibition deals solely with the liquid phase. Therefore, the manual handling of resins and other solid PAN materials is not prohibited under the AN standard.

A further point of contention concerned the phrase "products made from PAN," in the exemption provisions. It was argued that the exemption should also cover PAN itself, as well as materials made from or containing AN which might not qualify as PAN, such as acrylamide. These materials would also be exempted from the standard if they met the specified conditions for exemption. OSHA agrees that it should be the performance of the materials in question that determines whether or not such materials are to be exempted from the standard. The final standard reflects this expansion of the scope of the exemption provisions.

VII. Feasibility

In setting standards for toxic substances, the Secretary is required to give due regard to the question of feasibility. Section 6(b)(5) of the Act mandates that the Secretary shall set the standard which most adequately assures employees' safety and health "to the extent feasible, on the basis of the best available evidence." Additionally, in the development of occupational safety and health standards "considerations shall be the latest available scientific data in the field, the feasibility of the standards, and experience gained under this and other health and safety laws."

Accordingly, OSHA analyzes both the economic and technological feasibility of proposed standards. OSHA makes such analyses available to the public for comment and testimony during the course of the rulemaking. Interested parties are given the opportunity to testify on the economic and technological impact of proposed standards at the informal rulemaking hearing, and to submit additional information on the issue of feasibility.

In developing a standard for exposure to acrylonitrile, OSHA has evaluated both the economic and technological feasibility of the proposal on the basis of the entire rulemaking record, including the information developed by ECI and submittals by the public. On the basis of the best available evidence, therefore, OSHA has determined, as explained in detail below, that the permanent standard is both economically and technologically feasible.

Only one substantial study was performed as to the economic and technological considerations of the proposed AN standard. This study, which was performed by Enviro Control, Inc. (ECI of Rockville, Md.), was contracted for by OSHA, and considered the feasibility of the three alternative sets of permissible exposure limits contained in the proposal (Ex. 15). Representatives of ECI participated at the hearing and were subjected to questioning by other parties to the proceeding. In addition, feasibility was expressly considered in other testimony at the hearing.

I. *Technological considerations.* Upon reviewing all the data, comments, and testimony in the record, OSHA concludes that the achievement of the permissible exposure limits established in the final acrylonitrile standard is technologically feasible. This determination reflects the nearly

OCT 3 1978

V 4 3 / 1 9 2

0 C 3 7 8

universal agreement by the affected companies, as well as the conclusions of ECI, that existing technology and modifications of existing technology will be capable of reducing exposures in most operations to below the PEL.

The record indicates clearly that the operations which are the easiest to control, in most cases, are the AN manufacturing facilities. The manufacture of AN is essentially a closed process, as opposed to the more open manufacturing processes found in polymerization facilities. It is well recognized that the most effective way to limit exposures to toxic and carcinogenic materials in the workplace is to assure that the materials are enclosed in the system as much as possible. The primary sources of exposure in the AN manufacturing process are leaks and spills from pumps, seals, valves, and other breaches of the closed system. In addition, there is potential for exposure to AN in the tank farm and storage areas, as well as in maintenance operations whenever the closed system must be opened for cleaning or repairs.

Many of the controls developed for vinyl chloride can be applied and/or adapted for use with acrylonitrile. In particular, those controls which contain the monomer within the closed system, such as double mechanical seals, can be used with AN.

There is nothing about the physical qualities of AN which would make it more difficult to contain within a closed system than VC (Ex. 143). The physical properties of AN which differ substantially from VC (e.g., lower vapor pressure, presence as a liquid rather than a vapor at room temperature and greater solubility in water) are relevant insofar as cleaning up spills and detecting leaks are concerned, but should be of slight importance from the containment perspective.

Even when the question of leaks and spills does arise, however, the difference in physical properties does not necessarily make AN more difficult to clean up. Parties at the hearing contended that because VC escapes from a leak as a vapor, it is rapidly dispersed, and that when the leak is detected, a portable ventilation unit will control it without the need for respirators during repairs. They argued that AN, which leaks as a liquid, would drip or pour into the workplace, thus resulting in more persistent elevated concentrations of AN vapor. In addition, it was noted that AN spills would require both ventilation and respirators to be used during the cleaning process, and such use would be more prolonged because of the slower vaporization of the AN (Exs. 74, 76, 92).

However, not all of the consequences of the different properties of AN and VC are in the direction of making AN more difficult to control. Unlike leaks of VC monomer, which must be detected by a monitoring system, leaks of AN can often be detected by visual inspection of working surfaces, in a conscientious leak detection program. In addition, since AN is a water-soluble liquid, spills can be washed down with water into the process sewer or disposal system, thus limiting the time of exposure to vapors in the workplace (Tr. 1170). Respirator usage during cleanup would, therefore, be for shorter periods of time than has been indicated. The washing down of spills of AN has long been an established practice in the industry, owing to AN's solubility and biodegradability (Ex. 92).

The leakage of AN from the closed system in the manufacturing process is often unpredictable, since seals, valves, and other equipment are capable of failing without notice. In addition, some employees involved in maintenance operations and cleaning of portions of closed systems will inevitably have potential for exposure above both the TWA and ceiling limits. We recognize, therefore, that a limited amount of respirator usage would be necessary in AN manufacturing facilities regardless of the permissible exposure limits selected by OSHA. Respirators will also be necessary in certain operations in tank farms and loading facilities. OSHA is confident that, with the exception of fugitive emissions and inherently hazardous operations, the AN manufacturing sector can comply with a 2-ppm TWA and 10-ppm ceiling limit, through engineering and work practice controls.

The record of this proceeding indicates that of all elements of the affected industry, AN manufacturers are the furthest along in the development of controls for 2 ppm. Their facilities do not have to deal with the complexities of the polymerization process or unique properties of the materials contained therein. It is easier to maintain an enclosed system for monomer production than for polymer production. This point is readily acknowledged by the affected employers (cf. Ex. 11:(14); Tr. 1160). AN exposure in the manufacturing process (other than during maintenance operations) tends to result from fugitive emissions from valves, pumps, seals, and the like. In addition, since many facilities are located outdoors, there is considerable dilution of these fugitive emissions by winds and air currents.

In the manufacture of acrylic and modacrylic fibers, AN is released during the polymerization and during the washing, hot stretching, and drying of the fibers. The finished fibers, as has been noted do not represent a significant AN exposure potential. Most of the residual AN in the polymer is driven off during the manufacturing process.

The record indicates that fiber production is already operating generally in the 2-ppm range. There are occasional operations, such as maintenance and reactor cleaning, for which respirators are necessary in order to meet the permissible exposure limits (Ex. 11:(14); 11:(12)).

The most difficult compliance situation under the AN standard involves the manufacture of ABS and SAN resins, and nitrile elastomers. There are several reasons why control of AN in these operations is expected to be a more complex matter. First, the nature of the manufacturing process requires there to be a great deal of access to the product during polymerization. The product has a tendency to congeal on the inside of the reactor and other vessels in the polymerization process. The material must be removed manually at irregualr intervals in order to avoid clogging the process. Connected with the access requirement is the relatively high residual AN content of the material being polyermized, which is released throughout the polymerization process.

Stripping of residual AN from these materials is a far more complicated task than stripping vinyl chloride from PVC for several reasons. Since AN is much more soluble in water than is VC, it is more difficult to drive off from the liquid polymer intermediate. In order to drive off a comparable amount of AN, it would be necessary to use considerably more steam and/or vacuum than would be used for VC. In addition, the material to be stripped is, in the case of AN, much more sensitive as to its physical properties. The use of the amounts of steam and/or vacuum that would be needed to strip AN effectively from resin and elastomer intermediates would badly degrade the product and alter or destroy its physical properties. In addition, the polymer intermediates, when stripped, have a disquieting tendency to coagulate, or "flocculate," prematurely, even during the actual stripping, thus obstructing the manufacturing process.

Exposures to AN can occur throughout the ABS/SAN and nitrile elastomer manufacturing processes. Since the intermediate polymer latexes release their AN throughout the manufacturing process, from the monomer reaction vessels through the flocculation tank area, until after drying.

Exposures in the ABS/SAN and nitrile elastomer industry are the highest of the affected industry sectors, on a TWA basis. Exposures ranging up to 20 ppm have been reported by one nitrile rubber manufacturer, mostly in the flocculation tank area (Tr. 985; 999; Ex. 161). Whereas a number of other job positions might involve the employee being in the exposure areas for a small part of the day, the flocculation area requires frequent monitoring of the operation by the employee.

Many plastics and rubbers made from AN, are produced by "emulsion" or "suspension" polymerization. In these processes, the polymer is suspended in a water-based latex or other liquid solution. The suspended polymer has a tendency to agglomerate, forming viscous solidifying material called prefloc. Prefloc can clog up the manufacturing process, and must be removed periodically from reactors and other vessels (Tr. 762).

It should be noted that two major manufacturers of nitrile elastomers have testified that they could comply with a 2 ppm PEL in most of their operations, with one of them venturing that, with some exceptions, 1 ppm might be feasible (Tr. 978; 1020; Ex. 88; 89).

Some more advanced companies in the AN industry have expressed a degree of optimism as to the technological feasibility of levels lower than 2 ppm. Dow Chemical, which is already operating generally below 2 ppm noted that "We believe that levels of 0.2 ppm, and 1 ppm are technologically attainable, but would require significant costs and years of effort" (Ex. 11:(25); 2:(21)). Monsanto noted that they expect:

> With reasonable confidence to be able to achieve the 2/10 goals [2 ppm TWA, 10 ppm ceiling] * * * across all our manufacturing operations which include AN monomer, fiber intermediates and finished goods, and plastics intermediates and finished products facilities. The completion schedule for these engineering projects may extend over a period of more than 2 years (Ex. 11:(27)).

Even further, Monsanto predicts that this engineering program may result in exposure levels near 1 ppm TWA and 5 ppm ceiling in a number of process areas. In addition, they anticipate being able to define additional engineering solutions to meet a 1/5 standard (1 ppm TWA, 5 ppm ceiling), based on the results of their current engineering program, for most of their facilities. Implementation of 1/5 solutions, they noted, would take 2 or 3 years beyond the period for completion of their 2 ppm engineering program (Ex. 11:(27)).

Enviro Control, Inc. (ECI), the contractor for the economic and technological impact assessment of the proposed standard, concluded that "engineering controls will be technologically feasible for compliance under Scenario A (2 ppm TWA/10 ppm ceiling) in all segments except in periodic maintenance operations" (Ex. 15). In their report, ECI also determined that 1 ppm would be technologically feasible except for periodic maintenance operations and tank farm and loading areas, whereas 0.2 ppm could probably be achieved through totally enclosed processes with the use of chemical cleaners not yet developed, but in any event not for AN production or for tank farms, loading areas, or periodic maintenance operations. New plants were determined to be necessary for ABS/SAN and nitrile rubber manufacturing operations to meet the 0.2 ppm standard.

At the hearing, Dr. Bochinski of ECI expressed confidence that 2 ppm was technologically feasible (Tr. 324). However, on questioning, he admitted to great uncertainty as to the report's conclusions of industry's abilities to meet a standard below 2 ppm. In particular, the 0.2 ppm scenario was most doubtful becasue of difficulty of stripping monomer from polymer latex and the need for chemical cleaners to replace the manual cleaning of reactors (Tr. 324; 331-2). (The stripping problem also arises under the 1 ppm scenario, as discussed below.) There are, at present, no known chemical cleaners which can remove the prefloc and other materials from reactor walls without damaging the reactor lining or other components. (It should be noted that many AN-based plastics and rubbers are valued primarily because of their resistance to the types of chemicals and solvents that would be used as chemical cleaners.)

Even if such chemical cleaners were to be developed, ECI determined that new plant facilities would be required for resin and elastomer operations to meet a 0.2 standard. It is clear that a PEL of 0.2 ppm cannot be considered feasible, based upon either presently available technology or that technology which looms on the horizon.

The greatest amount of attention in this rulemaking was given to the question of which of the other two alternative proposed PEL's, 2 ppm or 1 ppm, was the "lowest level feasible." Whereas the capability to meet 0.2 ppm has been shown to be speculative, at best, the 1 ppm and 2 ppm PEL's are subject to more detailed scrutiny.

At the hearing, ECI expressed concern over the feasibility of the high rates of ventilation (30-40 changes per hour) that their report stated would be necessary to achieve a 1 ppm standard (Tr. 300; 312). In addition, there was serious concern about whether the industry could develop means of stripping residual monomer from polymers to reduce exposure during polymerization. In response to a question from McCleary of Uniroyal, as to the technical feasibility of 1 ppm as opposed to 2 ppm, for nitrile elastomers, Bochinski replied:

> * * * well, whenever you start stripping more, say at 2 ppm, my impression was they could get by without additional stripping. There was some additional stripping proposed at the one ppm level, in addition to get to the one level. And any additional stripping, the producer runs a risk of * * * In certain cases, certain products, my understanding was that with low molecular weight latexes and other kinds that you are not able to strip very much because then you destroy your product quality and it's unacceptable in the marketplace. Your options are closed. You have to do something else (Tr. 326).

Bochinski concluded that the stripping problem would be even greater for ABS resins than for nitrile rubber, because the intermediate latex tends to coagulate to a greater degree within the process vessel (Tr. 328).

The difficulty of stripping AN from polymers is well-documented. It results from a combination of factors: the nature of the polymer latex, the relatively low vapor pressure of AN as compared to VC, and AN's relatively high solubility in water (resulting in its tendency to remain in a water solution, emulsion, or suspension). Indeed, NIOSH has concluded that the stripping problem is the primary barrier to engineering control of AN to the 1 ppm level (Ex. 141).

In addition to stripping difficulties, the control of polymerization operations to 1 ppm is also limited by the degree to which these operations can be enclosed. Particularly in the case of resins and elastomers, the intermediate latexes and other polymer intermediates have a tendency to agglomerate. It is necessary for the system to be accessible in order for an employee to remove blockages of such materials from the process (Tr. 762). This results in higher potential exposures to employees in these areas, since the polymerizing materials are releasing residual quantities of AN as they pass through the process. As noted above, stripping of this residual AN at an early stage in the process is severly limited.

The effort necessary for compliance with the 2 ppm AN standard will not be insignificant. However, it should be recognized that the AN industry is in a much more advantageous position as to available control technology than was the VC industry at the time of the vinyl chloride standard. The vinyl chloride industry did not at that time have a comprehensive body of control technology from which to draw. The AN industry on the other hand, has the benefit of 3 years or intensive and largely successful technological development for controlling VC. It is clearly not necessary for such technology to be totally transferable to the AN context in order to be beneficial in developing controls for AN. In this case, however, as the record demonstrates, many of the engineering controls in use for VC can, in fact, be applied to

V 4 3 / 1 9 2

0 C 3 7 8

AN. Many companies in the AN industry, including some without any experience in dealing with vinyl chloride, have implemented or are presently implementing such controls as double mechanical seals, closed-loop sampling systems, and portable ventilation systems. It is noteworthy that an expert witness testifying on behalf of both Monsanto and the SPI, stated that vinyl chloride technology with minimal modifications would enable the industry to reach a 2 ppm standard (Ex. 76; 86).

In a paper presented at the American Industrial Hygiene Conference in May, 1978, Schoultz, Gideon, and Bochinski concluded:

> PVC and PAN processes and emission sources are of sufficient similarity to allow a significant level of transfer of control technology information. It is estimated that, except for certain operations (i.e., vessel cleaning), where sophisticated, long-term controls are required, excessive AN exposures in PAN plants can be reduced within acceptable levels as demonstrated in PVC Plants (Ex. 143).

It is recognized that the engineering controls implemented to meet a 2 ppm standard will often result in exposures at or below 1 ppm (Ex. 92; 11:(27)). The ability to reach 1 ppm does not, however, extend uniformly across the entire AN industry. In particular, it must be noted that the greates numbers of exposed employees are to be found in those sectors in which the prospects of reaching 1 ppm are the most remote, primarily in plastics and rubber manufacturing. This appears to be a function of the degree of process enclosure and automation that can be achieved in the various industry sectors. Whereas monomer manufacturing involves essentially a closed system, for example, nitrile rubber production requires a far greater amount of access to the material being processed.

Our determination as to the infeasibility of a 1 ppm standard rests not on the economics, but rather, on the technology of engineering controls for AN and AN-based materials. As will be discussed below, many of these compounds possess physical properties which render them even more difficult to control through implementation and modification of existing methods of stripping or process enclosure than was the case with vinyl chloride.

Chapter 4 of the ECI report dealt with the issue of technological feasibility of the three proposed sets of permissible exposure limits. ECI relied upon an examination of the effectiveness of proposed engineering controls in similar process applications involving vinyl chloride monomer, as well as discussions with AN industry officials, in their feasibility determinations.

The control methods listed in table 4-1 of the ECI report represent the contractor's findings as to the necessary technology for reaching each of the proposed PEL's. In OSHA's view, "technological feasibility" extends well beyond the limited definition employed by ECI in their assessment of the AN proposal. Nonetheless, on the basis of the Agency's own examination of the available technology and technology on the horizon, OSHA has determined that many of the control methods which would be necessary to achieve employee exposures below 2 ppm cannot be considered to be technologically feasible. In particular, these would include the need for considerable additional stripping of resins and elastomers, the development of chemical cleaners for reactors, and the use of extremely high rates of air flow in ventilation (30-40 air changes per hour), appear to fall into this category.

Many of the controls prescribed by ECI in their report, however, have been readily acknowledged to be appropriate methods of limiting AN exposure in the workplace. Such controls are, essentially designed either to enclose the processing operations more completely or to ventilate those areas in which further enclosure is not feasible. The use of ventilation becomes necessary when the materials being processed cannot be effectively enclosed, and wherever ready access to the processing machinery is required.

Double mechanical seals around pump or agitator drive shafts can be used effectively to isolate process liquids. These seals are pressurized with an inert liquid which will leak through before any process liquids can escape and expose the employee.

The effectiveness of a well-maintained double mechanical seal in preventing leaks of process liquids and vapors is supported by the data submitted by an industry expert witness (Ex. 76; 86). Another industry witness noted that a double mechanical seal "certainly would be a very adequate seal on a pump" (Tr. 1175). He also noted that his company is incorporating double mechanical seals "wherever they appear to be feasible and can be tested and evaluated" (Tr. 1162).

Two alternatives to double mechanical seals which were listed by ECI included "canned pumps" (totally enclosed pumps with no seals which can leak), and relocation of process equipment to provide for gravity flow. ECI's concerns as to the feasibility of these alternatives were echoed by industry (Ex. 92). "Canned pumps" can be damaged if process liquids contain solid particles, and relocation of equipment may not be possible given existing configurations and the need for the redesign and movement of pipes.

The control of AN in tank farms and loading facilities was found by ECI to be feasible for the 2 ppm scenario, but would be likely to require respiratory protection at lower levels. The technology recommended by ECI for these areas involved quick disconnects on pipes and hoses, movable local exhaust ventilation, vapor recovery systems, and the redesign of the work station to avoid extended use of awkward or heavy hoses or pipes by employees in the area.

ECI concluded that seals on pumps, valves, and gaskets would have to be properly maintained in order not to leak process liquids and vapors into the workplace. Such seals would require proper design and materials to avoid premature deterioration of the seal, whereas proper maintenance procedures and intervals would be necessary to assure protection. This conclusion was supported by the data on fugitive emissions submitted by Schroy (Ex. 76).

Sample collection from the process stream could be enclosed and provided with local exhaust ventilation, with the flow-through from the sample container being vented into the waste collection system. One company has reported the installation of closed circuit sampling valves as part of its plan to alleviate this problem (Ex. 92; Tr. 1127).

Many maintenance activities, such as reactor cleaning and "breaking" contaminated flanges, will probably require the use of respiratory protection, in any event. The use of remotely activated "blinds" can make "breaking" the flange unnecessary by allowing "blinds" to be inserted into the system without the employee having to contact the process contaminants.

Ventilation was determined to be necessary for those processes which are not readily enclosed, such as emulsion and suspension polymerization. ECI recommended air flow rates of as much as 30 to 40 air changes per hour, in order to reach the 1 ppm and 0.2 ppm levels. At the hearing, the ECI panel noted that such high ventilation rates might not be sufficiently feasible (Tr. 442).

ECI determined that two additional control methods (i.e. increased stripping and chemical cleaning of reactors) would be necessary for the industry to meet either a 1 ppm or an 0.2 ppm PEL. The record reflects that the technology to implement these control methods does not presently exist, and cannot be said to be "on the horizon."

The technology for stripping residual monomer from polymers is the main area of vinyl chloride technology which cannot be transferred to any appreciable degree to the control of acrylonitrile. As noted earlier, the limits of stripping residual monomer

from such materials as ABS resins and nitrile elastomers during the polymerization process represents the most significant difference in controlling acrylonitrile as opposed to vinyl chloride (Tr. 618; Ex. 141). The earlier in the process that residual monomer can be removed from a product, the lower is the potential at later points in the process for release of and exposure to that residual monomer.

Stripping of residual monomer from vinyl chloride (PVC) is relatively straightforward. PVC itself is highly resistant to the temperatures and other stresses inherent in the stripping process. The removal of residual vinyl chloride requires relatively little steam or vacuum, because of VCM's high vapor pressure. The physical properties of both AN and its polymer products make the stripping of residual monomer a much more difficult prospect.

Many of the polymer intermediates produced from AN are highly temperature- and pressure-sensitive (Tr. 762). When subjected to the stripping process, these materials will often coagulate in the stripper, forming in essence, their final products at a premature stage. In addition to clogging the polymerization process, this can result in unacceptable changes in the physical properties of the final products.

The vapor pressure of AN is, as noted earlier, considerably lower than that of VCM. This factor, combined with the relative affinity of AN for water makes it considerably more difficult to remove residual AN from water-based polymer solutions, suspensions, or emulsions. Even if the polymer were to remain stable throughout the stripping, the process would require far more steam or vacuum for removal of AN than would be used for VCM.

The relative sensitivity of ABS and SAN polymer intermediates to stripping is also a function of the presence of monomer and polymer in a solution or emulsion. In SAN polymerization, the polymer and monomer are in one phase, and that phase increases in viscosity as the polymer content increases. ABS polymerization has this same problem, but adds a rubber phase (AN-butadiene) which makes the mixture even more viscous. This can readily be distinguished from PVC manufacturing. PVC is insoluble in VCM, and precipitates out during the polymerization. This property makes the removal of residual VCM from PVC easier than removal of the more soluble AN from ABS/SAN suspensions or emulsions (Ex. 74).

ECI concluded that no additional stripping beyond that being performed at present would be required to meet a 2 ppm standard. However, insofar as additional stripping would be necessary to reach the proposed 1 ppm and 0.2 ppm exposure limits in many polymerization processes, particularly in the manufacturing of nitrile elastomers, these lower limits cannot be considered feasible.

The use of chemical cleaners to replace manual cleaning of reactors in the polymerization processes would also be necessary for compliance with the lower exposure limits. Chemical cleaning would make it unnecessary for employees to enter reactors. As noted by ECI, there are, at present, no known chemical cleaners which will work effectively in the ABS/SAN or nitrile elastomer manufacturing process (Tr. 331-2; 998a; 1121). The essential difficulty here is two-fold: first, the polymer materials which must be cleaned out of the reactors are prized for their resistance to the very types of chemicals which would be used to clean reactors and, second, there are no known chemical cleaners which will work on these caked-on materials without also damaging or destroying the linings or other elements of the reactors themselves (Tr. 368; 434). Reliance upon chemical cleaning would not, therefore, be considered to be feasible.

In summary, the ECI report supports OSHA's conclusion that a 2 ppm TWA with a 10 ppm 15 minute ceiling is technologically feasible for the affected industries, but that a lower standard cannot be considered feasible for the reasons noted.

Essential to an evaluation of the ECI report is an understanding of the relationship between its various sections. The cost estimates contained in section 5 of the report do not, in any way, reflect ECI's own engineering assessment of technological feasibility and the technology needed to meet each of the proposed limits. The cost figures for each industry sector were extrapolated by ECI using the cost data that they obtained from the affected companies. Except for the data contained in the supplement to the report, none of the cost estimates reflected any independent engineering judgment by ECI. Dr. Bochinski of ECI, in response to questioning, noted that: "I did not prepare the costs. I got the costs from industry" (Tr. 441).

The reason that this distinction becomes paramount is because of the efforts made by questioners at the hearing to merge the two sections of the report. It cannot be stressed too strongly that the cost estimates reported by ECI represent what the companies themselves felt they would need to meet the proposed levels. The cost estimates did not represent a detailed listing of the numbers and costs of the engineering controls and capital equipment that ECI felt would be necessary for compliance.

The costs submitted to ECI and included in the report, therefore, were indications of what the companies, and not ECI, felt would be needed to control exposures. As noted at various points in the record, various companies did not always agree with ECI as to what would be necessary (Tr. 485; 495-500). Dr. Bochinski clearly noted that the companies do not all have to employ the same control techniques (Tr. 479). Questioning by industry as to variability in control techniques, therefore, served only to elucidate this point.

In one instance at the hearing, a list of engineering changes and controls submitted by one producer was reviewed by ECI. Dr. Bochinski determined that in his judgment, there were certain items that should have been included that were not on the list (Tr. 495-499). This does not indicate, however, that the control methods as listed would not achieve the desired lowering of exposures.

Indeed, the company in question had stated that its planned engineering controls, which presumedly includes the list referred to above, were expected to reduce most operations to 2 ppm or less, when completed (by October 1978) (Ex. 922; Tr. 1135).

2. *Economic considerations.* In setting standards for toxic substances, the Secretary is required by section 6(b)(5) of the Act to give due regard to the question of feasibility. Section 6(b)(5) mandates that final standards be set which most adequately assure employee safety and health "to the extent feasible, on the basis of the best available evidence," and further requires that, in the development of occupational safety and health standards, "considerations shall be the latest available scientific data in the field, the feasibility of the standards, and experience gained under this and other health and safety laws." While the precise meaning of feasibility is not clear from the Act, it is OSHA's view that the term may include the economic ramifications of requirements imposed by standards. The determination that OSHA has the authority to consider economic feasibility factors in developing standards has been endorsed by the courts. *Industrial Union Dept. AFL-CIO v. Hodgson*, 499 F. 2d 467 (C.A.D.C., 1974); *AFL-CIO v. Brennan*, 530 F. 2d 109 (C.A. 3, 1975). As pointed out by the D.C. Circuit Court of Appeals, Congress did not intend the Secretary to promulgate standards which drive entire industries or large numbers of employers out of business. On the other hand, "standards may be economically feasible even though, from the standpoint of employers, they are financially burdensome and affect profit margins adversely." Further, the court

V 4 3 / 1 9 2

0 C 3 , 7 8

said, the concept of economic feasibility does not "necessarily guarantee the continued existence of individual employers" *Industrial Union Department, AFL-CIO* v. *Hodgson, supra,* at page 478.

In accordance with the Secretary's position, it has long been OSHA's practice to analyze the economic feasibility of proposed standards where significant economic impact on employers covered by the proposals seems likely, to make such analysis available to affected parties for comment and subsequent hearing prior to issuance of final rules, and to invite the submission of other information on the economic impact and feasibility of proposed standards. In developing a final standard, therefore, OSHA evaluates the economic feasibility of the final standard on the basis of the information developed by its own studies of the proposal and submissions by the public during rulemaking.

To assess the economic feasibility of the proposed standard for acrylonitrile, OSHA undertook a detailed study of the proposal's economic impact on various affected industries. This study was conducted for OSHA by Enviro Control, Inc. (ECI) (Ex. 15; 15A). The ECI study has provided basic economic data for the evaluation of the economic impact of the permanent AN standard on the major affected industries. Additional information for this purpose was obtained through OSHA's analysis of all other economic data, comments, arguments, and testimony submitted at the AN hearing, in prehearing comments, and in posthearing comments and briefs. On the basis of the best available evidence, therefore, OSHA has determined, as discussed in detail below, that the permanent AN standard is economically feasible for the affected industries.

The economic impact statement was prepared in accordance with Executive Order 11949 (42 FR 1017), as noted in the preamble to the proposed standard (43 FR 2612). A notice of its availability was published in the FEDERAL REGISTER on February 24, 1978 (43 FR 7669). Therefore, OSHA has not performed a separate regulatory analysis pursuant to Executive Order 12044 (43 FR 12661, March 24, 1978), which was issued over 2 months after the proposed standard was published (cf. Department of Labor Response to Executive Order No. 12044, Improving Government Regulations, 43 FR 22915, May 26, 1978).

The economic and technological assessment prepared by ECI (Ex. 15) was published on February 21, 1978, and a supplement was made available at the hearing, on March 22 (Ex. 15A). Opportunity was given to interested parties to comment on and to testify concerning the contents of the report. In addition, representatives of ECI were available at the hearing to respond to questioning concerning their findings as to the economic and technological feasibility of the proposed AN standard.

In the case of the proposed standard on acrylonitrile, three sets of permissible exposure limits were expressly included for consideration: 2 ppm TWA/10 ppm ceiling; 1 ppm TWA/5 ppm ceiling; and 0.2 ppm TWA/1 ppm ceiling. We have already discussed OSHA's determination that, on the basis of the record, the 1 ppm and 0.2 ppm alternatives are not considered to be technologically feasible. Therefore, detailed discussion of the economic impacts of the AN standard will concentrate on the 2 ppm standard which OSHA has determined to be technologically feasible for the affected industries.

It is abundantly clear on the record that the final AN standard will in no way threaten the viability of the acrylonitrile industry. The companies to be affected by the standard are not small, marginal companies, but, rather, include the largest chemical, plastics, and rubber manufacturers in the country. The estimated costs of compliance with the standard, even if accurate, are insignificant by comparison to the total sales and assets of the affected companies.

In addition, OSHA has assured, through the broad exemption provisions, that the standard applies almost exclusively to these primary users and manufacturers of acrylonitrile. Downstream processors and fabricators of products from AN-based materials will, for the most part, be exempted from the requirements of the standard.

A major contention of industry witnesses, particularly those representing polymer producers, involved the failure of the ECI report to analyze the economic impact of the proposed standard on "downstream" employers. For the most part, these employers are engaged in the fabrication of parts and finished products from AN-based polymers.

At the time of the report, there was little data available, either to OSHA or to ECI, upon which to base an assessment of the effects of the proposal on downstream employers. ECI chose to assume that the exemption provisions of the proposal would serve to exempt most downstream employers from the scope of the standard.

The impact of a 2 ppm standard, particularly when coupled with the more detailed exemption provisions in paragraph (a)(2), on downstream employers is minimal. The list of materials exempted from coverage by paragraph (a)(2)(i) represents most of the materials made from AN which will be processed, handled, or used by a downstream employer.

Based upon a thorough review of the record, OSHA has determined that a 2 ppm standard is both technologically and economically feasible for the affected industries. The standard provides sufficient lead time (2 years) for companies to complete the installation of engineering controls to achieve compliance with the permissible exposure limits. The record demonstrates that many employers in the AN industry, including representatives from each of the various sectors within the industry, are either already in compliance with 2 ppm for many of their operations, or are in the process of implementing controls to achieve that end.

The main area in which costs are expected to be significant is the installation of engineering controls. Other areas of concern, such as respiratory protection and protective clothing requirements, were addressed at the time the ETS was issued. It was, at that time, determined that there was sufficient quantities of protective equipment available for compliance with the ETS, and that the requirements were feasible for the affected employers. Because the scope of the ETS was broader than that of the final standard, OSHA anticipates that all employers to be covered by the standard were also operating under the ETS. Thus, the feasibility determination from the ETS applies for provisions appearing in both the ETS and final standard. The cost estimates prepared by ECI include the costs of respirators, protective clothing, and other materials to be required by the final standard.

Costs of Compliance. The greatest economic impact from the final standard is expected to fall upon the manufacturers of ABS and SAN resins and nitrile elastomers. However, even for this sector, the anticipated costs of compliance will be well within their capabilities. A lesser impact within the major sectors affected is expected for the manufacturers of AN monomer, acrylic fibers, and polyols.

The total estimated costs of compliance with the final AN standard, as determined by Enviro Control, Inc., are presented in table A below. These estimates reflect the data developed by ECI in their report, as supplemented by data received at the hearing and in post-hearing comments. ECI has expressly incorporated the cost data supplied by SPI in revising their final costs for the ABS/SAN sector. As will be noted in detail below, OSHA believes that the SPI cost figures substantially overstate the anticipated impacts of the standard on the ABS/SAN manufacturers. However, in the interest of providing an upper bound

estimate of the impacts of the AN standard, table A includes the SPI data. It is clear that the estimated costs of compliance with a 2 ppm standard will be well within the capabilities of the affected companies.

TABLE A.—*Revised ECI Costs of Compliance by Industry: 2 PPM Standard*

[in millions]

Sector	Capital	O & M	Total annualized
AN monomer	$14.4	$0.6	$2.99
Acrylic fibers	22.4	2.3	5.69
ABS/SAN resins	56.8	7.4	16.79
Nitrile rubber	14.4	1.1	3.45
Polyols	1.6	.3	.59
Total industry	109.6	11.7	29.51

An essential limitation of the extrapolation process used by ECI in developing industry-wide cost estimates is the inherent assumption that all plants within an industry sector are at the same stage of development in controlling AN exposures. The effects of this assumption on the overall cost estimates depend upon the degree to which the sample plant is representative of the industry sector as a whole. If the sample plant is more advanced than most, then the cost estimates based on the sample plant can be expected to understate the total compliance costs. On the other hand, if the sample plant lags behind most of the plants in the sector in controlling exposures, then the overall cost estimates can be expected to be overstated.

The ECI report does not lean consistently toward either of these alternatives. For example, ECI's cost estimates for the acrylic fiber manufacturers are based on data from a company which employs "solution polymerization" as its process. More of the U.S. fiber production capacity, however, involves "suspension polymerization," which is more difficult to control (Tr. 417-418). On the basis of that factor alone, the ECI estimates for the fiber production sector might be expected to be on the low side. However, on the other hand, the largest producer of acrylic fibers has reported that its controls for AN are further advanced than the sample plant appears to be (Ex. 11:(14)). This would indicate that the extrapolation of costs from the sample plant to the entire industry sector would result in the cost estimates being overstated.

The variability of this aspect of the report was recognized by ECI at the hearing. When asked whether he felt the cost estimates were understated, Dr. Bochinski replied, "Maybe in the 0.2 level we might have understated. In some cases, 1 ppm and 2 ppm in some segments; maybe not • • • It is a mix" (Tr. 384).

Another difficulty with the ECI extrapolation technique involves their use of a "typical plant" within each industry sector. The typical plant was determined on the basis of total annual production. The use of the "typical plant" was necessary to determine the costs of other elements of compliance besides engineering and work practice controls. These additional elements, such as respirators and monitoring equipment, were determined on a cost per plant basis using standardized costs for the equipment and estimated rate of usage.

ECI calculated the total costs of compliance for each major industry sector at each of the proposed alternative sets of permissible exposure limits. Cost estimates were supplied to ECI by various companies within the industry sectors affected by the standard. These estimates were then used to determine the compliance costs of a "typical plant" within each sector, based upon annual production in pounds. The typical plant costs were then extrapolated to the whole industry sector level on the basis of total annual production.

ECI's data base was limited to that data which the companies contacted were willing to provide to them. As noted at the hearing, except for the information in the supplement to the report ECI took the cost data as they received it, without independently reviewing it for proper engineering or accounting (Ex. 15A; Tr. 509). In addition, data was not received from within all of the major industry sectors. Considerable data was received for the nitrile elastomer sector, but no data on ABS manufacturing was supplied to ECI until the supplement was prepared. In determining the costs of compliance for the ABS sector, then, ECI used the nitrile elastomer cost figures (based on a 30 million pound plant) and extrapolated them to the ABS "typical plant" (figured at 200 million pounds) on the basis of similarity of process and process controls.

The ECI method of extrapolation relied exclusively on companies within each industry sector to supply what they estimated to be the costs of compliance for each of the three proposed exposure limits. ECI performed no independent engineering assessment of the data received from these companies. The data from the sampled companies represented what the engineering departments of those companies determined necessary for compliance.

There is no clear way to determine what specific cost items were included in each company's data. It must be assumed, however, that the engineers engaged in providing the data were not solely concerned with hardware. In developing engineering plans and estimates, the areas of downtime, lost production, and other consequences of the engineering changes are of great importance to the planner, particularly where these changes would necessitate nearly total shutdowns of plants or of individual production lines. An engineer would be expected, as a matter of course, to include projected costs of downtime and lost production in his estimates for a particular engineering job (cf., Tr. 1272-73).

OSHA recognizes, however, that there may be instances in which these "indirect" costs are either too speculative or otherwise incapable of being quantified. It is significant that the companies supplying cost data to the record during the rulemaking proceeding were most reticent about assigning numbers to these types of costs. One company stated that a 1-day shutdown of their facilities would cost $250,000 (Ex. 92). It was noted at the hearing, however, that the company already carries out periodic turnaround efforts, for which it does shut down facilities. During these planned shutdowns, an engineering expert for the company agreed that many different engineering changes could be made in addition to the programed maintenance activities during the shutdown period (Tr. 1129). The $250,000 figure, then, would not be due exclusively to the implementation of engineering controls, but would be attributable to a number of different functions within the facility.

The type of cost to be incurred directly determines the planner's ability to estimate its magnitude; some cost items are basic and must be assessed in connection with the engineering plan, whereas others may only be roughly projected, but are not at all reducible to dollar figures. The form in which the sampled companies in each sector supplied their data to ECI leaves the question open as to how much of either type of cost was included in their calculations. It must be assumed, lacking any information to the contrary, that the costs submitted by the companies reflected what their engineering departments determined to be necessary for compliance with the alternative proposed exposure limits. This necessarily would include those elements customarily assessed in engineering plans, while excluding those elements which could not be projected in dollar figures. Nonetheless, even if this assumption were erroneous, the question of downtime costs would not detract from the Agency's determination that the standard is economically feasible for the affected industry.

OSHA is satisfied that the data contained in the ECI report clearly demonstrates the feasibility of a 2 ppm

V 4 3 / 1 9 2

standard for all of the major industry sectors evaluated in the report.

AN Manufacturing. There is no question that a 2 ppm standard is economically feasible for the AN manufacturing sector. As has been stated throughout the record, AN manufacturing is essentially a closed process, with the greatest potential for exposures arising from fugitive emissions, leaks and spills, and during reactor cleaning and other maintenace operations. The companies have already developed engineering plans designed to tighten up their processes and limit points of process emissions into the workplace. The compliance costs for this sector of the AN industry should pose no serious economic impact on the four affected companies, which together produce 1.5 billion pounds of AN monomer per year.

The ECI cost estimates in the report for the AN manufactuing sector were obtained solely through a review of the OSHA rulemaking record. Until Vistron supplied additional data for the 2 ppm level (which ECI incorporated into the supplement to the report), the only data employed by ECI was from the du Pont and Monsanto submissions to the record.

The du Pont and Monsanto data as submitted were not broken down by product, but contained cost estimates for the respective companies' total AN-related operations. ECI took the data and attempted to split the costs up according to product. As will be noted, the efforts in this regard were not properly performed for the Monsanto data, resulting in cost estimates which were too high for the AN-manufacturing sector.

ECI assumed that the Monsanto data ($34 million incremental costs for reaching 2 ppm) covered the costs for their AN manufacturing and acrylic fiber manufacturing facilities only. However, as was noted at the hearing (Tr. 348), the costs supplied for Monsanto were for all of their operations, including their ABS manufacturing facilities. Therefore, ECI's figures for Monsanto's AN and fiber production are overstated. This is particularly evident in light of the fact that control of ABS manufacturing is expected to involve higher costs than controls for monomer or fiber production.

ECI averaged the du Pont costs with the Monsanto costs to obtain an average cost to apply to the AN manufacturing sector. Insofar as the Monsanto costs were improperly determined, the ECI estimates for this sector are clearly erroneous on the high side.

The difficulty with relying upon a "typical plant" in the context of monomer manufacturing is that there are only four companies which are in the industry, and no company has more than two plants. Any extrapolation from a "typical plant", therefore, will be limited by the total number of plants and the determination that any one plant is "typical" of such a small number.

After the initial ECI report was published, Vistron later supplied cost estimates for a 2 ppm standard for their monomer production facilities. ECI incorporated this data into their supplement and noted that the results were consistent with their previous figures for this industry sector (Ex. 15A; Tr. 511).

Acrylic fibers. ECI's estimates for the acrylic fiber industry were based exclusively on data received from Dow Badische. This data was scaled to the level of the "typical plant" and was extrapolated from there to the total acrylic fiber sector.

The difficulty with assessing the accuracy of the cost estimates for acrylic fiber manufacturing stems from two countervailing factors. The first concerns the type of manufacturing processes used in the sampled plant and in the overall industry, whereas the second has to do with the current exposure and compliance conditions in the various companies in the industry.

The Dow Badische facility which supplied data to ECI produces acrylic fibers by means of "solution polymerization." Solution polymerization involves the formation of polymer in a solvent, and the spinning of fibers directly from this solution. This method of production is not the most widely used means of manufacturing acrylic fibers. Most fiber production in the United States (over two-thirds, by one company estimate) involves "suspension polymerization" (Ex. 156). Suspension polymerization involves a formation of polymer in water. The polymer if filtered, washed, and dried, at which point the dried polymer is either stored for usage or taken immediately to be dissolved in a solvent and spun directly into fibers. In suspension polymerization, it is necessary to open up the process in order to isolate dried polymer. Because this system is much less totally enclosed than a solution polymerization process, it is more costly to reduce employee exposures at a suspension polymerization facility.

ECI acknowledged at the hearing that suspension polymerization facilities will cost more to control than solution polymerization facilities (Tr. 417–418). Since a solution polymerization plant was the source of the data used to estimate costs for the entire fiber sector, it is clear that this factor would result in an understatement of the total compliance costs. (It should be noted that other fiber companies had the opportunity to submit cost data to ECI, but did not do so.) It is not possible to determine with any degree of certainty how much the total costs would be understated. The data submitted by other fiber producers to the record would indicate that the difference would in no way constitute an economic burden to the affected industries.

A countervailing consideration in evaluating the cost estimates for this sector is the degree of compliance which already exists among fiber producers. At least two producers of acrylic fibers have reported that most of their operations are already operating at between 1 and 2 ppm on a day-to-day basis (Ex. 11:(14); 11:(10)). Since the total number of producers in the industry sector is not large, one would expect that ECI's estimates would be overstated insofar as they do not consider the advanced state of exposure control within this sector.

The 2 ppm standard is, without question, economically feasible for the acrylic fiber industry. Most producers are well along the way to compliance solely by means of engineering and work practice controls in most of their operations. The cost estimates supplied by ECI indicate that the compliance costs should not cause the affected employers undue difficulty. In addition, ECI's cost estimates undoubtedly include items and activities which most, if not all, of the producers have already implemented in their facilities.

ABS/SAN Resins—Nitrile Elastomers. The extrapolation procedure employed by ECI to determine compliance costs for the ABS/SAN sector and the nitrile elastomer sector of the AN industry, has been strongly challenged by various parties to the proceeding. The points of contention primarily involve the following: The averaging of the costs for two nitrile rubber manufacturers which submitted data to ECI; the use of the nitrile elastomer costs to estimate the costs for the ABS/SAN sector; the formula used by ECI to extrapolate from nitrile elastomers to ABS/SAN resins; the size of the "typical plant" within the ABS/SAN sector; and the question of "return on investment".

ECI determined that the typical nitrile elastomer plant produces 30 million pounds per year. This figure has not been seriously questioned. The cost estimate for this "typical plant" were determined by averaging cost data received from two producers, Uniroyal and BF Goodrich. The cost data from these companies were widely divergent, leading some to conclude that an averaging of these figures would be of questionable validity in estimating total costs for the sector. The averaged cost data were scaled by ECI to the level of the 30 million pound "typical plant".

Data received after the ECI report was published have indicated that the initial estimates in the report may not be very far off the mark for the nitrile elastomer manufacturers. Cost figures received from Reichhold Chemicals (Ex. 15A) and Goodyear (Ex. 89) are relatively consistent with the initial ECI estimates for this industry sector. The Reichhold data, when extrapolated to the level of the "typical plant" (30 million pounds per year), revealed cost estimates for capital investment to be $1.2 million for the 2 ppm standard. The Goodyear estimates of capital requirements for their production facilities, involving capacity of 31 million pounds (1976), were approximately $2.8 million for 2 ppm.

The findings as to estimated costs for the nitrile elastomer sector reflect the greater amount of data available to ECI on this sector in preparing their report. Nitrile elastomer production provided the largest number of plant estimates of all of the sectors sampled for the report (Tr. 508).

On the basis of their in-house assessment of the alternative proposed exposure limits, Goodyear concluded that 2 ppm was both economically and technologically feasible for their manufacturing facilities (and that even 1 ppm would be feasible) (Ex. 89). There is no reason to believe that the impacts of a 2 ppm standard on the other nitrile rubber manufacturers should be much more severe from an economic standpoint.

In summary, then, the available data on the nitrile elastomer industry indicate that a 2 ppm standard is both technologically and economically feasible for that sector.

ECI determined that the manufacturing process and the points of AN emission were sufficiently similar between nitrile elastomers and ABS/SAN resins to allow the control costs for nitrile manufacturing to be extrapolated to ABS/SAN manufacturing. This determination received considerable criticism from parties to the proceeding. Exposure conditions, it was contended, tend to be higher and more variable in nitrile elastomers. In addition, the "typical" nitrile plant is much smaller than ABS/SAN plant, and may involve different types of control problems.

In the supplement to their report (Exh. 15A), ECI included data which had been supplied by an ABS/SAN resin producer for the 2 ppm standard. The revised total cost for the entire sector (ABS/SAN) differed from the cost figures in the February 21 reported by only 2.5 percent.

The size of the "typical plant" in the ABS/SAN sector was determined by ECI to be 200 million pounds/year. The capital costs for the typical plant, based upon the nitrile extrapolation, were $6.8 million at 2 ppm. The capital costs based upon the later data from an ABS facility for 2 ppm were estimated to be $3.7 million.

ECI's extrapolation using the ABS plant data resulted in a much lower total capital cost for the ABS/SAN industry sector for the 2 ppm standard than did the extrapolation from nitrile elastomers. However, the estimates for operating costs (labor, materials, and utilities) from the ABS plant were considerably higher.

The main source of controversy concerning the cost figures for the ABS/SAN industry centered around the size of the "typical plant" selected by ECI. ECI determined that on the basis of their knowledge at the time, a 200 million pound per year plant was typical of the overall industry. However, in their posthearing comment, SPI indicated that the actual "typical" plant was closer to 62.5 million pounds per year (Ex. 148). Although SPI stated that this was the result of a survey of their member companies, there was no detailed explanation of why their description of a "typical" plant differed from that of ECI, nor was there a discussion of how they made their determination.

The method that ECI employed to scale the costs of the "typical plant" up to the entire industry sector involved the use of an engineering formula: Cost of equipment M=(Cost of equipment N)

$$\text{Cost for plant M} = (\text{Cost for plant N}) \left[\frac{\text{Capacity of plant M}}{\text{Capacity of plant N}}\right]^{0.65}$$

This formula allows for "economic scale"; for example, equipment costs for a 100 million pound plant will be less than twice the costs for a 50 million pound plant, even though production capacity is twice as much.

The plant (ABS/SAN) which supplied data to ECI produces 150 million pounds of resins per year. To estimate the cost for the "typical plant" with annual production capacity of 200 million pounds (according to ECI), the formula was employed as follows:

$$\text{Costs for 200 million lb. plant} = (\text{Cost for 150 million lb. plant}) \times \left[\frac{(200 \text{ million})}{(150 \text{ million})}\right]^{0.65}$$

$$= (\text{Cost for 150 million lb. plant})\ (1.21)$$

Thus, one can see that although the typical plant is ⅓ larger than the sampled plant, its capital costs are only 21 percent higher, using the formula.

Using SPI's determinations of the "typical plant" (only 62.5 million pounds/year instead of 200 million), the formula works the other way. Although the "typical plant" is only ⅝ as large as the "sampled plant" in this case, its capital costs will be more than half as much as the larger plant. Therefore, an extrapolation to the whole industry sector on the basis of the smaller typical plant will, in this case, result in a much higher overall capital cost. In addition, the other elements which are necessary in all plants, regardless of size, will increase in total costs because there are more plants to consider.

SPI's calculations of the costs for their 62.5 million pound "typical plant", using the ECI formula, result in a capital investment of $2.56 million. That figure, when extrapolated to the entire industry sector, results in a total capital cost for the ABS/SAN sector of roughly twice the figure arrived at by ECI.

ECI's estimate of the size of the "typical plant" was based upon their experience and engineering judgment. SPI's estimate was based on a survey of its membership of the industry. OSHA is unable to ascertan, with any degree of certainty, which approach is more accurate, nor is such a determination really necessary. OSHA has incorportated the higher estimate to establish an upper bound of costs of compliance for the ABS/SAN sector. We believe that this treatment of the available data provides an adequate basis for evaluating the economic impact of the standard.

Another major issue which arose concerning ECI's cost estimates, not only for ABS/SAN resins but for the entire report, was the treatment of the concept of "return on investment (ROI)." It was contended by several parties that the ECI cost estimates did not incorportate a return on investment as part of the overall costs of compliance with the standard (Ex. 76; Tr. 304; 393–4). It was argued that a failure to include an amount for ROI would result in an overestimate of the industry's ability to pass through costs to consumers as price increases. SPI, in the cost tables in their posthearing comment, chose to include an additional cost to represent the purportedly omitted figure for ROI, based on their assumption that such a cost was not incorporated in the ECI estimates (Ex. 148).

The record makes clear, however, that ECI did, indeed, include the concept of return on investment in developing their report. Dr. Henry Beale, a economist with Chase Econometrics, testified for ECI as to the handling of economic factors in the report. When questioned as to whether ROI was included in the capital cost estimates, Dr. Beale responded in the affirmative:

OCT 3 1978

V 4 3 / 1 9 2

There is implicitly a 10-percent rate of return on investment involved in that the expenditures, the capital costs are based on an assumed useful life of 10 years recouped at the 10 percent rate * * * basically is (the same thing as ROI) (Tr. 302).

Therefore, SPI, in choosing to factor an additional 10 percent ROI into their calculations, has incorrectly assumed that no ROI was included in the ECI report. The additional 10 percent results in double-counting, and serves only to inflate both the total compliance costs and, consequently, the impacts of the standard on prices and competition for ABS materials.

SPI's estimates of the effects of the standard on competition are open to question on several counts. First, as noted above, the erroneous inclusion of an additional 10 percent ROI serves to inflate SPI's estimates of the standard's impact on ABS prices. By artificially inflating the total compliance costs, this element also increases the price increases which are necessary to cover those costs. Second, as noted earlier, there is no way for OSHA to verify whether SPI's "typical plant" estimate is more accurate than ECI's estimate.

To the extent that SPI's typical plant may be smaller than warranted, the compliance costs other than capital will be inflated, since many of these costs are based upon a cost per plant basis.

Finally, the SPI cost estimates, as do the ECI cost estimates, necessarily assume that the plant supplying the cost data is about average for the industry. There is every reason to believe that many companies, including some within the ABS/SAN sector, are well along the way in planning and achieving reductions of employee exposures to below 2 ppm. To the extent that companies have already installed or are already implementing requirements of the standard, the incremental costs of compliance will be that much lower. At least one producer of ABS/SAN resins already maintains most of its operations below 2 ppm (Tr. 899-900).

Even if the SPI cost estimates were to be accurate, the economic impact of the AN standard on the ABS/SAN sector should be well within the capabilities of the affected employers. The ABS/SAN market is one of the most buoyant of all products made from AN, and the demand for ABS and SAN resins is expected to grow considerably in the future.

Polyols. Polymer polyol production represented the smallest industry sector investigated by ECI in developing their report. Based upon data received by one producer, ECI estimated that the "typical" polyol plant has a production capacity of 53.3 million pounds per year. The ECI estimate of the total investment needed to achieve a 2 ppm standard was $1.6 million for the polyol production sector. The annualized compliance costs were estimated to be approximately $0.6 million per year.

Downstream employers. As discussed in the exemptions section, OSHA believes that the final standard will effectively limit coverage to those employers with the greatest potential for exposure to AN in the workplace. As was the case with the ETS, we anticipate that most downstream employers will be exempted from coverage. A determined effort has been made to clarify the exemption provisions and broaden their scope where warranted by the evidence.

Economic impacts. After estimating the costs of compliance with the proposed standard, ECI assessed the effects of these costs on economic indicators as related to the affected industries. The impacts on critical materials, market structure, productivity, employment, energy, and prices were examined for each of the major segments of the AN industry. The methodology employed in the analysis of these impacts was described at length in the report, and will be discussed here only insofar as major issues were raised during the rulemaking.

Critical materials. ECI determined that critical materials impact was not relevant for AN or AN-derived materials, since none of these materials are currently listed on the Department of Commerce's list of strategic and critical materials. They also determined that there would be no indirect effects on critical materials due to product substitution as a result of the standard.

Market structure. ECI concluded that it would be most unlikely that the costs of compliance with the proposed AN standard would have any significant impacts on market structure at the four-digit [sic] industry level for any of the industry sectors studied. Most of the sectors are already highly concentrated. The four firm concentration ratios range from 91 for ABS/SAN resins to 100 for acrylonitrile monomer production. The only major exceptions to this conclusion would be, in ECI's view, if one or more firms in the nitrile elastomer industry were to cease production, or if compliance costs for the ABS/SAN industry were to substantially eliminate possibilities for entry into this growing area by new firms. ECI determined that at the 2-ppm level, the costs would not be sufficiently large to cause either of these two eventualities to occur.

Productivity. ECI calculated the aggregate labor costs of the proposed 2-ppm standard to be $3,557,000 annually. Based on a work force of 5,130, the average loss of labor productivity for the entire AN industry was estimated to be 2.89 percent.

For the 2-ppm standard, output was estimated to decrease by less than 4 percent with several sectors, such as AN monomer and polyol production, having reductions in output below 2 percent.

Initial capital costs of compliance were estimated to be 27.2 percent of annual investment for AN production, as compared with 6 percent for polyols, and 48.3 percent for fibers. However, these costs were estimated to be as high as 139.1 percent of annual investment for ABS/SAN resins, and 554.4 percent for nitrile elastomers. ECI concluded that for AN, polyols, and fibers, the cost of compliance at 2 ppm would not have a significant impact on output. Even for ABS/SAN resins, ECI estimated that the growth prospects of the industry were sufficiently great to make the costs of compliance unlikely to produce any major reduction in output. The one area of concern to ECI at the 2-ppm level involved the nitrile elastomer sector. However, additional data submitted to the record by two major producers in this sector (Uniroyal and Goodyear) indicates that a 2-ppm standard is considered by them to be feasible, and is not expected to have the serious consequences projected by ECI (Exs. 88; 89).

Employment. At the 2-ppm standard, ECI anticipated that relatively small changes in output will occur, so that few, if any, workers will be laid off. Any workers that are displaced are expected to be reabsorbed through transfers to other jobs in their companies.

Energy. ECI projected that for the 2-ppm standard, energy consumption would increase for the industry by 62,535 barrels of oil per year. or 173 barrels per day.

As ECI noted, even if these amounts were quadrupled, they would be insignificant on a daily basis in comparison to the total energy consumption of the affected industry sectors (Tr. 444).

At the hearing, ECI was questioned concerning the energy costs contained in their report (Tr. 442-444). It was contended that these overall costs did not include the energy requirements for the high rates of ventilation which ECI felt would be needed for compliance (Ex. 76).

ECI did acknowledge that they did not include the additional energy costs from ventilation as a separate element of their total energy cost estimates. However, this is not to say that such additional costs were omitted from the report. As we noted in our earlier discussion of costs, ECI's cost estimates were based solely upon data supplied to them by companies within each

0 C 3 7 8

sector. ECI did not apply independent engineering judgment to the companies' estimates, nor did they break these estimates down by line items needed for compliance. Therefore, ECI's own determination of what was needed to reach 2 ppm was not reflected in the costs received from the various companies. If a company determined that ventilation was necessary, then it included ventilation costs in its estimates. Moreover, if a company factored ventilation costs into its estimates, it must, therefore, also have factored in the operating and maintenance (O. & M.) costs of such ventilation. These costs would be expected to include the energy costs of operating the equipment. Therefore, energy costs would be included in the O. & M. costs for each sector, based on ECI's extrapolations of the data as received.

Prices. Based upon their estimates of the compliance costs of the proposed 2-ppm standard, ECI calculated the cost per pound of product output for each industry sector in the study. Using that cost per pound, ECI then calculated a maximum passthrough of costs, using a markup factor of 0.94. Finally, the estimated price increase was supplemented by the amount of compliance costs from AN manufacture which would be passed through to the AN users. The following table represents ECI's calculations as described above:

Product	Compliance cost per pound (cents)	Costs (percent of price)		Percent increase [3]
AN monomer	0.20	0.74		0.70
Acrylic fibers	.92	1.48		1.84
AEN/SAN resins	[1]1.25	[1]1.25	[2]2.05 [2]2.98	[2]2.15 [3]3.08
Nitrile rubber	1.89	2.82		2.93
Polyols	.18	.30		.36

[1] 0.94 markup and AN pass-on costs.
[2] ECI estimates from report.
[3] ECI estimates incorporating SPI cost data.

The table makes clear that based upon the cost estimates developed by ECI, the price impacts of the proposed AN standard of 2-ppm are all less than 3.1 percent, even when the SPI cost data is incorporated.

As was noted in the earlier discussion of costs, SPI recalculated the costs of compliance from the ECI data using a smaller "typical plant" (determined on the basis of a "survey" of its members), and adding a 10-percent "return on investment" (ROI) figured on an aftertax basis. Even assuming for the moment that the smaller "typical plant" was more accurate than that determined by ECI, we have serious difficulties in accepting the additional amount included for ROI, both in concept and in amount. As Dr. Beale made clear at the hearing, ROI was considered in the cost figures developed by ECI in their report. Therefore, the very inclusion by SPI of an additional element of ROI represents double-counting. In addition, the use of 10 percent after taxes is not a proper application in this context.

To the extent, then, that the SPI estimates include a double amount of return on investment, one can conclude that the resulting cost estimates, together with the projected impacts on prices of ABS/SAN products and materials, are considerably overstated.

Even if the overstated SPI cost figures for compliance capital were accepted, their own estimates demonstrate that the compliance cost to reach the 2-ppm level in a "typical plant" would only represent 11 percent of the total capital of a new typical ABS plant (Ex. 148). It is clear that to the extent that the SPI figures are overstated, the projected impacts of the standard will also be overstated, particularly as to SPI's dire projection for the ABS pipe industry.

Nonengineering costs. The major thrust of the economic impact assessment was directed at evaluating the impacts and costs of engineering controls to reach the permissible exposure limits. However, the other elements of the proposal, such as medical examinations, respiratory protection programs, and monitoring have also been examined. OSHA has determined, both from the ECI report and on the basis of the companies' submissions to the record, that virtually all of the affected employers have both the facilities and the resources necessary to implement these other provisions. Most of the affected companies have had medical surveillance programs for many years, and should have no difficulty in providing the medical examinations called for by the final standard. In addition, OSHA had determined at the time of the ETS that there were then sufficient respirators, sampling pumps, and other materials available for compliance. Since the scope of the final standard is, if anything, narrower than that of the ETS, it is clear that the findings of feasibility carry forward to the final standard.

As discussed in the exemption section, OSHA believes that the final standard will effectively limit coverage to those employers with the greatest potential for exposure to AN in the workplace. As was the case with the ETS, we anticipate that most downstream employers will be exempted form coverage. A determined effort has been made to clarify the exemption provisions and broaden their scope where warranted by the evidence.

ECI did not focus on downstream employers in their analysis of the costs and economic impacts of the proposal. They apparently assumed that the exemption would be as wide-ranging as OSHA intended it to be. In addition, ECI indicated that at the time they prepared their report, there was little or no data available on downtown exposures. The information supplied by the various companies during the course of the rulemaking has indicated that downstream operations do not, for the most part, represent a significant source of potential for AN exposure. Therefore, the omission of coverage by ECI of downstream impacts is not expected to affect the overall cost esitmates for the affected industries.

VIII. Benefits

The legislative history and language of the Occupational Safety and Health Act, as distinguished from some other environmental health and safety legislation, clearly indicate that Congress has already arrived at a judgment concerning the balancing of cost and benefit, with the result that worker safety and health are to be heavily favored over the economic burdens of compliance. Specifically, section 6(b)(5) of the Act provides:

> The Secretary, in promulgating standards dealing with toxic materials or harmful physical agents under this subsection, shall set the standard which most adequately assures, to the extent feasible, on the basis of the best available evidence, that no employee will suffer material impairment of health or functional capacity even if such employee has regular exposure to the hazard dealt with by such standard for the period of his working life. Development of standards under this subsection shall be based upon research, demonstrations, experiments, and such other information as may be appropriate. In addition to the attainment of the highests degree of health and safety protection for the employee, other considerations shall be the latest available scientific data in the field, the feasibility of the standards, and experience gained under this and other health and safety laws.

V 4 3 / 1 9 2
OCT 3 1978
UMI

Thus, while feasibility is an appropriate consideration, the Secretary is directed to set standards which attain "the highest degree of health and safety protection for the employee * * *."

This does not mean, however, that a systematic evaluation of costs and benefits is not to be encouraged within the limits of the estimation techniques. In considering the issue of feasibility in this rulemaking, as in others, OSHA has carefully evaluated the cost of compliance which may be incurred by the affected employers and their ability to comply. Additionally, OSHA believes that a standard for a substance which has been found to pose a cancer risk to workers, in this case acrylonitrile, must assure maximum benefit (i.e., prevention of serious illness or death) constrained only by the limits of feasibility.

Acrylonitrile has been found to cause cancer in laboratory animals, and has been linked with excess incidence of cancer in employees. No adequate scientific basic exists, however, to determine a quantitative dose-response relationship at the lower levels of AN exposures necessary to reduce the risk as much as is feasible. The uncertainty in both the actual magnitude of expected cancers and in the theory of extrapolation from existing data to the exposure level set in this standard places the estimation of benefits on "the frontiers of scientific knowledge."

While the actual estimation of the number of cancers to be prevented is highly uncertain, the evidence indicates that the number is likely to be appreciable. A dose-response relationship, that is, a lower incidence of excess cancer at lower levels of exposure, is likely to exist at lower as well as higher levels of exposures to AN. Therefore, reduction in exposure to lower levels is accompanied by a reduced risk, even though a precise quantitative relationship cannot be established.

In general, widespread employee exposure to acrylonitrile did not begin until the 1950's. In view of the latency period usually associated with the induction of cancer, significant reductions in mortality and morbidity may not be seen in the AN industry for many years after this standard is effective. However, unless exposures are reduced now, OSHA believes that employees exposed to AN will be at increased risk of cancer for many years to come.

In light of the uncertainties connected with risk determination and extrapolation from animal studies and human epidemiology, OSHA believes that it is required by the statutory mandate to adopt a highly protective posture in considering the evidence for health benefits.

Parties to this proceeding have attempted to use the du Pont epidemiological data to indicate both the magnitude of the risk and the hypothetical "cost per worker protected" under the alternative sets of permissible exposure limits in the proposal (Ex. 92; 146). Where the health effectiveness of alternative approaches is extremely uncertain and likely to vary from situation to situation, OSHA believes it is appropriate to adopt the compliance strategy which provides the greatest certainty of worker protection within bounds of feasibility, even if the approach carries with it greater economic burdens for the affected employers.

The issue of whether traditional "risk assessments" should be performed has been discussed at great length in this proceeding. Perhaps the most accurate discussion of the uncertainties surrounding the regulation of acrylonitrile was presented by Dr. Henry Beale, testifying for ECI, in response to a question concerning OSHA's policy determinations:

> If you recall (Dr. Cueto's) testimony, most of it was centered around the issue of determining that acrylonitrile was a carcinogen; that is, simply establishing it.
>
> He alluded to the possibility also of developing risk factors, dose/response relationships and so forth. These, in terms of the materials that I have seen, have not been developed for acrylonitrile.
>
> Now, I would draw a distinction between, in a slightly technical sense, the term "risk" and the term "uncertainty." Risk is a situation of known probabilities. It is like if you were a bridge player and you were a good bridge player. You may be able to get a count on a suit that is out against you and know after playing nine rounds that it breaks four to one. And you have to finesse for the queen. You know the odds are four to one which person to finesse. Okay? That is risk.
>
> If you do not have information, you just don't know what the probabilities are, you are operating under uncertainty. And to use the bridge player analogy, getting a count on a suit is a fairly sophisticated operation. A bridge player who is just a beginner would guess, and he might even not finesse for the queen.
>
> That is uncertainty. *The situation which prevails in terms of acrylonitrile is a situation of uncertainty. We do not know what the risk situation is. That sort of precludes any additional attempts at quantifying further benefits* * * * (Tr. 421-422) (emphasis added).

OSHA's experience with assessments of the impacts of health regulations has demonstrated to us the futility of applying traditional cost-benefit analysis and methodology to the workplace health context. The basic assumptions of such approaches are always subject to serious questioning, and the change in one variable can result in major changes in the overall assessment. The analysis performed by Dr. James Miller for Vistron demonstrates clearly the limitations and weaknesses of both the assumptions and the results of such assessments.

Miller relied upon the du Pont epidemiological study as his source for data on cancer risk for employees exposed to AN. His first assumption was that the du Pont cohort was exposed to 20 ppm. This assumption, which is the touchstone of his later use of the "linear model," is severely flawed. It must first be noted that the du Pont Company itself has been unable to provide significant data on the exposure of its cohort. Miller's 20 ppm assumption was based not on information from du Pont, but, rather, on what another company (Monsanto) blindly estimated the cohort's exposures to be. Using the 20 ppm figure as a starting point for an evaluation of risk, therefore, is highly questionable.

The 20 ppm assumption is also unsupported by the data on AN exposures which is available in the record. Industry officials have frequently referred to the high acute toxicity of AN in describing the reasons for their early activity in instituting control measures in AN manufacturing and polymerization operations. Indeed, exposures have generally been well below the previous 20 ppm standard for many years. Twenty ppm is not far below the level at which acute toxic effects are noted. The companies have always recognized that AN is a dangerous chemical, even before evidence of its carcinogenicity became available. If a person could detect AN by odor (between 13 and 19 ppm), that was a sign to leave the exposure area. Because AN exposure is, in this range, self-limiting, it is most unlikely that employees were exposed to TWA's as high as 20 ppm. (Vistron's assertion that the industry standard in the early 1950's was 50 ppm is unsupported and, in any event, does not serve as evidence of the actual exposures at that time). Therefore, Miller's use of 20 ppm as an established exposure for the du Pont cohort is highly questionable on this ground, as well.

The impacts of the 20 ppm assumption on Miller's risk estimates become apparent when one reviews the "linear model" which was used in the assessment. As Miller acknowledged on questioning, if the actual exposures from the du Pont study were, in fact, 10 rather than 20 ppm, the line between the starting point and the origin would change in slope. He stated:

> (T)he reduction in risk per unit reduction in exposure would be twice that I have assumed. So it would mean that the cost figures per one reduction and by one chance in one thousand would be cut in half (Tr. 1278-79).

This acknowledgment by Miller is highly significant, particularly as it relates to the basic conclusions of his study. Even using his 20 ppm assumption, Miller did conclude that a case could be made for a 2 ppm standard (Tr. 1270). If, as noted above, a more reasonable 10 ppm assumption was substituted, a case would be established for an even lower standard, purely on health grounds.

Taking Miller's study as it stands, we also believe that such an assessment ignores the element of externalities. The costs of illness and death due to occupational exposures to carcinogens are only partially absorbed at present by the industries involved. Employees and former employees must presently suffer most of the costs and losses resulting from occupationally induced cancer. The standard for AN will reduce mortality and morbidity among workers, thus relieving them of these costs. In essence, then, the affected companies are being called upon to internalize the types of costs which they had previously been able to externalize. To the extent that the costs of illness and death related to workplace exposures would have been incurred, the costs of protecting employees from occupational diseases do not represent new costs to be borne, but, rather, substitute costs. Further, the costs of engineering controls may, in many cases, be expected to cover more than one generation of employees in a given worksite.

The "linear model" is a useful tool only in those situations where one can demonstrate a true dose-response relationship for an exposed population. This requires, by definition, a showing of a known effect/no effect level. For AN, we have no data to indicate at what point this level is reached. In this regard, if the cancers in the du Pont study are traced directly to AN exposure, it is impossible to determine at what level of exposure these cancers were actually induced. We cannot rule out the possibility that employees with higher exposures did not, in fact, have their cancers induced by lower concentrations of AN.

In the case of the acrylonitrile standard, the evidence in the record overwhelmingly demonstrates that the costs of compliance with a 2 ppm standard will not be overly burdensome to industry. Having determined that the benefits of the standard are likely to be appreciable, OSHA is not obligated to carry out further exercises towards more precise calculations of benefits which would not significantly clarify the ultimate decision.

OSHA has, in the past, attempted to obtain a more detailed quantification of benefits to be attained under proposed standards. Previous efforts in this direction as an aid to decision-making have not been fruitful (41 FR 46742), and have provided little, if any, assistance in setting final health standards.

In summary, then, OSHA is promulgating this final standard in light of the specific mandate provided by section 6(b)(5) of the Act: to provide the greatest protection for employees, with consideration being given to the latest available scientific data, feasibility, and experience under the Act.

IX. Environmental Impact Assessment

In the preamble to the proposed standard (43 FR 2608), OSHA stated that it had made a tentative determination that the AN standard would have no significant environmental impact, and that preparation of an environmental impact statement (EIS) was not required. At that time, we solicited comments and data on this determination and information relevant to the issue of whether significant environmental impacts could be anticipated. Written comments were received from several participants in the rulemaking proceeding in response to the proposal (1-5).

The basic argument presented by all of the comments was that OSHA had erred in not preparing an EIS, because environmental impacts would occur as a result of the proposed regulation. The companies referred to general areas of impact, such as increased water usage, increased production of waste water, increased air emissions, and changes in solid waste disposal. However, no specific examples or data quantifying the extent of these potential impacts were provided to support the contention that significant impacts would occur.

In making the initial determination that the proposal would result in no significant environmental impacts, OSHA relied on the information available at the time, which indicated that the standard would have little, if any, impact on the current levels of air and water pollution, and minor impact on waste disposal practices.

Since the proposal was published, we have reevaluated our determination not to prepare an EIS. Although we still maintain that the impact on the environment as a result of this standard will be insignificant and that an EIS is not required, we are endeavoring to present a discussion of the areas which could potentially be affected to any noticeable degree. The control methods which will be used to limit employee exposure to acrylonitrile are more completely discussed in the section dealing with technological feasibility of the standard. The following is an assessment of the environmental impact potential of the standard for occupational exposure to AN.

1. The proposed action was designed to control occupational exposure to acrylonitrile. Only the workplace environment of 43 plants and the approximately 5,130 exposed employees involved in AN monomer production, processing, and use will be directly affected by the standard. The nature of this effect has been discussed in detail above. The general physical or natural environment external to the workplace will not be significantly affected by the proposed action, in that employers' efforts to comply with the standard will not significantly alter current levels of environmental emissions from the affected industries.

The following paragraphs outline the major AN industry segments which will be affected by the standard, in somewhat less detail than the discussions of technology and feasibility elsewhere in this preamble. Each segment will be reviewed as to the major sources of employee exposure to AN, ways in which such exposures may be controlled, and how control of exposures may impact the general environment.

AN Monomer Production. Employee exposures to AN in the monomer production segment of the industry occur as a result of product sampling activities, process leaks, accidental spills, storage and transport of AN monomer, and fugitive emissions. Methods which will be used by employers to reduce employee exposures include the following: more complete enclosure of systems to prevent release on AN into employee work areas, the use of exhaust or dilution ventilation in areas where leaks cannot be eliminated or where system enclosure is impractical, use of improved seals and gaskets to control employee exposures both during normal operations and product sampling, and immediate washdown of AN spills to prevent the generation of persistent high concentrations of AN vapor in the workplace.

Most, if not all, of these control methods are already in use to some extent in the AN monomer production facilities operating in the United State. The standard will result simply in more agressive control of employee exposures than has been the established practice to date. The control methods will not result in an increase in the amount of AN released to the ambient air, and, in fact, may reduce the current levels of emissions somewhat. Such a reduction would result from the improved control of leaks and other fugitive emission sources which presently expose employees and which inevitably reach the extenal environment. This reduction of exposures may be highly significant insofar as the health of employees is concerned, although the total amount of AN involved would be very small on an absolute scale. The total reduction in pounds of AN released to the environment would be expected, therefore, to

V 4 3 / 1 9 2
OCT 3 1978

be insignificant in terms of overall environmental impact.

Washdowns of spills into process sewers to prevent employee exposure to AN is already a common practice. Thus, no significant increase in the amount of water used for this purpose is anticipated.

In addition, washing down of liquid AN serves to remove AN which would otherwise vaporize into the air. Thus, whereas there might be an increase in the amount of AN into process waste water, there would also be a corresponding decrease in emissions into the air.

Treatment or disposal of contaminated waste water is already being accomplished by one of two methods (biodegradation or deep-well injection) at all five AN monomer production facilities. The OSHA standard for control of employee exposure will not affect the waste water treatment methods currently practiced by the industry, nor will it result in higher levels of AN in the environment.

Acrylic Fiber Production. Exposure of employees in acrylic fiber production occurs when the monomer is being transferred from storage tanks to the reactors, during the extrusion of the fibers, and during the stretching, washing, and drying phases of the fiber production process. The latter operations result in continuous release of residual monomer to the ambient air and into process water, as well as into employee work areas.

Methods which will be used by employers to control worker exposure to AN include eliminating and controlling fugitive emissions at tank farm, loading, storage, and reaction areas; ventilation of monomer storage, sampling, and fiber production areas; and enclosure of extrusion, stretching, washing, and drying operations. As with the monomer production industry, spills and leaks of AN would be washed with water into process sewers for treatment and disposal.

None of the exposure control methods cited above will result in an increase in the release of AN into the environment. It should be noted that the amounts of residual AN present in the fibers and released during processing are very small. Thus, although these small amounts are important from the standpoint of employee protection, controls will not involve removal of vast quantities of AN from the general environment. Further, the industry has chemical sewers already installed for the disposal of process wastes and spilled materials, and, therefore, the washdown practices used for control of exposures should not affect waste water disposal practices already in effect.

ABS/SAN resin production. Employees in the ABS/SAN resin manufacturing sector are exposed to AN primarily from latexes containing residual and unreacted AN monomer which are transported throughout the manufacturing process. The highest potential exposures occur around the flocculation tanks, but other major exposure areas include the filtering, washing, and drying processes. As with acrylic fiber production, exposures may also occur when AN monomer is transferred to or from storage tanks and reaction vessels. Methods which will be used to control employee exposures include additional enclosure of processes or operations, ventilation of storage and process areas, washdown of spills, and control of leaks to prevent exposure to fugitive emissions. Further, additional stripping of monomer from intermediate polymer materials may be necessary.

The only control method which has the potential for increasing the total amount of AN released into the environment is stripping. The additional amounts of monomer that can be stripped from the intermediate polymers are greatly limited by two factors, however. First, some stripping is already being carried on by ABS/SAN producers; thus, the remaining amounts of residual AN are relatively small. Second, extensive stripping, beyond what is presently being done, can result in degration of the final product, as noted in the discussion of technological feasibility elsewhere in this preamble. Where additional stripping may be feasible, the amount of AN released from the ABS/SAN materials is expected to be significant only from an employee exposure standpoint (i.e. employee exposures will be reduced), and will not result in large quantities of AN being released into the general human environment.

Stripping is usually performed at an early stage in the polymerization process. The reason that a company strips its polymer products is to assure that residual monomer is not released to expose employees during later stages in the process. It can be assumed, therefore, that much of the monomer which is driven off by stripping would otherwise have been released by the polymer at some point during manufacturing. To this extent, stripping does not increase the total amount of AN released into the environment, but rather, removes at an early stage concentrations of AN which would have been released in any event.

None of the control methods is expected to result in an increase in the amount of AN released to the general environment from the ABS/SAN sector. Conversely, although the amounts of AN to be controlled by the additional engineering methods may be significant from the standpoint of employee health, they do not constitute a major decrease in the total amount of AN released into the environment.

Nitrile elastomer production. Employee exposures occur throughout the entire processing operation for nitrile elastomer manufacture, including the polymerization, coagulation, and washing/drying operations. Further, exposures can occur at AN monomer storage and transfer points. Emissions to the general environment presently arise from these same emission sources.

Methods which will be used by employers to control employee exposures include the same procedures to be employed in the ABS/SAN industry, as noted above. Similarly, the nitrile elastomer sector has also implemented controls to some extent, as have the other industry sectors. Some stripping is already being performed, and further stripping is limited by the same factors present in the ABS/SAN industry.

The controls envisioned for nitrile elastomer production are not expected to result in any significant environmental impacts.

2. At the time that the proposal was published, it was thought that much additional stripping might be feasible for employers in achieving exposure limits below 2 ppm. As we have noted in our discussion of technological feasibility, we have since determined that the type of stripping necessary in the ABS/SAN and nitrile elastomer industries to reach a 1 ppm exposure limit cannot presently be considered feasible. The reasons for this determination were twofold. First, the materials to be stripped have a tendency to coagulate prematurely, and can severely clog the process machinery when further stripping is attempted. Second, stripping which extends much further than present practices can result in severe degradation of the product.

Comments have been received concerning the increased use of stripping, stating that such stripping would release more AN into the ambient air and water, creating an adverse environmental impact. In addition to the reasons expressed with regard to the individual industry sectors, we believe that there are two other bases for our determiniation that there will be no adverse environmental impact from stripping. First, the amounts of residual AN contained in resins and elastomers are usually less than 1 percent by weight. Thus, any amount which can be stripped would be, quantitatively, very small, and, therefore, environmentally insignificant. In addition, of the small amount released, it is assumed that at least some of it would have been released at some later stage of the process if not for the stripping. Second, it is likely that employers would make efforts to recover and recycle the stripped AN monomer if the amounts were sufficient to make recycling feasible.

3. Several commenters have stated that the proposed standard's requirements for waste disposal would result in a complicated change to current waste disposal practices, and, thus, an adverse environmental impact. No supporting data on this subject were provided in support of this position, however.

OSHA does not believe that the proposed standard, if implemented as written, would significantly increase the amount of solid waste for disposal by AN affected employers, nor would ultimate disposal of AN-contaminated waste be significantly affected. The sole purpose behind the proposed requirement to inclose AN wastes was to eliminate uncontrolled employee contact with AN. Provided that employees charged with further handling of waste materials were properly protected, the standard included no specific requirements for methods of disposal once the waste materials were packaged.

As noted elsewhere in this preamble, we have revised the waste disposal provisions for the final standard removing the requirements for placing AN and PAN waste in closed containers. The reasons for this change are not based upon any adverse environmental impact, but rest upon two basic determinations as to the risk of employee exposure posed by these materials. "PAN scrap," in and of itself, does not constitute a source of AN exposure unless it contains sufficient residual AN. In addition, packaging of materials containing AN can result in a high concentration of AN within the container, thus posing a greater potential for exposure of employees handling the packages for disposal or further treatment. The waste disposal provisions as revised require decontamination by water washdown, ventilation, or other means, before disposal. The revised provisions incorporate continued use of established methods of handling and treating waste materials, while minimizing the risk of AN exposure among employees and other persons handling the materials. Because established methods currently in use are to be continued, the waste disposal section of the final standard does not result in any increased release of AN into the environment.

4. One area of concern to some commenters involved the fact that the Environmental Protection Agency (EPA) was studying emissions from the AN monomer production industry. It was contended that this indicated a community health problem with AN, and that OSHA was remiss in not preparing an EIS to discuss the proposal's impact on this problem. It is true that EPA has conducted extensive studies of air and water emissions from AN production facilities (6,7,8). These studies were prompted by the fact that AN is one of the highest volume organic intermediates produced in this country. Because of the size of the production operations involved and the known toxicity of AN, EPA has been examining the extent of pollutant release into the environment from AN monomer manufacturing facilities.

Findings published by EPA and referred to in the preamble to the proposal have indicated that a number of hazardous air and water pollutants are emitted from AN manufacturing, such as carbon monoxide, hydrocarbons, nitrogen oxides, and sulfur oxides, but that the actual amounts of AN emitted (the only substance to be regulated under the OSHA proposal) are relatively small. EPA is attempting to develop standards and control methods to limit overall exposures to the high volume pollutants contained in the AN industry emissions.

As an example, EPA has found that uncontrolled ground level concentrations from AN manufacturing reach their highest levels in the product storage areas (tank farms). The highest uncontrolled emissions of AN recorded in these areas were less than 0.1 ppm in 24 hours. This level was determined using the assumption that all sources were continuous when, in fact, the actual emissions from storage tank areas are intermittent and probably lower than the 0.1 ppm level. All other point sources of AN emissions are considerably lower than those from the storage area.

5. The use of engineering methods such as exhaust or dilution ventilation will require the increased use of energy in certain segments of the AN industry. Projected energy increases were estimated by Enviro Control, Inc., in the technology assessment and economic impact statement it prepared for OSHA in February 1978. According to this document, annual energy increase (in terms of barrels of No. 6 fuel oil) would be approximately: 131, 323 for the 2 ppm alternative PEL, 222, 150 for the 1 ppm alternative and 312, 591 for the 0.2 ppm alternative PEL.

It was argued by industry representatives that the figures for the 1 ppm and 0.2 ppm levels were underestimated, because compliance by means of dilution ventilation would require more than 40 changes of room air per hour and the Enviro figures did not account for this. Enviro stated that it felt that achievement of compliance by such methods would be impractical and unworkable so it did not estimate the costs associated with such.

It is not anticipated that the increase in energy consumption as a result of this standard will result in significant environmental impacts.

Conclusions. Examination of the environmental impact potential of the proposed standard for control of occupational exposure to AN indicate that the effects of the proposal on the general human environment will not be significant, and preparation of an environmental impact statement is not required.

SUMMARY AND EXPLANATION OF THE STANDARD

The following sections discuss the individual requirements of the AN standard. The sections include an analysis of the record evidence and the policy considerations underlying the decisions as to the various provisions of the standard. As discussed in the PEL section above, the final standard sets a permissible exposure limit for acrylonitrile of 2 ppm as an 8-hour TWA, with a ceiling limit of 10 ppm as measured over any 15-minute period during the workshift. Engineering controls and work practices are required where necessary to reach the PEL, and written compliance plans must be developed. Engineering controls must be in place by November 2, 1980, or 2 years from the effective date of the standard. Other portions of the standard including those on respirators, protective clothing, hygiene facilities, exposure monitoring, and the exemption provisions have been revised and clarified as described in detail below.

The language of the standard and the order of the various provisions is consistent with the drafting in other recent OSHA health standards, such as the benzene final standard (43 FR 5913) and the arsenic final standard (43 FR 19584). OSHA believes that a similar style should be followed from standard to standard in order to lead

V 4 3 / 1 9 2

0 C 3 7 8

to uniformity of interpretation of similar provisions. Section 6(b)(5) of the Act states that health standards shall also be based on "experience gained under this and other health and safety laws."

Scope and application: Paragraph (a). This standard applies generally to all occupational exposures to acrylonitrile (AN). Some of the industry sectors where significant exposures to AN may occur are in the manufacturing of AN monomer, the production of acrylic/modacrylic fibers, and in the polymerization of AN with other monomers to produce resins, elastomers, and other materials. It should be noted, however, that not all workplaces where AN may be found will be subject to the AN standard. OSHA has determined that the standard should be focused towards those workplaces in which there is the greatest potential for AN exposure. This would involve primarily the manufacturers of AN, the manufacturers of acrylic and modacrylic fibers, and producers of ABS and SAN resins, nitrile elastomers, polymer polyols, and other AN based polymers and materials. In a limited number of cases, downstream processing, handling, and use of certain materials made from or containing AN will be covered by the standard.

The exemption provisions of the final standard contain both a listing of materials which are exempted, and two performance bases upon which materials not specifically listed can be exempted. The exemptions as drafted differ markedly in several respects from those in the proposal. A detailed discussion of the changes that have been made and the rationale for these changes are contained elsewhere in the preamble to this standard.

The first exemption provision, paragraph (a)(2)(i), lists a number of "finished polymers" which are to be exempted from the AN standard. This listing reflects the data received in the record which shows the minimal potential for AN exposure to employees during further processing, use and handling of these materials. The term "finished polymers" is not defined in the standard. This is because it is not possible to state as a general matter the area of the manufacturing at which each polymer listed becomes "finished." In most cases, this involves a drying step, after which the polymers are packaged and/or stored. At this point, the polymers are no longer being "manufactured." Further handling, including shipping, processing and use, of the finished polymers, is exempt from the standard.

As is the case with most polymers, which contain some amounts of residual monomer, some of the AN-based polymers on the exempted list may release monomer into the headspace at the top of their storage vessels. When the vessels are opened, the monomer escapes, with the potential of exposing employees to AN. OSHA recognizes that this can and will occur. However, the resultant low level exposures are transient and do not represent a significant source of exposure. (It should be noted that other materials not listed in paragraph (a)(2)(i) may exhibit this phenomenon as well. If the materials would otherwise qualify for exemption under the performance criteria in (a)(2)(ii) for TWA exposures, the headspace release will not affect their exemption.)

Paragraph (a)(2)(ii) carries forward, with minor modifications, the performance criteria provided in paragraph (a)(2)(i) of the proposal. The criteria are applicable to all materials made from and/or containing AN. This clarifies a problem area from the ETS and proposal, which referred only to "products fabricated from PAN." OSHA's interpretation of the ETS has been that PAN itself and other materials made from AN should be allowed an exemption if they meet the performance criteria for AN release.

The criteria for exemption under paragraph (a)(2)(ii) involve the providing of and reasonable reliance on objective data showing the following: that the material is not capable of releasing AN resulting in airborne concentrations exceeding 1 ppm (as an 8-hour TWA) under the expected conditions of processing, handling and use which will cause the greatest possible release. OSHA anticipates that the manufacturer of the material will be in the best position to test his products and supply the necessary objective data.

The "1 ppm release" referred to in the exemption as proposed meant an 8-hour time-weighted average under expected conditions involving the greatest possible release of AN. The Agency has interpreted the ETS in this manner, and is revising the final standard to refer explicitly to an 8-hour TWA.

The third exemption provision, paragraph (a)(2)(iii), exempts the handling, use, and processing of solid materials made from and/or containing AN if they are not heated above 170° F. This is changed from the proposal to set a temperature limit instead of the term "heating or melting." This provision is included primarily to cover future products made from AN, since most solid materials are already exempted by the listing in paragraph (a)(2)(i). The term "solid materials" is meant to clarify that the exemption (paragraph (a)(2)(iii)) does not apply to liquid AN, as defined in the standard.

Action level. The proposal contained alternative action levels of 1 ppm, 0.5 ppm, and 0.1 ppm, corresponding to the three alternative PEL's of 2, 1 and 0.2 ppm, respectively. The action level triggers the monitoring and medical surveillance requirements of the proposal. The final standard sets an action level of 1 ppm, in accordance with the 2 ppm PEL.

The record contains little negative comment on the action level concept. Most comments received were directed at the various PEL's, and addressed the action level primarily from the measurement and monitoring standpoint (Exs. 92; 11:(14)).

In the absence of a demonstrated safe level of exposure for a carcinogen, OSHA has consistently required that employee exposure be limited to the maximum extent feasible by the use of engineering controls and work practices. OSHA believes that it is also appropriate to begin some protective actions under the standard prior to exceeding the PEL. The action level serves such a purpose. Another purpose of the action level is to help to relieve the burden on employers by providing a cut off point for many of the required compliance activities under the standard.

From a pure health viewpoint, it would not be unreasonable to require some action to be taken wherever employees may be exposed to a carcinogen. However, this approach would be unduly burdensone both to the affected employers and to the Agency. Nonetheless, the standard necessarily will encompass some employers whose employees are exposed below the PEL. We expect that the exemption provisions will greatly limit this group of employers. Where they are covered, such employers are required to perform initial monitoring to determine the extent of their employees' AN exposures. If, on the basis of the initial monitoring results, an employee's exposure is below the action level, the employer may discontinue monitoring and all other compliance activities for that employee except for training and labeling. The action level concept thus provides an objective means for an employer to determine what further actions are required for compliance with the standard.

The statistical basis for determining the action level has been discussed in connection with several proposed OSHA standards (see, for example, "Proposed Standard for Trichloroethylene" (Oct. 20, 1975, 40 FR 49032)). In brief, although all measurements on a given day may fall below the permissible exposure limit, some possibility exists that on unmeasured days, the employee's actual exposure may exceed the permissible limit. Indeed, as various parties have noted, the exposures in the AN industry can vary widely from day to day. Where exposure measurements are above one-half of the permissible exposure limit, i.e., the action level, the employer cannot reasonably be confident that his employees may not be overexposed. (Leidel, N.A. et al., "Exposure Measurement Action Level and Occupational Environmental Variability," DHEW, PHS, DCD, NIOSH, DLCK (August 1975)). Therefore, requiring periodic employee exposure measurements to begin at the action level provides the employer with a reasonable degree of confidence in the results of his measurement program.

Definitions: Paragraph (b). For the purposes of the final standard, "decontamination" means treatment of liquid AN waste, protective clothing, work surfaces, and other areas, usually by means of ventilation or water washdowns, to assure that the materials or surfaces no longer release AN above 1 ppm. Unlike the exemption provisions, the decontamination provisions deal with actual release of AN from a leak, spill, or other source of liquid AN, rather than with the potential for release from a material during processing. Testing to assure nonrelease from a decontaminated area, therefore, may be performed by an area sample, provided that the probe is placed at least as close as any employee would get to the point of AN release.

The term "emergency", as used in the proposal, covered any release of AN above the ceiling limit. The breadth of this definition would have required the employer to implement the emergency procedures and notify the OSHA area office whenever the ceiling was exceeded. As was noted by several commentators, such a requirement would apply to many situations which could not truly be deemed as "emergencies" (Exs. 92; 149). In addition, we recognize that this would tend to lessen the employee's awareness of true emergency conditions if and when they did occur.

"Emergency" has been redefined, as in the vinyl chloride standard, to refer to a "massive release" of AN. The employer is best able to determine if an emergency exists in his facilities. His central obligation under the standard, which is to limit employees' exposures to AN, is, therefore, supplemented by the requirement to take further action when emergency situations arise.

The proposal defined "polyacrylonitrile," or "PAN" for the purposes of the standard, as homopolymers or copolymers made from AN except for materials exempted under paragraph (a)(2).

This proposed definition of "PAN" has been deleted from the final standard for several reasons. The standard was and is intended to protect employees from exposure to AN monomer. There is nothing to indicate that polyacrylonitrile itself is harmful, other than through its release of residual quantities of AN. In addition, the definition of "PAN", as proposed, led to some confusion under the ETS. Whereas the proposed standard was to apply only to PAN as limited in the definition (not to all generic polyacrylonitrile materials), some persons thought that references to "PAN" throughout the proposed standard meant all polyacrylonitrile materials, regardless of potential for AN release and exposure.

The standard has been revised to read solely in terms of "AN" and "liquid AN." As noted in the discussion of the scope of the standard, the processing, use and handling of most "PAN" materials have been expressly exempted from the standard. The performance exemption has also been modified accordingly, to allow materials made from or containing AN to be exempted if they meet the conditions set forth in paragraph (a)(2)(ii). The use of the phrase "products fabricated from PAN," as contained in the proposed exemption was too restrictive, since it did not, on its face, appear to allow PAN itself or other materials made from or containing AN to qualify for exemption.

A new definition for "liquid AN" has been added to the final standard. This definition is intended to assure that all intermediate products of the polymerization process are covered by the standard. The definition also provides a differentiation between intermediate latexes and other liquid polymer intermediates created in ABS/SAN and nitrile rubber manufacturing, and final product latexes. Whereas final product latexes may present an AN inhalation problem in some cases, there is nothing to indicate that they also pose a significant potential for skin exposure to AN. The skin and eye contact provisions, along with the concomitant protective clothing and equipment provisions, have therefore been drafted in terms of "liquid AN" monomer and polymer intermediates.

Exposure monitoring and measurement: Paragraph (e). The standard requires each employer who has a place of employment where there is exposure to AN as the result of the employer's activities (except where exempted under paragraph (a)(2)) to monitor his employees' exposure to AN, and to determine an employee's exposure over an 8-hour period without regard to the use of respiratory protection. Section 6(b)(7) of the Act (29 U.S.C. 655) mandates that any standard promulgated under section 6(b) shall, where appropriate, provide for monitoring or measuring employee exposure at such locations and intervals, and in such manner, as may be necessary for the protection of employees.

There are various reasons which make it appropriate for employers to measure employee exposure to AN. First, exposure monitoring informs the employer as to whether he is meeting his legal obligation to keep employee exposures below the permissible exposure limit. Second, exposure monitoring evaluates the effectiveness of the installation of engineering and work practice controls and informs the employer as to whether additional controls need to be instituted. Third, exposure monitoring is necessary in order to determine whether respiratory protection is required at all, and if so, which respirator is to be selected.

Fourth, section 8(c)(3) of the Act (29 U.S.C. 657) requires employers to notify promptly any employee who has been or is being exposed to toxic materials or harmful physical agents at levels which exceed those prescribed by an applicable occupational safety or health standard, and to inform such employee of the corrective action being taken. Exposure monitoring is necessary in order to determine whether employees are being exposed to AN at levels exceeding that prescribed by this standard and therefore must be notified as required by the Act. Finally, the results of exposure monitoring are part of the information which must be supplied to the physician.

The need to conduct exposure monitoring was generally accepted by participants in the rulemaking proceeding. A major point of contention centered on the available methods of sampling and analysis, as discussed below. In addition, several employers noted that they already conducted monitoring on a more frequent basis than the monthly and quarterly periods included in the proposal (Exs. 11:(25); 11:(27)). They contended, however, that the standard should only require employee notification of the required qurterly or monthly monitoring. The wording of the proposal, in their view, would have required the employer to notify the employee of any additional monitoring results that he might have as a result of more frequent monitoring. It was argued that to require notification of extra monitoring results would discourage employers from conducting more frequent monitoring than that required by the standard.

Section 8(c)(3) of the Act (29 U.S.C. 657) requires employers to notify promptly all employees exposed above the PEL. The final standard implements section 8(c)(3) by requiring an employer to notify each employee in writing of the employee's measurement within 5 working days after the

V 4 3 / 1 9 2

receipt of the results of any required measurements.

OSHA recognizes that the standard is intended to set only minimum monitoring requirements for employers. It is reasonable, then, that the standard should only require the notification to employees when monitoring required by the standard is carried out. Additional actions by the employer in monitoring exposures, while certainly encouraged by OSHA, are not required by the standard, and direct notification need not be given to employees.

The standard requires that measurements be made by monitoring which is representative of each employee's exposure to AN over and 8-hour period without regard to respiratory protection. Exposure measurements for each individual employee would, certainly, be an indication of that employee's exposure. However, this may be unnecessarily burdensome in some instances. Monitoring which can be shown to be representative of an employee's exposure would provide the necessary information and in many instances would require fewer samples. This is particularly true in manufacturing of AN and other 24-hour continuous processes.

The proposal required monitoring monthly for employees exposed above the permissible exposure limit and quarterly for employees exposed between the action level and the PEL. As noted above, many employers have indicated that they perform monitoring on a more frequent basis. It is evident that the higher the frequency of measurement, the higher the accuracy of the employee's exposure profile. The companies involved with the manufacturing and polymerizing of AN indicated little, if any, disagreement with the monitoring frequency in the proposal. OSHA has carried forward these provisions to the final standard. We believe that in the industries affected by this standard, monthly and quarterly monitoring will reflect employee exposure with sufficient accuracy to assure that suitable precautions will be taken as needed to protect employees from exposure to AN.

Industry representatives have concentrated much of their criticism on what they have contended to be the lack of a method of sampling and analysis for AN in the range of 1 ppm and below which will meet the accuracy and precision requirements set forth in the proposed standard. This issue was brought to the surface by the original NIOSH recommendations in September 1977 (Ex. 65). In those recommendations, NIOSH stated that OSHA should issue a 4 ppm standard, based upon what they characterized as the limitations of existing sampling and analytical methods for AN. As we pointed out at length in the preamble to the ETS, OSHA was most concerned about this situation, particularly in light of the industry recommendations at that time that the standard be set as low as 2 ppm. Therefore, testing was performed at the OSHA Analytical Laboratory in Salt Lake City, Utah, to determine whether NIOSH method S-156, which was the method used under the existing 20 ppm standard, could also be used in sampling lower concentrations (see appendix D).

The test results clearly showed that S-156 could be used for sampling and analysis below 1 ppm with sufficient accuracy (Exs. 18; 18A). Testing was performed in the presence of high humidity (85 percent) and other monomers, such as styrene and butadiene, to determine whether these elements had any detrimental effect on the sampling and analysis. The effects of these factors was negligible. The Director of the OSHA Laboratory, Floyd Madsen, appeared at the rulemaking hearing and was questioned at length by industry representatives concerning his testing procedures and results. In addition, representatives of SPI were permitted to visit the Laboratory after the hearing, in order to talk with Mr. Madsen further concerning sampling and analysis, in response to a direct request at the hearing by both SPI and Vistron. Although such a visit did, indeed, go beyond what is required of the Agency during informal rulemaking, OSHA determined that it was, in this limited circumstance, an appropriate gesture toward developing a complete record on the sampling issue.

Laboratory testing has also been performed by NIOSH at their laboratories in Cincinnati, also involving method S-156. Data submitted to the record by Dr. Judd Posner of NIOSH also demonstrated that AN could be sampled and analysed below 1 ppm with accuracy (Exs. 43; 66). Since this data was submitted during the course of the hearing, Dr. Posner invited interested persons at the hearing to submit questions to him in writing, to which he would reply during the post-hearing comment period. It is important to note that no such questions were received. A complete write-up of the analytical method and sampling technique used by NIOSH is available in the record (see appendix D). In essence, it sets forth the same method utilized by the OSHA Laboratory, with the major exceptions being the use of a different desorbing solvent and the use of flame ionization without the nitrogen phosphorus detector.

OSHA does not require that any one specific method of sampling and analysis be used for compliance with the monitoring provisions of the standard. This provision is set forth in performance language, and permits the use of any method which meets the accuracy and precision requirements set forth therein. The testing that OSHA has performed, supplemented by the NIOSH data, serves to demonstrate that there is at least one method available which meets those requirements. We are fully aware that there are many other methods in use throughout industry to sample for AN, as well as methods which are in varying stages of development. Such methods include the use of porous polymer tubes instead of charcoal tubes for collecting the sample, gas bags, badge-type dosimeters, and the use of portable and fixed-point sampling devices and systems. Considerable data has been submitted to the record by many companies concerning their experience with these methods. By demonstrating the availability and effectiveness of S-156 as modified, we do not intend to short-circuit any of the efforts by these companies to develop their own monitoring procedures, some of which may prove to be even more accurate.

Industry representatives have argued that it is essential for a method to be "field validated" in order to be used for compliance with the AN standard (Exs. 75; 83). Yet it should be noted that such representatives have also stated that the range of field conditions that may be encountered in the AN industry is so wide and variable that it would be necessary to "field validate" a method in each individual workplace in order to show that it was, indeed, a workable method across the board (Tr. 933). It is evident that no single analytical method will work in every imaginable workplace situation, either for AN or for most any other organic vapor. In addition, it is also clear that whatever method an employer may choose to use to monitor for AN, he must validate it for use in his particular plant. The need for such individual validation was espoused by industry representatives (Tr. 933).

The method of "field validation" proposed by Dr. Ward of Monsanto presents an interesting approach which shows promise (Ex. 136). However, there is nothing to indicate that a method is or has been in use in the past to "field validate" sampling methods for AN or other organic vapors. In addition, Dr. Posner of NIOSH has submitted an analysis of Dr. Ward's validation method which points up that it, too, is not without pitfalls in its implementation (Ex. 140). There is no single accepted method of "field validating" a sampling method to obtain data which will support its use under all workplace conditions.

A detailed exposition of the range of available methods of sampling and analysis for AN was contained in the written comments submitted by Monsanto (Ex. 11:(27)). Table A contains a

listing of five methods which were either validated by Monsanto (field and/or laboratory validation) or, in the case of the gasbags, showed a detection limit below 1 ppm. The field validation was, presumedly, carried out under the protocol submitted by Ward (Ex. 136). Although Monsanto reported difficulty in using NIOSH method S-156, it is clear that they have been able to develop or apply other methods of sampling and analysis to their many and varied operations.

Monsanto, in their written comments, discussed the various problems that they had experienced with NIOSH method S-156 (Ex. 11:(27)). They noted that the only charcoal lot which had shown satisfactory results was lot 107. This point was noted by Madsen in his testimony (Tr. 132). In dealing with the problems of sample "breakthrough" reported by various companies, including Borg-Warner (Ex. 83), Monsanto noted that some companies are using two larger charcoal tubes, containing up to 1,000 mg., in series, to replace the 150-mg. tubes generally used. They have concluded, however, that there is no evidence of any effect of humidity or temperature at low AN burden.

Monsanto noted that charcoal tube methods can be used for AN at concentrations below 2 ppm even where AN recovery (with methanol or carbon disulfide) falls below 75 percent by developing a "working curve," in lieu of the NIOSH protocol. They emphasized that appropriate validation techniques are necessary for the use of all monitoring procedures in the workplace setting, whether charcoal tubes or other means of sampling are used. They have chosen to rely upon alternative systems, such as porous polymer adsorption/thermal desorption, since they consider them to be less subject to the types of variables associated with charcoal-based systems.

As was noted by Madsen in his testimony at the hearing, Monsanto concurs that the use of a nitrogen-specific gas chromatographic (GC) detector has the potential of enhancing the detection limit of all of the methods listed in the table by a factor of 10 (Ex. 11:(27)). It is also important to note that other methods which involve gas chromatographic analysis, have this same potential.

Monsanto has also reported using both the Century OVA 128 and Century flare tubes at levels well below 1 ppm, noting only that "the methods are claimed to be selective." Century Systems testified independently that their instrumentation was capable of measuring AN at concentrations well below 1 ppm as an 8-hour TWA (Tr. 873-874).

OCT 3 1978 UMI

V 43/192 OCT 3 1978

TABLE B: ADDITIONAL METHODS OF MONITORING AND ANALYSIS

FOR AN BELOW 1 PPM

(Adapted from Monsanto comments (Exhibit 11:(27)))

Method	Adsorption/Desorption/ Analysis	Validation: concentration, detection limits
1. Monsanto PoropaK-N	Poropak-N (porous polymer)/Thermal/GC	field validated down to 0.1 ppm; detection limit approaching 0.02 ppm for a 3-liter air sample.
2. Modified NIOSH P&CAM 127	Charcoal/1 to 2% Acetone in CS_2/GC	field validated at levels above 0.08 ppm within ± 2 std. devs. for a TWA_6.
3. NIOSH P&CAM 127	Charcoal/CS_2/GC	laboratory and field validated at and above 0.2 ppm for a TWA_6; Reported loss of AN when desorbed sample is stored over time.
4. Passive Dosimetry	Abcor R /Acetone / GC Gasbadge/in CS_2/	laboratory validated 0.94 ppm; field tested at 0.8-3.8 ppm by reference to method no. 2 above.
5. Gas sample bags	Gas bag/GC	Detection limit of ca a 2.5 cc. gas sample. Reported memory effects at low AN levels.

Monsanto was confident that "the charcoal tube or passive dosimeter methods could be practiced by downstream processors with some guidance from trained professional" (Ex. 11:(27)). The record reflects that the employers covered by this standard possess considerably more technical capability in this area than downstream employers would be expected to have. The broadening of the exemption provisions will limit the scope of the standard to those companies best able to provide an effective monitoring program which will produce meaningful results.

Companies such as Goodyear, Dow Badische, and Dow Chemical have submitted details of the sampling and analytical methods that they have found valid for use in their respective operation (Exs. 138; 11:(17); 11:(25)). Still others have installed continuous monitoring systems which provide area measurements of airborne AN concentrations (Exs. 11:(10); 11:(8)).

As the record makes clear, there are a number of adequate methods available for sampling and analysis of AN concentrations at and below 1 ppm. OSHA recognizes that one method may not work under all workplace conditions due to such variables as temperature, humidity, and other unique factors. Regardless of the method selected, an employer must validate the method that he intends to use under the conditions present in the particular workplace to assure himself that it will be sufficiently accurate. It is for this reason that the monitoring accuracy and precision required by the standard are stated in performance terms. The OSHA and NIOSH methods of monitoring employee exposures are included as an appendix to the final standard as a means of assisting the employer in the selection of an appropriate method for his workplace.

It was also contended that because neither the OSHA nor the NIOSH variations of method S-156 had been "field validated" under all workplace insults and exposure conditions, they could not serve as reference methods. This assertion totally misconstrues the true purpose of a so-called "reference method." The applicability of any "reference method" was described most accurately at the hearing by Dr. Ward:

> There is always a need for a reference method. However, the reference method cannot serve under all applications. It can serve under laboratory conditions and it has merit in that respect * * *. (Tr. 791).

OSHA and NIOSH have both performed laboratory testing of their variations of NIOSH method S-156 and have found the method to be a suitable reference method for use in the range of concentrations covered by the standard (Exs. 18; 18A; 41; 66).

The monitoring defined by the OSHA Laboratory involves the use of charcoal tubes and personal sampling pumps, with subsequent analysis by gas chromatograph with nitrogen phosphorus detector. Laboratory validation data indicates that this method can be used with sufficient accuracy and precision down to the 0.5-ppm level and below. Floyd Madsen was questioned extensively at the hearing as to his findings by industry representatives (Tr. 117-159). In addition, several industry personnel visited Madsen at the Laboratory during the posthearing comment period (Ex. 142). Neither the questioning at the hearing nor the laboratory visit have raised any significant questions as to Madsen's findings.

The primary differences between the NIOSH and OSHA variations on S-156 are the method of desorption (NIOSH does not use ultrasonic agitation of the sample), the desorbing solvent (NIOSH use 1 percent acetone in carbon disulfide, whereas OSHA uses methanol), and the analytical equipment (NIOSH uses flame ionization, whereas OSHA adds a nitrogen-phosphorus detector).

Method S-156 and variations thereon have been adopted and accepted for general use in field monitoring at the 1- to 2-ppm level by several major companies that manufacture and/or use AN in their facilities. Workplace conditions and other factors vary widely among these companies (cf. Ex. 2:(22); 11:(14); 138; Tr. 1196-1199).

The standard requires that the measurements be made by monitoring which is representative of each employee's exposure to AN over an 8-hour period without regard to the use of respiratory protection. Exposure measurements for each individual employee would, of course, be an indication of that employee's exposure. However, this may be unnecessarily burdensome in some instances. Monitoring which is truly representative of an employee's exposure would provide the necessary information and in many instances would involve fewer samples.

In their testimony, the NIOSH panel expressed concern that OSHA did not specify a means of determining if an exposure measurement was "representative" of an employee's exposure. They believed that this presented a potential for actually reducing the protection afforded to workers exposed to AN. OSHA believes that the standard should require the desired performance, i.e., a showing of representativeness, rather than specifying one method for determining it. We recognize, however, that NIOSH has published a document outlining a sampling strategy which is directed at this problem (Ex. 14:(157)). That strategy is certainly one approach toward determining representativeness of exposure measurements. There are other approaches which would be suitable, as well. The employer has the burden of showing, by whatever means at his disposal, that his measurements are representative of each employee's exposure to AN.

The rulemaking record, along with experience under the ETS, indicate that most affected employers have successfully implemented a monitoring method which gives satisfactory results in their operations, at concentrations in the 1- to 2-ppm range. However, OSHA cannot ignore the difficulties that various companies have reported in demonstrating the required accuracy and precision specified in both the ETS and proposal at a (95 percent confidence level, ±25 percent at or above 2 ppm, and ±35 percent below 2 ppm) (Exs. 83; 159). We have determined that these criteria should be made more flexible, in order to assist employers who have encountered unique sampling problems. Therefore, the final standard permits the use of methods with accuracy and precision at a 95-percent confidence level, of ±35 percent at or above 2 ppm, and ±50 percent below 1 and 2 ppm. The difference (35 percent vs. 50 percent) reflects a recognition that accuracy of monitoring decreases below 2 ppm.

The accuracy and precision requirements are intended to provide the employer with a degree of confidence in his sampling results. As noted earlier, monitoring is not carried out for its own sake, but for the purposes of determining what is required for compliance in a given operation. OSHA anticipates that the wide range of available methods, combined with more flexible criteria for the method employed, will enable employers to perform their required monitoring without serious difficulties.

The employee exposure measurements are to be made without regard to the use of respiratory protection. One commentator took issue with this provision, contending that the sampling does not reflect the actual exposure of the employee who is being protected by a respirator (Ex. 149). Whereas this statement may be true, it overlooks the fact that exposure monitoring is not a single-purpose activity. It is necessary to know employee exposure levels without the use of respiratory protection in order to evaluate the effectiveness of the required engineering and work practice controls, and to determine whether additional controls must be instituted. In addition, monitoring is necessary to determine which, if any, respirator must be used by the employee.

V 4 3 / 1 9 2

0 C 3 7 8

As noted by numerous participants in this rulemaking proceeding, exposure conditions vary throughout the day in many operations. At least one sample is to be taken during each shift in order to assure that exposure measurements represent exposures of employees on all shifts. Employees working in the same area doing different jobs may have different exposures. Therefore, the standard requires sampling for each job classification, as well. The proposed standard did not contain detailed procedures in this regard. However, in order to assure accurate representative monitoring of employee exposures, OSHA has determined that the variability of exposures warrants such procedures.

The standard requires that the initial monitoring be conducted, and the results thereof obtained, as of the effective date of the standard. OSHA believes that this provides more than enough time for employers to complete the sampling and obtain the results. Moreover, the standard permits employers who have monitored under the ETS, or since January 17, 1978, to utilize these measurements for purposes of complying with the initial monitoring requirements of the final standard. Employers who have already monitored their employees' exposures within this period will, therefore, not have to conduct initial monitoring unless, because of a process, control, or personnel change, they are required to redetermine exposures.

The final standard requires measurement every 3 months for employees exposed between the action level and the TWA limit, and monthly for employees exposed above the TWA limit.

The higher the measurement frequency, the higher the accuracy of the employee exposure profile. The selection of an appropriate interval between monitoring efforts is judgmental. OSHA has determined that requiring monthly and quarterly monitoring for AN exposures will reflect employee exposure with sufficient accuracy to assure that suitable precautions will be taken as needed.

Periodic measurement is appropriate when exposures are in the 1-2 ppm range because of the possibility that minor changes in process, materials, or weather conditions may raise exposure to above the TWA limit, and to compensate for the possibility that such measurements are falsely low.

Periodic monitoring and measurement are not required when initial measurements are below 1 ppm. It is unlikely, when exposures are at this level, that minor fluctuations in process, materials, or weather or measurement accuracy would result in false negative readings below the TWA limit. It would not be appropriate to require periodic measurements in those operations where exposures would be well below the permissible exposure limit.

The standard requires that whenever there has been a production, process, or control change which may result in new or additional exposures to AN, or whenever the employer has reason to suspect an increase in employee exposure, the employer shall repeat the required monitoring and measurements for those employees affected by such change or increase.

The redetermination procedure is necessary to assure that the most recent monitoring results accurately represent the existing exposure conditions. This is necessary so that the employer may take appropriate actions such as instituting additional engineering controls and providing appropriate respiratory protection.

The final standard also provides that employers may discontinue periodic monitoring for those employees for whom two consecutive measurements, taken at least 7 days apart, show exposures to be below the action level. Where employee exposure measurements fall below the permissible exposure limits but are at or above the action level, the employer may alter the monitoring schedule for those employees from monthly to quarterly after two consecutive measurements taken at least 7 days apart indicate the reduction in levels.

Section 8(c)(3) of the act (29 U.S.C. 657) requires employers to promptly notify an employee who is exposed in excess of the permissible exposure limit. The standard requires the employer to notify each employee in writing of that employee's measurement within 5 working days after the receipt of the results of any measurements required under paragraph (e). Notification in writing need not be an individual letter to the employee, but may be a notice prominently displayed on a bulletin board or similar workplace location.

OSHA has determined that the proposed paragraph (e)(7), requiring a weekly survey of operations involving liquid AN, should be deleted from the monitoring provisions of the final standard. The data in the record indicates that the purposes of the weekly survey (i.e., detection of leaks and spills of liquid AN) can be achieved through a less elaborate and detailed leak detection program.

The unpredictable nature of fugitive emissions from valves, pumps, and the like, makes it unlikely that a survey performed on a weekly basis will detect all, or even most, of the leaks and spills that occur in liquid AN operations. Further, such a weekly survey would add little to the exposure monitoring required by the standard, in determining employee exposure to AN.

The alarm system required by paragraph (i) of the standard will detect AN concentrations which exceed the ceiling limit. When an alarm is sounded, the employer will have to take action to locate the source of the release which is causing the high levels of AN, and will then have to decontaminate the leak or spill area. In this regard, the weekly survey, as proposed, would be redundant.

OSHA has determined, however, that some form of leak detection program should be required by the standard. The details of such a program, however, should be left to the employer, who is already under the obligation to control employee exposures to within the permissible exposure limits. The leak detection program in the final standard has been placed in the housekeeping section of the standard, paragraph (k).

Regulated areas and notification: Paragraphs (d) and (f). The final standard requires the employer to establish regulated areas wherever AN exposures exceed the PEL, and to limit access to these areas to authorized persons. This requirement will help to limit exposure to AN by preventing persons who are not authorized from entering areas with AN exposures above 2 ppm. It will also assist in designating areas where precautionary signs are to be posted, while also designating areas where employees will be subject to monthly exposure monitoring pursuant to paragraph (e). Employees in regulated areas willl be prohibited from smoking and eating in these areas, and may be covered by protective clothing and equipment and hygiene requirements under other sections of the standard.

The limitation on eating, smoking, and applying cosmetics in regulated areas is necessary to prevent unnecessary exposure to AN. Potential routes of exposure to AN are ingestion, skin absorption, and inhalation. All of these routes must be limited by OSHA in order to protect employees from the carcinogenic hazard posed by AN exposure.

Paragraph (d) of this standard requires the employer to notify the OSHA Area Office within 30 days of the establishment of regulated areas in his workplace. This requirement is more limited than was proposed, in order to concentrate on exposure conditions above the PEL. It enables the Agency to be aware of facilities where substantial exposure to AN exists.

Methods of compliance: Paragraph (g). The final standard requires that by November 2, 1980, engineering controls and work practices be used to control employee exposure to acrylonitrile, except to the extent that the employer can show that they are not feasible. If all feasible engineering and

work practice controls do not succeed in reducing exposure below the permissible exposure limit, they must be implemented and supplemented by respiratory protection. OSHA's experience has been that engineering controls must be coupled with suitable work practices to maximize their effectiveness. Respiratory protection may be used only during the time period necessary to install engineering controls, where engineering controls may be inappropriate, such as during some maintenance operations, or in those cases when both engineering controls and work practices do not succeed in reducing exposures below the permissible exposure limit. Respirators are also to be used in emergencies.

This compliance strategy has been consistently OSHA's policy and has been followed in prior standards and proposed standards. This policy is based upon the view that the most effective means of controlling employee exposure is to contain emissions of toxic substances at their source through the use of mechanical means combined with work practices. This is far more effective than reliance on the highly variable human behavior so critical to the successful use of respirators. As discussed below, respirators have many disadvantages which preclude primary reliance or coreliance on respiratory protection on an equal basis with engineering and work practice controls. Furthermore, the burden of reducing employee exposure should more properly rest on the employer in whose establishment toxic substances are released, rather than placing the burden of respirator use on the exposed employee.

The Council on Wage and Price Stability suggested a control strategy involving principal reliance on respiratory protection, to reduce the cost of compliance (Ex. 27). However, the affected companies themselves readily acknowledge the many difficulties inherent in reliance upon respiratory protective devices. (Exs. 11;(27); 92). These difficulties were also discussed by respirator expert Darell Bevis (Ex. 19). Because of the difficulties in obtaining and maintaining a proper fit and seal of the respirator facepiece, it is difficult to know whether the respirators actually provide adequate protection. Respirators, by interfering with vision, hearing, and mobility, can cause safety problems. Some employees cannot wear respirators because of breathing difficulties. Finally, it is not appropriate to place the burden of compliance principally on the employee, as would be the case if respiratory protection were the principal means of reducing employee exposure. Therefore, OSHA retains in the standard the policy of principal reliance on engineering controls and work practices, except in circumstances where there is no feasible alternative to more substantial reliance on respiratory protection.

Even in situations in which engineering controls will not succeed in reducing exposure levels below the TWA limit, it is still appropriate to require all feasible engineering controls to be installed, even though they would have to be supplemented by the use of respirators. The engineering controls, by minimizing the amounts of AN in the workplace environment, will also minimize the potential for overexposure to AN resulting from poorly fitting respirators, and will usually reduce the number of employees who will need to wear respirators at all.

The standard places the burden on the employer for proving or disproving feasibility. The employer is in the best position to gather evidence on feasibility in a particular workplace. He is most familiar with his own production processes and engineering modifications which can be made. Further, it is the policy of the OSHA Act that employers be required to take steps to investigate the feasibility of controls and install them as necessary.

In addition to the obligation to institute engineering and work practice controls, except to the extent that such controls are not feasible, the final standard also requires that each employer establish and implement a plan for reducing exposures to within the permissible exposure limits solely by engineering and work practice controls. These written plans must be furnished upon request for examination and copying to representatives of the Assistant Secretary and the Director. These plans must be reviewed and updated periodically to reflect the current status of exposure control. The written plan is an essential part of the compliance program, since it will encourage employers to implement the necessary technology for reducing employee exposures. It also provides the information to allow OSHA, the employers, and employees to examine the control methods chosen and the extent to which these planned controls are being implemented in the workplace.

Respirators: Paragraph (h). The standard requires that respirators be used only during the time period necessary to install or implement feasible engineering and work practice controls, in operations in which such controls are not appropriate, such as certain maintenance operations, in work operations in which such controls are not feasible or are not yet sufficient to reduce exposure to the permissible limits, or in emergencies. These restrictions on the use of respirators are consistent with the requirements of 29 CFR 1910.1000(e) and with good industrial hygiene practice.

Many comments cited problems associated with respirators (Exs. 92; 11(27)). Respirators are to be considered secondary to the objective of limiting emissions at the source. Proper facial fit is essential, but due to variations in individual facial dimensions, as well as facial hair, scars, or growths, it is difficult to maintain. Fatigue and reduced efficiency may occur more rapidly among workers wearing respirators due to increased breathing resistance, heat stress, and reduced vision. Additional problems include the entanglement of hoses of air-supplied respirators, as well as limited mobility resulting from hose length and bulkiness of the apparatus. (Ex. 19).

It is clear, and generally agreed to by the affected employers, that respirators cannot generally be considered as the primary means of employee health protection. It is also recognized by OSHA that there will be certain operations in which the use of respirators will be necessary to protect employees from exposure to AN. This aspect was recognized in the preamble to the proposal.

OSHA has concluded that if the permissible exposure limit is exceeded, employees must use respirators. This is necessary in order to provide the maximum amount of protection available in situations where engineering controls and work practices do not succeed in reducing exposures below permissible levels.

The affected employers have indicated that they have endeavored to determine, under the ETS, those job positions for which respirator use will be necessary for a large part of the workshift, under a 2 ppm standard. This achievement places the employers in a position to develop a detailed respirator program directed primarily at these employees. Items which might be considered for such a detailed program include making available a greater variety of respirators from which employees can choose, having a technician fully trained in respirator use and selection, and organizing the work so that part of the day can be spent in clean rooms or control rooms where the exposure limits are not exceeded. The nature of the work in many monomer and polymer manufacturing facilities, much of which is highly automated, lends itself to this type of program. The employer should also investigate the possibility for respirators with microphones, should communication on the job prove to be a problem.

Respiratory protection also has a role during maintenance operations as well as during emergency situations. We realize that respirators may be

V 4 3 / 1 9 2

needed in these types of operations, even over the long run. The standard is designed to control AN workplace emissions at the source, and, thus, to minimize the need for general use of respirators by employees.

In the proposal, OSHA included a proposed table of respirators for use with AN. The primary basis for the selection and evaluation of respirators in this table (Table I) was the NIOSH-OSHA respirator decision logic. The protection factors supplied in the table were based on qualitative fit testing, which involves only the facepiece-to-face seal. (Ex. 19). In addition to the Table, several other requirements for respirator usage were included in the proposal, concerning approval of respirators, replacement of cartridges and/or canisters, and cleaning of respirators.

A number of changes have been made from the proposed provisions, based primarily upon the recommendations of Darell Bevis, an acknowledged expert in the field of respiratory protection. These changes will be discussed below.

The proposal specified that where air-purifying respirators were to be used, they would have to be approved by NIOSH specifically for use with AN. NIOSH has since informed OSHA that they will not grant such approval because of AN's poor warning qualities. Since AN cannot be detected by odor until concentrations reach the 13-19 ppm range, it is not possible for the respirator wearer to detect leakage or breakthrough within the facepiece until he is clearly overexposed. Under the respirator decision logic, the use of air-purifying respirators should not be permitted for AN, because of this factor. However, OSHA has determined that air-purifying respirators, when used in a rigidly controlled program of proper fitting and frequent sorbent replacement, should be permitted for protection against low concentrations of AN, as prescribed in Table I of the standard. When the protection factors in the respirator table are followed, organic vapor cartridges and canisters can provide protection for employees.

Therefore, OSHA has revised its proposal to permit organic vapor cartridges and canisters to be used for AN. These sorbent containers must be approved by NIOSH for use with organic vapors. We must not however, that there are numerous factors which affect the performance of air-purifying respirators, including the sorbent material itself and the fit of the facepiece on the wearer. Other important factors include wearer acceptance and training.

Proper fit of the respirator is critical. A negative pressure is created within the facepiece when the wearer breathes. This may result in workplace air entering the facepiece through gaps and leaks in the facepiece seal, instead of passing through the sorbent material. Obtaining a proper fit on each employee may require the employer to provide two or three different mask styles.

The employee must be properly trained to wear the respirator, to know why the respirator is needed, and to understand the limitations of the respirator. An understanding of the hazard involved is necessary to enable the employee to take steps for his or her own protection. The respiratory protection program implemented by the employer must conform to that set forth in 29 CFR 1910.134. This provision contains basic requirements for proper selection, use, cleaning, and maintenance of respirators.

Under § 1910.134, the employer must check to see that the employees' respirators fit properly and that leakage is at a minimum. A rapid simple fit test can be performed at the start of each shift by each employee wearing a negative-pressure respirator. This test can be either a positive pressure test, in which the exhalation valve is closed and in which the wearer exhales into the facepiece to produce a positive pressure, or a negative pressure test, in which the inlet is closed and the wearer inhales so that the facepiece collapses slightly. Employees must be trained to perform this test.

The standard requires a qualitative fittest at the time of initial fitting and semiannually thereafter. Isoamyl acetate can be used to qualitatively test facepiece fit. If the employee can smell the isoamyl acetate while wearing the respirator, it can be concluded that the particular respirator will not provide suitable protection for that employee.

The proposal contained no specific requirement for periodic fit testing. However, as noted below, the issue was raised by OSHA in the proposal as to whether the more sophisticated quantitative fit test should be generally required. We have concluded that the periodic qualitative fit test can serve as a preliminary screening for all respirator users, to determine whether an employee's face-to-face piece seal is sufficient to permit the use of respirators designated in Table 1.

The standard also requires that each employer with 10 or more employees who must wear negative pressure respirators must provide quantitative fit testing for those employees at the time of initial fitting and semiannually thereafter. In a quantitative fit test, the level of leakage and degree of protection are specifically measured by sensitive instruments. These tests are more accurate and provide greater assurance that the respirator is providing proper protection to the employee. Whereas the qualitative fit test is subjective, relying upon the employee's sense of smell, the quantitative fit test uses instrumentation inside the facepiece to determine the integrity of the seal. One type of quantitative fit test involves using a simple hood, sodium chloride vapor, and automated instrumentation. At least one such device is commercially available at less than $10,000. These tests can be performed rapidly (10 to 20 minutes) and are relatively easy to perform. Since the standard will apply almost exclusively to monomer and polymer producers, it is reasonable to assume that these large companies can obtain the equipment for such testing.

OSHA requested views, arguments, and other comments on the issue of quantitative fit testing in the course of this rulemaking proceeding. The use of such testing has been endorsed by the Z88.2 subcommittee of ANSI as noted by Bevis in his testimony (Ex. 19). The equipment has been developed which makes quantitiative fit testing relatively easy to carry out, and it is universally recognized that it provides greater assurance of proper protection. We believe, therefore, that it is appropriate for employers with significant numbers of employees wearing negative pressure on respirators to be required to provide quantitative fit testing for those employees.

Under the ETS, employers were required to implement any practicable combination of engineering, work practices, and respiratory protective devices to lower their employees' AN exposures below a 2 ppm TWA. Much of the compliance activity under the ETS involved the implementation of respiratory protection programs. Therefore, there should be no need for a "transition period" for the implementation of respirator programs under the final standard. The standard requires that the employees exposed above the PEL as of the effective date of the standard must be provided with and must wear appropriate respirators in accordance with the selection criteria in Table I.

The proposal provided for the replacement of "filters" if an employee reported breathing resistance. This provision has been deleted from the final standard. As was noted at the hearing, organic vapor cartridges do not use "filters," which are generally used for protection against particulate hazards (Ex. 19). The vapor hazard associated with AN in the workplace should not present any breathing resistance difficulties, since there is no problem of clogged filters in this situation. Therefore, the requirement is not appropriate for a regulation on AN exposure.

OCT 3 1978

Perhaps the most controversial element of the proposed respirator section involved the frequency of replacement of cartridges or canisters. It was contended by many in industry that the daily replacement of cartridges or canisters was wasteful, particularly if they were only used briefly during the workshift. A system of labeling of cartridges, it was argued, would assure that cartridges and canisters were replaced before the expiration of their service life (Ex. 92). OSHA does not agree with these contentions. As noted earlier, the very use of organic vapor cartridges and canisters for AN, which does not have good warning properties, runs totally counter to the respirator decision logic and to good industrial hygiene practice. However, OSHA has determined that it is necessary to allow their use under a limited set of circumstances, provided that that use is very narrowly restricted. The lack of end-of-service-life indicators for organic vapor cartridges used with AN masks it is necessary for OSHA to require the replacement of the sorbent at the completion of each shift (Ex. 11:(16)).

It should be noted, in addition, that even changing the sorbent container each shift may not assure protection. Testing data submitted by a respirator manufacturer and by NIOSH indicate that some organic vapor cartridges used for AN may not last for 8 hours, and that they may last for only 4 hours under humid conditions (Ex. 11:(12L); 11:(13L); 11:(14L)). This finding is particularly important in the context of this standard, since there are numerous monomer and polymer production facilities which operate under conditions of high humidity. It is clear that where the service life of a cartridge or canister is less than 8 hours, that cartridge or canister may have to be replaced again at some time during the workshift. The standard allows for such a situation by requiring the employer to replace cartridges or canisters before the end of their service life or at the completion of each shift, whichever comes first. The employer has the obligation to ascertain the service life of the cartridges and canisters to be used in his workplace, in order to assure that they are replaced as required by the standard.

On the issue of frequency of replacement of the cartridges Bevis stated:

> I am in full support of the change of the cartridge after each shift has ended, whether it has been used for 15 minutes or * * * 8 hours, since it is virtually impossible to assure how much air has been drawn through that cartridge or canister or to determine the specific minutes or hours of life. The activated charcoal sorbents in the organic vapor cartridges will sorb not only organic vapors but also moisture, shortening their service life (Ex. 19).

On questioning, he elaborated on the practice of labeling used cartridges as an alternative to replacement each shift:

> It's my firm opinion that when using sorbent-type cartridges and canisters (.) the most conservative approach must be taken * * * I never recommend—in fact, I'm a crusader against—reuse of sorbent type cartridges and canisters because I don't feel that they can safely be reused (Tr. 191).

We agree that in the limited use of the sorbent-type air purifying respirators, the most conservative approach must be taken in order to assure the most protection from that device.

As noted in the proposal, the wearing of a respirator can result in facial irritation at the face seal surface. To prevent this irritation and to minimize the discomfort of respirator use, the proposal would have permitted employees to periodically "wash" their faces and respirator facepieces. This provision has been modified in the final standard. It was noted at the hearing that an employee who "washed" his respirator facepiece might also wet the sorbent cartridge or canister, possibly rendering it ineffective or less effective. The employee's role, it was argued, was to make sure that he wore the facepiece properly (Tr. 193-4). We believe that the standard should reflect these concerns. The provision in the final standard has, therefore, been clarified to allow washing of the face, but only a wiping of the facepiece-to-face seal of the respirator itself. Cleaning of the active elements of the respirator should be in the hands of a trained person as part of a respirator program.

OSHA believes that if an employee receives training as to the purpose of his respirator and the proper method of wearing it, he will be less likely to do anything which will limit the protectiveness of the respirator program.

Emergency situations: Paragraph (i). The emergency provisions are substantially unchanged from those of the proposal. However, the revised definition of the term "emergency" limits the types and number of situations for which a written plan will be required. OSHA has determined that not all instances of release of AN above the ceiling limit should be viewed as emergencies. Only the "massive release" of AN is termed an emergency under the final standard.

It should be noted that the standard still requires the installation of an alarm system, to be activated by releases of AN above the ceiling. Although not an "emergency" per se as defined in the standard, the exceeding of the ceiling limit does necessitate the taking of protective action to assure that employees are not overexposed.

The alarm system will, in most cases, involve the installation of a continuous monitoring system which will detect AN concentrations at the ceiling limits to activate the alarm. Such monitoring systems have already been installed by some companies and are being used for generating area monitoring data in addition to detecting ceiling concentrations of AN (Exs. 11:(10); 87).

The need for an alarm system has been recognized by many of the affected companies (Exs. 11:(10); 11:(14); 11:(27)).

Protective clothing and equipment: Paragraph (j). The standard requires the employer to provide and assure that employees use protective clothing and equipment wherever there is potential for exposure to liquid AN. This provision is considerably narrower in scope than that in the proposal. It reflects the determination that solid PAN and other finished polymers do not represent significant sources of AN exposure. The new provisions require appropriate protective clothing and equipment only for "liquid AN," as defined in the standard, including polymer intermediates produced during the polymerization process.

The protective clothing provisions of the proposal elicited much comment and testimony from interested persons. The detailed requirements for providing, maintaining, and replacing protective clothing and equipment were criticized as not being sufficiently performance-oriented. Some comments noted that impermeable clothing was provided to the employee to protect him from skin contact with AN. Thus, when such AN-impermeable clothing became wet with AN, there was no need for the employee to remove the clothing immediately, as the proposal would have required, because there would be no skin exposure. Dow Badische recommended that the standard provide separate requirements for the handling of impermeable clothing, such as rubber gloves and suits, as opposed to coveralls and other permeable clothing (Ex. 149).

We have determined that these suggestions have merit, and the final standard incorporates appropriate changes. Where it is likely that impermeable clothing has contacted liquid AN such clothing must be washed down with water before being removed by the employee. The employee may then remove the clothing in the change room and proceed to shower. The clothing must then be placed in a regulated area and decontaminated.

A more complicated situation arises if an employee wearing AN-permeable clothing becomes wet with liquid AN. Understandably, this should only occur in accidental spills and emergencies. In this situation, the employee

V 4 3 / 1 9 2

0 C 3 7 8

shall remove the wetted clothing and shower immediately. The clothing shall then be placed in a regulated area and decontaminated in the same manner as impermeable clothing.

Clothing and equipment worn for protection from liquid AN must, of necessity, be impermeable to AN. The proposal would have required replacement of such clothing on at least a weekly basis. We have noted, however, that the actual need to provide replacement varies greatly with the conditions of use. We believe that the employer should be required to replace protective clothing and equipment as necessary to assure its protectiveness. Whereas this does not specify a given interval, it does require frequent inspection of clothing to make sure that it remains impermeable.

The washing down of impermeable suits, gloves, and the like before removal is intended to minimize the potential of skin contact with AN. The washdown should be sufficient to assure that the clothing will not release AN. The employee shall, nonetheless, shower at the end of the workshift.

The provision for decontamination of wetted protective clothing and equipment helps to resolve a major area of difficulty surrounding both the ETS and the proposal. The proposal required protective clothing to be placed in a closed container after use. This presented a problem of possible skin contact with and inhalation exposure to AN by persons opening these containers, as well as by persons who had to handle the clothing for disposal or laundering. In addition, the closing of the containers posed a potential for fire or explosion due to the volatility of the AN within the containers. The final standard deals with these problems by ventilating and washing down the contaminated clothing and equipment to remove their potential to release AN above 1 ppm.

Many maintenance operations, particularly those involving reactor cleaning, involve the potential of skin contact with liquid AN. The impermeable clothing requirements, along with respiratory protection requirements, are essential to the protection of employees engaged in these operations.
